In any land, it is important that the river be viewed as a whole, and that each project be conceived as part of one system. And in a land where water is the key to life itself, such foresight is imperative. In this way, Iran ultimately will achieve the best use of her rivers for irrigation, flood control, navigation, power, and other primary purposes, as dictated by the needs of present and future populations.

These principles were tested and proven successful in the Tennessee Valley; that Iran recognized the need for a careful approach to the development of the valleys of the Khuzestan region was clear a year ago when we were invited to see the area.

Development and Resources Corp. is a wholly private American enterprise. As such, it has no ties with the United States Government; it will therefore, make its own way and its own policies. On the side of public responsibility, there is the fact that Development and Resources Corp.'s chief officers and most of their associates have spent much of their careers in public service, principally with TVA.

FULL DEVELOPMENT

More important in this regard, much of the company's aims in Iran will be achieved through publicly controlled organizations. The object is development itself—dams, irrigation canals, factories—a dynamic, integrated economic growth. The Khuzestan region will be developed to the full, for the good of its people and the rest of the nation, in accord with plants, policies, and decisions made by Iranians.

This program can benefit the Khuzestan region—and all Iran—as directly as the TVA has benefited the region and nation it serves, by helping build prosperous farmlands and attracting new industry to the cities and towns.

One indirect benefit from such a program concerns the relationship between a people and a government. In the Tennessee Valley, before the days of TVA, the Federal Government was remote and generally identified with such unpleasant matters as tax collections. The TVA was held with suspicion at first, but when the people of the valley began to realize that the TVA was not there to tell them what to do or impose its will upon them, hostility gave way to a search for partnership on both sides.

State governments, local agencies, private groups, and thousands of citizens voluntarily joined with the TVA to make the valley

a land of opportunity—on the farm, in new factories, and in revitalized State and local governments able to serve their people.

In many nations of the Middle East, as in so much of the world, this sense of a bond between the people and the Government is a recent and evolving phenomenon of great significance.

The interest other nations may take in watching the development of the Khuzestan region may arise in part from the feeling that the new approach in Iran could have a significant bearing on a complex problem which is central in international relationships: How the industrialized Western countries can make their experience available to the newly awakened countries of the East, on a basis which is both acceptable and workable.

The program in the Khuzestan region may suggest some way in which this problem can be met. Its potential importance in this larger context could far outweigh its immediate aim of helping the Iranians.

Commonwealth Status Preferable for Alaska

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. PELLY. Mr. Speaker, a group of California businessmen, according to the Minister of Natural Resources for the Provincial Government of Saskatchewan in Canada, are to invest $40 million in a pulpwood project. These Americans have an option on 12,000 square miles of timberland, and a 300-ton-a-day woodpulp mill will be constructed soon with a further arrangement for doubling the timber rights and capacity of the mill for production of both pulp and newsprint.

Why are these American investors going to Canada as against Alaska, where vast timber resources exist which are available with ample water for such a new development?

The answer, I venture to say, lies in a carefully conducted study which shows the relative present costs and future projected conditions in both locations. Venture money goes to the area of greatest opportunity for profit.

Why would the Province of Saskatchewan and Canada offer greater returns on an investment than the Territory of Alaska?

The answer, of course, is in labor and living costs, transportation expense, and taxes. Alaska cannot compete with other areas of North America, and what is more, statehood will increase this cost of doing business and retard development for decades to come.

If certain political leaders in Alaska would sacrifice their personal ambitions to represent a new State of Alaska in Congress, this situation, it seems to me, could be changed. In other words, if Alaska would ask for commonwealth status and forego for a time the right of having voting representatives in Congress, she might be given complete self-government in all other respects and, in addition, exemption from Federal income taxes. This exemption for corporations would offset the high cost of operating industry in the northland, and Alaska's rich resources of timber and minerals would induce investors to put their millions into Alaska rather than locations such as I mentioned in Canada.

Meanwhile, Mr. Speaker, the Federal Government could continue with a program of roads and highways in Alaska, and likewise in the costly work of conservation of her fisheries which a limited treasury such as the new State would possess could not allow.

The Members of the House of Representatives, it seems to me, should study the full facts before we turn over Alaska's resources to the possible selfish control of certain politically inspired factions which exist in the Territory of Alaska, and which may seek to discriminate against nonresidents in order to benefit themselves. Let us not forget that the fish, timber, water, and minerals of the Territory belong to all the people of these United States—not just those who live there.

Should Reduced Nonessential Federal Spending Begin in Our Own Congressional Districts?

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. FISHER. Mr. Speaker, last week I offered an amendment to an appropriation bill to cut out a new Federal program of making outright grants to local communities to help the local people pay for their sewage disposal systems. The amendment would have saved $50 million during the next fiscal year, and if continued would eventually save the taxpayers $450 million.

The amendment, initially approved by a teller vote of 162-to-140, was defeated on a record vote by a substantial majority. That was the considered action of the House, to which those of us who favored the amendment respectfully bow. Members entertain honest disagreements as to what spending is essential and what is nonessential.

This amendment has been referred to in the press as an example of legislative actions that stem from the people themselves who become aroused when Federal funds are about to be cut off from local communities.

The Washington Star commented:

> Already more than 900 applications by cities and counties had been approved, at least 1 in each of the 435 congressional districts.
>
> The news that money for these projects had been denied brought overnight a wave of protests from local organizations and officials in dozens of districts.

Mr. Speaker, under leave to extend my remarks I include a letter from a Texas citizen who believes that bold action is necessary by the Congress if we are to achieve substantial reductions in nonessential spending. The letter follows:

DALLAS, TEX., *April 4, 1957.*

Hon. O. C. FISHER,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CLARK: This morning the Dallas News carried an account of your initial success in the House in an economy move, eliminating at least for the time being Federal handouts to States and cities for sewage disposal plants.

I would simply like to express my admiration for your action. I am sure that there are some cities in your district which could use some of this Federal money; but pursuing the philosophy for which you are rather widely known, you demonstrate that if we are to achieve economy, all of us have to start at home. I have always had less than no patience at all with the citizen who screams for economy and bemoans high taxes and simultaneously seeks Federal money for his own particular pet project. You are going at it in the right way.

Although I know you are motivated solely by your conscientious convictions, permit me to express the opinion that your move is the best there is in the way of practical politics. Contrary to a great deal of popular opinion, the Congressman who will oppose wasteful or unnecessary Federal expenditures in his own district adds far more to his political strength than he loses. In such a stand, he will inevitably antagonize a selfishly interested minority; but the great majority usually admires his courage, regards him as of increased stature, and forgets the details and votes for him at the next election. The average voter has come to regard him as a man of strength and character without reference to any particular local interests.

The most recent illustration of the foregoing that comes to my mind is Bruce Alger's last race here in Dallas County. Incidentally, I am firmly of Democratic persuasion, and supported Bruce's opponent in that election. Contrary to what a few of us thought was sound politics, the Democratic candidate (no doubt with the hearty approval of a majority of his advisers) tried to capitalize on some of Bruce's voting in the interest of economy, even at the expense of 1 or 2 Dallas projects, and tried to drive home the point that Bruce has gotten nothing for his district. The results speak for themselves. Dallas County actually is still strongly Democratic in formal party alinement—a point clearly enough proved in the election last Tuesday. Bruce nevertheless won his race last summer by what was for this county a heavy majority. I am sure that he was a part of your support mentioned in the attached news clip.

Best regards.
Sincerely,

TOM SUGG.

Report of a Postmaster

EXTENSION OF REMARKS
OF
HON. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. COLE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter from Postmaster Floyd W. English, Corning, N. Y., which was recently sent to me as well as Senators IVES and JAVITS.

Lately, there has been considerable discussion about appropriations for the Post Office Department. Aside from the current matter, the problems of the Department and the individual post offices are matters of almost daily concern of every Member of Congress. Postmaster English's letter was of such great interest to me that I thought it should be made available to all the Members of Congress, especially those of us who sometimes forget that the Post Office Department has made considerable strides in the past 4 years:

POST OFFICE,
Corning, N. Y., April 4, 1957.

To: Senator IVES, Senator JAVITS, and Congressman COLE:

The morning papers carried a list of services that the post office would have to cut unless requested funds are appropriated so the subject was discussed at my table at Rotary Club today.

Eight people are at each table so there were seven besides myself. Five took the attitude that the discussion of the budget matter is politics, eventually some figure will be agreed upon, and the statements, speeches, and threats are not worth reading. The other two felt the Post Office Department was wasting money just the same as all departments of Government.

My opinion is that the Republican Party can be very proud of the Post Office Department and should capitalize on its accomplishments.

In 1953, Mrs. English and I attended the postmasters convention in San Francisco where out of 2,400 there were less than 50 Republicans. It was the first time in 21 years that there had been any Republican postmasters to attend a convention and as Postmaster Keller, of Niagara Falls, stated we were treated as if we had no right to be there. We traveled on a special train from Chicago which accommodated 300 and we were not made to feel welcome. We decided to be friendly—we both worked hard and the following Christmas received 63 cards.

To illustrate the difference I want to tell what occured last October at the New York convention. At the conclusion of an address by Postmaster General Summerfield, the Secretary of the National Association of Postmasters, Postmaster Puskar, announced that so much had been accomplished that he would vote to keep the Republican administration.

In this, the Corning, N. Y., post office, we have the same number of employees as in 1948. The volume in 1948, $160,880.11; 1956, $275,660.65. Most of this has been accomplished by more efficient policies which include the regional plan and elimination of much redtape by the Department.

I would like to suggest:

1. Eliminate many post offices. The Department has agreed to a policy that no post office will be closed unless the postmaster's position becomes vacant and therefore I have offered to resign when the post office at Painted Post is made a station.

2. Eliminate postal savings—with insured bank deposits this is not needed.

3. Eliminate money orders except for c. o. d. merchandize. Banks offer convenient checking accounts at a lower rate.

4. Eliminate the rule that advertising matter should have a street number. This requires many clerk hours for sorting.

5. Decide whether the post office is to be a service organization or self-supporting. If it is to be self-supporting, then increase rates.

I do not mean to be critical but the Post Office Department deserves great credit. This administration inherited an inefficient organization with obsolete equipment—they have developed new methods and machines, delivered increased volume of mail, paid a large salary increase and with less deficit than the former administration. I hope you can find a way to give credit to a Department that is doing a good job.

Sincerely yours,

FLOYD W. ENGLISH.

"Soapy" Williams Scores Again

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks, I am inserting the following article from the Washington Star of April 3, written by the well-known political analyst, Doris Fleeson. In the following story, the writer informs her readers of what we in Michigan have known for a long time, namely, "Soapy" Williams, the greatest vote getter on the American scene, is real Presidential timber. As you know, the Democrats in Michigan made a clean sweep of all contested offices in the April 1 elections, thanks to the campaigning abilities of our forceful young Governor, G. Mennen Williams:

"SOAPY" WILLIAMS SCORES AGAIN—YOUNG DEMOCRAT GOVERNOR LEADS PARTY TO ANOTHER MICHIGAN ELECTION VICTORY

(By Doris Fleeson)

Gov. G. Mennen (Soapy) Williams, a liberal young Democrat, this week displayed a remarkably impressive pair of coattails in the typical pivotal State of Michigan.

In an off-year election marked by voter apathy and with an unremarkable slate of candidates, Democrats swept the boards clean. Williams, elected last fall to his fifth term as Governor, was not on the ticket, but in a hard-hitting, statewide campaign laid his own prestige on the block for it.

Even his opponents are now saying "It was 'Soapy' who did it." The net to him is increased national stature, which will force Democrats to reassess his 1960 possibilities, plus undisputed command of his State.

The Williams rise is accompanied by a comparable collapse of the Republican State organization. Michigan observers are talking about the wreckage of the GOP and suggest that Republican Senator CHARLES E. POTTER will need a miracle to win reelection next year.

The general expectation is that Williams will not oppose POTTER but will run for his 6th term and win. Such a victory would make him easily the senior in point of service among the 48 State governors.

Of that 48, 29 are Democrats. They will head their delegations to the national convention and carry great weight in the selection of the national ticket.

The probable opposition to POTTER is Lt. Gov. Philip Hart. Like POTTER, Hart was badly wounded in World War II combat; unlike many Democrats, he has good connections with the business community of Detroit.

Williams has from the start had the constant support of labor in populous Wayne County, which includes Detroit. His ability to win reelection shows, however, that he has wide public acceptance beyond labor. He has also built an effective State organization under a talented State chairman, Neil Stabler.

Stabler's work in Michigan attracted the attention of the national committee, which made him head of a committee on organization to teach his fellow-Democrats how it's done. The Stabler committee report is now in the hands of National Chairman Paul Butler, who has said he would promote its general acceptance.

The story of the Michigan Republicans seems to be chiefly one of factional strife and uninteresting candidates. However, their ticket which just met defeat was said to be as good as that of the Democrats who won.

Blame is attached to Postmaster General Arthur Summerfield by some observers who charge him with trying to run the State from Washington, a maneuver which rarely succeeds in politics. Also, as the factional GOP quarrels multiplied, the big contributions disappeared, which is normal in the political picture.

Remove the Reckless Mr. Dulles

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. REUSS. Mr. Speaker, I am sure that everyone concerned with the formulation and execution of United States foreign policy will be interested in the following editorial from the Milwaukee Journal of April 4, 1957:

DULLES SHOULD BE REPLACED

The new biography of John Foster Dulles is certainly not meant to label the recent unpleasantness in the Middle East as Mr. Dulles' war.

Anything but. Written by a Dulles sycophant in Henry Luce's Time-Life stable, it is dedicated to the proposition that Dulles can do no wrong. The foreword, in which Thomas E. Dewey describes the Secretary of State as "no ordinary mortal," is symbolic.

And yet, when John Robinson Beal's book is analyzed, this seems evident: That while it was Israel, England, and France that invaded Egypt last October, it was Dulles who set the stage.

It has been a general assumption that last July's withdrawal of the Aswan Dam financing offer to Egypt was honestly based on hard economic facts and that Dulles' brusque announcement was more or less accidental. Not so, according to Beal's book, written after interviews with Dulles. The rejection was deliberately rude. Dulles wanted to call Russia's economic bluff (the Reds had also talked of building the Aswan Dam) and he wanted to show neutral nations that there was a limit to American tolerance.

Writes Beal: "Nasser combined the right timing, the right geography, and the right order of magnitude for a truly major gambit in the cold war. As a calculated risk the decision was on a grand scale, comparable in the sphere of diplomacy to the calculated risk of war taken in Korea and Formosa. It risked opening a key Middle East country * * * to Communist economic and political penetration. It risked alienating other Arab nations * * *."

What the "calculated risk" decision precipitated is now history. Nasser immediately seized the Suez Canal. (He told visiting American editors in Cairo last week that his action resulted directly from Dulles'

"insult to Egypt, as an act to undermine Egypt.") Frantic attempts to reach a canal settlement failed—British and French sources have said because of Dulles' refusal to be firm with Nasser.

Then came the Israeli-British-French attack on Egypt and its death and destruction. The western alliance was disrupted, the British commonwealth perilled and Russia threatened nuclear and missile war. The Suez was blocked, the oil flow halted, and Western Europe went on rationing. The United Nations was plunged into major crisis. The United States felt forced to assume, singlehandedly, the tremendous commitment of the Eisenhower doctrine to defend the entire Middle East against Russia and communism.

Not one country, but three—Egypt, Syria, and Jordan—were opened, and apparently remain open, to "Communist economic and political penetration."

Beal credits Dulles with ending the war against Egypt by "'waging peace' with genuine skill." Many knowing observers believe that the United Nations, Canadian diplomats, Russian threats are equally responsible. Be this as it may, if the Dulles quotations in Beal's book are correct—and denials do not sound convincing—Dulles was only putting out a fire for which he laid the wood.

The vitally important thing about the Beal book, however, is that it once more proves that the destinies of the American people, internationally, are in the hands of a self-satisfied, self-righteous, boastful, and reckless diplomatic schemer—a would-be Machiavelli who gambles against war with nations and people as his dice.

This irresponsible and dangerous man must be retired from his post of power. Otherwise his next calculated risk or purposeful march to the brink of war may end in disaster.

The Proliferating Public Payroll

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. RAY. Mr. Speaker, under leave to extend my remarks, I present and commend for careful consideration by all Members of this House the following discussions entitled "The Proliferating Public Payroll," and "Lord Beveridge's Second Thoughts," which appeared in the April 1957 monthly letter published by the First National City Bank of New York:

THE PROLIFERATING PUBLIC PAYROLL

A year or two ago the London Economist invented a "scientific" formula for figuring out future additions to government payrolls. The mathematical rule, capriciously labeled "Parkinson's Law," was based on two premises: Officials want to multiply subordinates; and these subordinates make work for each other.

The law purports to show that the number of government employees bears no relationship to the amount of work to be done; regardless of the workload, it automatically increases at an annual rate of 5.6 percent. In support of its law, the Economist noted that between 1914 and 1928 the British Navy reduced the number of its ships by two-thirds and its sailors by one-third. In the same period, however, the administrative staff increased by more than 78 percent.

A recent study by the National Bureau of Economic Research, while not at all concerned with "Parkinson's law," presents some interesting information on the growth of public payrolls in Great Britain and this country. Looking back over a 60-year span, the National Bureau finds that government in both countries "has been growing faster than any other major segment of the economy." The employment figures include members of the armed forces as well as civilian workers at the national and local level.

Between 1891 and 1950, the working population of Britain increased about 57 percent while Government employment, not including nationalized industries, went up 450 to 500 percent. Similarly, in the United States between 1900 and 1950 the total labor force rose about 125 percent while Government employment jumped almost 500 percent.

In 1891, government in Britain employed only 1 person out of 25 in the labor force. By 1950, 1 British worker in 7 was on a Government payroll; if nationalized industries are included the ratio increases to 1 out of 4.

In this country in 1900, 1 worker out of 25 was employed by Federal, State, or local governments. Fifty years later the ratio was up to 1 out of 8.

THE PATTERN OF GROWTH

The National Bureau found a number of similarities in government employment in the two countries. For instance, in 1950 total government employment in both Britain and the United States was fairly evenly divided between the Central Government and local government bodies. There was also an almost identical increase (4½ times between 1900 and 1950) in nondefense government employees—those not in the military services or working for the military in a civilian capacity. In the United States, nondefense workers numbered 1.1 million in 1900 and 5.2 million in 1950; in Britain the increase was from 500,000 to 2.1 million.

Moreover, of this increase in nondefense employees, national governments accounted for a growing share, most particularly after the 1930's. Commented the National Bureau:

"The Central Government's economic activities as regulator or producer were greatly expanded and its participation in social welfare activities augmented. In part this represented the establishment of new functions or the enlargement of old Central Government activities. In part it represented the assumption by the central government of functions previously handled by the local authorities."

Since 1950, there have been some important developments in central government employment. In Britain, the Conservatives regained power in 1951 and promptly began to abandon or relax the myriad economic controls imposed by the Labor Government. Between April 1950 and April 1955, manpower engaged in economic regulatory activities was reduced by some 37,000—a cut of about 45 percent. Although Britain's central government increased overall employment by 128,000 (7.2 percent) between 1950 and 1955, the increase was due solely to defense personnel; nondefense workers declined.

In this country, the Government's Armed Forces more than doubled between mid-1950 and mid-1955 while Federal civilian employment went up about 22 percent. In its early years the Eisenhower administration was successful in trimming the size of the civilian payroll—and taxes. From 2,555,930 on Executive branch payrolls at the end of January 1953 the number was steadily cut until by September 1954 it was down to 2,329,181—a reduction of 226,749. Since then, however, the total has been rising. At the end of January it stood at 2,375,000, an increase of nearly 46,000 over the low point achieved by the administration. And the United States Budget Bureau estimates civilian employment will increase another 73,000 by June 30, 1958.

THE YEAR 2069

The enlarged public payroll is one indicator of the big expansion that has taken place not only in the population of the country but also in the role of government—especially central government.

A "Parkinson's law," as it might be applied to this country, affords opportunity for some interesting calculations. During the past 25 years, the civilian labor force has grown at the rate of 1.2 percent a year compounded, while total Government civilian employment has expanded at the rate of 3.2 percent compounded. If these trends are projected into the future, one finds that in the year 2069 we will all be working for the Government.

LORD BEVERIDGE'S SECOND THOUGHTS

In 1945, Sir William Beveridge proposed that the government assume responsibility for seeing to it that jobs would always be abundant. In his book, Full Employment in a Free Society, he described full employment as always having more vacant jobs than unemployed workers and suggested: "The labor market should always be a seller's market rather than a buyer's market. * * * Jobs, rather than men, should wait."

The British Government has pursued his idea. Sir William has had the opportunity, out of 10 years' personal experience and observation, to check the practical workings of the theory. In his second thoughts there is a fine lesson for Americans who advocate inflating the currency to maintain more jobs than men to fill them.

The cardinal principle of Sir William's plan was that whenever the total of public and private spending fell below the level necessary to maintain a shortage of labor the Government should step in and make up the difference. To insure adequate total outlay he called for the Government to expand the scope of its activities, increase its spending, adhere to a cheap money policy, and avoid rigidly orthodox finance because it involves an impracticable route to full employment.

Lord Beveridge (he was elevated to the peerage in 1946) put forth his full employment plan for two reasons. He wanted to keep employment high so the famous Beveridge plan for cradle-to-the-grave social security would not overburden the Treasury. And, thinking back to the great depression, he wanted to relieve people of worries about finding jobs.

THE BASIC PROBLEM

However idealistic in conception, the basic difficulty with any such full employment plan is the inflation to which it gives rise. If governments spend enough, and if they fuel a boom with the high octane of easy money and credit, they can achieve conditions of full employment and labor shortage. But the worker, being human, will in these circumstances raise his wage demands. And the employer, to retain his working staff and avoid strikes, will pay more and raise the prices he charges the customer to make up the difference. Since one does not have to work hard to keep a job, the economy loses efficiency. Since savings are discouraged, funds to finance industrial progress grow scarce.

Great Britain has enjoyed—or suffered—labor shortage practically continuously during and since World War II. Official statistics show that job vacancies have far outnumbered the registered unemployed. But Lord Beveridge is witness to the fact that full employment provides no utopia. It has produced some opposite effects: insecurity for millions of people who must live on pensions or other fixed incomes or on accumulated savings. Even workers whose daily wages have kept up with the cost of living have suffered from the dwindling value of the pound. Escalator clauses do not protect

the value of funds in savings accounts, life insurance, or retirement plans.

PLANS GONE HAYWIRE

In a speech in London last October 20, Lord Beveridge noted:

"Most of my working life was spent in University service. When I left that service to become a politician in 1945, I was able to take with me for superannuation enough thousand pounds to feel fairly happy for my future. Now each of those pounds is worth about 6s. 8d. Like many other healthy people in the seventies I am in danger of living longer than I can afford to live. Our plans for useful old age are all going haywire.

"The underlying reason for that is the claim of each industry to fix its own money wages by sovereign action. Under full employment that is leading to destruction of the value of money, and is spreading widespread poverty among all who are trying to live on savings or fixed pensions."

Lord Beveridge sought prosperity on a road paved with elaborate government plans and unbalanced budgets. He purposely avoided the path that over the years has proved the surest course to real economic progress. That path is one in which governments operate under the discipline of sound finance and provide the environment that encourages private enterprise and investment to go forward to the benefit of the national product and the national strength.

Partnership Benefits All

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. GUBSER. Mr. Speaker, I submit herewith portions of an editorial from the San Jose News favoring the proposed partnership agreement between the Pacific Gas & Electric Co. and the Bureau of Reclamation for development of the Trinity River:

[From the San Jose (Calif.) News of March 13, 1957]

PARTNERSHIP BENEFITS ALL

* * * * *

Investigation and analysis is tipping the scale of public benefit in favor of Seaton's governmental-public utility merger.

Basis of the argument is on the question of whether the Government should tie itself to a business partnership with private utility, or whether it should act independently in the major job of developing northern California water resources to the benefit of the State as a whole.

P. G. & E.'s plan of partnership ties in neatly with the attainment of this objective—and to the financial benefit of the taxpayer.

The private utility offers initially to build and pay for the project's powerplants and related transmission facilities for the purpose of obtaining use of the falling water in development of hydroelectric power.

In addition, it proposes a schedule of payments to the Government for the falling water amounting to an estimated $4,600,000 each year.

Savings are to be realized in construction costs. It is estimated $56,700,000 would be paid out by the utility in capital outlay for the $225 million Trinity Dam.

Taxwise, the Government would receive $83 million more in taxes over the 50-year repayment period, the State $7,310,000 and local districts $53,245,000.

And all this without loss of any appreciable amount of water, the prime objective of the Trinity project and related water conservation planning in northern California.

* * * objections to penalty payments to P. G. & E. during the heavy irrigation periods when water would have to be drawn from storage faster than it could be used in power development; the increased power rates to preferred customers and the Federal-utility link diminish quickly when held up to the benefits of the proposed combination development.

Secretary Seaton and the P. G. & E. have worked out an ideal partnership for Trinity water. It should be implemented with full support of our legislators in the interests of the public's need for water and power.

How Long Can Nasser Last?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. MULTER. Mr. Speaker, our State Department supported first Farouk, then Naguib, and now Nasser. It will be interesting to see just how long Mr. Nasser can ride the crest of a new wave of Arab popularity, artificially created by Mr. Dulles.

In this connection, I commend to the attention of our colleagues the following article, written by Eliezer Whartman, which appeared in the March 1957 issue of the American Zionist:

HOW LONG CAN HE LAST?—EGYPT'S PLIGHT: SANDS ARE RUNNING OUT FOR NASSER

(By Eliezer Whartman)

At first blush Gamal Abdel Nasser may have appeared to be riding high following his comeback after the Suez debacle, but economists are almost unanimous in their verdict that, despite his hollow victory, the sands of time are running out for the dictator. The economic facts of life are against him. The real question today is not how Nasser can be stopped, but rather how long can he go on?

Egypt has always been a poor country. One noted sociologist called it a land of "unrelieved horror." The average annual per capita income is less than $100 (contrasted to $1,870 in the United States). Of Egypt's 4 million adults engaged in agriculture, 1½ million are completely landless, and another 2 million own less than 1 acre each, which is approximately half the number needed for subsistance. Only 3 percent of the land is cultivated. Six percent of the people own 60 percent af the arable land.

Nasser's much-touted land reforms have done almost nothing to rectify a situation which leaves most of the agricultural populace permanently hovering on the brink of starvation: Only about 4 percent of the land has been redistributed; and, even if the redistribution program were to be fully implemented, only 8 percent of the land would be affected. U. N. economic reports for 1956 show a decrease in yield per acre from previous years. When this is contrasted with the phenomenal increase in birth, the results are potentially explosive. Egypt's population is swelling at the rate of half a million people, or 2 percent per year. Her national income—before Suez—was rising only at the rate of 1 percent, and now even that low increase has dropped. It has been estimated that Egypt needs a minimum of at least $56 million each year in new capital simply to take care of her annual increase in population. Even if the Aswan Dam project, now shelved, were to be put into operation, and thus bring into production another 2 million acres, by 1970 her population per square kilometer would have shot up from 752 persons to 883. When one considers the precarious state of health of Egyptian citizenry today, one is appalled to consider what the prospects will be in another decade.

The only solution for such a potentially explosive situation is for a government to take a number of drastic measures: First, it must encourage foreign investment, open up foreign credit and step up its exports; second, it must plan a more diversified agriculture and stimulate local industry so that it can radically reduce imports; and, third, it must cut government costs to the absolute bone, reducing the size of its bureaucracy and slashing at its defense expenditures.

How has the Nasser regime reacted? Economists shake their heads and wave their hands in despair.

Instead of encouraging foreign investment, Egypt has gone out of her way to discourage it: Only recently the Government passed an ordinance calling for the nationalization (read Egyptianization) of all foreign firms within 5 years. This has had the effect of destroyingg any vestige of interest by foreign firms in investing in Egypt. Not a franc, pound, or dollar (or even rubles) are finding their way to Egypt today for investment. Foreign currency is as scarce along the Nile as tourists. As for opening foreign credit abroad, Nasser has done the reverse: almost $400 million of Egyptian hard currency is blocked in Great Britain and the United States. The Egyptian pound has fallen to less than 40 percent of its official value. Nasser today could muster no more than about 60 millions in foreign currency to shore up his badly sagging economy. It is significant that although Soviet Russia has granted unlimited credit for the purchase of arms—backed by collateral in cotton—she hasn't seen fit to grant one ruble of strictly economic credit to the hard-pressed Nasser.

Regarding exports, figures show that the value of goods exported from Egypt during the last quarter of 1956 fell off to about half what it was in the previous quarter—before the fighting began with England and France.

Ironically enough, the closing of the Suez Canal has radically reduced the export of Egyptian cotton to the Far East. Here in the Western Hemisphere Egyptian cotton, which constitutes 85 percent of her total exports, is running into new difficulties. Slowly United States and South American produced long staple cotton is crowding the more expensive Egyptian import off the market, and should, in time, displace it almost entirely.

EGYPTIAN COTTON DROP

Nasser has likewise failed to implement the second step of an economic sine qua non if he hopes to save Egyptian economy from foundering; he has neither diversified the traditional pattern of Egyptian agriculture, nor has he been able to substantially reduce imports. Cotton is still king. However, it doesn't reign supreme. Prices for Egyptian cotton have been steadily falling as the long staple product comes into production in other parts of the world. British and French markets have been cut off, and now the chief market is with the Soviet bloc—a dangerous dependency, as T]to will testify. About half of this has been bartered for already acquired Soviet arms (much now in Israeli hands) which means that Egypt will be exporting from $25 million to $30 million of cotton each year during the next 8

to 10 years for which she will receive no visible return. Having thus obligated himself to the Russians, Nasser can hardly be in a position to take an independent economic line with the Kremlin.

Because cotton is still king and the average fellah has shown no great disposition to try to raise other staple crops (largely because there hasn't been much of an urge by the Government, occupied "elsewhere," to have them do so) Egypt is obliged to import most of her wheat from abroad. This country has refused to sell on credit, so the bulk of it comes from Eastern Europe. This hardly portends a happy future for Nasser. He has managed to do some bartering, but he has only one commodity to peddle and right now there is an abundance of cotton on the world market. (The Russians are dumping Egyptian cotton for whatever it will bring.) Moreover, Egypt has just had a bad cotton crop this year and exports are off. The only alternative that Nasser has is to try to lower the standard of living for his people. This standard is already dangerously low, and while the Cairo unemployed—their number grows monthly—and the fellahin have little to sacrifice, the middle classes still have something to lose and it is from them that the grumbling about Nasserism is growing louder.

GOVERNMENT COSTS SOARS

And as to the third step—cutting government costs and reducing defense expenditures—Nasser is as remiss in this as he is in implementing the other two.

Far from decreasing government costs, he has increased them, burdening the economy with a swollen army and a fat bureaucracy. To meet their expenses he has increased taxes and has taken a sinister step: he has nationalized—actually confiscated—an estimated billion dollars' worth of assets from liberated foreign and Jewish firms in Egypt. The assets he has realized by this desperate maneuver may see him through for the next few months, but it merely postpones the inevitable. Nasser simply doesn't have the necessary trained personnel to run these businesses. Many of these depended on trade from abroad which has dried up. Others are being run into the ground by incompetents. On top of it all, he has lost an annual revenue of $17 million per year by putting the canal out of commission.

Nasser's position for the time is still secure. He has the army backing him, and, of course, the street mobs. He is still the hero to the Arab masses from Tangier to Iran, but underneath the slogans, the saber rattling, and the frenzied demonstrations, the foundations are crumbling. No one knows this better than Gamal Abdel Nasser.

The TVA as a Great Enterprise Cannot Be Run by Politics-as-Usual Any More Than a Great Corporation Could Be Run in That Fashion—A Dedicated Believer in the Principles of the TVA and a True Friend Should Be Appointed to the Board

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. EVINS. Mr. Speaker, under unanimous consent, I include an article by the able columnist, Marquis Childs, concerning the future of TVA in the RECORD. Mr. Childs' article is timely and it conveys the idea that one dedicated to the ideals and purposes of the TVA should serve on the Board directing the affairs of this great agency of the Government in the public interest.

I commend the reading of Mr. Childs' article:

POLITICS BREWING OVER TVA CHOICE
(By Marquis Childs)

An opportunity is coming up for the Eisenhower administration to prove that all its campaign claims to restore integrity and independence to Government were not just campaign talk.

A vacancy will occur soon on the board of the Tennessee Valley Authority, and with this second appointment the administration will, in effect, control the TVA board. The politicians have begun to maneuver for this exceptional plum paying $20,000 a year for a 9-year term.

But as originally conceived, the TVA was to be an independent agency free of politics both on the regional and national levels and able, therefore, to select those truly qualified to run what has become a $2 billion enterprise. * * *

This administration, like others in the past, has rewarded lame-duck Congressmen and the faithful who have worked in the Republican vineyard. It would seem, however, that both precedent and the administration's strong profession of integrity in Government would dictate another kind of appointment for TVA.

The choices are clear. The job can go frankly to a politician in the region, such as Representative HOWARD H. BAKER, Republican, of Tennessee. Some support had been generated for BAKER until he publicly declared he was not interested in the appointment.

Or at the other extreme the administration should be able to find a highly qualified man with independent judgment and with a sufficient background in administration, whether in public or private affairs and perhaps also with a scientific and engineering background. There are such men, and in the past it has been possible to recruit them for the kind of public service in the general welfare that TVA implies.

The first vacancy to occur on the TVA board was filled by President Eisenhower in August 1954 by the appointment of Brig. Gen. Herbert D. Vogel, who had been a district engineer of the United States Corps of Engineers. The President also made Vogel chairman of the board.

With the President publicly branding TVA as "creeping socialism," Vogel's position has been an anomalous one. Perhaps inevitably, he has been accused by TVA's intensely loyal partisans of giving less than his full support to the goal set forth in the TVA Act. That goal is no less than the rehabilitation of a whole region by development of the resources of land, water and people in the Tennessee Valley.

Vogel supported the Dixon-Yates power deal, even though many Republicans—conspicuously Senator JOHN SHERMAN COOPER of Kentucky—were convinced at the outset that this would backfire as it did.

He is accused by the Democrats of violating the nonpolitical precedent in the speeches he made in the last presidential campaign, boasting of what the administration had done for TVA. And, finally, it is said in the region that he already is anticipating partisan control of the board by predicting what it will do when, with another appointee, he will have a majority.

The term of Harry A. Curtis expires on May 18. At the time of his appointment he was dean of the College of Engineering at the University of Missouri. Before that, as a distinguished chemical engineer, he had had a great deal to do with developing TVA's chemical fertilizer plant.

Many claims are made for TVA by those who, over the years, have given it a dedicated loyalty. They see it as an integrated whole in which flood control, power development and agricultural improvement all have had a part in raising the level of living of a region that had suffered acutely from the ills which, to a lesser degree, plague other parts of America.

Even if the claims of partisanship are brushed aside, one outstanding fact remains. The TVA is a great enterprise. It cannot be run by politics-as-usual any more than a great private corporation could be run in that fashion.

First Governor's Kin Vacations in Arizona

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. RHODES of Arizona. Mr. Speaker, institutions of a new country, like Arizona, many times come from States which are long established. Likewise, many of the pioneer figures of Arizona were prominent in the East before they became Arizonans.

In his regular column of March 30, Bert Fireman, of the Phoenix Gazette, deals with the life of the Honorable John Noble Goodwin, Member of the House of Representatives in the 37th Congress from the State of Maine, and first territorial Governor of Arizona. There follows Mr. Fireman's article:

FIRST GOVERNOR'S KIN VACATIONS IN ARIZONA

Detroit is only a few hours from Phoenix by air, so that's the way the Philip G. Moons came. They're staying out at Jokake Inn. Phil is from Idaho, but now is assistant vice president of the National Bank of Detroit. His wife is the former Frances M. Kendall of Augusta, Maine. So why shouldn't they vacation in sunny Arizona, winter crossroads of the Nation?

There's a strong family historical link that attracts Mrs. Moon to this land of the sun. Her great-grandfather was Arizona's first territorial governor, the Honorable John Noble Goodwin of Maine. Mrs. Moon has a passel of documents and family heirlooms that fill in chinks in the story of that dignified New Englander who launched Arizona's territorial government.

Although their vacation here is a short one, Mr. and Mrs. Moon brought along a handful of those old papers. Safe at home at 44 Oxford Road, Pleasant Ridge, Mich. (a suburb of Detroit) is the governor's original commission signed by President Abraham Lincoln and Secretary of State William H. Seward on August 21, 1863.

Goodwin was a Maine native, a lawyer, and served in the 37th Congress as a Republican Representative. He was defeated for reelection by 127 votes. Three days after his term expired on March 3, 1863, President Lincoln appointed him chief justice of the newly authorized Arizona Territory. But when John A. Gurley of Ohio, originally picked to be Governor, died before starting west, Goodwin was named chief executive. He took the oath of office and proclaimed organization of the Territory at Navajo Springs on December 29, 1863. A few weeks later he established a temporary capital at original

Fort Whipple, located at Del Rio Springs in Chino Valley. A few months later the capital was established at the new town of Prescott.

One termer: Goodwin served as Governor little more than a year. In the campaign of 1864 he was elected our second delegate to Congress, succeeding Charles D. Poston. Poston challenged the results of the voting, circulating reports in Washington that Goodwin had been elected by fraud and deceit.

The legislative assembly passed a concurrent resolution supporting the choice of Goodwin and attesting to the authenticity of the election. The Moons have a certified copy of that document and also original certificates of the official voting. Arizona gave Goodwin 707 votes, cast 376 for Joseph P. Allyn, and only 260 for Poston—the "father" of the Territory but already losing prestige because of eccentric behavior.

Among their other original papers is a deed from King S. Woolsey, pioneer farmer, soldier, and miller, conveying half of an undivided "auxiliary" tract of land along the Agua Fria River to Governor Goodwin in consideration of $100. This was located 2,000 yards south of Woolsey's ranch, which would place it approximately at the present location of the mining hamlet of Humboldt.

In their possession also are a dozen certificates of mining lode claims in the Walker district, southeast of Prescott. Goodwin failed to realize expected profits on his investments in Arizona mining and lands. Possibly that is why he never returned here after serving one term as Delegate to Congress. He resumed practice of law in New York City, but 30 years later was living in California. There he was interested in old Spanish land grants, according to papers handed down to Mrs. Moon. Goodwin died at Paraiso Springs in California in 1887 and was buried in Augusta, Me.

While here the Moons hope to drive to Prescott to see the town where great-grandpa Goodwin brought Yankee thrift and sincerity to a land as rocky and yet beautiful as his native State.

Federal Program To Aid Depressed Areas

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. DINGELL. Mr. Speaker, it is a well-known fact that many communities in the United States have not shared in the general economic growth and development which most of the people in the country have enjoyed. According to the United States Department of Labor there are at present 77 communities with a labor surplus. To paraphrase the polite language of the Department of Labor, this means that there are scores of cities in the United States where unemployment is a major problem and where a considerable portion of the labor force cannot secure productive jobs. Many of these communities have appeared on this Department of Labor list year after year since the Department started to keep these data in 1951.

In addition there are hundreds of rural counties in the United States which have really never enjoyed the standard of living which is supposed to be the birthright of every American. We find counties in the United States where the per capita income is a third of the average in the rest of the country, sometimes even less than a third. The United States has a responsibility to alleviate conditions in these communities. Eleven years ago, Congress recognized in the Employment Act of 1946 that it is the responsibility of the Federal Government to assure the existence of maximum production and employment in the country. This means that it is the responsibility of the Federal Government to help eliminate conditions of unemployment and underemployment.

It is with this purpose in mind that I have introduced H. R. 5302. The bill in brief provides for a comprehensive Federal program to aid depressed areas. The major provisions of the bill are as follows:

1. TECHNICAL ASSISTANCE

The bill provides technical assistance to depressed areas, to help them to appraise their human and natural resources and their economic potential. Such service would help communities to plan their economic development realistically in terms of their resources and potentials.

2. LOANS

Communities with a labor surplus normally have difficulty raising needed capital. It is therefore imperative that the Federal Government supply the needed capital to create new activity and to stop the economic decline from snowballing. H. R. 5302 provides for a revolving fund of $200 million to be equally divided between rural and urban communities. Distressed industrial areas and low income rural areas would benefit from these funds. Business desiring to expand or to locate new businesses in these areas could get as high as 75 percent of the total funds required for the projects. The loans would be made at a reasonable rate of interest, not exceeding one-half of 1 percent above the cost of the money to the Government.

But in order to gain new business communities must have the necessary public facilities to make themselves attractive to new business. This may require the development of industrial parks or other public facilities that new business may deem essential. The Dingell bill provides for a revolving fund of $75 million which may be used to expend loans for public facilities. The interest rate on these loans is the same as for the other type of loans.

3. GRANTS

Some communities which have been subject to chronic unemployment for a long period may not be in a position to pay interest on or repay loans. The bill therefore provides that in extreme cases of community need, the Federal Government would make grants instead of loans. For this purpose the bill establishes a $50 million fund from which grants could be made to communities.

4. VOCATIONAL TRAINING AND COMPENSATION

Bricks and mortar are not sufficient to make a community attractive to new or expanding industry. An industry moving into a new location needs the necessary skills in order to start operations. In depressed economic areas this problem becomes even more acute because the new industries may not be able to use the skills that were developed by the industries which have ceased operations or moved out. The bill, therefore, provides for a vocational training program which would help the people in the community to learn new skills. It is, however, unrealistic to expect that persons who have been unemployed for a long period of time and have no resources could undergo effective training without any means of subsistence. The bill, therefore, provides also that persons undergoing training would be entitled to receive subsistence compensation for a period not exceeding 13 weeks. The amount of compensation would be equal to the average unemployment benefits in that State, and the funds would be paid by the Federal Government.

The purpose of the bill is to aid depressed areas. It provides, consequently, for strict eligibility requirements which would limit the benefits of the program to needy communities. In order to qualify for assistance under H. R. 5302 a community must have had 12 percent unemployment for a year prior to the application for benefits, or 8 percent for 15 months out of the preceding 18 months or 6 percent for 8 months during each of the preceding 2 years. In case of rural communities, the bill provides that only the poorest low-income counties would qualify for aid.

In order to ensure that the program provided in this bill would be carried out energetically the bill provides that a special agency be established to carry out the above provisions. Furthermore, the program involves business, labor, and agricultural groups as well as the welfare of the public at large. It is, therefore, deemed desirable that the administration of the program be placed in a separate agency rather than in one of the established agencies like the Departments of Commerce, Agriculture, or Labor, each one of which has special responsibilities to particular groups.

Our experience during the last decade has shown that depressed communities remain with us even in a period of prosperity and economic growth. Rapid economic change, deterioration and exhaustion of resources and changes in technology are some of the major factors which cause certain communities to decline economically. The Federal Government can help these communities from deteriorating and thus prevent overall recession. H. R. 5302 will, if adopted into law, not only help depressed communities, but will raise the economic level of activity for all of the United States.

Studying Monetary Policy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. MULTER. Mr. Speaker, opposition continue to mount against a Presi-

dential Commission in lieu of the proposal contained in House Resolution 85 for a congressional committee to study monetary policy.

The following letter, dated April 3, 1957, written to me by Clyde T. Ellis of the National Rural Electric Cooperative Association, is typical of the opposition to this substitution:

NATIONAL RURAL ELECTRIC
COOPERATIVE ASSOCIATION,
Washington, D. C., April 3, 1957.

HON. ABRAHAM J. MULTER,
House of Representatives,
Washington, D. C.

DEAR MR. MULTER: On behalf of the rural electric systems of the country who are threatened with an increase in the REA interest rate as a result of the tight credit, high interest rate policies of the Treasury and the Federal Reserve System, I wish to thank you for your vote on House resolution 85 on March 27.

We sincerely appreciate your stand on this resolution, and we hope that we can count on you to oppose any effort to substitute a Presidential Commission for a congressional investigation. Farmers have been put on notice by Mr. Burgess, Under Secretary of the Treasury, that if such a Commission is approved one of its first assignments will be to investigate agricultural lending agencies which would include the Rural Electrification Administration.

If and when the Congress wants to look into REA interest rates, it should do so through its established committees. We have no stomach for an investigation by a Commission which would doubtless be less interested in the welfare of rural people than in whitewashing the tight credit-high interest rate policies of the Treasury and Federal Reserve System, and certainly no honest investigation of REA's interest rates could be justified without a keen look at the forces behind high cost money to everybody.

Sincerely,

CLYDE T. ELLIS,
General Manager.

Water Woes: Suppliers Increase Rates To Finance New Facilities

EXTENSION OF REMARKS
OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1957

Mr. BLATNIK. Mr. Speaker, from the beginning of our history this Nation has been blessed with an abundance of natural resources. One of these resources, water, used to be so plentiful that it was not even considered a resource or thought of in such terms. It was just there, like the air we breathe, and we took it for granted, wasting it and polluting it as if we could never possibly run out of it.

Due to the fantastic population growth during the past decade, however, the problem of supplying sufficient quantities of water of adequate quality has suddenly become very serious indeed, and in many areas critical. While our water supply remains constant the demands placed on that supply are zooming and in the not too distant future we are going to have a water supply crisis on our hands unless we begin doing something about it now. The Wall Street Journal of April 4 contained an excellent article regarding the water problem. Under leave to extend my remarks in the RECORD I include this article which I call to the attention of every Member of the House:

WATER WOES: SUPPLIERS BOOST RATES TO FINANCE EXPANSION AS DEMAND GROWS PAST—MISSOURI UNIT PUTS FEE ON AIR CONDITIONERS—OHIOANS PONDER PIPELINE NETWORK—CHICAGO GLOATS OVER LAKE

(By Ray Vicker)

CHICAGO.—Water rates here will rise by one-third on May 1.

Missouri's St. Louis County is initiating a surcharge on water-consuming air conditioning equipment, also effective May 1.

The Hackensack Water Co., Weehawken, N. J., which serves 57 communities in northern New Jersey and 6 in New York, now is seeking to make permanent the 9.5 percent temporary rate increase authorized February 1, while Milwaukee is seeking a permanent 50 percent rate boost to replace a temporary 25 percent increase initiated last August.

These boosts are symptomatic of the ripples now ruffling the surface of America's water industry. Water—the Nation's most abundant mineral—is becoming costlier in hundreds of communities around the country. To finance expansion of water reservoirs or facilities, higher rates are being assessed or studied in a growing number of communities.

SPENDING WILL RISE

Expenditures for publicly owned water supply construction in 1957 will approach $675 million, up from $580 million in 1956 and $554 million in 1955, the United States Department of Commerce reports. Meanwhile, expenditures of private companies, which have been running around $100 million annually, should be stepped up about 10 percent this year, too.

Here in Chicago, local residents and suburbanites from the 54 communities on Chicago's water lines may gaze with some satisfaction across Lake Shore Drive's car-laden lanes to the cool, blue expanse of Lake Michigan.

"Our water supply is inexhaustible," boasts James W. Jardine, Chicago's commissioner of the Department of Water and Sewers.

Numerous other cities aren't as fortunate. Even Chicago plans to spend $154.5 million through 1960 in a 5-year program launched in 1955 to expand facilities for delivering lake water to the city's taps.

Harry E. Jordan, secretary of the American Water Works Association, headquartered in New York, says: "Aside from those fortunate cities on the Great Lakes and in certain spots along our major streams, adequate water service in the future is going to depend upon the development of water storage reservoirs. The day has passed when many cities of any importance can depend upon the daily flow of a stream to provide the water supply needed."

PIPELINE NETWORKS

Looking ahead, some visionaries are predicting that networks of long distance water pipelines may come into being in the next few years. Already, California cities are reaching as far as 550 miles for water. New York stretches 125 miles for its water, while Denver goes as far as 70 miles. Meanwhile, in northern Ohio plans are under consideration for a pipeline network which would bring water to eight countries from Lake Erie.

One Department of Commerce study noted that 42 percent of the 552 water systems serving communities of 25,000 population or larger had deficiencies. The Department estimated that it would require estimated expenditures of $3.2 billion to correct them.

Getting the money for such expansion is a problem which is putting upward pressure on current rates. In addition, metering of big users is being stepped up to keep charges in line with consumption. Users of air conditioning equipment face surcharges similar to those already scheduled for St. Louis County.

Expansion of facilities may be "too little and too late" in some cases. This summer, householders in perhaps 1,000 communities will watch their lawns turn brown in the hot sun, while city fathers ban sprinkling lest reservoirs run dry, or pressure in mains drops to a dangerously low level.

PROBLEM GROWS

"The matter of providing an adequate water supply is becoming more of a problem everywhere in the United States," warns D. P. Morse, executive vice president of Indianapolis Water Co.

During the past decade, expansions of water systems in many cities have not kept pace with zooming population. To further complicate the situation, the average person has boosted his use of water for baths, drinking, dishwashing, clothes washing and a variety of other appliance uses, while industry is gulping down huge draughts of the life-giving fluid.

Total water use in the United States soared from 175 billion gallons daily in 1945 to 262 billion gallons daily in 1955 and to an estimated 282 billion gallons daily today. By 1960, thirsty land, industry and people will be using 312.5 billion gallons of water daily, according to the United States Commerce Department.

Irrigation accounts for nearly half of the water used—a percentage which is being whittled down as industrial usage rises. Today, industry takes 10 gallons of water to produce each gallon of gasoline, 300 gallons of water to brew a gallon of beer, 3,600 gallons of water to manufacture a ton of coke, 65,000 gallons of water to pour and roll a ton of finished steel, and 600,000 gallons of water to produce a ton of synthetic rubber.

United States Steel's giant Gary Works, in Gary, Ind., pumps 550 million gallons of water into the plant daily from Lake Michigan—enough water to make a lake 10 feet deep measuring 15 city blocks in length and width. At Weirton, W. Va., Weirton Steel Co., a division of National Steel Corp., requires a pumping capacity of 265 million gallons a day to keep steel production going. Eastman Kodak Co., of Rochester, N. Y., reports it consumes enough water every day to satisfy a city of 300,000. During a peak period in the summer the Union Stockyards here will consume 5 million gallons a day while Armour & Co. plants will use 10 million gallons a day.

Paper mills use 250 tons of water for every ton of sulphite woodpulp, with most good-sized mills consuming more water in a day than would a city of 50,000

Industrial and steam power use now account for around 45 percent of total water use, compared with 39 percent in 1946 By 1970 the figure is expected to rise to about 51 percent.

Most big water consuming industries build their own water plants. Nevertheless, about a third of the water supplied by public water systems goes to industrial and commercial establishments.

Water supply now ranks with labor and transportation as a key factor in determining plant location. Some areas are being bypassed by industry because of water shortages, while water may play a big part in slowing the mushrooming growth of the Southwest.

NO COINCIDENCE

It is no coincidence that heavy water-consuming chemical plants have been locating along the Ohio and Mississippi River Basins or that one-third of the Nation's total plant spending in the past 5 years has been concentrated in the Great Lakes area.

Most people are concerned with public water supply, whether or not they have a stake in industry. Today, 17,000 water supply firms serve 120 million people, says the American Water Works Association. There's no doubht water demand is soaring.

The daily consumption of water at San Francisco for example, jumped from 67.9 million gallons daily in 1940 to 104.2 million gallons in 1950 and to 142.7 million gallons daily in 1956, reports G. W. Pracy, general manager of the San Francisco Water Department. Current capacity is 190 million gallons a day, with the city reaching 190 miles away to the Hetch Hetchy Water Reservoir for its supply.

Philadelphia Suburban Water Co. added 58,000 new customers in the past 10 years, a 60-percent increase. In Los Angeles, Burton S. Grant, assistant general manager of the department of water and power, reports daily consumption in 1956 totaled 394.7 million gallons, up 23 percent in a decade.

That same story of mounting demand could be related by almost every water department in the country. Users on public water lines drew off an estimated 18 billion gallons of water daily in 1956, compared with 17 billion in 1955 and with 12 billion in 1946. Per capita consumption now runs a little over 150 gallons daily, compared with 123 gallons in 1940.

HOUSEHOLD USE

Industrial users kick up that average. Nevertheless, the amount of water consumed in the typical American household would stagger a desert-bred Arab.

"An average of 137 gallons of total per capita daily consumption is devoted to domestic use," reports the Chicago-headquartered Council of State governments, in a 48-State water use report. That's enough water to fill 3 ordinary oil drums and still leave 13 gallons over.

Every time a toilet is flushed it takes 4 to 7 gallons of water. A shower runs about 25 gallons down the drain. Two gallons usually are used for washing dishes. An automatic dishwasher may take 25 gallons. Bathing the children takes an average 40 gallons each. The average person drinks a half to a gallon of water daily.

Waterworks managers reserve their darkest looks for the air-conditioning unit. Reason: These units are operated only a relatively short period of the year in most areas. Yet, when used, they boost peak demand sharply, and waterworks facilities must be built to service peak requirements rather than average daily consumption. Water is used chiefly in commercial and industrial air conditioners, most home units use a refrigerant.

"Because of the present low water rates and the short air conditioning season, the revenue derived from the sale of water for air conditioning purposes cannot begin to cover the annual fixed charges for construction of the large standby plant capacity needed to supply the high water demands," says H. H. Gerstein, assistant chief water engineer of the Chicago Water Department.

ENOUGH FOR A CITY

The Chicago Department of Water and Sewers estimates that a 1,000-ton unit in a commercial establishment uses 2,160,000 gallons of water a day, or about the amount of water which normally would supply the needs of a city of 20,000.

By installing water conservation equipment, the air conditioning user may slash water usage by 90 percent. Such equipment eventually may be mandatory in many cities. Chicago now is considering measures to boost rates to air-conditioner users who use water and don't have conservation equipment.

Chicago's general rate increase of one-third will be come effective May 1, with the rate per 1,000 gallons of water rising from 12 cents to 16 cents for metered customers. Affected will be 3.7 million consumers in the city plus another 678,000 consumers in the suburbs supplied by the city system.

The 9.5 percent increase which Hackensack is seeking to make permanent is necessitated by expansions made by the company to keep pace with rising demand, according to the company. Capital expenditures have averaged about $5 million annually.

DETROIT STUDIES BOOST

"An increase in water rates to suburbs now is under consideration," says G. Remus, general manager of the city of Detroit Board of Water Commissioners. Detroit currently has a $35 million expansion under way and due for completion in 1960.

Expansion is under way at other companies and water departments around the country.

"Work expected to be performed between now and 1960 will total approximately $10 million," says David V. Auld, director of sanitary engineering for the District of Columbia. This follows $45 million spending on expansion since 1948.

Denver now is engaged in a 15-year $100 million program aimed at doubling its water supply. It isn't expected, however, that usage restrictions on this water-pinched city will be lifted until 1962 when $60 million worth of work now underway will be completed.

The Miracle at Parris Island

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, April 8, 1957

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "The Miracle at Parris Island," written by G. Lincoln Rockwell, and appearing in the May 1957 issue of the American Mercury.

It is an exceedingly interesting and pertinent article, and one which I think every American should read.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE MIRACLE AT PARRIS ISLAND

(By G. Lincoln Rockwell)

It's 4:30 a. m., but still just as dark as it was at midnight. A chilling movement of damp, night air rustles the blades of the palmetto trees on Parris Island, but there is no sound. The only human figure visible is a lonely sentry at his post.

The miracle of Parris Island is about to take place.

In wooden barracks surrounding the deserted parade ground sleep thousands of young men from all over the eastern United States. Some of them are the bright, eager, well-educated boys we like to think of as typical Americans. But many, many more of them are not what we like to picture as American youth. Some are juvenile-delinquent types, undisciplined, arrogant, and disrespectful of all authority. Some, including many high-school graduates, can't read well enough to pass third-grade reading tests. Some are in very bad physical shape—weak or fat, or both. A frightening proportion are almost totally unacquainted with old-fashioned patriotism. None of them know anything about defending their country.

At 5 a. m. these thousands of teen-agers will explode into feverish action, but now they are sleeping like the little children most of them still are at heart. Only the man who is charged with teaching these boys how to be marines—and men—is awake. At 4:30 a. m., half an hour before recruit reveille, the drill sergeant—the DI—is up, impeccably dressed and ready to show his new platoon of teen-agers what a marine is supposed to be like. He will help hustle them into the "head," out to exercise and to breakfast formation, acting as a combination mother, father, boss, teacher, sheepdog, psychiatrist and big brother. Everything he will ask them to do, he will be able to do much better. Most of his kids will get from their DI the permanent picture of an ideal Marine that they will carry with them the rest of their lives.

For almost 17 hours, this enlisted marine, this DI, will guide 70 kids through the most cataclysmic change in their lives. He will shout, cajole, wheedle, sneer, praise, lecture, beg, despair, pray, and maybe damn. He will be literally hoarse for the first week. Seven days a week, he gets up before the recuits, shepherds them through 17 hours of patience-wrenching training and sees them to bed at 9:30 p. m. Then he will sit up and plan activities for the next day. This goes on for 12 weeks.

At the end of that time, the 70 kids will be men. Gone will be the flabby bellies, the ignorance of the greatness of America, the automatic rejection of authority, the lack of purpose in life and the general softness. They will be more than men—they will be marines. Perhaps this alone should be considered the miracle—but it isn't.

The miracle of Parris Island exceeds even this accomplishment. Because at 5 a. m., when the bugle sounds reveille and those kids hit the deck, the DI will be faced with a much bigger problem than simply making marines out of teen-agers. DI's have been doing that for over a hundred years, and their success is attested by the glorious record of DI-trained marines at places like Belleau Wood, Tarawa and Iwo Jima. But today, as the DI steps into the barracks to hold reveille, he will not only have 70 difficult problems in front of him—he will have almost impossible pressure from behind.

Since the tragedy of the McKeon case, when five recruits were drowned, justified public outrage has been magnified and promoted by Communists and subversives into a conspiratorial campaign to "get" the Marine Corps. Every conceivable case of marine brutality has been magnified by disloyal elements in the press to build up public opinion for a major change—a softening—of Marine training. The Reds don't want a razor-sharp, highly patriotic Marine Corps to undermine their efforts to democratize and soften the other armed forces, nor do they want their brethren overseas to have to fight tough marines.

As usual, when the Communists decide on an objective, an enormous apparatus of hidden agents and sympathizers goes into brilliantly planned action. The pressures on Government officials become irresistible. Strangely, America's supposedly conservative newspapers like the New York Times, for instance, followed the same line that is printed in Red papers, which call the marines "storm troopers." The Times, for instance, termed marines "professional killers." This is, in a technical sense, possibly true, but there is a gangster-connotation to the term which is wholly inapplicable to the marines—and the Times know this. In the most recent article on the subject in the Times, a correspondent who was at Parris Island at the same time I was, and received the same courtesy

and access to all information, wrote two bald misstatements of fact which were publicly called lies by the commanding general. Swagger-sticks, pencil-thin wooden wands carried by Marine officers as part of the uniform, are referred to as "22-inch steel-tipped rods," and it is hinted that they are used for beating recruits.

The truth is that the pressure from public opinion and from his superiors has caused Marine Corps commandant, Gen. R. C. Bate, to set up the most extraordinary machinery to make even the slightest brutality impossible.

There is no chain of command to the generals in charge of recruit training. The commanders report directly to General Pate. And, in addition to this, he has set up a special corps of officers whose job it is to inspect the activities of DI's, constantly and unannounced. Severe and instantaneous disciplinary action is taken against any DI who is proved to have committed any act of maltreatment. The maltreatment has been so specified that, if my own children were marines, and I were their DI, I would have been court-martialed the first day. The use of any of the epithets which have been the treasured prerogatives of sergeants from time immemorial has been absolutely prohibited. General Greene, the commander of recruit training at Parris Island, is, understandably, almost violent on the subject of eliminating so-called brutality. His career is on the line, and too many incidents in the papers will ruin him. While he stands loyally and courageously by any of his DI's until they are proved to have violated the new code, he leaves nothing to the imagination of DI's when he tells them what will happen to those who swear or lay hands on a recruit.

The result is that the DI, facing 70 aggressive, high-spirited, undisciplined American teen-agers, must try to accomplish the age-old job of making disciplined marines out of them with his hands partially bound, and cotton stuffed in his mouth. He is constantly under the scrutiny of gimlet-eyed inspectors, and Parris Island abounds with correspondents trying to trap him into statements or admissions which could be used against the corps in the press. In addition, there is evidence that agents are planted in the platoons as recruits, with the job of provoking the DI—and then yelling for the press. One DI overheard four such vermin planning it all out: one was to be the dumb guy, another the wise guy, a third the cry baby, another the squealer. They would bounce the DI back and forth until his patience was exhausted.

In addition, Reds on the outside organize mothers' committees or any other group to take advantage of the natural tendency of homesick kids to write home to mom about how tough it is at Parris Island. There have been cases where recruits were hurt fighting with each other—and then blamed the bruises and cuts on the D. I.

Right or wrong, the report of the accusation in the press adds one more nail to the coffin they are trying to build for Marine Corps toughness.

The press eagerly prints every available story which might hurt the corps. How come they are not equally anxious to print the story of what the corps is doing for thousands of young men, as shown by stacks of letters like the following from two mothers?

"FEBRUARY 7, 1957.

"DEAR GENERAL LITZENBERG: I have just finished reading an article in the New York Mirror about the incident in platoon 399. I think it is about time that someone speaks out about the good points of our Marine Corps. My son, Pvt. Bernard J. Avitabile 1426350, platoon 374, is home now on leave from Parris Island. I am so proud of him I could bust. He came home 23 pounds heavier, tanned, and strong as a bull. When he left for Parris Island, he was a boy who did not know exactly what he wanted. He came home a man. He sits down and talks things out calmly. He told me all about his training and how he enjoyed every minute of it. He said 'sure, things sometimes seem impossible to accomplish but what a wonderful feeling when you succeed.' He also explained the Marine Corps has a reason for every ruling. He said on graduation day, he felt '10 feet tall.' And I might add that when he wears his uniform he looks it.

"Everyone that has seen him has remarked how good he looks. He has improved physically and mentally.

"My son does not know I have written this letter to you. I just had to write, after reading the article. I only hope other mothers, who have been as pleased as I, will write in and say so.

"You may quote any of my letter to Mr. Nelson R. Porter. I want him to know the other side of the story."

"A proud and grateful mother.

"MRS. JOHN AVITABILE.

"STATEN ISLAND, N. Y."

"WALLACE M. GREENE, JR.,
"Brigadier General, USMC.

"DEAR SIR: Thank you for your letted dated August 30, regarding our son.

"Probably it is not customary to reply to such letters and we know very little concerning military procedure, therefore we are not writing this along those lines, but as parents, to one who has given their son what they wanted him to have more than anything else.

"On May 31 we sent to Parris Island a 17-year-old boy who had many fine qualities and high intelligence and who also was the most unhappy, uncooperative, and bewildered individual that we ever dealt with. Not just an ordinary teenager with their growingup faults, but one who had his parents and teachers actually concerned.

"Just 3 months later you sent back to us, not only a marine, but the man we knew he was capable of being. Of course, like most any marine, he is sure that he had the best D. I.'s on Parris Island and so to them, to his chaplain, and the Marine Corps, we will be forever grateful that we can now be proud of our son, not only as a marine, but as a man."

Evidence like that, and the thousands of physically fit, mentally alert, disciplined, gentlemanly young Americans being graduated from Parris Island, should be more than enough proof for any impartial news medium to print the true story. This inspiring story is the miracle at Parris Island—the story that, in spite of unheard of pressure from above, and multiplied difficulties and agents provocateur from below, the D. I.'s are still making marines.

The typical D. I. works hours which would break a lesser breed of men. He gets no special pay. He can't usually have his wife or family with him, both because of the housing difficulty, and the impossibility of being with the family anyway. He gets panned in the press and hated by misinformed mothers as a brute. He is beleaguered by his officers to act like a perfect gentleman in dealing with the "dead end" type kids he must handle. He is meat for sly newspapermen who try to gain his confidence and who often lie about him. He is, in short, under more pressure than any other enlisted man in any service—and it would be relatively easy for him to escape. All kinds of psychiatrical screenings are continuously held to make sure the D. I.'s are fit to deal with the recruits, and it would be no trick to be relieved of this duty. But in spite of all this, the D. I.'s don't quit, and they don't allow impossible rules to scare them into ineffectiveness. This is not to make the slightest implication that the D. I.'s defy the orders of their officers, or that they are the least bit brutal. But they know with a sure instinct that if they preoccupied themselves with a 100 percent effort to avoid saying "damn it" at appropriate times, for instance, they would be unable to concentrate the necessary vital attention on making marines out of kids. Within the limits of human capabilities, they obey the spirit of their officer's regulations, for they know that even the slightest slip could cost them their stripes and careers—as it has for some.

I asked one D. I. out on the parade ground how he stood it—why he was trying so hard. I know it's considered corny in these days of super-sophistication to talk about glory, patriotism, and deep emotions, but I am not ashamed to admit that the sergeant's answer to my question brought a lump to my throat. I was filled with genuine love and fellow feeling for this shouting, ram-rod straight little man with a foreign-sounding name.

"How can you keep this up, month after month, with all the pressures on both sides of you, with small pay, long hours, no chance for family life, and the curses of ignorant people?" I asked.

"I'd rather be court-martialed and cashiered out of the corps than to make a poor Marine or hurt the Marine Corps, sir" he said.

When I asked him what reward, if any, he got out of his task, his answer was equally inspiring.

"Well," he said, reflecting a moment, "when I see these kids march off at graduation, looking sharp, lotsa pride in their faces, I remember what a sad bunch of slobs they was coming in. And they tell me. Most of 'em do. They tell me how much they hated me for makin' 'em learn to be good Marines, but how much they are grateful when they learn the score. Makes me feel good."

That is the miracle on Parris Island. You can get the same answer from most of the other D. I.'s—and it's reassuring to think that it is still possible to find four or five hundred men who feel like that. They—the D. I.'s—are saving the Marine Corps in its darkest hour.

It would be nice to end the article with that sentence—but it can't be done. There is, unfortunately, more.

Most of the officers and men in the corps, from the top brass to the privates, feel that they can weather this storm and regain public favor if only they try hard enough, if they eliminate every last case of maltreatment. This is like Cinderella trying to get popular with her stepmother by dressing prettily, smiling sweetly, and curtsying.

The Communists and phoney liberals are out to get the corps, and they are not going to be deterred just because the corps doesn't deserve to be got. The repeated evidences of lack of good faith on the part of the press are sufficient grounds for such a statement, but there is more. Those familiar with the Communist conspiracy will know the pattern right away. Unfortunately, professional marines have usually been too busy with military affairs to recognize the symptoms, but they are learning fast.

The only way the Marine Corps can preserve its toughness and its ability to win and save lives in combat is to educate the public to the fact that sadism is the extreme exception in Marine Corps training, and that most recruits and the country benefit enormously from the program at Parris Island and San Diego. You, as a member of the public must help. When you hear stories of marine brutality, check the facts, and reveal them in your community. The corps invites personal inspection of its program and hides nothing from anybody. Suggest that complaining mothers and fathers visit the training camp, and see for themselves.

Above all, remember that the Reds are out to get the elite corps which has helped win American freedom all over the earth. Only you, the public, can help the corps which has done so much for you. Don't let down the men who have made that miracle at Parris Island.

Lawyer Dulles

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. MULTER. Mr. Speaker, the following article by Stewart Alsop, which appeared in the Herald Tribune of April 4, 1957, makes most interesting reading. I am sure most readers will agree good legal tactics do not necessarily make for good diplomacy:

LAWYER DULLES
(By Stewart Alsop)

WASHINGTON.—If you see him in action, it is easy to understand why Secretary of State John Foster Dulles was one of the world's most highly paid corporation lawyers. At his press conference the other day Secretary Dulles found his path liberally strewn with booby-traps, mostly placed by his admiring biographer, John Robinson Beal. It was a pleasure to watch Dulles dancing delicately around them, because it is always a pleasure to watch a first class mind in action.

Yet one could not help wondering, also, whether a brilliant lawyer does not suffer from certain liabilities as a Secretary of State. A lawyer is an advocate. His whole training prepares him to put the best possible face on a client's case, suiting his argument to the occasion and the audience.

This ingrained habit has been responsible for most of Dulles' troubles. Take the biggest boobytrap Dulles faced at his press conference, the report in the Beal book that Dulles had withdrawn the Aswan Dam aid offer "brutally, without (giving Nasser) a chance to save face," in order to force a Middle East showdown.

At his press conference, Dulles claimed that he had withdrawn the aid offer "in a courteous manner." What actually happened was this: Dulles received the Egyptian Ambassador, Achmed Hussein, who had been dispatched to Washington by Nasser to accept the American aid offer, on the afternoon of last July 19. He cited to Hussein various reasons why the United States wished to withdraw its offer (and no one disputes that there were excellent reasons for doing so). He then showed Hussein a press release citing Egyptian economic weakness as the main reason for withdrawing the offer, and asked Hussein to comment on it.

Since the statement was already prepared for release to the press, there was really nothing Hussein could say. Dulles was polite to Hussein, and the press release contained the usual protestations of "our friendship for the Egyptian people." In this purely formal sense, the manner of the withdrawal was courteous. But in real terms, it was a slap in the face for Nasser, as Nasser instantly realized.

There is no doubt at all about one main reason why Dulles slapped Nasser's face so publicly. The Aswan Dam project was at the time under the most violent attack from an alliance of rightwing Republicans and cotton State Democrats. A month before, under pressure from this alliance, Dulles had said that there was no likelihood of any United States funds being used for the project.

Letting Nasser down easily in such a way as to save his face—by saying that the project had to be reconsidered, for example—would have caused an explosion in the Senate. Dulles took office determined not to repeat his predecessor's mistake of alienating Congress, and his manner of turning Nasser down was certainly, in part, a gesture of appeasement to the antidam Senators.

Dulles also came to office, however, determined not to make his predessor's other mistake, of alienating the press and through the press the public. Domestic political appeasement may sometimes be wise, but it is not heroic foreign diplomacy. And Dulles undoubtedly did have another reason for his abrupt rebuff to Nasser—he wanted to expose the hollowness of Soviet economic aid offers to Egypt.

In private conversations with sympathetic reporters like Beal, Dulles, like a good lawyer, no doubt emphasized this more heroic aspect of the matter. And thus his rebuff to Nasser emerged not as a necessary gesture of domestic political appeasement, but as a truly major gambit in the cold war, comparable in the sphere of diplomacy to the calculated risks of war taken in Korea and Formosa.

When this sensational version of the episode caused the inevitable explosion, Dulles, the good lawyer again, shrugged off the withdrawal of the aid offer as a necessary act performed in a courteous manner. All this suggest why his critics at home, and especially abroad, use the word "disingenuous" and other, harsher adjectives, when they describe Dulles. But in his own eyes, Secretary Dulles is certainly not disingenuous at all.

He simply puts his client's case in the best possible light, depending on the audience, as he was trained to do. In a good lawyer, this is an admirable habit. But in a Secretary of State of the United States, it can cause a lot of trouble, as recent history very clearly suggests.

Sound Thinking on the Budget

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. MINSHALL. Mr. Speaker, as one who has voted consistently with the economy bloc thus far this session. I thought that my colleagues should have the benefit of two editorials that appeared in the Cleveland papers; the first from the Cleveland News of April 4 and the second from the Cleveland Plain Dealer of April 5. The editorial follows:

[From the Cleveland News of April 4, 1957]

WE'RE DISAPPOINTED IN IKE

We purposely have waited a week to learn if President Eisenhower would amend his derision of Congress' sincere attempt to reduce his $71.8-billion budget.

Lamentably, he does not.

At his weekly news conference yesterday, Mr. Eisenhower again displayed inexplicable irritation regarding economy cuts. He declared he sees "no chance" for what he called a substantial budget cut such as $2 billion.

He added he doesn't expect any startling results from the administration's own effort to trim the gargantuan budget. He spiked hopes for a tax reduction before the end of his second term, although Budget Director Brundage, and Treasury Under Secretary Burgess said Tuesday they believed "sizable" tax cuts will be justified next year.

In his latest remarks, the President does not help the cause for economy in Government—no more than he did last week when he derived attempts to cut the budget as "fatuous" and foolish piecemeal economy.

He penalizes the economy drive.

This is the same President Eisenhower who 4 years ago promised to exercise a prudent control over Government expenditures.

Frankly this newspaper, which has been a consistent supporter of Mr. Eisenhower, is keenly disappointed in the budget statements he made last week and yesterday.

By now, we and everybody can tell that public opinion throughout the country, as reflected by the unprecedented deluge of mail upon Washington, is overwhelmingly for substantial budget trimming.

Mr. Eisenhower gives every impression of going against this public opinion when he belittles economy moves within the Congress. We cannot understand his reasoning—particularly when he spoke of budget cuts ranging to $150 million as "foolish, piecemeal economy."

We do realize the necessity of adequate financing in the struggle for peace. But that does not rule out obvious ways to trim domestic expenditures and even foreign aid.

Newspaper publisher John S. Knight, one of the greatest Eisenhower adherents, writes in his personal column that the "Present Deal" of President Eisenhower will "go far beyond anything ever contemplated by Presidents Roosevelt and Truman." Mr. Knight also declares that "it is tragic, indeed, that a man like Eisenhower, a self-proclaimed economic conservative, has forsaken his earlier convictions for a philosophy of government that is unsound and fraught with peril."

We do not quite embrace this extreme gloom.

We do say respectfully to the President that, instead of deriding attempts to trim his budget, he should return immediately to his original role as an economy advocate and support with all the power of his executive office Congress' effort to reduce governmental costs wherever and in whatever amount it can be done without endangering national security or any vital Federal service.

[From the Cleveland Plain Dealer of April 5, 1957]

UNCONTROLLED SPENDING

In two moves this week Senator HARRY F. BYRD, Democrat, Virginia, has shown how Congress has lost control over annual Federal expenditures.

One was a compilation of 26 new spending programs which he found in President Eisenhower's record peacetime budget. Congress is being asked to authorize more than $3 billion for these programs, although only about $700 million would be spent in the first year. These new programs, along with the expansion of 15 others, constitute "a spending spree that will continue inflation and increase the cost of living," BYRD said.

The new programs all have their good points, in that they are aimed at achieving desirable objectives, such as building schools, preventing juvenile delinquency, planting trees, promoting medical and dental education, etc. But are they necessary? Could we get along without them? Moreover, once started, they would be likely to continue indefinitely, to expand in scope and to become ever-growing burdens on the taxpayer. And once Congress commits itself to these programs, it loses control of them, since it is virtually impossible to abolish a Federal spending project.

In his other move calling attention to Congress' loss of control over Federal spending, BYRD revealed that Federal agencies will start the next fiscal year with $70 billion of unexpended balances while the Administration is asking for $73,300,000,000 in new spending authority. Thus, the Administration has so much money to play around with, that even if Congress cuts the new requests in half, it could still spend the $71,800,000,000 it proposes to get rid of next year and have money left over.

To remedy this situation, BYRD announced the introduction of a resolution to restore congressional authority over expenditures. This would require all appropriations to be consolidated in one bill and it would also place an annual limitation on the amounts

that could be spent, both from current appropriations and the unexpended balances of previous appropriations.

These proposed reforms will have to be adopted eventually if Federal spending is ever to be controlled, if there is ever to be another tax cut, if a start is ever to be made on a reduction of the Federal debt.

President Eisenhower, we believe, is out of touch with the people when he says that the people are demanding the new services which his budget projects. What the people are demanding, in our opinion, is less Federal spending and lower taxes.

Federal Civilian Personnel

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. HOSMER. Mr. Speaker, the Council of State Chambers of Commerce issue a bulletin from time to time entitled "Federal Spending Facts." Statistical material therein is collected by the council's research director, Eugene P. Rinta, and is consistently reliable. The most recent bulletin describes Federal civilian personnel as "one of the fatty areas in the 1958 budget." The bulletin takes a strong stand favoring S. 1683 which would set a ceiling of 2,125,000 on the number of employees of the executive branch of the Government. Perhaps legislation of such inflexibility would not permit that branch to meet the needs of changing situations. I have in mind the futility say, of placing a ceiling on Post Office Department personnel. Two and one-half million new Americans every year simply means expansion to meet new service demands. The same is true of many other areas of government. But the bulletin does give a vivid picture of the savings possible from even a lesser number of personnel cutbacks which do not involve constriction of essential service or inhibition of necessary expansions to meet population growth. Pertinent text extracts and tables from the bulletin are as follows:

RECENT TRENDS IN FEDERAL EMPLOYMENT

At the outbreak of the Korean war in June 1950 there were 1,951,579 paid civilian employees in the departments and agencies which constitute the executive branch of the Government according to current reports of the Civil Service Commission.

The fluctuation in employment since June 1950 is shown in Table I with totals broken down to civilian personnel in the Defense Department and those in other departments and agencies:

TABLE I

	Total	Defense Department [1]	Other
June 1950	1,951,579	753,149	1,198,430
June 1951	2,475,154	1,235,498	1,239,656
June 1952	2,589,477	1,337,095	1,252,382
June 1953	2,473,078	1,257,657	1,215,421
June 1954	2,381,700	1,208,900	1,172,800
June 1955	2,371,373	1,186,535	1,184,838
June 1956	2,372,001	1,179,836	1,192,165

[1] Includes some 40,000 or more employees each year engaged in Army civil functions.

The Korean war mobilization accounted for the sharp rise in civilian employment from June 1950 to June 1952. After July 1952, employment began to recede until June 1954, after which it leveled off except for seasonal changes. From June 1954 to June 1956, there was a further reduction of 29,064 in the Defense Department but this reduction was largely offset by an increase of 19,365 in other agencies. This increase brought employment in nondefense activities back to about the June 1950 level which marked the height of the Truman Fair Deal program.

HOUSE COMMITTEE SUGGESTS 2,000,000 EMPLOYEES AS ADEQUATE

During the past several Congresses the House Post Office and Civil Service Committee has been charged by the House with the responsibility of reviewing manpower utilization in the executive departments and agencies. In 1955 the committee appointed a subcommittee headed by Representative JAMES C. DAVIS of Georgia, to intensify and expand its work in this field.

This subcommittee issued an interim report July 27, 1956, in which it asserted:

"All the essential tasks of the Government can be done with 2 million or less employees. This employment level can be reached if the departments and agencies will develop and implement an effective manpower program based on the functional approach as recommended by the committee."

BUT THE 1958 BUDGET INCREASES PERSONNEL

Civilian personnel in the executive branch will reach a total of 2,418,461 by June 1957, according to present estimates and the 1958 budget calls for a further net increase to 2,447,933 by June 1958.

A comparison of positions budgeted for the end of fiscal year 1958 with the actual positions at the end of fiscal 1956 last June 30 shows that increases are planned in 57 departments and agencies while decreases appear in only 13 agencies.

There will be a net decrease of 9,601 civilian employees in military functions of the Defense Department resulting from reductions in the Army, Air Force, and the Office of the Secretary, and an increase in the Navy.

Table II shows the personnel totals at the end of fiscal 1956 and the end of fiscal 1958 for all nonmilitary departments and agencies for which an increase in personnel is budgeted. These personnel figures, which were compiled by the Bureau of the Budget, show a total increase in personnel of 85,655.

The cost of salaries and other expenses of 85,655 employees is approximately $450 million. Thus if the aggregate employment in these departments and agencies were held to the June 1956 total, there would be a personnel savings of $450 million in the 1958 budget.

SENATOR JOHNSTON PROPOSES PERSONNEL CUT THROUGH NORMAL ATTRITION

On March 21 Senator OLIN D. JOHNSTON, chairman of the Senate Post Office and Civil Service Committee, introduced a bill, S. 1683, which would produce a substantial budget reduction. The purpose of his bill is twofold. First, it provides for a reduction in personnel that is painless insofar as individual employees are concerned. Second, it sets a ceiling at 2,125,000 on the number of employees in the executive branch.

The reduction of personnel will be accomplished by a prohibition against the filling of any more than 25 percent of the job vacancies which occur. This prohibition will remain effective until the total number of employees has been reduced to the ceiling of 2,125,000.

The Director of the Bureau of the Budget is the key official charged with administering this personnel reduction program. He is given a responsibility for making continuing studies of the personnel needs of the executive departments and agencies and is also charged with deciding which vacancies should be filled within the 25-percent limitation. Under this provision of the bill, the budget director could approve the filling of more than 25 percent of the vacancies which occur in the more essential and efficient activities. But to the extent this were done, some less essential or less efficient agencies or units would have to get along with the filling of fewer than one-fourth of their vacancies.

WHAT S. 1683 WOULD MEAN IN DOLLAR SAVINGS

The reduction in employees from the June 30, 1957, level to the proposed ceiling of 2,125,000 would mean elimination of 293,461 positions. On a full-year basis this would produce a budget savings of about $1.5 billion.

Assuming that it would take 16 months beginning July 1, 1957, to bring the employment total down to the ceiling, about 218,400 positions would be eliminated by the end of fiscal year 1958. If this reduction occurred evenly through the year at about 18,200 a month, the savings in the 1958 budget would be close to $600 million.

TABLE II.—*Projected increase in executive branch personnel (excluding Department of Defense military functions)*

	Employment at end of fiscal year		Increase, 1958 over 1956
	1956 (actual)	1958 (estimated)	
Executive Office of the President:			
The White House Office	372	405	33
Bureau of the Budget	430	472	42
Office of Defense Mobilization	259	265	6
Other	132	190	58

Mideast Showdown Must Come Quickly

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1957

Mr. DINGELL. Mr. Speaker, recently I placed remarks in the RECORD on the subject of American and U. N. commitments to Israel because of Israel's withdrawal from the Gaza strip and the Gulf of Aqaba. I recently found an article in the Detroit Jewish News by a distinguished journalist, my good friend, Mr. Philip Slomovitz. That article, entitled "Mideast Showdown Must Come Quickly," sets forth still further reasons why the United States and the U. N. have incurred a very real duty to guard against injury to Israel resulting from her compliance with the resolutions of the U. N. and the desires of the United States.

The article follows:

[From the Detroit (Mich.) Jewish News of March 29, 1957]

MIDEAST SHOWDOWN MUST COME QUICKLY

We are so far removed from a solution in the Middle East that it is proper to ask that our Government take firm steps to assure just approaches to the Israel-Arab issue and to insist upon strict adherence by the Eisenhower administration to certain assurances given Israel to protect her right on land and on sea.

Three editorials of the past week emphasized the urgency of the issue. The Detroit News found it necessary to challenge the complacency of the Eisenhower administration when it declared:

"Some weeks ago when Israel was ignoring United Nations' request that she give up occupied Egyptian territory, Washington hummed with tension. Today while Egypt no less flagrantly violates the spirit of the U. N. settlement, moving as rapidly as possible toward the resumption of hostilities against Israel, Washington remains remarkably calm.

"What has happened to the spirit of righteousness that rang from the President's speeches denouncing Israel's defiance?

"One change is obvious and significant. It was President Eisenhower who publicly took charge of breaking the Israel-U. N. deadlock. It was his voice that affirmed so strongly the rights and wrongs of the conflict. It was he who demanded quick action and who gave weight to the talk of possible economic sanctions. Today the President is silent. The Middle East is again in the hands of the professional diplomats."

At the same time, the New York Times reviewed the record relating to the existing situation and warned that the United States and the United Nations must act in accordance with the assurances given Israel—assurances which led to Israeli assumptions that they were pledges, but which nevertheless resulted in denials by the United States spokesmen in Washington and at the U. N. that they had made any promises to Israel. The following review of the record, in the New York Times editorial Middle East: the Record, will guide the citizens of this country in reaching their own conclusions whether promises had been made:

"The new tension arises because Egypt's President Nasser has taken over the administration of the Gaza strip; because he is moving troops equipped with new Soviet arms to the area from which Egypt launched its main guerrilla attacks against Israel; because he proclaims a continued blockade of Israeli shipping in both the Strait of Tiran and the Suez Canal on the basis of belligerent rights derived from a continued state of war; and because he asserts not only unrestricted control of the Suez Canal but also the right to use it as an instrument of Egyptian politics.

"Now, the United States and the United Nations have not only expressed hopes and expectations concerning all these issues. They have assumed definite commitments involving their good faith.

"These commitments are contained in the following pronouncements:

1

"The basic resolution of the United Nations General Assembly of November 11, 1956, which, in calling for a cease-fire and withdrawal of the invading forces, also called on all parties 'to observe scrupulously the provisions of the armistice agreements' * * * to desist from raids across the armistice lines * * * 'to refrain from introducing military goods into the area' and 'to restore secure freedom of navigation in the Suez Canal.'"

2

"The General Assembly resolution of November 5, 1956, which established United Nations Emergency Force 'to secure and supervise the cessation of hostilities in accordance with all the terms' of the resolution of November 2."

3

"Secretary General Hammarskjold's report of November 6, endorsed by the General Assembly, that it would be the function of the United Nations force 'to help maintain quiet during and after the withdrawal of non-Egyptian forces.'"

4

"Mr. Hammarskjold's report of January 24 that in view of the armistice agreements and a Security Council decision 'the parties to the armistice agreement may be considered as not entitled to claim belligerent rights'; his report of January 16 that 'the international significance of the Gulf of Aqaba may be considered to justify the right of innocent passage through the Strait of Tiran and the gulf in accordance with recognized rules of international law'; his report of February 22, that 'the takeover of Gaza from the military and civilian control of Israel * * * in the first instance would be exclusively by the United Nations Emergency Force,' and his report of March 8 that 'until further arrangements are made, the United Nations Emergency Force has assumed responsibility for civil affairs in the Gaza Strip.'"

5

"Ambassador Lodge's statement to the General Assembly on January 28 that 'under the armistice agreement and pursuant to the Security Council decisions, neither side may assert belligerent rights, much less engage in hostile actions.'"

6

"The United States memorandum to Israel dated February 11 and 'the future of the Gaza strip is to be worked out through the efforts and good offices of the United Nations,' and that 'the United States believes that the Gulf of Aqaba comprehends international waters and that no nation has the right to prevent free and innocent passage in the gulf and through the straits giving access thereto.'"

7

"President Eisenhower's statement of February 20 that 'The United States would be glad to urge and support some participation by the United Nations, with the approval of Egypt, in the administration of the Gaza strip' * * * to assure that the strip 'could no longer be used as a source of armed infiltration and reprisals'; that 'we should not assume that * * * Egypt will prevent Israeli shipping from using the Suez Canal or the Gulf of Aqaba' * * * and that, 'if, unhappily, Egypt, does hereafter violate the armistice agreement or other international obligations, then this should be dealt with firmly by the society of nations.'"

8

"President Eisenhower's letter to Premier Ben-Gurion assuring that 'Israeli will have no cause to regret' its withdrawal * * *?

"This is the record, and these are the commitments. The United Nations and the United States will be judged by the way they live up to them."

The sentiments we have just quoted appear to represent the general consensus of opinion of the country at large. The Detroit Free Press editorially challenged "Secretary Dulles on communiques" and declared:

"Secretary of State Dulles and Mrs. Golda Meir, Israel's Foreign Minister, conferred nearly 2 hours Monday. After that, Mrs. Meir spent upward of another hour with Mr. Dulles' subordinates, and a communique was issued.

"It announced a scoreless tie.

"When reporters pointed out to Mr. Dulles that the communique left a great deal unanswered, the Secretary replied that 'we do not answer all questions in communiques.'

"Mr. Dulles would have been several country miles nearer the truth about his Department had he said that its communiques never answered any question at all, for the very simple reason that Mr. Dulles never has any answers to give.

"In this instance, nobody knows what is covered by the moral commitments Mrs. Meir was talking about.

"A great deal that is of consequence to America, its future and conceivably the affairs of its individual citizens are at stake in the Middle East. If anybody finds out what we're doing and what we stand for out there, notify Mr. Dulles at once.

"We're sure it would be news to him."

These challenges and résumés of the situation speak for themselves. The old Lincolnian warning that "you can't fool all of the people all the time" remains valid. In spite of denials, it is on the record that Israel has been given assurances of protection against assaults from the war-threatening neighbors who encircle her. These promises must be adhered to—without further shenanigans.

The President Finally Decides Small Business Is Here To Stay

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, this administration has taken a number of conflicting positions on the matter of making the Small Business Administration a permanent agency.

This administration has maintained for years that the Small Business Administration should be continued on a temporary basis, apparently on the assumption that small business might go away.

It is true, of course, that the present Big Business Cabinet has done its full share in trying to help big business become even bigger and, at the same time, small business to become ever smaller.

A full 95 percent of Federal research funds goes to companies employing more than 500 workers. In the past 3 years, research contracts totaling $4.7 billion have been awarded. Of this $4.6 billion, or 98.1 percent, has gone to the 500 largest contractors.

These and other equally interesting facts were developed by the House Small Business Committee under the skilled and able leadership of Representative WRIGHT PATMAN, Representative ABRAHAM J. MULTER, and others.

The first straw in the wind that this administration had decided that small business was here to stay and that the Small Business Administration should be permanent was the statement by Wendell Barnes that he favored such a course. Mr. Barnes made his earth-shaking announcement before the Multer subcommittee of the Select Committee on Small Business of the House of Representatives on March 26, 1957.

Just a few days previously he had testified before the Senate Small Business Committee to the exact opposite—that is, that the SBA should be continued on a temporary basis rather than be made a permanent agency.

Now we were to see a parade of administration big-wigs before the Multer subcommittee testifying that the Small Business Administration should be a permanent agency.

On Thursday, April 4, the administration bill to make the Small Business Administration permanent was introduced in the Senate and House.

This agency, it is now argued by the administration, should be given permanent status, it is 4 years old, and has proved its effectiveness in all respects. If made permanent, the SBA will be able to attract more competent personnel, banks will more willingly participate in loans to small business, its procurement activities in behalf of small business can be expanded, and so on.

These things are so obvious that it is utterly impossible to understand why it took this Republican administration and the President so long to arrive at this unassailable conclusion.

Well, better late than never, I always say.

Of course, I introduced a bill, H. R. 2513, on January 10, 1957, to make the Small Business Administration a permanent Government agency, so administration support is welcome for my position, even though it is almost exactly 3 months late.

I include here a statement by George Burger, vice president of the National Federation of Independent Business. This organization has been campaigning for years to make the SBA an independent permanent agency.

Also, I include an article by Drew Pearson from the Washington Post and Times Herald of April 1, 1957. Mr. Pearson reports on the matter of tax relief promised by the Republican Party.

Mr. Pearson also has some very interesting things to say about Secretary of the Treasury Humphrey, who is a member of the Loan Policy Board of the Small Business Administration:

STATEMENT OF GEORGE J. BURGER, VICE PRESIDENT, NATIONAL FEDERATION OF INDEPENDENT BUSINESS, BEFORE SUBCOMMITTEE NO. 2, HOUSE SMALL BUSINESS COMMITTEE, SMALL BUSINESS ADMINISTRATION, MARCH 28, 1957

I am George J. Burger, vice president and Washington representative of the National Federation of Independent Business, Inc. I am appearing here solely for the membership of the federation.

We represent independent business and professional people in all vocations from all parts of the country. We have the largest directly supporting membership of any business organization in the country.

Our position on legislation is dictated directly by our membership. We poll our members on all important issues, and are committed by their majority vote.

The federation, of course, has a vital stake in seeing to it that the operation of the Small Business Administration is carried out in accordance with the will of the Congress. In view of this, Mr. Chairman and members of the committee, it might be well to do as the late Al Smith often said: "Let's look at the record" as it pertains to the actions of the federation since the Small Business Administration was created by the Congress, to make certain that the agency has carried out the will of the Congress in its help to small business of this Nation.

First. The record will show that in our appearances before the Banking Committees of the Congress we recommended the creation of the agency, and more important, that it be an independent agency, subject at all times to review by the Congress. This was the action we took in 1953.

In view of the statement made before your committee by the Administrator, Mr. Barnes, a day or two ago, that the administration favors the agency being made a permanent agency of the Government, if this recommendation is followed up by the Congress in making the Small Business Administration a permanent agency, with full control vested in the Administrator will result in increasing the efficiency of the operation of the agency which will act as a morale builder for small business of this Nation, and the establishment of the agency on a permanent basis will also attract more competent personnel.

Second. Shortly after the agency was created in the summer of 1953, I made my usual annual visit to the head office of the federation at Burlingame, Calif., and during the time of this visit out there I had an opportunity to visit some few regional offices of the visit to the head office of the federation at Burlingame, Calif., and during the time of this visit out there I had on opportunity to visit some few regional offices of the agency and confer with the regional directors. Mr. Chairman at the time of these visits I always make it a must to be accompanied by some one else so that whatever my findings are they can be confirmed by others present.

During our visits to the regional offices of the Small Business Administration in the West and Middle West we found a situation as to policy that was not in keeping with the intent of Congress, and as a result of our findings on my return to Washington a joint meeting was held with Treasury and Commerce officials on October 26, 1953, which resulted in a complete change of policy through which all small business could be helped through the SBA. I might say that in November 1953 the press gave full publicity to that action. Shortly thereafter Mr. Wendell Barnes became the Administrator.

Third. During the life of the agency the closest liaison has existed between the Washington office of the Federation and the top officials of the agency. Many conferences have been held with Br. Barnes and his deputies—all in keeping with the intent of being a help to the agency, and we believe the information we have been getting from our nationwide membership, commonly referred to as the grassroots has tended to advance the standing of the Small Business Administration with small business throughout the Nation. During these past 3 years we have made it our business to visit regional offices of the agency throughout the Nation for the sole purpose of finding out what was taking place at the local level.

Fourth. On July 5, 1956, speaking for the Federation, I conferred with Dr. Arthur Burns, Economic Adviser to the President, and presented to him as Chairman of the President's Cabinet Committee on Small Business, seven specific recommendations on small business to be considered by his group when they made their report to the President. Among the recommendations made by us were (1) that the agency be made a permanent agency of the Government, and (2) that the control of the agency be placed exclusively in the hands of the Administrator,

eliminating the policy board as heretofore existing in that agency. In making the above recommendations we reaffirmed the recommendations which we made from the first instance when the legislation was proposed.

Fifth. In our appearances before the platform committees of both national conventions—in Chicago and San Francisco, 1956—we urged these committees to have the same recommendations adopted in their respective platforms.

Sixth. On December 11, 1956, I had a 2-hour conference with Mr. Barnes and his deputy, at which time I gave to them our recent findings after personal visits to regional offices of SBA in certain sections of the Nation. As a result of that 2-hour-or-more conference we believe that SBA is showing a steady progress in carrying out the will of the Congress. However, there is still plenty of room for improvement. The subject matters discussed during this conference were: (1) Tight money, (2) inventory, (3) credit formula, (4) direct loans, (5) advisory groups, (6) ceiling on loans.

Seventh. On the opening of the new Congress we urged introduction of legislation to make the agency a permanent one, with full power as to the overall policy of the agency being placed in the hands of the Administrator. We are more than pleased to advise that quite a few bills have been introduced along the line of these recommendations, and we have just completed a nationwide poll of our entire membership on S. 545 introduced by Senator THYE, and H. R. 2513 introduced by the Honorable FRANK THOMPSON, JR., both of which bills provide for the establishment of the Small Business Administration as a permanent agency, and with full control vested in the Administrator. The result of the poll disclosed: 83 percent for, 14 percent against, 3 percent no vote.

It is our hope that at no time will Congress ever permit the agency to become a part of the Department of Commerce.

Of course, there are many other operations the Small Business Administration can fulfill and carry out, such as making greater and greater efforts toward securing an equal share of Government contracts for small business, even if necessary, to take the prime contract.

There is another important recommendation which should be considered, and that is that the regional and national advisory groups to the Small Business Administration should be made up exclusively of independent businessmen because through this action those groups will be able to give to the agency, both at the national and local levels the correct picture facing small business in the respective areas. We look upon this as very important for a successful administration of the agency. It is with this operation of the agency at this time that we have our most grevious complaint, and to substantiate—within the past week we have received statements from members of the advisory groups to the Small Business Administration—1 from the west coast, and 1 from the east coast.

The report from the west coast states: "I am a member of the advisory board and have been for several years. At no time has the regional director ever called a meeting of the advisory group, which was the original intent and purpose expressed to us at the time we were appointed. The area covered by this board is quite extensive and we don't know anything about the situation down there, whether small-business men need help in one category or another. All it is is a setup as an office, with a lot of bulletins, etc. But small-business men come to me week after week advising of the problems on which they need help. The whole situation, as it reflects to small business in that area is that SBA is not operating for the interest of small business in that area. There has been no meeting of the advisory board in that area in 2 years."

As it relates to the loan policy in that area, the west coast report states: "A Member of Congress from this area recently said at the time Barnes was up for extra money that he was very pleased to know banks in his area were cooperating with SBA. This does not check with my personal knowledge of the situation. A few small, independent banks are cooperating but none of the large banks or big chain banks will do business with SBA in participating in any loans."

From the east, the member of the Advisory Board is well informed in the financial world. As the loan situation applies in his area, he states: "SBA is not credited within our county, in my opinion, as being sympathetic in their approach to loan applicants or loan applications. They appear to treat the applicant, as well as an application, in the same light that the ordinary commercial bank analyzes it (there is no need for SBA unless that agency is going to take a different approach)."

I might say, Mr. Chairman, at this point, that this was the same reaction I received last summer in Chicago, San Francisco, etc.

The east coast advisory board member further states: "If SBA was really trying to get the small-business man to consider that agency as a helpful medium, they most certainly have not been successful. Disparaging remarks seem to be predominant not only among loaning officers in the commercial banks, but also the small-business man."

Mr. Chairman, he constructively criticizes the agency and, bear in mind he is a member of the advisory committee, but at the same time he goes further. He makes these recommendations:

"1. Their approach to making loans should be the same as the personal-loan companies; which is, only when they have losses do they really know and believe that they are doing a job. If they try to avoid making losses, it is because they are not making the necessary volume of loans that they were created for.

"2. Hire a couple of top-grade personal-loan men in the loanmaking division of SBA—they will show them how to get loan applications and make them."

It was very encouraging to hear members of the committee during the past day or two of hearings remark that when this agency is made permanent it will be able to attract competent personnel and this was the same opinion expressed by some members of the Senate Small Business Committee during their recent hearings on the Small Business Administration.

We have noted, and the Small Business Administration is to be commended for the action they have taken in the issuance of publications for distribution which provide information as an aid to small business. We also recommend that this action be continued and improved upon as time goes on.

As the views I have expressed come from the grassroots we trust that Congress will take early action in following through on such recommendations.

[From the Washington Post and Times Herald of April 1, 1957]

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

TAX RELIEF KILLED BY WHITE HOUSE

One of the GOP campaign pledges pounded on prior to November 6 was aid for small business. President Eisenhower promised at Lexington, Ky., on October 1: "I shall call for further help to small business with some dozen specific recommendations for action, including special tax measures." He also said on October 22 that he planned to ask Congress to give small-business men about $600 million in tax relief.

Last week, however, Republicans lined up almost solid against an amendment to the tax bill by Senator WILLIAM FULBRIGHT, of Arkansas, giving 8-percent tax relief to small business netting up to $25,000. The final vote was 52 to 33 against the amendment.

Cleveland tycoons

Cyrus Eaton of the Chesapeake & Ohio Railroad and the Cleveland investment firm, Otis & Co., had a recent private huddle with top Democratic leaders regarding another well-known Clevelander, Secretary of the Treasury George Humphrey.

Eaton urged a full Senate investigation of Humphrey, pointed out that the Secretary of the Treasury has not sold his stock in his farflung M. A. Hanna Co., said the stock had appreciated some $800 million while Humphrey was in the Treasury, and that almost everything the Treasury handled affected Humphrey's private interests in one way or other.

Foreign business firms, he pointed out, had in some cases purchased coal from Humphrey's Pittsburgh Consolidation Coal Co., largest coal company in the world, because their countries had to do important business with the Secretary of the Treasury. Humphrey is a member of the board which controls the Export-Import Bank from which many countries have to borrow money.

Later, Eaton wrote a private letter to the Senators, dated March 9, which follows:

Sixty-billion-dollar orbit

"A further illustration of the manner in which George Humphrey continually uses his high public post to buttress his private business interests is provided by the recent preemption of top offices of the Federal Reserve Bank of Cleveland by Humphrey henchmen.

"First, Arthur VanBuskirk, a director of Humphrey's Pittsburgh Consolidation Coal Co., was made chairman of the bank. This was swiftly followed by the naming of J. H. Thompson, president of Humphrey's M. A. Hanna Co., as vice chairman of the bank. With these adroit moves, another powerful financial institution boasting assets of $4,755,000,000 was added to the Humphrey orbit, to bring to the incredible total of $60,755,000,000 the combined assets of the corporations interlocked by officers and directors in the Humphrey-Hanna-Pittsburgh consol group.

"This does not tell the whole story, however, for there are other companies in which Humphrey exercises great influence without representation among officers and directors.

"Since the Secretary of the Treasury holds office by virtue of Senate approval, does not the Senate have a continuing moral obligation to take corrective action when the Secretary constantly uses his official public position to further his private business fortunes?"

Around the World in 80 Days

EXTENSION OF REMARKS

OF

HON. PATRICK J. HILLINGS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. HILLINGS. Mr. Speaker, Washington is host today to the famous Hollywood producer, Mr. Mike Todd. He is here for the Washington premiere of the award-winning motion picture Around the World in 80 Days. I am sure my colleagues join with me in welcoming him to Washington on this occasion.

Around the World in 80 Days, which Mr. Todd produced, has received the academy award as the best picture of

the year, and similar awards from the New York film critics, Associated Press, Good Housekeeping magazine, Cosmopolitan magazine, Parents' Magazine, and a host of other honors. The picture also received academy awards for best film editing, best musical score, best screen play and best color cinematography.

This outstanding motion picture will bring entertainment to millions of people in our country and abroad, and is an example of the outstanding quality of pictures produced by our motion picture industry. Mr. Todd's production will not only provide entertainment, but will help to bring American good will to people all over the world.

I congratulate Mr. Todd for this splendid film which I hope all of my colleagues will have an opportunity to see.

Public School No. 11 of Jersey City, N. J., Celebrates a Century of Education

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. SIEMINSKI. Mr. Speaker, it is said that Public School No. 11 on Bergen Square in Jersey City stands on the oldest site continuously dedicated to education in the United States. Dutch settlers used the land almost 300 years ago to set up a school in 1662.

Since then five schools have been built on the same spot. Public School No. 11 is the fifth of these schools. A statue of Peter Stuyvesant flanks the entrance to the school.

It is thought that no site in the country has served as a seat of learning for so long a time. This in spite of the first Latin grammar school founded in New England in 1635 and Harvard College in 1636 and William and Mary in Virginia in 1693. Does not the Good Book say "the children shall lead them"?

That is why I rise at this time, Mr. Speaker, to thank Mayor Berry and the able and distinguished and the alert and the brave City Commission of Jersey City for taking the time and the initiative to help Public School No. 11 celebrate a century of education.

In a few days, on April 10 and 11, the mayor and the city commission and the people of Jersey City, its children, parents, teachers, businessmen, and all the residents of the community will take part in the 100th anniversary activities of Public School No. 11. It promises to be a magnificent manifestation of a people's love for learning and for leading their children into courageous inspired and useful lives.

The people of Jersey City will attest on April 10 and 11 their faith in the public-school system. It has formed a single people out of many races, nations, and creeds. We see the spirit of that system at work on the floor of this House. God preserve it.

In closing, Mr. Speaker, may I say that Public School No. 11 holds a dear place in my heart. I started school there at the age of 6 in 1917. I reported for military service there in 1942. In April of 1950, I campaigned for Congress in its auditorium. In March of 1951, after my election to Congress and my return from Korea, in this same auditorium, I expressed my profound appreciation to the people of Jersey City for their helpfulness in all things worthwhile. The noble, the religious, and the democratic are at work in our hearts when our educational system is at its best. Was it not Jefferson who said:

> Enlighten the people generally and tyranny and oppression of both mind and body vanish—education makes a people easy to lead but difficult to drive, easy to govern but impossible to enslave.

So be it. This salutes, too, the mayor and the City Commission of Jersey City for building 5 new schools in 6 years.

First Grapevines in America

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. BLATNIK. Mr. Speaker, one of the little-known facts concerning the founding of Jamestown in 1607, the 350th anniversary of which is being commemorated this year, is that numbered among Capt. John Smith's crew were two men of Croatian descent. They were the first of many thousands of people of Slav descent who came to the New World to make their homes. Under leave to extend my remarks in the RECORD, I include an article by John C. Sciranka which appeared in Frankford Bulletin, published in Philadelphia. In his article Mr. Sciranka quotes Mr. Vlaho S. Vlahovic, a well-known American Yugoslav publicist and my very close personal friend. The article is as follows:

Recently I mentioned the Croatan Island in Virginia, stating that it was named in honor of the Croatians. I stated this in connection with the history of Capt. John Smith and the first two Slovaks, Juraj Mata and Jan Bogdan, who came to Jamestown on September 25, 1608, on the ship *God Speed* to help Smith build the first permanent English settlement in the New World. Now, my good friend and a well-known American Yugoslav publicist, Vlaho S. Vlahovic of New York City, congratulating me on my recent contributions to the history of the early Americans, gives me the following important historical data:

"The Republic of Dubrovnik, better known as Ragusa, in the early 15th century boasted of one of the largest merchant fleets in the world. Her navigators and seafarers were highly in demand by every power in the world. Documents here in America attest to this fact and in particular to the heavy recruiting by Russia of Yugoslav shipbuilding experts from regions of Dubrovnik and Kotor along the Dalmatian coast."

Vlahovic further continues that "the Dubrovnikians (Ragusans) sailed to America with Sir Walter Raleigh's band of colonists in 1587. All given names of crew and passengers, of course, were in English." Vlahovic explains that in those days it was a practice among Dubrovnikians to have their names translated into the language of their adopted country so that they would be considered citizens of it. This is evident from the Italianized names of many Dubrovnikian and Dalmatian nobles. For example, the Slav Gundulic became Italian Gondola; Gradic was changed to Gradi, Bunic to Bona, Pucic to Pozza, etc.

What lends credence to the belief that Yugoslavs comprised Raleigh's crew is the statement in the memoirs of Governor White of the "Lost Colony," now known as Roanoke Island is that the word "Croatoan" was found carved on a tree trunk.

On his return to America in 1590, Governor White noted: "* * * We found * * * the place strongly enclosed with high palisades of great trees, with curtains of flankers (very fort-like), and one of the chief trees * * * at the entrance had the bark taken off and 5 feet from the ground, in fair capital letters, was engraved 'Croatoan' without any cross or sign of distress."

Historians and writers have frequently misspelled Croatoan as Croatan. This English spelling of Hrvat (Croat) is the earliest historical record pointing to the presence of Yugoslavs (at least members of the Croatian branch) in the new world.

Dr. Hawk, in the History of North Carolina, observed that Indians of the State spoke of the certain tribe as Hateras Indians, or Croatoan Indians as the English knew them. Hamilton McMillan, in 1880 wrote that "these Indians had traditions of vessels wrecked in past times. Children with auburn hair and blue eyes were noticed among them, which impressed the belief they had communicated with white people."

Much of this is corroborated in the record of an exploration made by John Lawson in 1709. He noted that "Indians who lived on Roanoke Island, or much frequented this locality, tell us that several of their ancestors were white people and could talk in book as we do. The truth of this is confirmed by grey eyes being frequently found among these Indians."

There are records preserved in the archives of the city of Dubrovnik, known in history as Ragusa, in Yugoslavia, which show that about 1540, a fleet of sailing ships left the Republic of Dubrovnik bound for America.

American historian Lawson concurs that "a wreck of a ship was found there (Roanoke Island) about 20 years before the arrival of the Colonists. A previous wreck in 1558 mentioned "some of the crew were saved."

Vlahovic further states to me another factor: "The oldest known grapevine in America (still producing delicious grapes) is located on the island close to the spot where the lost colony is believed to have landed. Governor White noted that this grapevine was bearing abundant fruit in 1590 which supports my contention that those preceding the Colonists could have been Croatians." Vlahovic further states that "transplanting grapevines is a custom with Dubrovnikian and Dalmatian navigators * * * When a Dubrovnikian or Dalmatian sailor embarked on a long voyage he frequently took with him seedlings, roots, and plants, especially grapevine cuttings. These he would sow or transplant into the soil of whatever country he visited. When returning home he would bring back seeds, shrubs, and strange fruit trees."

This was a wonderful example which should be followed by our men and women of our United States defense forces.

The wirter is very happy to acknowledge with thanks and appreciation the vast contribution of Mr. Vlaho S. Vlahovic, an American of Yugoslav extraction who dedicated his life to research on the contribution of Slavs to the growth and progress of America.

President Rhee Speaks

EXTENSION OF REMARKS
OF

HON. AUGUST E. JOHANSEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

Mr. JOHANSEN. Mr. Speaker, President Syngman Rhee is a great statesman, a heroic patriot, and a perennial challenge to the conscience of all men who love freedom.

The President of Korea delivered an address March 1 in Seoul in commemoration of the 38 anniversary of the Republic of Korea.

Under permission to extend and revise my remarks, I include Dr. Rhee's address:

A DAY OF ACCOUNTING

My fellow citizens, March 1 is the birthday of our Republic.

On Saturday, March 1, 1919, in the Blue Moon Cafe, in Seoul, at 2 p. m., the 33 patriots whose memory we honor placed their signatures on our declaration of independence. Then they called in the Japanese police and gave themselves up.

On that day there commenced in our country a nationwide mass movement of protest against the alien domination of our homeland by the empire-building imperialists of Japan. Our people did not resort to war. But neither did they supinely accept their status as exploited colonials. They devised a dignified middle way of honorable appeal to the decency and sense of justice of the civilized world.

Theirs was the first passive revolution in this history of modern times. In all the years since then, we have never weakened in our desire to settle all disputes, national and international, through appeals to facts and reason, without passion and in the spirit of commonsense.

But there is also another spirit that has been demonstrated continuously through all the 4,300 years of our history. This is the courageous and honorable spirit of self-defense. This is also a part of our tradition and it is a part of our policy today.

A SINGLE WORD

If there is one word that strongly characterizes the long history of our Nation, that word is "justice." Never in our entire history have we attacked any other nation. In fact, we have never fought outside our own national boundaries.

No nation on earth can point an accusing finger at us. We have reason to be proud of the great tradition that has come down to us. We have always fought like tigers to defend our own fields and our own homes. But we never have tried to take from any other people one single acre of ground or piece of property that was not ours.

In 1882 a new era in our history began. At that time our Government was persuaded to enter into a series of treaties—first with the United States and then with other outside powers. Our ancient isolationism was abandoned.

Unhappily, the world community of nations had entered into an era of power politics. We tried to live according to our own national standards of morality, but we encountered conditions in which immorality was backed by ruthless power.

In 1910 we were abandoned to Japanese conquest, with the concurrence of the Western nations whose offers of friendship had persuaded us to give up the protective isolationism of the old Hermit Kingdom. In 1919 we found that although the Western powers talked of the rights of self-determination of all peoples, their policies were still dominated by what they called expedient power politics.

Then in 1945, at the conclusion of a war that had been fought under the ringing slogan of the four freedoms we found that once again power politics was the guiding policy of the dominant nations. We were promised liberation—but we found our nation divided along the 38th parallel and occupied by foreign troops.

In that time of great tribulation, we maintained both our dignity and our sense of national independence and justice. We refused to accept a plan of trusteeship, which would have fastened the grip of Communist domination upon our entire Nation. Our demand for self-government was manfully recognized by the United States, though contemptuously spurned by the Soviet Union. With the cooperative assistance of the United Nations, the Republic of Korea was established and elections were held in this part of our country. But the Soviet Union continued to hold its domination in the north.

When, in 1950, the Communist armies—recruited, equipped, led, and directed by the Russian tyrants—launched the infamous attack against us, our faith in justice seemed for a time to be justified. Under the leadership of the United States, the United Nations came to our assistance, and the Communist invaders were defeated.

NO COMPROMISE WITH JUSTICE

Then, once again in the name of expediency, and in disregard of justice, the neutralist members of the United Nations, under the leadership of Mr. Nehru of India, insisted that the beaten Communist imperialists must be allowed to "save face" by being left in control of the northern half of our country.

This was done in the name of compromise—with disregard for the fact that justice is justice, and to compromise with justice is to destroy both justice and peace. A truce was forced upon us which was wicked in itself—but which far more wickedly has been viciously and continuously violated by the Communist invaders. The faith which our people placed in international morality was violated.

During the years since that truce was imposed on us in 1953, our warnings against the perpetuation of injustice in the name of expediency have been repeatedly justified. The very nation, India, which insisted that we must bow to the demands of the United Nations is now flouting and rejecting the authority of that organization. The Communists, who were supposed to be pacified by the sacrifice we were forced to make to them, have continued their aggression, their brutality, and their subversion of freedom on an ever wider scale. Time after time the nations of the world have been taught that when they flout justice, there is a heavy price that must be paid by all who cherish freedom and try to live in honor.

The events of the past several months have involved a series of crises which may mark the beginnings of a new era in international relations.

The brave patriots of Hungary have proved that communism cannot destroy free spirits with the poison of propaganda. The savagery of the Russian tyranny in Hungary had disgusted millions of peoples who had permitted themselves to become deluded by Communist hypocrisy. The Kremlin has been forced to admit openly that its so-called anti-Stalinist movement was a shameful farce. The demagoguery of India's Nehru and Krishna Menon has begun to weaken the grip which they had fastened upon the foreign policies of several of the nations in Asia.

Meanwhile, in the Middle East Russian ambitions for world conquest have once again been emphasized, and in a manner that genuinely alarms the western nations. The United Nations has been clearly revealed as a one-sided organization that can impose restrictions upon nations that recognize the meaning of justice, but that is helpless when it confronts aggressors who are still governed by the morality of the jungle.

Japan, too, has been caught up in these rapid movements of international change. She has signed an agreement with the Communists in Moscow, and has openly begun to orient her policies toward friendship with Russia and Red China. She has encouraged a hysteria of anti-Americanism among her own people. The new Government of Japan made a few empty gestures of pretended interest in conciliation with our Nation, in an attempt to influence world opinion—but has flatly refused to join us in a constructive move to restore just relations.

As we view the world today, there is great cause for discouragement and ample reason for pessimism about the present aimless drift of international affairs.

HOPE IS AHEAD

But there are also gleams and portents of hope.

President Eisenhower spoke glowingly in his inaugural address of the absolute need for a world order based on justice. His new policy for the Middle East shows a determination to support justice, when necessary, with force. Within the United Nations, many member nations are deeply disturbed by the failure of that Organization to do anything constructive to help the people of Hungary against the open aggression of Russia.

A great testing time now confronts humanity.

All around the world the lesson has been driven home again and again that genuine peace is impossible while the Great Powers helplessly acquiesce in the flouting of justice by aggressors. There can no longer be any doubt in the minds of honest men that peace must be sought through bold justice rather than through weak concessions to aggressors. The time is ripe for the emergence of a new spirit and a new international program.

On our part, we have constructive proposals to present—just as we have always had in the past. We call for the reform of the United Nations.

1. We believe it should be converted into a body to enforce justice, not merely to be a forum in which aggressors can freely spread propaganda and foment disagreement among the democratic allies.

2. In order to make this change possible, we believe the great majority of law-abiding nations must enforce the provision of the Charter that all nations in order to be members must be peace loving, and must accept the procedures and principles of honest negotiation.

3. As an agency for enforcing justice, we call for the establishment of a genuine peace enforcement army, composed of the armed forces of small nations which are free from ambitions of empire building.

4. The basic responsibility of a United Nations genuinely pledged to the provisions of the Charter is to ensure to all peoples the right of free and fair election of their own governments.

5. As to the Korean situation, I do not want to emphasize the injustices forced upon us by the Soviet Union, Communist China, and Japan because by this time the people of all friendly nations should be fully aware of the unjust dealings of these countries toward Korea. When the world conscience has awakened to the necessity of international morality and equity the situation will be righted. Our great hope is that the United Nations will change its present attitude of helplessness and act with firm, courageous judgment.

6. Other disputes, in all parts of the world, whether in Kashmir, or the Middle East, or elsewhere, should similarly be settled within the United Nations by a moral court of justice supported by all free member nations in accordance with just rules of law.

In my judgment, the great majority of the peoples and the nations around the world are ready to accept and support such a program as this. Unless such measures of reform are adopted, the alternative is still further chaotic drift, with more and more surrenders to communism, until another world war of desperate self-defense shall be forced upon the free nations, perhaps after it is too late.

My public life has extended through 6 full decades. During that time I have witnessed 4 full-scale wars in North Asia, and 2 world wars. During all that time, statesmanship by the great powers has been characterized by a patchwork expediency that has tried to bridge crises with compromises and that has tried to avoid conflicts by a pretense of unity when the fundamental foundation for unity did not exist.

The world must face the fact that power politics as practiced by single powerful nations and by blocs of nations has failed and always will fail. War has followed war with frightening constancy, and each war has been ended with a patchwork of expedient compromises which has nurtured the injustices that lead straight on to another conflict.

THE LESSON OF MANKIND

Surely we must learn the lesson that the great enemy of mankind is the horrid spectre of aggressive sovereignty. When the free will of powerful nations is unchecked by a decent respect for the opinions of mankind, the world must always tremble upon the brink of disaster.

There is an alternative, and we should be mature enough to grasp it. If a program of justice is spelled out, nations will rally around it. Aggression will not have to be smashed down by war, if the peoples of the world are offered a mechanism and a leadership through which they can express their united will to enforce justice with united determination. Excommunication, economic sanctions, and boycotts can be effective, if they are organized on a clear basis of justice and are applied alike to all aggressors, without fear or hesitancy.

From this platform, I address my plea primarily to the United States and to all those many small nations who will gladly rally behind a constructive program to enforce justice. Let us be wise before the event and not merely desperate after it. Our destiny is in our own hands if we but have the courage and the wisdom to guide it.

Neither war nor subjection to tyranny are inevitable. They are but the price humanity too often pays for weakness and indecision. The future calls us to a new haven of human unity based on justice. This is a challenge we dare not longer deny.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

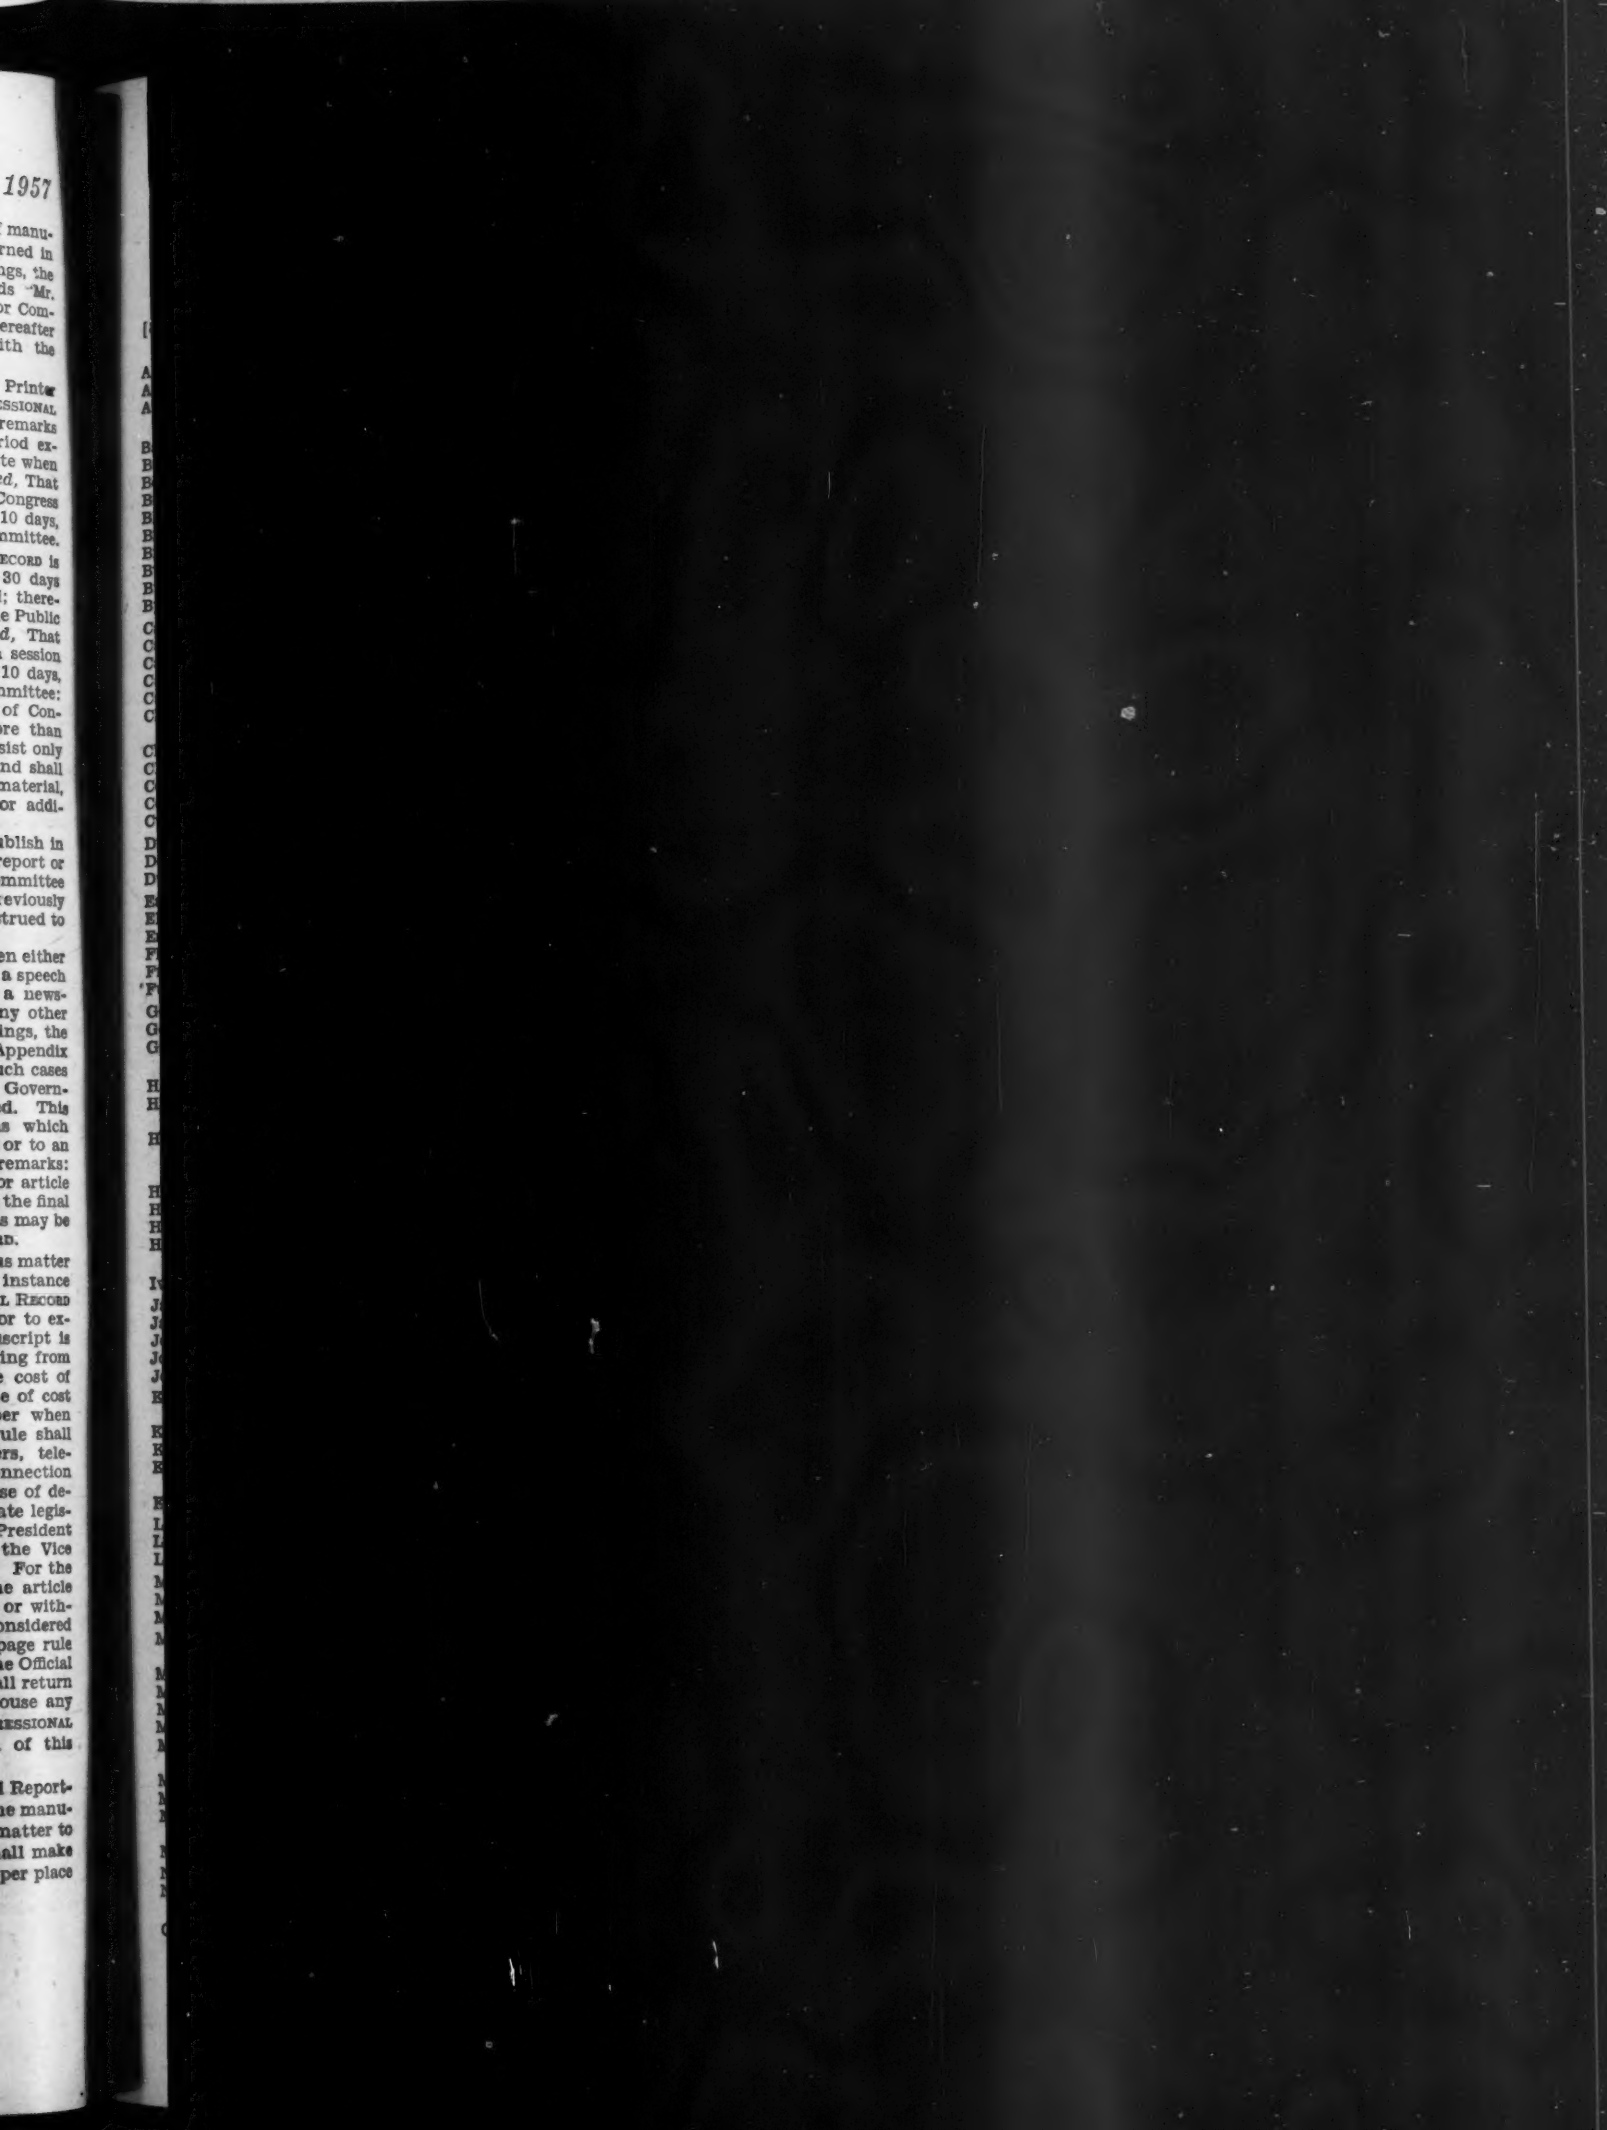
8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.



Appendix

Address by Hon. William F. Knowland, of California, to Grand Lodge of Masons of New York

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 9, 1957

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the breakfast of the Grand Lodge of Masons in New York on March 31, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Most worshipful grand master, distinguished guests, Masons, and fellow Americans, this Nation of ours has grown from a weak Colony of 3 million on the Atlantic coast to a great power of 170 million people, the most productive nation the world has ever known.

The priceless ingredient for our people has been our constitutional form of government which guarantees our religious, personal, and economic freedom.

The incentives furnished have constantly opened new horizons.

In this atmosphere, Americans of each generation have sought to leave to their children a better land than they themselves found, not just better in a material way but in the educational and cultural developments that make for better family and community life.

New inventions in various industrial fields and the tremendous potentials of the peacetime developments of atomic power are bound to challenge us for many years into the future.

We must not take our constitutional form of government or our free-enterprise system for granted. Neither fall into the category of something that can be locked in a safe-deposit box and kept forever secure. Each generation must be prepared to make the necessary sacrifices to maintain them that our Founding Fathers were prepared to make in the first instance.

Other nations have been or now are larger in land area, in population, and in natural resources. Yet they have not been able to give to their people the freedom and the standard of living Americans have enjoyed.

As important as is the productive capacity of our Nation and its military strength, these are not the factors which alone could preserve our freedom or enable us to maintain a free world of freemen. The inner strength of America has not been its great cities, its huge industrial plants, its extended transportation systems, or its variety of natural resources.

The factor which made America an inspiration to the rest of the world grew out of our Declaration of Independence, the Constitution of the United States, and the spiritual values which the founders of our Republic recognized and by which they were guided.

We have recognized that there was a higher moral law to which governments were also accountable. We have humbly acknowledged the divine inspiration which made and preserved us as a nation.

We have read of and been inspired by the action of George Washington in kneeling in prayer during the dark days of Valley Forge and of Lincoln doing the same during his lonely vigil in the White House during the darkest days of the Civil War.

Instinctively we know that human freedom is a greater force than tyranny.

We also instinctively know, though at times our allies and our own Government may for expediency forget that these are some things in life which cannot be compromised.

We know that no international organization and no government can long survive a double standard of international morality.

The free world should heed the admonition in Second Corinthians: "Be ye not unequally yoked together with unbelievers: for what fellowship has righteousness with unrighteousness and what communion has light with darkness?"

We are constantly faced with the threat of international communism to destroy human freedom everywhere in the world. Against this external danger we must maintain strong and adequate defenses—air, sea, and land—at home and abroad as long as the menace continues. This may well be for a decade or more.

Foreign policy is too important to be left to government alone. It is of concern to all of our people. In order to have a sound foreign policy it is necessary to have an informed public.

There is also the danger that every free government around the world faces. This is internal subversion, sabotage, and espionage by the international Communist conspiracy.

We cannot buy international friendship any more than personal friendship can be purchased.

Nor should we attempt to remake the world in our economic or political image.

Our efforts should be directed toward helping others to help themselves. In this private investment should play a major role.

In the period since the close of World War II the United States has provided over $50 billion in economic, military, and technical assistance to allies, neutrals, and former enemy countries outside of the Iron Curtain.

There has been nothing comparable in the world history of civilization to this program.

It was a matter of mutual interest to help rehabilitate the war-devastated areas of the world, both Allied and enemy alike, not only as a matter of humanity but because it was in our own interest as well not to have the Soviet Union or international communism take advantage of the economic and political chaos which otherwise would have existed.

The wartime damage has been repaired. It is time for foreign aid to be reduced.

It is neither in their interests nor ours for nations abroad to be permanently dependent upon American financial grants. It is time for them to start living within their means and for us to do likewise.

Government, industry, and labor must be constantly on the alert against this termite menace which could do great damage though the outer structure might seem to be unimpaired.

Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation, in a recent article clearly outlined and documented the fact that the Communist "new look" is a study in duplicity. The domestic Communist Party, as with the Kremlin, has a fixed objective though the tactics remain fluid.

In this day and age of the airplane and atomic power we can no more return to isolation than an adult can return to childhood, regardless of how pleasant the recollection might be.

Our foreign policy seeks to preserve peace with honor. Our efforts will continue to be directed to the establishment of a system of international law and order, based on justice, that will preserve the peace for ourselves and our children. We seek no territorial gains nor to subjugate any people anywhere in the world.

We do recognize, however, that when freedom is destroyed anywhere a bit of freedom is destroyed everywhere.

Nations can die while delegates talk. Last year the General Assembly of the United Nations passed 10 resolutions in 76 days of debate. All that while freedom was being strangled to death in Hungary. With callous indifference the Soviet Union placed itself above the higher moral law of God as well as above its obligations under the United Nations Charter.

No international organization can long endure with a double standard of international morality.

Having a decent respect for the opinions of mankind, a sense of obligation to the charter and the incentives inherent in a free country having freely elected parliaments, an informed electorate and a free press, Great Britain, France, and Israel withdrew their forces from Egypt.

Having no respect for the opinions of mankind and no sense of obligation to the charter the Soviet Union ignored all 10 General Assembly passed resolutions and still have their forces in Hungary.

Are the obligations and the mandates of the United Nations to be applicable to the democratic nations but not to the totalitarian powers? To the law-abiding but not to the outlaw nations? To the small and weak countries but not to the big and strong? What kind of justice is this? Are we building on quicksand? What kind of a foundation is this for constructing a system of international law and order based on justice?

We serve no useful purpose if we hide the facts. To the contrary by ignoring them and failing to seek remedies, we may endanger the safety of this Republic and freemen everywhere.

For many decades the men in the Kremlin have preached the doctrine that the free world contains the seeds of its own destruction.

It is far more likely, I believe, that the Communist world contains the seeds of its own destruction.

Hungary was but the latest in the indications that, even under totalitarian police rule and the brainwashing of a whole generation, the spark of freedom still lived and was capable of lighting a fire that endangered the whole monolithic structure of Communist tyranny.

After the Hungarian experience how much reliance can the Soviet Union place in the armed forces of the other captive nations if freedom is ever within their reach? How can

they have faith in Communist indoctrination when young students were the leaders of the Hungarian rebellion?

Within the past 10 days, the rulers in the Kremlin have sought to intimidate both Norway and Denmark.

The Soviet Union has not changed its long-term strategic objective. The destruction of human freedom everywhere.

They will be relentless in seeking to destroy our institutions. Fortified by our faith in God, we must be determined that our way of life will be preserved.

We also confront a danger of another sort. This does not come from an armed enemy from without nor from a foreign-led conspiracy from within. This springs rather from our own people and the institutions we have created. Apathy on our part or an inclination to let the other fellow assume the responsibility that each citizen has an obligation to undertake can well lead to a chain of events that would undermine both our governmental and economic systems.

The founders of this Republic knew well the history of the world up to their time. They knew that where there was a concentration of power in a single agency of national Government that the freedom they sought to guarantee could be easily lost.

As a result, they not only created three great coequal branches of the Federal Government, the legislative, executive, and judicial, but they also made the Federal Government one of limited and of specified powers and reserved all other powers to the several States and to the people thereof.

The Congress is a coordinate and not a subordinate branch. It was made the repository of all legislative power.

If we are half as wise as the men who gave us our Republic and as those who helped to maintain it, we will see to it that no administration, Republican or Democratic, departs from the letter or the spirit of the American Constitution.

The strength of our country depends, of course, on far more than our Armed Forces alone. It rests upon a sound national economy and a solvent Federal Government.

For the fiscal year ending June 30, 1941, the budget expenditures amounted to $13,262,000,000. The 1958 proposed budget is $71,800,000,000.

The national debt has grown from $48,900,000,000 to over $270 billion. The annual $7 billion of interest alone on the debt is now greater than the total cost of all functions of the Government (including national defense) as late as the fiscal year 1938. The annual interest charge is larger than the total tax receipts of the Federal Government in any year between the founding of our Government under the Constitution in 1789 and when we entered World War II in 1941.

Now, frankly, I do not subscribe to the theory that if individuals or business organizations spend their own earnings it is inflationary whereas if the Government takes it from them and spends it that is not inflationary. Government spending is a major inflationary factor.

The challenge we face is how to meet the large defense expenditures necessary for the preservation of our way of life, to take care of our growing needs for public and private facilities and to avoid the tendency to solve the problem by concentrating more and more power in the Government at Washington.

This will take some voluntary restraint on the part of citizens generally, in requesting new and additional programs until we can digest programs now underway or complete certain of the projects before undertaking additional ones.

This is the time for prudent and responsible citizens in private industry, in labor, in agriculture, and, indeed, throughout our entire population to take a close look at the growth of the Federal Government. Constructive support is needed for the efforts which will be made to reduce nonessential spending, to apply some payments on the national debt and to lay a foundation for some further tax reductions next year.

As an American citizen and as a Senator of the United States, I am convinced that if we of this generation will only use the same faith and courage that motivated the men who sat at Philadelphia and under what I believe to have been divine guidance, gave us first our Declaration of Independence and later our Constitution, there are none of our great domestic problems which we as a free people cannot solve, and there is no foreign foe we need ever fear.

Protecting Our Free Enterprise System From the Harmful Effect of Corporate Mergers

---

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered before the Automobile Wholesalers Association of Tennessee at Gatlinburg on April 8. In my remarks I dealt with the merger trend which we are experiencing today, and its harmful effect upon our free enterprise system, and particularly small business.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure and privilege for me to attend this session of the Automotive Wholesalers Association of Tennessee.

As chairman of the antimonopoly subcommittee of the Senate, I am here to listen to some of your problems as well as to discuss some of the very real concerns that I have in the developing economic picture as it affects businessmen such as you.

I am pleased to appear on a program which includes two very fine students of the antitrust laws, Mr. J. Austin Latimer and Mr. James W. Cassedy, both of whom, as you know, are attorneys in Washington who specialize in antitrust practice.

Only last week Mr. Cassedy testified at length before our committee. His discussion of a legislative proposal pending before us, and of the Standard Oil of Indiana case, which he tried, was most helpful to the members of the subcommittee.

I know that you, like I, believe in the competive, free-enterprise economy of the United States. But I suspect that you, like I, are beginning to be disturbed by what is happening to it.

A multitude of mergers during the past 4 years has outstripped anything of the sort since the 1920's. And with them competition has been lessening. As automotive wholesalers, as parts dealers, you know that your sources are certainly becoming more restricted. The "big" in the automobile business are becoming constantly more powerful, just as the "big" in the oil businesses are becoming overriding giants.

Four years ago, I joined in a report of the antimonopoly subcommittee of which I was then a member, pointing out that we were then in the midst of the third great merger movement to sweep the United States.

In the intervening 4 years the pace has not lessened—it has instead quickened. The New York Times observed in 1954 that the "wave of mergers is now more like a floodtide, so wide and pervasive has it become." By 1955, the Wall Street Journal put it this way: "Company mergers and acquisitions are taking place at an astonishing rate."

That same year the House Judiciary Committee made a study. They observed:

"In recent years a rising tide of industrial and bank mergers has played a significant role in hastening the reduction of competition in many areas and promoting the concentration of economic power. Many superstructures in industry have been created, not through superior technology or natural internal growth, but through absorption of independent competitors."

The House committee pointed out that under these conditions "mergers are not indicative of a normally developing industry, but rather symptoms of the competitive avarice of certain giant corporate enterprises."

"Frequently the plant of the acquired company is closed in the process, which not only eliminates the competition of this unit, but throws people out of employment and reduces the economic wealth of the community in which this particular plant existed," the House report continued.

Fortune magazine, at that time, estimated that mergers of important corporations were being affected at the rate of about 45 a month and that probably a score of lesser companies are absorbed daily.

Thus through the recent years some of us in Government and in the press have been calling attention to this very disturbing trend which is occurring. Now it is 1957, and just last week we saw one of the results of the trend.

Mr. Edwin L. Covey, chief of the Federal courts' bankruptcy division, increased his present estimate of the number of bankruptcies anticipated during the year.

Mr. Covey estimates that the number of cases filed during the 12 months ending next June 30 will reach a record high. He estimates there will be 72,000 bankruptcies. Think of it. That is almost 2,000 more than the present record. And the present record was set in a year to which none of us wants to return—1932.

Furthermore, we are already beginning to get a glimpse of what might happen in the future. I read in the Wall Street Journal of March 14 the report of a speech by Mr. Roger M. Blough, chairman of United States Steel, made to the Economic Club of Chicago. Mr. Blough told his audience that "a new business concept—giant corporations joining to form large combines for spreading their risks—may be developing on the economic scene."

"The future," he said, "may, indeed, call for bigger business organizations as man seeks to unlock the secret of the atom, penetrate outer space, and harness the rays of the sun."

Nor is this "partnership of corporations" idea merely a forecast of what may be necessary to handle America's tomorrow. It is already taking place. Mr. Blough continued:

"Our biggest corporations are rapidly getting too small to do all the things that are expected of them. The development of raw materials, for instance, has become so expensive, and involves such risks, that a number of steel companies have had to band together to develop faraway iron-ore deposits and to establish plants and processes for the manufacturing of usable blast furnace materials out of low-grade ores."

Our committee is presently making a study which I think will shed more light on just what the facts in the situation are. In cooperation with the Bureau of the Census, we

are obtaining data on the size of concentration. When we are finished and are able to publish the reports, which should be within the next few weeks, we will know the extension of concentration by industry and by product.

We also are gathering material and will hold hearings on the problem of price increases in administered-price industries, which is presently having such a great effect on the cost of living. These industries are those which, because of their power, have control over prices not affected by normal competitive forces. Examples are steel, newsprint, many types of food, automobiles, and farm machinery.

We will greatly appreciate the assistance of groups such as yours in the course of these studies. We want to conduct them fairly and objectively. But we have reached the point where we have to have better information than now exists on this tide of mergers in order that we as Government officials, as businessmen, and as citizens may discharge our responsibilities.

I frankly don't like what I know of the trend. I have long believed that it is only a step from the loss of economic freedom to the loss of political freedom. Germany under Hitler and Italy under Mussolini were examples of that step. There statism followed the seizure of the economic and industrial power by the few. The Soviet is another example. Economic and political power there also is all one.

I don't think it is necessary for this to happen in the America of tomorrow in order for us to enjoy the benefits of the good things which engineering and scientific skill have made possible. Our aim is—it must be—to have these benefits, but to get them through the competitive, free-enterprise economy which has made this Nation great in the past.

In order to achieve that goal we must understand and arrest the present alarming trend.

Solution of Housing and School Problems by Indiana Towns

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the April 9, 1957, issue of the Wall Street Journal, entitled "Donations, Not Taxes, Aid Indiana Town's Schools, Spur Housing."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FUND-RAISING FLAIR—DONATIONS, NOT TAXES, AID INDIANA TOWN'S SCHOOLS, SPUR HOUSING—BUSINESS LEADERS SET SWIFT CHARITY CAMPAIGN PACE, THINK UP OWN PROJECTS—"WE TAKE CARE OF OUR OWN"

(By Ray Vicker)

COLUMBUS, IND.—When the local high school needed a new gym, residents of this industrial-agricultural community on the east fork of the White River staged a charity-style fund drive that raised $1 million—60 percent of it donated by industry. The campaign made it unnecessary for the local government to issue bonds that would have saddled the city with debt and high interest charges, and which might have put pressure on tax rates.

On winter-browned land where homes give way to rolling farm country, concrete walks and drives now are being poured for the nearly completed 12-room Northside elementary school. Industry contributed $314,500 for the modernistic glass and brick structure, which will be ready for the fall term next September.

Such solving of community problems without outside help is characteristic of this city of 22,000. Its solutions may be of interest to other cities with fund-raising problems.

HELPED SCHOOLS CATCH UP

"Through contributions we have helped our outdated school system catch up," says J. Irwin Miller, chairman of Cummins Engine Co. "Now facilities have been updated to the point where taxes can handle any future expansions," adds the soft-spoken former Rhodes scholar whose taste for contemporary architecture is manifested in several newer buildings in town.

"We have adopted the philosophy of substituting contributions from industry and individuals for tax money where it might be difficult to raise the tax money," says A. D. Silva Jr., vice president of Columbus Process Co., an electronics equipment manufacturer. "When something needs to be done we don't sit and argue until the tax money is forthcoming. We start a drive for the money and we get it."

Like several hundred other local businessmen, Mr. Miller and Mr. Silva spend a lot of their spare time pushing community and charity projects. In this respect businessmen in Columbus are little different from their colleagues in Chicago, Pittsburgh, Los Angeles, Oshkosh and hundreds of other big, medium and little cities.

Total contributions to charity in the United States in 1956 "conservatively" amounted to $6.1 billion, according to the American Association of Fund-Raising Counsel in New York City. This compares with estimates of $6 billion for 1955, $5.5 billion for 1953 and $4.1 billion for 1950.

CONTRIBUTIONS TAX DEDUCTIBLE

The Internal Revenue Service lists more than 40,000 organizations to which contributions may be made, then deducted for tax purposes. However, not more than 6,000 of these organizations are themselves engaged in philanthropic giving, says A. A. F. R. C.

In 1956, collecting for 1957 budgets, federated campaigns around the United States raised $378 million compared with $339.7 million a year earlier, says A. A. F. R. C. These campaigns are United Fund, Community Chest and similar broad scale drives.

Columbus may be no different when it comes to obtaining business support for community and charity projects, but the extent of that support is unusual.

Walking down Washington Street the town's main stem—it is hard to distinguish Columbus from dozens of other Midwestern communities that once were rooted in the soil but now have industrial plants rimming business sections dating from the 1890's. Columbus is a quiet town; after the Crump and Rio theaters darken at the end of the late show, town burghers figuratively roll up the sidewalks for the night.

TAKE CARE OF OWN

"We're just hillbillies around here," opines one local merchant, "but we do look out for our own."

The latter is an understatement. Annually Columbus contributes an average of more than $750,000 to a wide variety of causes—new schools, kids' club quarters, the Heart Fund, a college students' loan fund, and many others. In the last 6 years, industry and individuals raised $1.7 million for building new schools, in addition to providing many more thousands of dollars for educational equipment.

At Lib's Nook on Washington Street, an overalled oldster at the counter grumbles over a cup of coffee: "They're always collectin' for somethin' in this dang town."

"What you complainin' about, Ed?" rasps a companion in a bright flannel shirt. "You never give nothin' anyway."

NO COMPLAINTS FROM INDUSTRY

Notes Fred E. Daniel, vice president of Arvin Industries, which has a sprawling collection of plant buildings on the edge of town: "Most such complaints about there being too many drives come from people who don't give much anyway."

But none of the complaints comes from industrialists, even though they constantly are dunned for this or that cause. In fact, when there's a dearth of fund drives, business leaders often suggest projects and launch money raising campaigns of their own.

When the city suffered from a housing shortage, business leaders kicked in $46,000 to provide municipal facilities for vacant land on the northeast side. That stimulated a builder to erect four apartment buildings housing 52 families.

To keep children off the street, the town—via contributions—built three centers where boys and girls may take part in such activities as watching TV, playing basketball, learning to sew, and studying woodworking. Last October a fund drive for current year operations raised $76,250, exceeding the $67,252 goal.

To attract and hold top flight teachers, the Columbus School Foundation was launched with a collection drive last December. Collections totaled $6,500, surpassing the $5,000 goal. The fund will be used to help support teachers taking summer courses, to send select teachers to Europe for a summer and to help teachers and the school system in other ways.

The propensity of Columbus' citizens to give to charity is part belief in local responsibility, part tradition, and part self interest. "We in industry recognize the increasing responsibility we have toward the community in which we operate," says Mr. Miller of Cummins Engine, the community's largest employer. Robert Huthsteiner, Cummins president, adds, "If you don't have attractive schools, hospitals, housing, and parks you won't attract good people to the town. When we try to hire people those are the first things they ask us about."

Though no one says so flatly, Columbus sees extra appeal in any fund drive that also enhances local living conditions. The town must compete for workers with such industrial centers as Indianapolis to the north and Louisville to the south.

"The bulk of the contributions for various drives comes from industry," says attractive, auburn-haired Mary Bottorff, executive secretary of the local American Red Cross chapter.

That was especially true of the drive to improve and modernize the school system. The school drive also illustrates some of the city's fund-raising techniques.

Columbus currently has a birth rate nearly double the rate 10 years ago. Its busy industries also have been attracting people from elsewhere. In the past 16 years population has increased 87 percent, with a 19.8-percent increase recorded in the past 6 years.

SCHOOL ENROLLMENT JUMPED

The growth, plus the zooming birth rate, put the school system in a tight squeeze. Primary and high-school enrollments, which totaled 3,375 in 1950, jumped to 4,635 in 1956, with a further rise to 5,239 forecast for 1960.

In 1950, when businessmen first became concerned about the school system's deficiencies, the city had 105 classrooms, adequate for 3,150 children on the basis of the town's estimate of an average of 30 per

room. But 3,375 children already were going to school, with a big influx due.

A committee of business and civic leaders tackled the problem. They recognized that bonds could be floated and taxes raised, but they felt that over the years, interest payments could eat up a substantial portion of funds accumulated for the school system. Moreover, the tax-bond route might have been time consuming; the need for schools was immediate and urgent.

So it was decided to use contributions to supplement the regular tax program. The first new school added to the system was the Jefferson elementary school, completed in 1951. About 90 percent of the $376,000 cost of the attractive, contemporary-style building was donated by industry. After the Jefferson school was completed, $1,006,000 was raised by contributions for a new physical education building at the high school. Industry contributed about 60 percent of this money.

WEEK'S PAY OR PROFIT

"We adopted the slogan 'a week's pay or a week's profit,'" says S. E. Lauther, president of the Irwin Union Bank, who ranks as a newcomer since he's only lived in town for 10 years.

Many communities wouldn't even attempt a fund drive with an anticipated per capita contribution equivalent to about $50 each for every man, woman, and child in town. Columbus raised the money in 15 days.

As the money rolled in, the Irwin Union Bank contributed its facilities toward putting funds to work while the gym was being built. Funds earned $18,000 while the gym was being designed and constructed.

Total contributions to the school system for building alone amount to $1,746,500 over the past 6 years. In the same time span, $2,269,000 of tax money went into school buildings. Today, Columbus has 180 classrooms, 71 percent more than at the start of the building program.

SWIFT PACE OF GIVING

Industry is helping Columbus and Bartholomew County set a charity contribution pace that probably exceeds that of any other community in the United States. The county's per capita contributions for the Tuberculosis Association lead the Nation, say association folk here. Average per capita contributions for the entire country amount to 16 cents annually; Bartholomew County's average is over 50 cents.

Mental Health Fund contributions for this county are the highest in Indiana and among the highest in the country. Bartholomew County's 21 cents per capita contribution last year compared with 5 cents for Indiana and less than 2 cents for the Nation.

Sometimes four drives are underway at one time, yet each meets or tops its goal. In January, the National Foundation for Infantile Paralysis staged its drive, followed by the Heart Fund in February and the Red Cross in March. Now, the Heart Fund and the Red Cross drives are being wound up; the Salvation Army is coming on the scene; the Crippled Children's drive has a painted oil drum "well" in front of the Irwin Bank and the Cancer Fund is in its April campaign.

This variety of causes is unusual. The trend in many communities is away from individual campaigns toward one United Fund drive. An estimated 600 cities have switched to United Fund, often because industry has grown tired of constant solicitation.

MULTIPLE DRIVES FAVORED

Not so Columbus. After a study, the idea of a united campaign was turned down, with industry taking the lead in favoring multiple drives.

"Our study showed that people were contributing twice as much through individual drives as they estimated they would be able to give under a united drive," says Bob Gordon, editor of the 12,000 circulation Evening Republican.

Secret of Columbus' success in raising money is its strong support from top business management.

In many fund drives elsewhere, a corporation president may take the bows for handling the drive. But behind the scenes he has delegated the work to subordinates far down the ladder—subordinates who may try hard but who may lack the organizational spark and management talent of a top executive.

"Here you go the top to get a job done," declares Lowell Engelking, husky, broad-shouldered president of Engelking Patterns, Inc. Management puts the same top-flight talent into charity drives as into sales campaigns.

The fact that many of Columbus' industries are home owned also helps. Executives don't have to seek permission from distant managements when considering donations. And being hometowners, Columbus executives undoubtedly have a more direct interest in community welfare. Finally, full employment and high income levels mean the town's intensive fund drives have more chance of exceeding goals.

NO OUTSIDE FUND RAISERS

Columbus has no use for professional fund raisers in its campaigns. Nearly every dollar collected goes for its intended purpose, with very little eaten up by expenses.

"Last year we had $148 in expenses when raising $23,700 for our fund drive," says Miss Bottorff, of the Red Cross. The current Red Cross drive has set its sights on $24,500. She explains that industry is providing the managerial talent. Company secretaries handle any correspondence on company stationary.

Many factors underpin the success of Columbus' fund raisers. Top executives who head campaigns know one another intimately, belong to the same clubs—Rotary, Kiwanis, chamber of commerce, and the like—and see one another often. When an executive accepts the chairmanship of a fund drive, he loses little time in calling on his friends to help. A fund raiser may put the bite on a fellow businessman at an informal club meeting or direct a formal fund appeal to an entire club.

The fact that many of the town's executives are their own bosses means they can put as much time as they like into charity work, without worrying about the reaction from a vice president in another city.

There's a certain element of mutual back scratching, charity style. Since most executives take turns at heading campaigns, there's an informal but effective understanding that a donation to the polio drive will be reciprocated by the campaign chairman when a colleague comes around for the Heart Fund.

SOME SOCIAL PRESSURES, TOO

There is more social pressure to contribute in a town the size of Columbus than is the case in a larger city. Everyone knows who is giving and who isn't, and campaigns use the technique of having neighbor call on neighbor. And the community's smaller size makes it easier for citizens to see the results of their giving. New schools, boys and girls clubs, and the Red Cross bloodmobile all give physical evidence of past campaigns—and increase willingness to give to future drives.

Employee contributions are stimulated through payroll deduction programs. Employees contribute a certain amount each week in deductions, and proceeds are divided among local charity drives.

Hamilton Manufacturing production workers average $15 annually in payroll deductions. "Many of our employees wanted to have $1 a week deducted from their paychecks when we launched this program," says William Hamilton, company chairman. "We talked most of them out of that for we thought it was too much for a production worker to give."

The giving spirit in Columbus spills over into other channels. Republican and Democratic politicians report that Bartholomew County citizens are so conditioned to donating that political contributions roll in with little collecting effort.

Employee Welfare and Pension Benefits

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 9, 1957

Mr. HUMPHREY. Mr. President, the attention of many people has recently been directed to the question of employee welfare and pension benefit plans. Senators will know that S. 1122 is presently pending before the Committee on Labor and Public Welfare. That bill, sponsored by the distinguished senior Senator from Illinois [Mr. DOUGLAS], not only offers the Senate an opportunity to adopt appropriate legislation, but this bill is serving as a model for others pending on the State level. Such is the case in my own State of Minnesota, where a union welfare fund bill, modeled on S. 1122, has recently been approved by the House Labor Committee of the Minnesota State Legislature.

An editorial on this subject appeared in the March 26 issue of the St. Paul Dispatch, and I ask unanimous consent that the text of this editorial be printed in the Appendix of the RECORD.

In this same connection, Mr. President, I have recently written to Senator DOUGLAS expressing my own interest in S. 1122 and my hope that the Senate Labor Committee may soon proceed to its consideration. I ask unanimous consent that the text of the letter just mentioned be printed in the Appendix of the RECORD.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

DOING THE RIGHT THING

The union welfare fund bill which the House Labor Committee has approved is an adaptation of the measure which Senator PAUL DOUGLAS, of Illinois, has introduced on the national level. It is designed to prevent abuses in Minnesota such as those that have been exposed in the senatorial investigation and to that end sets up a system of supervision and regulation.

The responsible leaders of organized labor in Minnesota have been among the first to see the need for such legislation. In fact the Minnesota federation of labor is pushing the bill and its legal counsel had a hand in drafting the provisions.

Praising people for doing the right thing always sounds a little like saying that their virtue comes as a surprise. It does not come as a surprise that these labor leaders are seeing this situation in the right way because they have run a good labor movement in Minnesota and if the scandals coming to light at Washington should besmirch any segment of that movement here, none would deplore and oppose the abuse of trust more than they.

The present legislation would provide protection against abuse of trust in the handling of these welfare funds. The welfare plans will have to be registered and there must be annual reports and audits. It provides for investigations and criminal penalties for misuse of the funds or diversion from their rightful owners and purpose.

What is happening in the labor world is the same thing that happened earlier in the case of business. With its great and rapid growth, need for regulation has arisen in the interests of labor itself and the general public. The quicker and better this is done the better for all concerned. It is a good thing that the leadership here recognizes this.

Address by Hon. Eugene J. Keogh, of New York, Before National Conference of Bar Presidents

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 9, 1957

Mr. FREAR. Mr. President, by request, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from a speech made by Representative EUGENE J. KEOGH before the National Conference of Bar Presidents, at Chicago, Ill.

Mr. KEOGH spoke regarding the provisions of H. R. 9 and H. R. 10, which relate to the retirement and benefit plans affecting the legal profession.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

Mr. Chairman and distinguished ladies and gentlemen present here today, rather than doing you a favor, I should say that I have been accorded a great privilege to meet with you leaders of the American bar on a cause in which I have envinced some interest over the years and in which I assure you I shall never refrain from envincing interest whenever and wherever the opportunity arises. I do this out of a firm conviction that the pending bills to which I shall address myself but briefly mark, in my opinion, a long delayed injustice to be corrected; they mark a great step in the direction of solidifying the dynamic type of representative democracy and democratic government that we think we have, that some of us know we have, and all of us always want to have.

So, it is with no concern at all about any of the details, any of the varying theories of solving this problem that I come to you today to talk to you about bills H. R. 9 and H. R. 10, which have been introduced in this, the 85th Congress, by my very distinguished and able colleague from Ohio, Mr. JENKINS, and by me.

* * * * *

Lawyers generally are entitled to be interested in law and lawyers, therefore, have a distinct and justifiable interest in proposed legislation, but if there is one thought that I would like to be able to leave with you today, it is that I would like your help in dissipating, when and wherever necessary, the obviously false notion that H. R. 9 and 10 is a lawyers' bill.

It is, on the other hand, a bill to encourage the establishment of voluntary pension plans by self-employed individuals, by those who either by law cannot or by choice do not operate under the corporate form.

This would be accomplished by affording such individuals a tax deferment on a specified limited portion of their earned net income which they set aside for retirement.

Under existing law, as we all know, such deferment is afforded to employed persons whose corporate employers and noncorporate employers have established so-called employees' pensions and pension plans meeting the statutory limits and requirements. However, since self-employed individuals cannot be their own employers nor employees, they cannot qualify under existing legislation.

We need only recall that the Social Security Act, which set up the compulsory system of old-age pensions, originally applied only to employed persons but has now been extended to cover almost all self-employed persons. The bills, therefore, would give to those same self-employed persons a further measure of equality with employed persons so far as supplemental private pensions are concerned.

In order that we may all know about what we are talking, and I am sure that we all do, permit me to point out that the bill would allow self-employed persons a deduction for Federal income-tax purposes for amounts set aside for their retirement with the proviso that the annual deduction could not exceed the lesser of 10 percent of self-employment income or $5,000, with a special rule that would provide that in the cases of persons 50 years of age or over, who would have only a few years to build up their retirement funds, that they would be permitted an additional allowable deduction which would be increased one-tenth for each year of age over 50 and not over 70.

To the extent that allowable deductions were not used in any one year, they would serve to increase the allowable deductions during the following 5 years, until exhausted, except that a maximum annual ceiling of $5,000 would still apply.

A self-employed individual could not deduct over his lifetime more than 20 times the maximum annual contribution under the general rule.

Under the bills, a self-employed individual is the same as self-employment provisions of the Social Security Act, except, that it also includes those not presently covered by such act, the principal group of which is, of course, the medical profession and some clergymen.

Self-employed persons who are also employed during the year are not disqualified unless they are currently a member of or receiving payments under a governmental or private pension or profit-sharing plan or have received a distribution of their interest in such pension or profit-sharing plan.

The allowable deduction is in terms of amounts paid as so-called retirement deposits, which are defined in the pending bills as amounts paid into a restricted retirement fund or as premiums under a restricted retirement policy. The fund is defined as a trust or custodian account established under a retirement plan for self-employed individuals.

* * * * *

In lieu of the rates otherwise applicable, the lump sum distribution would be assessed at 5 times the rate applicable to one-fifth of the amount and the same treatment would be given payments on the death of the participant before withdrawal of the funds. The withdrawal of such funds prior to age 65 is permitted.

A new provision in the pending bills permits a takedown of funds prior to age 65 and short of total and permanent disability. It is permitted subject, however, only to the payment of a penalty; in such cases it is provided that the tax shall be 110 percent of the amount which would have been payable had the distribution been included in the individual's gross income rate over the taxable year and 4 taxable years immediately preceding or such lesser number of immediately preceding years in which retirement deposits are actually made.

These provisions would apply equally to distributions from a restricted retirement fund and under a policy.

Generally speaking, I have briefly covered the important provisions of the pending bills and I must tell you that the form of the bill now pending is quite distinct, quite different from its predecessors. Those changes have been made and they have been made after careful thought and study, in which thought and study your committees have been continually engaged and have been in consultation with as many of the representatives of groups that might be affected by the form of the bill as they possibly could meet with and discuss the problems with. They have been meeting, too, with representatives of the executive branch of the Government and have sought in those discussions to elicit from the representatives of that branch of the Government as much as they possibly could with respect to the desires, the aims, the hopes and the aspirations of that branch.

I think that I should tell you that this is the fourth Congress in which the bills in some form have been introduced. One who is not too familiar with legislative work might think that it is about time something was done. Well, as one of the original introducers of what now is the pending bill, I would be inclined to agree with you. But I am sure that some of the more experienced men and women in the room understand that sometimes it takes a little longer to perform that which is obviously just than it does to perform some legislative miracles.

In all of the work that we have been doing in Washington, we have always been courteously treated by the representatives of the Treasury Department. I think it is fair to say that we, the sponsors of the legislation, have always sought to keep it on a bipartisan basis. I use that word because I am one who thinks that in a legislative sense there is really nothing that can be nonpartisan. We have tried to approach it in a manner that would not mean that one political party might take advantage of the other or that one might be hurt as compared with the other.

We have sought to be completely objective in our approach in relation to the objections that have been raised to the prior forms of the bill, just as I assure you that we will seek to be objective with respect to any objections that may be raised for the form of the pending bill.

* * * * *

We welcome gladly, anxiously and with deep appreciation the interest that your distinguished president has taken in this little piece of legislation and the great work that your association and your committees have done.

I am sure that you are all conscious of the danger of specifics and I am sure, also, that you would not mind my mentioning a few names of those representatives of your organization who have been with us during the dark and dreary days and who are with us now that we see some rays of sunlight coming up over the horizon.

I refer, of course, to George Roberts and Leslie Rapp and the committee, and I am delighted to observe that you have been fortunate in obtaining the increasing interest of Laurens Williams, who has done such a great job for the Treasury Department and who I am confident will do an equally great, if not greater job, for the self-employed now.

I am delighted in Chicago, too, to pay my respects to Dr. Frank Dickinson of the AMA who has been just as stalwart as those of you who know of him know him to be and who has been a great source of encouragement to TOM JENKINS and to me and I compliment you, Mr. President, on the formation of the

newly revitalized, reactivated assembly that you have gotten together and your selection of Mr. Donohue, for this will probably succeed in keeping him in Washington a little more than he has been in the past 2 years.

• • • • •

Mr. President, I hope that before this Congress is over that you and your members and your fine organization will be pleased by the report of progress that all associated with you in this endeavor will have made. I am indeed grateful to you for this opportunity to talk to you today. [Applause.]

Address by Ambassador MacArthur Before the American-Japan Society

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 9, 1957

Mr. MANSFIELD. Mr. President, on March 22, 1957, the United States Ambassador to Japan, the Hon. Douglas MacArthur II, delivered an address before the American-Japan Society, at Tokyo. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE DOUGLAS MACARTHUR II, UNITED STATES AMBASSADOR TO JAPAN, BEFORE THE AMERICA-JAPAN SOCIETY, TOKYO, MARCH 22, 1957

Mr. President, distinguished guests, and members of the America-Japan Society, 35 years ago I visited Japan for the first time. I came with my father, and we spent 3 weeks in this great and beautiful country. We landed at the port of Yokohama, and in addition to Tokyo we visited Nikko, Lake Chuzenji, Kyoto, Kamakura, and other places of remarkable interest and beauty.

I was at the impressionable age of 13 and was for the first time exposed to a culture and art which long antedated that of my own country and which in many respects has yet to be equalled anywhere in the world.

The friendliness of the Japanese people whom we met everywhere and the beauty of this country made an indelible impression on me. It gave me the desire to know more about Japan and about other countries and their peoples. In fact, it was following this visit to Japan that I decided to enter the American Foreign Service. So, if I am here today as Ambassador, only Japan is to blame, because of the imprint it made on me 35 years ago.

It is indeed a happy privilege to take my turn in observing the tradition that an American Ambassador to Japan makes his maiden speech before this society. In so doing, I would like to begin by paying respect to my distinguished predecessors, particularly Ambassador Grew, Ambassador Murphy, and Ambassador Allison. I have talked long and earnestly with them about Japan, and sought their counsel regarding my mission here. Each sent renewed and most affectionate greetings to Japan, the Japanese people, and this society. Each in his own way has contributed greatly to the cause of Japanese-American friendship.

Following in their footsteps, I am aware of a rich heritage and a high obligation. In assuming that obligation, I have a strong conviction as to what should be the first step in carrying out my responsibilities as the American Ambassador to Japan.

That first step will be to listen. For, listening is the key to knowledge and understanding, and mutual understanding is the very essence of peoples and nations living successfully together. My every effort will be directed to broadening and deepening the flow of true understanding between our two countries.

To accomplish this, I want to learn more about what the Japanese people think and feel, in all walks of life, throughout the country. The process of learning is, of course, endless, and I have much to learn. That is why in the next few months I hope to spend a large part of my time in meeting Japanese people, making friends, traveling, observing, and taking part in typically Japanese experiences. I am eager to absorb all those manifold impressions that go to make up a real understanding of another country.

As one who wants to begin by listening, I might start by discussing with you today the questions uppermost in my mind, the things about which I would most like to learn.

My first question is: What is to be the character of the period now beginning in the relations between our two countries?

That a new period is beginning is evident in many ways.

During the past few years the meaning of the peace treaty has gradually been spelled out in the fabric of daily life. At the same time, the social and spiritual convalescence of Japan from the profound shocks and strains of war and its aftermath has steadily progressed.

Politically, with her admission to the United Nations, Japan has fully returned to the world community as a respected, equal, and influential member—a development that my Government and the American people warmly welcome.

In the economic field, thanks to the great energy and skills of the Japanese people, Japan is now back on its own feet. And, while Japan has long-term economic problems, I am confident that these also can be met provided the principles of free world cooperation and interdependence are observed.

Japan is now entering the atomic age for peace along with other countries that have the requisite technology, and the development of atomic energy can contribute greatly to the economic progress and well-being of the Japanese people. With time and further development, it seems to promise electric power in abundance, as well as increased yields in agriculture and improved health.

The coming of the jet plane in commercial transportation is another great development in our changing times. The fact that now Tokyo and Copenhagen are nearly as accessible to each other as were Tokyo and Osaka 50 years ago illustrates dramatically the growing proximity of nations and their vital need of understanding and cooperation.

During these last few years, major changes have been likewise observable in the rest of the world. We have witnessed a shift of tactics—but not objectives—on the part of certain countries whose avowed purpose is to impose their totalitarian regimes first on their neighbors and then throughout the world.

With this tactical shift have come other centers of danger, but at the same time new opportunities for constructive Japanese participation in world affairs. This, Japan is already doing in the United Nations, where her clear and courageous voice has effectively made itself heard on behalf of justice and conciliation.

Thus, we are entering a new period. A period which holds not only great opportunities but also great responsibilities for Japan—indeed for us all. And the character of this coming period will, of course, be influenced by decisions Japan takes.

Accordingly, my first question leads to a second:

What will Japan choose to do with her new position and opportunities in the world? What responsibilities is she now going to assume? What others will she prepare for?

It is for answers to such questions, including the many more specific ones which they raise, that I shall be listening most attentively and sympathetically as I talk with people in Japan. For, clearly, these are questions which the Japanese people must decide for themselves, taking into account the kind of world they wish to help develop and in which they wish to live.

Only by freely exercising their own independence, with its attendant responsibilities, can they come deeply and sincerely to grips with the problems of free world interdependence, which is the reality of the world today, and on which freedom and security depend.

As I listen to Japanese points of view, I will of course speak in turn, to the best of my ability, about what Americans are feeling and thinking. Understanding is not a one-way street. It is a two-way street in every sense, and precisely in such a friendly but completely frank give-and-take relationship, based on full equality, good will, and mutual respect, lies the best hope for the future of Japanese-American friendship.

On the subject of interdependence among nations in the modern world, the convictions of my country are clear and strong. We have learned by hard experience that we cannot live alone and merely do as we please; that security is either collective or illusory; that only by joining hands and working together can free peoples remain free.

Whenever two countries which share the same fundamental interests work closely together there will, of course, be differences of opinion on specific problems. But this is not unhealthy. On the contrary, it is a normal thing, and is in fact the very hallmark of free peoples and free nations. For, where differences between countries are not permitted to appear, it means that the views of one have been suppressed.

Finding solutions to those differences which arise between our two countries will require patience and understanding, persistence and sacrifice on both sides. We must both understand that durable solutions to problems cannot give complete satisfaction to either party, and that they must be based on the principle of give-and-take.

But, I have the greatest faith that we will find solutions to our problems, because the community of interest between our two countries is so broad and so deep. This identity of interest far outweighs those differences as to method and approach which are bound to arise between us with respect to specific problems.

I would like to close with a word about my hopes and my faith.

I view the future relationship between our two countries as a full and equal partnership which serves the enlightened self-interest of each country.

I am convinced that there are immense possibilities, for both Japan and America, in the area of Japanese-American relations that is now opening before us.

I believe with all my heart that Japan and the United States share the same fundamental purposes and interests. Both countries and peoples are dedicated to the same high principle of seeing peace with justice prevail in the world.

As the American people's pledge and prayer, I leave with you this message, spoken by President Eisenhower in his second inaugural address:

"We look upon this shaken earth, and we declare our firm and fixed purpose—the

building of a peace with justice in a world where moral law prevails.

"The building of such a peace is a bold and solemn purpose. To proclaim it is easy. To serve it will be hard. And to attain it, we must be aware of its full meaning—and ready to pay its full price.

"We recognize and accept our own deep involvement in the destiny of men everywhere. We are accordingly pledged to honor, and to strive to fortify, the authority of the United Nations. For in that body rests the best hope of our age for the assertion of that law by which all nations may live in dignity.

"May the light of freedom, coming to all darkened lands, flame brightly—until at last the darkness is no more.

"May the turbulence of our age yield to a true time of peace, when men and nations shall share a life that honors the dignity of each, the brotherhood of all."

To those sentiments, I am sure the Japanese people can also sincerely subscribe.

True understanding and cooperation between Japan and America will contribute much to make a living reality of a world truly at peace.

I thank you.

Military Programs for the Middle East and Asia

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 9, 1957

Mr. HUMPHREY. Mr. President, the decision at the Burmuda Conference for the United States to participate in the military aspects of the Baghdad Pact has opened up once more our consideration of the value of our military assistance programs in the Middle East and south Asia. I myself was surprised at the Burmuda decision, since we had so recently been assured by the Secretary of State—only a month previously—that he did not contemplate further participation in Baghdad Pact activities.

In the Minneapolis Star for March 25, 1957, there appeared an editorial entitled "We and the Baghdad Pact." The editorial discusses some of the difficulties of our new position, and I ask unanimous consent that it be printed in the Appendix of the record.

Some of these same considerations were reexamined in succinct form by Mr. C. L. Sulzberger, in a dispatch from Paris which appeared in the New York Times for April 3, 1957. Mr. Sulzberger's column is entitled "A Self-Defeating American Policy in Asia," and it examines what Mr. Sulzberger calls our "sabotage of India's social revolution" by our arms aid to Pakistan. I ask unanimous consent that the text of Mr. Sulzberger's column be printed in the Appendix of the RECORD.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the Minneapolis Star of March 25, 1957]

WE AND THE BAGHDAD PACT

The United States, as one result of the Eisenhower-Macmillan talks in Bermuda, is to join the military committee of the Baghdad Pact. It is not yet clear precisely what Anglo-American policymakers hope will be the outcome of this move.

This country did not openly associate itself with the pact when it was signed in 1955 (by Britain, Turkey, Iran, Iraq, and Pakistan), but we were generally credited—or blamed—for its organization. We pushed the pact, it was said, as a means of preventing Red penetration of the Middle East.

Subsequently Russia leapfrogged the defense tier established by the pact and the Communists have penetrated in varying degrees in Syria, Jordan, and Egypt. Also subsequently, pressures from pact members have forced this country to associate itself more and more with the Baghdad organization. Last April we joined the economic and antisubversion committees of the pact, set up a permanent liaison office with the military committee, and agreed to contribute to the costs of the permanent secretariat.

Originally it had been said we did not join the pact in order not to offend Egypt, Saudi Arabia, etc. The Arab league governments, however, having espied Uncle Sam's hand behind the pact from the first, took note of such subsequent developments and have continued to be offended.

The pact members, especially Britain, have not been satisfied with our membership-in-all-but-the-name and have pressed us to stand up and be counted. Apparently it has been decided at Bermuda that we should now rise almost but not quite to such a standing position.

It is a little hard to see the exact gains that will accrue to the pact from our joining the military committee—in view of our already intimate working relationship. It is not quite clear, either, just how our closer association with the pact, which is so unpopular with other Middle Eastern governments, will facilitate carrying out the Eisenhower doctrine's design of closer relationships with all governments in the area to oppose Soviet power penetration.

It is impossible not to see, on the other hand, the propaganda uses antiwestern Arab extremists will try to make of our move.

Perhaps ensuing developments will shed more light on the intentions of the Bermuda policy planners.

[From the New York Times of April 3, 1957]

FOREIGN AFFAIRS—A SELF-DEFEATING AMERICAN POLICY IN ASIA

(By C. L. Sulzberger)

PARIS, April 2.—United States foreign policy as applied in south Asia displays a disturbingly schizophrenic aspect. Our aspirations are clearly both benevolent and sound. But the methods by which we seek to achieve them are almost surely self-defeating.

Our fundamental objective is to seal off the Sino-Soviet bloc and prevent communism from intruding southward. To bolster the underdeveloped countries affected we are sponsoring a dual program.

One phase is purely military. This endeavors to strengthen defensive capabilities of nations committed to the Western camp. Pakistan comes specifically within this category as a member both of SEATO and the Middle Eastern Baghdad Pact. The second phase is economic. This endeavors to strengthen the social, agricultural, and industrial structure of all south Asian nations, neutral or otherwise, enabling them to resist subversive pressures.

In this category we include not only our ally Pakistan, but countries often irritatingly unsympathetic to our aspirations—to wit, India, Ceylon, Burma, Nepal, and Afghanistan. Of these India is overwhelmingly the most important.

Even those in Washington most angered by Nehru's tendency to lecture us while excusing Communist transgressions and his own violation of principles he preaches admit that the West has an immense stake in Indian democracy's success. For India is the only massive Asian nation that remains non-Communist.

INDIA VERSUS CHINA

A curious competitive coexistence exists between New Delhi and Peiping. The Russians, recognizing the importance of this contest, are pouring vast material, technical and financial aid into China. We, likewise, are investing a considerable amount in efforts to help Nehru's democratic revolution—much as we tend to dislike his personality.

If, during the coming generation, India can succeed in modernizing its antiquated plant, educating its illiterate masses, and becoming self-sufficient, the cause of freedom will have achieved a triumph. Ultimate repercussions in other Asian nations, even ironbound China, might be boundless.

However, the chances of Indian success in this competition with China are being hampered by an arms race with Pakistan Part of India's budget is supported by our economic generosity. But another part is drained off by New Delhi's determination not to lag behind Karachi militarily. Pakistan's materiel comes from us.

Both countries spend on defense infinitely more than they can afford. The amount in each case is probably over half the national income. Neither, within the foreseeable future, can become strong enough to stave off open Soviet aggression. But each is rapidly attaining a capability to cripple the other.

American policy of arming Pakistan tends indirectly to weaken disastrously the Indian economy. It has also provoked another neighboring land, Afghanistan, to make an unhealthy weapons deal with the U. S. S. R. on the assumption such equipment is required because of a frontier argument with the Pakistanis.

FRUIT OF OUR POLICY

Therefore, by our policy, we encourage indirectly a sterile military spending race. None of the south Asian countries can afford this. And India's new 5-year plan—upon which we ultimately base such hopes—is going down the drain.

Even if New Delhi continues to receive American economic aid at present rates—which Nehru's political gyrations render less likely—and even if a new World Bank loan is forthcoming, there will be a short fall in financing the second 5-year plan amounting to perhaps $750 million.

As a result the plan, upon which India's ultimate political health relies, must now be drastically cut. Projected new developments have been halted and imports restricted. Many undertakings are being stopped half finished. Equipment already purchased, therefore, lies wasting.

This situation allows Moscow two political choices. The Russians have already offered India a $125 million credit. They may suggest still larger amounts in an effort to gain controlling leverage on India's economy. Or they may withdraw proposed help in the hope of stimulating collapse and possible disintegration of Asia's largest democratic nation.

By our well-intended policy of arming Pakistan we are unwittingly helping to sabotage India's social revolution—upon which we bet so heavily. Clearly the time has come to think this through more carefully.

Pakistan, as our ally, is surely entitled to be strong. But hasn't the moment already arrived to cut down military assistance to that country and help develop its disturbingly backward economy? Should we make such a decision it is certain that India can be prevailed upon to reduce investment in unproductive weapons.

It would be short-sighted folly if, for the sake of strengthening one ally's limited fighting potential, we helped destroy Asia's most important non-Communist revolution—and, by so doing, lost Asia itself.

Protecting Wholesalers and Jobbers From Monopolistic Practices

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Tuesday, April 9, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address of James W. Cassedy, general counsel of the Motor and Equipment Wholesalers Association, at the annual convention of the Automotive Wholesalers Association of Tennessee at Gatlinburg, on April 8. The address of Mr. Cassedy is one of the finest statements that has come to my attention of the part each level, that is, the manufacturer, wholesaler, and jobber and retailer, should play in our economic system. Mr. Cassedy, in his address, points out the necessity of protecting the legitimate rights of each of these three groups in our free competitive enterprise system from discriminatory practices. He points out the necessity of passing H. R. 11 and S. 11, which would strengthen the Robinson-Patman Act in achieving this aim. Mr. Cassedy was one of the chief attorneys for the Federal Trade Commission for a number of years, and is now a successful private practitioner of law in Washington, D. C. His thoughts about the problem of fair competition and the remedy to prevent certain unfair practices of today are well worth considering.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PROTECTING WHOLESALERS AND JOBBERS FROM MONOPOLISTIC PRACTICES

(Address by James W. Cassedy, general counsel, Motor and Equipment Wholesalers Association)

The American economic system of free competitive enterprise was conceived by the Founding Fathers of our Nation and was written into the Declaration of Independence and the Constitution and laws of the United States. In the beginning this concept was largely an ideal in the minds of men who desired freedom from unreasonable restraints in the conduct of their individual lives and businesses. Subsequently, with the development and growth of this country the ideal of a really free competitive enterprise system has been the objective of our representatives in Congress and in the legislatures of the various States. At every session of Congress and of the legislatures of the States the major effort of our lawmakers is to perfect and protect this ideal, in the public interest.

A really free competitive enterprise system embraces the total of millions of day-by-day decisions—some good and some bad—but decisions that are freely made by individuals acting individually and independently in the conduct of their own businesses. The objective of the system is to provide for all American businessmen the right to be independent, to make their own decisions, and to determine their own actions in accordance with their own judgments.

Competition is a contest between two or more business rivals for the business of a customer. Webster's New International Dictionary defines competition as "seeking, or endeavoring to gain, what another is endeavoring to gain at the same time; a contest between rivals; a match or trial between contestants."

The term "enterprise" means an undertaking or hazard; an arduous attempt. "Free enterprise" means the right to conduct a legitimate business for profit, except in time of war. "Free competition" means a free and open market among both buyers and sellers for the sale and distribution of commodities.

The American economic system of free competitive enterprise includes competition between manufacturers, producers or sellers at the primary level. It includes competition between wholesalers, distributors or jobbers at the second level. It includes competition between retailers at the third level. Each level of competition is entitled to equal dignity and is of equal importance.

The importance of independent wholesale distribution and independent retail distribution in the automotive service industry, as well as by wholesalers or retailers in other industries, cannot be overemphasized for the protection and maintenance of our free competitive enterprise system, for the independence of the wholesaler and of the retailer is vital to that system.

The wholesaler is a specialist in making merchandise available. He gives time value and place value to goods. He is the bridge that connects thousands of manufacturers, producers, and other sellers at the primary level of competition with hundreds of thousands of retailers at the third level of competition. The wholesaler buys goods in large quantities, warehouses them, breaks them up into smaller quantities, and distributes them as they are needed by his retail customers. He makes delivery. He extends credit. He furnishes merchandising aid and counsel to retailers. He is the long arm of distribution reaching out and giving availability to merchandise everywhere.

Only a few manufacturers or producers at the primary level of competition can directly serve the retailer as economically and as well as they can through the wholesaler. Many thousands of manufacturers and producers and many hundreds of thousands of retailers simply could not exist if it were not for the services provided by the wholesaler. If the wholesaler were eliminated the great majority of manufacturers and retailers would also be eliminated.

The American economic system of free competitive enterprise is protected and maintained by our antitrust laws. These laws express the national public policy. We look to their enforcement to protect competition not only between manufacturers, producers, and other sellers at the primary level of competition but also competition between wholesalers, distributors or jobbers at the secondary level and competition between retailers at the third level. We look to the enforcement of these laws to protect competition at all levels from injury and destruction by price discrimination, exclusive dealing, price fixing, and other illegal practices. We look to their enforcement to provide free and open markets, equality of opportunity of all persons to compete in trade or business, and freedom of choice in the purchase and sale of all commodities.

We believe that our antitrust laws should provide free and open markets, equality of competitive opportunity, and freedom of choice in trade at all levels of competition. That is our objective and goal but since the enactment of the first antitrust law Congress has found it necessary time and again to pass additional antitrust legislation to meet some new threat to our free competitive enterprise system which the law did not cover.

The American people have never hesitated to support and the Congress has never failed to enact whatever antitrust legislation was needed to protect our free competitive enterprise system, but throughout the history of our country we have learned that protecting this system requires constant effort because there are always some who for selfish reasons adopt and use unfair and destructive methods of competition, particularly price discrimination, to gain an economic advantage which injures, destroys, or prevents competition, creates monopoly, or lessens their need to compete on the basis of fairness and efficiency. Of these illegal practices, the one that has been the most harmful and difficult to prevent throughout the years has been price discrimination. The fight waged against the evil of price discrimination has had a long legislative history.

The first Federal law prohibiting price discrimination was the Interstate Commerce Act of 1887. Congress enacted this law largely as the result of public resentment against the discriminatory practices of the Standard Oil Co., and other trusts and combines, which destroyed their smaller competitors. Subsequently, this law was supplemented by the Sherman Antitrust Act of 1890 which made illegal "every contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade." This act also made it illegal to "monopolize, or attempt to monopolize, or combine or conspire with any other person or persons to monopolize any part of the trade." Thereafter in two cases prosecuted by the United States Government against the Standard Oil Co. and the American Tobacco Co., which were decided by the Supreme Court in 1911, the evidence dramatically demonstrated that price discrimination had played a major part in bringing about monopolies in the petroleum and tobacco industries. These monopolies were broken up and the Sherman law appeared to be adequate where known monopoly existed or where known monopoly had reached such a near state of maturity that the intent of gaining a complete monopoly was unmistakable, but this law was never interpreted as adequate to prohibit the monopoly practice of price discrimination.

Following these decisions there was great public concern over the monopoly problem. This was reflected in the presidential campaign of 1912 in the platforms of the Democrat, Republican, and Independent Parties, which called for legislation that would prohibit the specific acts and practices, such as price discrimination, which led to monopoly rather than to wait for a monopoly to grow to full flower and then attempt to break it up. The public demand was "to kill the weed in the seed."

It was in response to this public demand that Congress enacted in 1914 the Clayton Antitrust Act and the Federal Trade Commission Act. The Clayton Act made unlawful and specifically prohibited price discrimination and other harmful acts and practices that injure competition and tend to create monopoly. The Federal Trade Commission Act made unlawful and prohibited unfair methods of competition to cover any other acts or practices which had not yet been defined as leading to monopoly.

Subsequently, in the efforts to enforce the Clayton Act prohibitions against price discrimination three loopholes and weaknesses were found which practically nullified the law. The first was that while the statute sought to protect competition generally from substantial injury it was not adequate to protect an individual wholesaler or retailer competing locally in the resale of the manufacturer's goods. The second was the proviso which exempted price discrimination on account of differences in the quantities sold without reference to differences in the seller's cost savings. The third loophole was the proviso which exempted price discrimination made in good faith to meet competition. Because of these loopholes and weaknesses in the Clayton Act discriminatory practices increased and spread

to many industries and brought about an increasing public demand for corrective legislation to protect competition, not only between manufacturers, producers, and other sellers at the primary level, but also competition between wholesalers at the secondary level and between retailers at the third level. The prevalence of the price discrimination evil and its destructive effects upon small manufacturers, wholesalers, and retailers at all levels of competition was set out in an overwhelming mass of evidence in some 30 volumes of factual studies submitted to the Congress by the Federal Trade Commission and by the committee hearings on the Robinson-Patman bills.

As a result the Congress enacted the Robinson-Patman Act in 1936 in an effort to strengthen the Clayton Act by closing the 3 loopholes and weaknesses previously described.

The scope of the provision prohibiting price discrimination, where the effect may be to substantially lessen competition or tend to create a monopoly in any line of commerce, was enlarged and rewritten so that price discrimination would also be prohibited where the effect may be to injure, destroy, or prevent competition with any person who either grants or receives the benefit of such discrimination, or with customers of either of them. By this amendment the law would protect competition of individual competitors as well as competition generally from the harmful effects of price discrimination. The proviso exempting price discriminations made on account of different quantities sold was eliminated and instead it was provided that price differences would be lawful where they were based upon actual savings in cost to the seller resulting from different methods or quantities in which a commodity is sold or delivered.

The proviso of the old Clayton Act exempting price discriminations made in good faith meeting of competition was considered by Congress to be one of the principal loopholes of the law and a major obstacle to its enforcement. The Robinson-Patman Act attempted to eliminate the nullifying effects of this proviso by rewriting it as a procedural provision so that whenever a manufacturer or other seller at the primary level of competition claimed that he was justified in discriminating in price because he was meeting in good faith an equally low price of a competing manufacturer, the Federal Trade Commission would be required to prove that the actual or probable effect of the price discrimination was substantially to injure competition. Where the effect of the discrimination substantially injured competition it was clearly the intent of the law to prohibit the discrimination. The legislative history of the good-faith proviso in the Robinson-Patman Act clearly shows that Congress had in mind the situation where manufacturers and other sellers at the primary level of competition found it necessary to lower their prices to some customers in order to meet in good faith equally low prices of other competing manufacturers or sellers at the primary level. Congress certainly did not have in mind that a manufacturer or other seller at the primary level of competition could arbitrarily discriminate in price between his customers who were competing at the wholesale level or who were competing at the retail level. It is unreasonable and illogical to assume that Congress intended to give to any manufacturer or seller at the primary level of competition the right to discriminate in price between competing wholesalers or between competing retailers and thereby substantially injure, destroy or prevent competition between wholesalers or between retailers.

Nevertheless in 1951 in the case of Federal Trade Commission against the Standard Oil Company of Indiana, the Supreme Court of the United States in a 5-to-3 decision held that a manufacturer or other seller at the primary level of competition may discriminate in price between competing wholesalers or between competing retailers in order to meet in good faith an equally low price of a competing manufacturer or other seller at the primary level regardless of the substantially injurious effects upon competition between wholesalers at the secondary level or upon competition between retailers at the third level. In effect, the Supreme Court held that the very loophole that practically nullified the price-discrimination section of the old Clayton Act and was an obstacle to its enforcement, that Congress clearly intended to close, and thought it did close when it enacted the Robinson-Patman Act, was still open and that the "good faith" proviso afforded just as complete a defense under the Robinson-Patman Act as it did under the old Clayton Act.

As a result of this decision the Robinson-Patman Act has been seriously weakened, the act affords no protection to competition between wholesalers, or between retailers, the public interest in protecting competition at all levels has been subordinated to the individual manufacturer's or supplier's private interest in discriminating in price, the act has become largely a declaration of the seller's right to discriminate in price, and wholesalers and retailers who are discriminated against are deprived of their right to object, regardless of the number of businesses that are injured and destroyed.

Such discriminatory pricing practices constitute a serious threat of substantial injury and destruction to competition between wholesalers and between retailers, which cannot be prevented by the Robinson-Patman Act unless the act is amended to close the loophole created by this decision.

Legislation has been introduced and is now pending before the Congress to plug this loophole. The legislation is called the equality of opportunity bill and is designated H. R. 11 in the House of Representatives and S. 11 in the Senate. This proposed legislation simply means that where the effect of the discrimination in price may be substantially to lessen competition between manufacturers or other sellers at the primary level, between wholesalers, distributors, or jobbers at the secondary level, or between retailers at the third level of competition in any section of the country, the price discrimination cannot be justified and excused on the ground that the manufacturer or other seller at the primary level was meeting an equally low price of a competing manufacturer or other seller at the primary level.

As general counsel for MEWA I appeared before the House and Senate Judiciary Committees at the last session of Congress and testified in support of this proposed legislation for the protection of automotive wholesalers. At that time the House of Representatives voted 393 to 3 in favor of the proposed legislation and it was favorably reported by the Senate Judiciary Committee but did not reach a vote on the floor of the Senate before adjournment. At the present session of Congress I appeared before the Antitrust and Monopoly Subcommittee of the Senate Judiciary Committee on March 29, 1957, and testified as general counsel for MEWA in support of the proposed legislation. Hearings will be held before the House Judiciary Committee in the near future and I intend to represent the interest of the members of MEWA in support of this legislation before that committee as soon as I have an opportunity to do so. It is my considered opinion after many years of study that this legislation, if enacted, will greatly strengthen the Robinson-Patman Act and will furnish vitally needed protection to competition at all levels from the substantially injurious effects of price discrimination.

In the automotive service industry there are approximately 1,200 manufacturers of automotive products. These are divided into three classifications. The first makes automotive products only for original equipment and sells only to the car manufacturers. The second makes automotive products in part for original equipment and in part for the replacement market and sells both the car manufacturers and the independent automotive wholesalers. The third type makes automotive products only for the replacement market and sells only to automotive wholesalers. In addition, three of the major automobile manufacturers, General Motors, Ford, and Chrysler, also manufacture and sell automotive products in the replacement market.

Automotive wholesalers buy their automotive merchandise from many of these manufacturers that make and sell automotive products for the replacement market and resell such merchandise to garages, repair shops, service stations, car dealers, fleet operators, and other miscellaneous trade outlets. In so doing automotive wholesalers compete directly with automobile manufacturers and the car dealers, the major oil companies, the rubber tire companies, chain stores, mail order houses, and other automotive wholesalers that handle automotive products.

To say the least the competition faced by the automotive wholesaler is rough and very difficult to meet. The economic power possessed and exercised by the automobile manufacturers through their car dealers in the sale of automotive products in the replacement market, together with the economic power possessed and exercised by the major oil companies through the gasoline service stations, in the sale of automotive products such as tires, batteries and accessories has practically foreclosed these markets from the independent automotive wholesaler. Price discrimination, exclusive dealing, and other illegal practices are the shackles that close the door upon these markets and prevent the independent automotive wholesaler from selling automotive products to the car dealer and the service station. These illegal practices enable the car manufacturers and major oil companies to dominate and monopolize the car dealer and service-station market.

In these circumstances the enactment of the equality of opportunity bill (S. 11 and H. R. 11) is urgently needed if independent automotive wholesalers are to survive in this industry.

The issue is sharply drawn on this proposed legislation between the manufacturers, producers and other sellers at the primary level of competition who oppose the enactment of the equality of opportunity bill and the wholesalers and retailers at the second and third levels of competition who support and advocate the passage of such legislation. You can take your choice but I submit to you that if you desire an equal opportunity to meet your competition with the car manufacturer, the oil companies, the rubber tire companies, the car dealers, the chain stores, the mail order houses and other automotive wholesalers you will support this proposed legislation and urge your Representatives and Senators in Congress to vote for it.

A Senator's Case Against Seniority

EXTENSION OF REMARKS

OF

HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9, 1957

Mr. CLARK. Mr. President, in last Sunday's New York Times magazine appeared an interesting article written by the junior Senator from Oregon [Mr.

NEUBERGER] entitled "A Senator's Case Against Seniority."

I do not necessarily concur with all the views set forth in the article, but it is provocative and well worth reading. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A SENATOR'S CASE AGAINST SENIORITY

(By RICHARD L. NEUBERGER)

WASHINGTON.—Although I have served in the Senate only since January 1955, it has become my firm conviction during this period that seniority should not continue to be the sole determinant of congressional sovereignty and influence as reflected in committee chairmanships and committee assignments. As I see the question, seniority is wrong on three fundamental counts:

1. It attaches little or no significance to the special abilities and experience of an individual, but only to the duration of his service.

2. A committee chairman never can be removed, even if the national interest is jeopardized by his continuance in that post.

3. Seniority rewards those States with one-party systems and, conversely, penalizes States in which two robust and equally matched political parties fight it out at the ballot box.

The reasons for these objections to seniority are so obvious, it seems to me, that they can be regarded as practically self-explanatory. What can be said of a method of operating Congress that will give an ordinary layman with long political tenure a greater opportunity to serve on the Joint Committee on Atomic Energy than a famous nuclear physicist who might come newly to House or Senate? A man may be a leader of the bar in his State, but will he attain the Judiciary Committee if he lacks seniority? Senator THRUSTON MORTON, of Kentucky, was President Eisenhower's Assistant Secretary of State, but the inexorable rule of seniority has given him a seat on the District of Columbia Committee rather than on the Foreign Relations Committee, where his training in the State Department could be put to practical use.

After their defeats for the Presidency, both Thomas E. Dewey and Adlai Stevenson were surrounded by rumors of senatorial ambitions. Why should men of their distinction and oratorical gifts not aspire to the Senate Chamber? Yet, it later was reported that they had decided against essaying the humble and unrewarding roles of freshmen Senators. Surely the decision of men of their caliber not to try for the Senate was a loss to the whole Nation. Under a similar system in England, Winston Churchill would have had to be content with back-bench status after he dropped out of Parliament for a time and thus relinquished his seniority.

In these days of crisis, Government must be flexible to met new situations. The earth is moving at a mad pace. Emergencies are omnipresent. Never so true was the couplet from James Russell Lowell's The Present Crisis:

"New occasions teach new duties,
Time makes ancient good uncouth."

Yet the congressional rule of seniority is the direct antithesis of this. It is rigid, inflexible, and unyielding—particularly in the vital realm of committee chairmanships. An isolationist may head the Armed Services Committee at the height of American involvement in a worldwide conflict, and in that post he stays if seniority put him there. If seniority installs a foe of conservation as chairman of the committee charged with protecting America's dwindling supply of natural resources, draft horses and wainrope cannot drag him out of his seat. And if the allies or beneficiaries of special interests become the heads of key committees responsible for regulating those same special interests—well, that is seniority.

Ought Congress to be laced into such a straitjacket? If Senators can be trusted to pass on matters as crucial as war and peace, why is it unsafe to let them pick their own committee chairmen?

This is not to claim that able men of integrity rarely rise to congressional dominance through the seniority system—far from it. For instance, Senator JAMES E. MURRAY, of Montana, an ardent conservationist at the age of 80, presides today over the Interior Committee. I have been amazed at the details concerning fiscal matters known to Senator CARL HAYDEN, of Arizona, 79, who wields the gavel in the vital Appropriations Committee.

But the point is that, even if Senator MURRAY were not so ardent a conservationist and if Senator HAYDEN possessed far less familiarity with the Federal budget, they still would head the Interior and Appropriations Committees, respectively. Their qualifications are secondary to their seniority. I wonder if this is a wise set of priorities, particularly when we consider that men critically ill have ruled strategic committees for years in absentia. As long as breath remained in their bodies, the seniority rule could not be breached. They had to retain their chairmanships.

Furthermore, under such an arrangement, seniority often becomes an end in and of itself. Electorates are told that they must keep in office a certain individual not necessarily because he is sound on the burning issues confronting America and the rest of the world, but simply because he has so much seniority on deposit in Senate vaults.

In 1954, when I ran for the Senate as a Democrat in a State which had not elected a Democratic Senator for 40 years, my opponent was an incumbent Republican who, through the inexorable workings of the seniority process, had become chairman of the Interior Committee. This is the most powerful Senate committee in dealing with problems affecting the Western States. The special advantages and benefits to Oregon of my opponent's seniority became a leading issue of the campaign. Indeed, at times it subordinated all other issues.

I shall never forget a conversation I had with an enlightened and able editor of a small-town daily newspaper whose support I was seeking. This man is an internationalist and a fervent defender of civil liberties. I cited to him my opponent's rollcall votes in the Senate against ratifying the North Atlantic Treaty Organization, against extending reciprocal trade, against point 4, against any moves toward rebuking Senator MCCARTHY, against confirming such appointees as Chester Bowles and David E. Lilienthal, against positive Federal action in the realm of civil rights.

"Everything that you charge about your opponent's voting record is undoubtedly true," said the editor, whom I long have respected and admired. "I can't defend that record. Yet I still would hate to see our State lose all that valuable seniority in the United States Senate, as well as on some of its most important committees."

And, near the climax of the campaign, this internationalist, liberal-minded editor endorsed for the Senate an isolationist and adversary of civil rights.

I am convinced that such incidents are by no means uncommon. Yet an endless and self-serving circle is thus created. A one-party State provides seniority for its Senators because they serve without serious challenge to their tenure. Then, this seniority is relied upon as an all-persuasive argument for continuing the State's one-party standing.

This constitutes my principal complaint against the seniority system. It provides an argument and shield for people who fear the real workings of democracy. Despite all our vaunted devotion to the two-party system, grassroots competition between strong political parties is virtually unknown in approximately half the States of the Union. In fact, the absence of genuine political competition in so many States may be at the root of the undue emphasis on prolonged tenure in office. Such tenure is inevitably a byproduct of one-party rule.

Occasionally some of the one-party States may be breached by a Presidential nominee of the other party who possesses overwhelming personal popularity or glamor—Franklin D. Roosevelt or Dwight Eisenhower, for example. In some distressing cases, as with the religious bigotry of 1928 directed against Alfred E. Smith, a one-party State may reverse itself.

But these exceptions seldom register any lower on the ballot. Mr. Hoover, once, and Mr. Eisenhower, twice, successfully invaded much of the deep South. Yet they brought to victory with them not a single Republican Senator from that region. Mr. Roosevelt carried Oregon decisively four times, but the State never elected a Democratic Senator on such occasions. For offices like United States Senator or the governorships, no fewer than 28 States may be regarded as nearly impregnable strongholds of 1 party or the other. These are the States which ascend most often to dominance in Congress under the seniority system.

What is a one-party State? I admit the term is susceptible to no hard and fast definition. Yet some specific standards of measurement are possible.

I have based this measurement on Senate seats because they are generally the offices fought over the hardest and national significance is most likely to attack to the results. I have gone back only to 1914, when some States first began to experiment with the direct election of Senators. Prior to that time all Senators were chosen by State legislatures, with railroads and timber companies and steamship monopolies often more influential in the choice than the will of the electorate.

With this in mind, I believe it is fair and accurate to describe as a 1-party State any in which 1 party has held, since 1914, a preponderance of senatorial election victories of 3 to 1, or more.

I find that in 28 States the nominees of 1 party have regularly won Senate seats in 3 elections out of 4, or better. This is considerably more than half the States of our Nation. Some of these 1-party States, especially in the South and Southwest, have been traditionally Democratic. Other States, particularly in New England and in the Corn and Wheat Belt of the Middle West, have been steadfastly Republican.

In only 20 of the States have Senate seats been divided somewhat evenly between the 2 parties since the direct election of Senators began to replace the appointment method. They are: Colorado, Connecticut, Delaware, Idaho, Illinois, Indiana, Iowa, Kentucky, Maryland, Massachusetts, Minnesota, Missouri, New Mexico, New York, Ohio, Rhode Island, Utah, Washington, West Virginia, and Wyoming.

It is true that these States today hold 5 chairmanships among a total of 15 permanent Senate committees. But it also is true that the chairmanships belong to the 5 among the 2-party States that are the closest to being 1-party States. In this category is New Mexico, whose senior Senator serves as chairman of the Public Works Committee. New Mexico has had its senatorial seats occupied by Democrats for a 13 to 5 supremacy during the past 43 years. This is narrowly below the 3 to 1 ratio which would add New Mexico to my list of 1-party States.

Furthermore, States where the 2 parties are as closely matched politically as New York and Illinois have not held major Senate chairmanships for a considerable number of years, despite their vast populations and their importance to the national economy. I can think of no more compelling reason for modifying the seniority rule than the manner in which seniority must inevitably discriminate against great 2-party States such as these.

Fortunately, there has been some slight recent erosion of seniority. This has occurred not in the disposition of committee chairmanships, but in the place where reform ought logically to begin—in the assignment of new Senators to committee seats.

Some weeks ago, Representative STEWART L. UDALL, of Arizona, in an able defense in this magazine of the seniority rule, stressed the change in the method of committee assignments as a hopeful sign that seniority is losing its ironclad aspects. I agree with his satisfaction over this development. However, Representative UDALL neglected to point out that this curtailment of seniority has applied thus far to only 1 of the 2 major political parties.

Upon becoming Democratic leader of the Senate in 1953, Senator LYNDON JOHNSON laid down the policy that no member of the party, regardless of his seniority, would receive a second top committee seat of his choice until every Democratic Senator had been given at least one such assignment. Up to that time, senior Senators had monopolized nearly all the prized committee posts. Newcomers were relegated to minor committees, which usually meant Rules or Post Office or District of Columbia. This is still often the fate of junior Republican Senators, because the Johnson doctrine has yet to spread across the center aisle after 4 years of operation.

Immediately after their elections, Senators MIKE MANSFIELD of Montana and STUART SYMINGTON of Missouri were seated by the Democrats on the Foreign Relations and Armed Services Committees, respectively, because of their long backgrounds in those fields. Senator WAYNE MORSE of Oregon, who once taught international law, received a Senate Foreign Relations Committee place from the Democrats even while he was still an Independent. Yet no Republican seat on the committees operating in the realm of diplomacy has gone to Senator JOHN SHERMAN COOPER of Kentucky, even though he has come to the Senate fresh from experience as President Eisenhower's envoy to India.

Two years ago I entered the Senate as a freshman and was assigned by the Democratic leadership to the Interior and Public Works Committees, both vital to natural-resource management in my Pacific Northwest constituency. By contrast, Senator CLIFFORD CASE of New Jersey, an Eisenhower Republican who entered the Senate with me, has been given only such typically minor berths as Post Office and District of Columbia because members of his party senior to him had laid claim to all the committee chairs of his preference.

What is to be done about this whole thorny question of seniority in Congress and of the penalty it imposes upon two-party States?

Stubborn issues rarely respond to easy or pat solutions. However, I have three specific remedies to propose:

1. Relate committee assignments in Congress far more to geography and to specific State problems than to seniority.

2. Permit committee members to elect a chairman by secret ballot, rather than having this decided only by seniority.

3. Convert as many of the present 1-party States as possible into 2-party States.

Let me explain what I mean by the first proposal.

The people of the State of New York pay about 20 percent of all the taxes collected by the Federal Government. There should always be one Senator from New York on the Finance Committee, where taxation matters are decided. The Agricultural Committee should be balanced as fairly as possible among Members from the cotton States of the South, the grain States of the Middle West and the specialty-crop States on both seacoasts. This balance does not prevail today. Among the committee's 15 Members there is not 1 Senator from the immense rural area between the Great Plains and the shores of the Pacific Ocean.

It is my belief that, once assignment to committees has been removed from the realm of seniority, it soon will follow that each committee will be able to elect its chairman. In the Senate committees on which I serve, the chairman thus selected undoubtedly will be the same Senators who have occupied the head chair through seniority. But this would not be automatically the case in every committee, and the two-party States would find themselves at least participating in the choice; their total exclusion from such decisions might end.

My third suggestion may seem illusory and farfetched. How do you change a 1-party State into a 2-party State? Let me offer my own State as a prime demonstration that the feat can be accomplished.

While Franklin Roosevelt was President, only three States—Maine, Vermont, and Oregon—failed to elect Democratic Senators or third-party Senators aligned with the Democrats. The last Democratic Senator from Oregon had been elected in 1914, the last Democratic Governor in 1934, and 2 of Oregon's 4 House seats had never in history been won by Democrats. Today, Oregon has 2 Democratic Senators, a Democratic Governor, and 3 out of its 4 congressional seats are occupied by Democrats.

The significant feature of Oregon's emergence from entrenched one-party status is the circumstance that 2 out of 3 Democratic senatorial victories have occurred in 1954 and again in 1956. Oregon never elected a Democratic Senator during the 12 years that the White House was occupied by Franklin D. Roosevelt, most popular of Democratic Presidents. Paradoxically, Oregon today has 2 Democratic Senators who were elected during the 4 years that the White House has been the residence of Dwight D. Eisenhower, most popular of Republican Presidents.

What was responsible for this?

The principal ingredient in the political upheaval in Oregon has been the refusal of the Democrats to be daunted by the deeply rooted political monopoly of the Republicans. Democratic leaders in every Oregon county decided there was no valid reason why Oregon should be the exclusive property of the Republican Party. Spirit and persistence accounted for the change.

I discuss Oregon merely as a case in point. There are other one-party bastions and they, too, can be carried by a formidable political assault. Pennsylvania, with a 14-to-4 preponderance of Republican senatorial victories throughout its modern history, is succumbing to change. JOSEPH S. CLARK, JR., is the first Democratic Senator from Pennsylvania in many years. And, now that President Eisenhower himself has twice breached many of the Democratic redoubts in the South, his party is looking southward for victories at other levels on the ballot.

Any invasion of a political stronghold, be it Republican or Democratic, is to the eventual advantage of democracy and progressive government. As one-party citadels fall, seniority will lose much of its attraction and influence in Congress. And as seniority is gradually modified, there will be less temptation for a State to continue suppliantly in the clutches of one political party. Both of these changes will help the Nation—inside the Halls of Congress as well as far beyond the Capitol Dome.

Women Know How To Cut a Budget

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 9, 1957

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Women Know How To Cut a Budget," written by the very fine columnist, Dorothy Thompson.

Mrs. Thompson expresses a viewpoint I have held for years, in saying:

No one can tell this householder that the expenditure could not be cut from 5 percent to 10 percent without giving up any major project.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WOMEN KNOW HOW TO CUT A BUDGET

(By Dorothy Thompson)

Years ago I rented a villa in Italy and employed a cook, a man named Carlo. Every day, except Sunday, he did the shopping and presented me with the bill.

His cooking was superb, but at the end of the first week I found his bills appalling. The household consisted of myself, usually a house guest, a maid, the cook, and a kitchen boy—Carlo's son whom he had introduced into the menage with the argument that a cook of his abilities, who had hitherto served only in great households, could not be expected to carry shopping bags or peel vegetables, but his son would work for only his food.

Looking over the menus of that first week, I could not imagine how 8 dozen eggs, 6 pounds of butter, and prodigious amounts of coffee, olive oil, and meat had been consumed, and I consulted an Italian friend, a famous hostess who lived in a very grand manner. She exclaimed, "This is an outrage. He's feeding his family out of your kitchen. Your food should cost you so and so many liras a day per person and no more. That is what I spend."

SO MUCH FOR FOOD

I was rather afraid of Carlo, who bore a disturbing resemblance to Mussolini, but on Monday I called him in, handed food money for a week, and said, "From now on I want no more accounting, either daily or weekly. This money must last 7 days, and I expect the meals to be exactly as good as usual."

He counted the money, and in his dark look I thought I discerned a trace of admiration.

Meals remained as exquisite as ever. We had fish a little oftener, and not quite as often a filet of beef, but Carlo could make a veal ragout that was something out of this world and do incomparable things with cheese.

This little story is apropos the national budget. In Carlo's case I had to reduce the amount of take-home pay in kind—less dishonest than customary, depending on the canniness of his employer. I am not suggesting any further analogy than that in any household, living at a high standard, one can always reduce costs without appreciably or uncomfortably reducing the standard.

The National Government is living to the tune of $71 billion a year, and no one can tell this householder that the expenditure could not be cut from 5 percent to 10 percent without giving up any major project.

The trouble with a budget that size is that no one person knows what is in it. But if every single department and agency were told, "Reduce your costs by 5 percent and

render exactly as good a service," each of them could, I am convinced, do so.

THRIFTY HOUSEKEEPING

The President agreed, in his last week's press conference, that one could pare a little here and there, but not save appreciably. If, however, one pares a little everywhere, the grand total can be quite startling.

This is something that every housekeeper is being compelled to learn as the result of taxation, which is reducing the budget of every family. "Turn off the lights when you leave the room, the electric bill is too high."

We'll use paper napkins, towels that don't need ironing, and father must wear shirts that drip dry because the laundry bill is too high. We search for delicious recipes using the cheaper cuts of meats, because the food bills are too high, and so ad infinitum.

And all these little economies under nearly every heading add up appreciably at the end of a month or year.

When the income-tax collector comes around, the householder can't argue that he's unable to pay because his living costs have consumed his income, and "Am I expected to live at an un-American standard?"

Turn off the lights on leaving the room, gentlemen.

A penny saved is a penny earned.

Great Lakes Basin Compact

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 9, 1957

Mr. HUMPHREY. Mr. President, as a cosponsor of S. 1416, I continue to take a particular interest in the Great Lakes Basin compact.

A recent editorial appeared in the Duluth Herald, Duluth, Minn., concerning this project, and I ask unanimous consent that the text of this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GREAT LAKES COMPACT MAKES GOOD SENSE

Michigan, Minnesota, Wisconsin, Illinois, Indiana, and Pennsylvania have joined a Great Lakes commission, known as the Great Lakes Basin Compact. As any bright-eyed geographer will have noticed, two of the Great Lakes States, Ohio and New York, are not yet of the company.

The Cleveland Chamber of Commerce says it sees no need for Ohio to join at all. It says that Federal agencies now exercise all the proposed functions, that the plan would mean another bureaucracy, supported by the member States.

True, almost anything a State or any other unit of government, business, or humanity may do will cost some money. And it is also true that any function which the States neglect will be performed, some day, somehow, by the Federal Government if needs become both serious and obvious and there are Federal funds available.

But for much of the country the Great Lakes means an ornamental cluster at the top of the map and some possible competition in transportation. The lakes States themselves have a great many common interests and none too many votes in Congress to insure the protection of those interests.

We have been helped by many Federal agencies and will need more help from them in the future. We will get more assistance, of the kind we need and more promptly, if we have a unified, articulate agency which can speak for all of the Great Lakes States.

Interstate compacts are one hopeful answer to the trend toward centralization. They enables States to act in concert on common problems, combining close acquaintance with problems and a large enough area to permit effective action. That an organization speaking for the business and civic interests of a large port city like Cleveland should oppose a compact with six lake States have thought worth joining will sadden many residents of lake States.

Fair Share of the National Income for Both Management and Labor

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 9, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a column which appeared in the Indianapolis News of April 2 entitled "Business, Labor Better Take Heed," which was reprinted from the Providence Evening Bulletin.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Mr. Eisenhower is receiving strong support from at least one industrial leader for his contention that the national welfare requires industry to practice restraint in raising prices and likewise demands that labor refrain from asking wage increases which exceed productivity gains.

The industrialist is Mr. Henry Ford II. He told a New Jersey audience that he welcomes competition among labor, management, and consumers for their respective fair share of the national income. He believes that such striving, each for its rightful own, stimulates the national economy and spurs progress and prosperity for all.

But trouble appears, Mr. Ford contends, when either management or labor attempts to grab more than its fair share of the national income. If either industries or the unions undertake to get for themselves all the fruits of the increased productivity of the Nation, the inevitable result, Mr. Ford says, will be monetary inflation or a shrinkage of the total market, or perhaps both misfortunes.

Either of these results obviously would be damaging to the national welfare.

For, according to Mr. Ford's thesis, which is hard to challenge successfully, the resulting inflation or the decline in the total market would penalize all the groups concerned, whether consumers or industry or labor. The soundness of Mr. Ford's position, we believe, cannot be intelligently disputed. In making this observation publicly, he renders distinguished service, the more valuable because of its timeliness in a critical economic period for the Nation.

It would be helpful if some union leader, as highly respected in labor as Mr. Ford is in industry, now would add his public endorsement to this particularly sage comment on management-labor responsibility for the national welfare.

Lafayette Square

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, April 9, 1957

Mr. BEALL. Mr. President, often the ladies of the United States inform us, as Members of the Congress, of their attitudes on various measures before the Congress, in which they have an abiding interest. Often, too, these matters are of a nature that the women of America see aspects involved which sometimes are overlooked by their male counterparts.

The problem of how to maintain Lafayette Square in this city as the front yard of the United States has recently beset the Government in the determination of how to provide additional space for executive offices.

The 78th Congressional Wives Club has recently written to me expressing its views on this matter. This letter very forcefully represents that we most certainly should make every effort possible to preserve all those things which we have received from our historic past, while, at the same time we prepare for the future.

I, therefore, ask unanimous consent to have this letter, dated March 30, 1957, printed with my remarks in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *March 30, 1957.*

Hon. T. GLENN BEALL,
Senate Office Building.

DEAR MR. BEALL: On March 8 at a luncheon meeting of the 78th Congressional Club (whose members are wives of Congressmen who took their seats in January 1943) there was a discussion of the proposed plan to build a $27 million Federal office building in Lafayette Square. This discussion was lively, informed, and comprehensive. The 26 members present showed concern, lest this project damage the historic interest and the familiar charm of Lafayette Square, which is almost like a front yard of the White House.

The members talked freely of mistakes made in the past and errors that might be made in the future by the planners and builders, private and governmental, who have it in their power to keep Washington a capital to be proud of. Must they (those men) turn it into a city like any other, packed with big buildings, paved with concrete parking lots, ribbed with freeways and six-lane highways? Progress and expansion made changes necessary, it was agreed, but as one member said: "They seem to like nothing better than to tear down historic old buildings just for the sake of putting up something brandnew." Another member asked, "Is it really necessary for the Federal Government to invade Lafayette Square? Why not put these new buildings in parts of the city where worn-out, ugly structures need to be torn down?" Also it was asked, "What about the other side of the Lafayette Square? Were they going to tear those buildings down, too?" And another, "In 50 years, they'll be restoring the very buildings torn down today."

The chief criticism of the Federal project seemed to be that a massive office building

would destroy the scale and intimate charm of the square as it now is. Despite the presence there of several office buildings, there still remains in the square a certain harmony of period and style. The White House, St. John's Church, Decatur House, the Dolly Madison Home, the row of old brick and brownstone houses on Jackson Place and the other buildings across the square on Madison Place make a pleasant picture, surrounding the green park with its statues, trees, flowering shrubs and colorful pansy beds. This generation and many gone by have loved this spot. What a shame to mar it so that people coming after us will not have the same pleasures of the eye and the imagination.

As one of the members of the 78th Club said, "We congressional wives spend a lot of time taking people from our districts around Washington. Lots of them know exactly what they expect to see. They have read about Washington. It would be too bad if pretty soon all of the familiar landmarks they are looking for were gone." This remark followed the comment of a member who said: "That if the old State War and Navy Building were replaced by a modern executive office building it might seem logical and progressive to tear down the old Treasury Building on the corner of 15th and Pennsylvania and put up something more like a first-class streamlined bank."

It was agreed to commend the present position of the National Trust for Historic Preservation to go along with the Federal authorities with their plans for a Federal building in the square, hoping that the building when erected should present a facade on Jackson Place in conformity with the structures there now which are not to be torn down, such as the Decatur House, the Blair House, and Blair Lee House and perhaps others. Also it was remarked with some satisfaction that for the present the actual building may be delayed because of the inflationary trend.

However, the 78th Club decided to set up a committee for the preservation of historic Washington, and to inform the members of other congressional wives clubs about its interest in this matter. It was also agreed that this committee should send a letter about its special interest in Lafayette Square to certain selected authorities.

Yours very truly,

SEVENTY-EIGHTH CLUB COMMITTEE FOR PRESERVATION OF HISTORIC WASHINGTON.

AGNES HALE, *Chairman.*

MARGARET C. HOLMES,

JEAN J. SUNDSTROM.

Fears of Illness

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9, 1957

Mr. HUMPHREY. Mr. President, the fear of prolonged and catastrophic illness is one of the aspects of contemporary American life with which, sooner or later, we are going to have to deal. Various insurance companies have attempted to meet the problem, and have made small but hopeful beginnings. Nevertheless, I think it is clear that sooner or later we are going to have to resort to Federal legislative action, if we are to have a broad-based attack on this central problem.

Sylvia Porter has recently contributed one of her excellent columns to this subject. I ask unanimous consent that the column, entitled "Fear of Illness," which appeared in the New York Post, be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

FEAR OF ILLNESS

(By Sylvia F. Porter)

There are three great fears of economic insecurity which profoundly disturb all but an insignificant minority of us, America's tens of millions of adults.

One is the fear of being helplessly dependent in our older years on others for mere subsistence.

To some extent, this fear is being alleviated by the development since the thirties of our social-security system and the growth of major private pension plans.

Another is the fear of being out of a job for some time and as a result, losing our savings, going into debt, hitting financial bottom.

This fear also is being gradually eased by the development of jobless insurance and supplementary unemployment benefit plans.

And a third fear is that of prolonged illness—resulting not from an unusual sickness but from an everyday type of disease which can strike anytime and which always places a massive financial burden on the worker and his family.

In combating this great fear, we have made only minimum progress.

In fact, not until this day of March 29, 1957, have we had even an authoritative estimate of the extent of this form of economic insecurity, its cost to the worker, the employer, the community, the Nation.

Yet, the chances are 1 out of 25 that this year you will be hit by the disaster of prolonged illness—defined as an illness keeping you away from your job for 4 weeks or more.

The chances are 1 out of 5 that you will be struck by this catastrophe within 5 years.

The chances are that only a little more than half the cost of this illness will be covered by corporation payments to you or some insurance deal.

The chances are that if you're an average worker earning $3,485 a year, your illness will keep you absent from your job for 10.7 weeks; your wage loss will be $717; you'll be compensated for only 55 percent of this loss; your net loss will run to 9.3 percent of your annual earnings.

And the chances are that if you're in the $7,500 or over income bracket, your illness will keep you absent for 11 to 12 weeks; your average wage loss will top $2,000; your net loss in annual earnings will exceed 21 percent.

To put it brutally, you'll recover from your physical illness a lot faster than you'll recover from the financial blow.

It's hard to believe that we've never known such facts as these until today. And behind this lies a fascinating tale of research.

Back in 1951, when there was an outburst of pressure for national health programs, the Research Council of Economic Security—a privately financed, nonprofit Chicago organization—decided to get some facts about the costs of lengthy illness. "To our astonishment, we found we were probing into an absolutely unexplored field," said Leon Werch, the council's research director, when I interviewed him in New York this week. "When our union advisers and industrial sponsors urged us to go ahead and said 'This (prolonged illness) will be the next major area for bargaining,' we really dug in." The council has been working on its report for 5 years, has studied almost 194,000 employees of 145 firms for at least 1 year.

One of the most significant findings of the survey is the disclosure that while insurance plans do "a pretty good job" of covering hospital and surgical costs, they provide woefully inadequate coverage of other expenses. Werch emphasized that "the average worker stays in the hospital only 2 weeks but he's away from the job for more than 10. We should reexamine our entire insurance program to see what package can be devised to cover the nonsurgical, nonhospital costs of the average worker."

Another most significant finding is the confirmation of the vital need for better corporation planning to prevent prolonged illness of workers.

The council has given us a basis for action to fight this third great fear. Now what will be done will depend on you—as an individual businessman, a union leader, and insurance executive. Even modest progress would mean so much to so many of us.

The Plight of the Teacher in Our Public Schools

EXTENSION OF REMARKS

OF

HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9, 1957

Mr. CLARK. Mr. President, the National Education Association has recently conducted a survey on the plight of the teacher in our public schools. The results of the survey were graphically reported in the New York Times of last Sunday, April 7, in an article by their educational editor, Benjamin Fine, and also commented on in an editorial in the same issue of the New York Times entitled "The Teachers' Lot."

Mr. President, I ask unanimous consent that both the article and the editorial be printed in the Appendix of the RECORD. They indicate to me the crying need for Federal aid to education not only in the field of school construction but generally with relationship to improving the lot of the teaching profession, as provided in S. 1237, sponsored by the senior Senator from Oregon [Mr. MORSE] and me.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

EDUCATION IN REVIEW—NATION'S PUBLIC-SCHOOL TEACHERS PRESENT A CANDID REPORT ON THEIR PROFESSION

(By Benjamin Fine)

A candid look at the Nation's public-school teacher, taken last week by the National Education Association, warrants the serious attention of all who equate free public schools with democracy.

The report on teachers—the most comprehensive since 1911—was published by the National Education Association research division as the centenary celebration of the Nation's largest school group got underway. Thousands of teachers in hundreds of communities met last week to begin the celebration. In Washington, President Eisenhower led the list of distinguished citizens who paused to pay tribute to the organization that has helped teaching become a profession.

Two rather disconcerting facts emerge in the survey: 73 percent of the male teachers and 17 percent of the women have to supple-

ment their teaching salaries with other income. And nearly half of the male teachers—46 percent—are not sure that they would go into teaching if they could start all over again. Eighty percent of the women would go into the profession again.

It is discouraging to find that education is such a financially insecure profession. You don't often find doctors, dentists, engineers, or lawyers working on the side to make ends meet. Yet the teachers reported that they worked at ditch-digging, bartending, factory work, baby sitting, and many other jobs. It is an unhappy thought to realize that only about half of the men teachers would go into teaching if they could start anew. As it is, men number only 27.5 percent of the teaching force.

ON MONEY

The teachers were asked to speak their minds. And they did. This is what they said on various issues:

Married man, under 36, in big city, salary of $4,850; teaches science in high school: "Frankly, as much as I like to teach young people, I cannot afford to teach much longer. The financial struggle is becoming much more than we can bear. Other positions have been offered to me doubling my present salary to start with."

Unmarried woman, 32 years a teacher, salary $3,700, teaches high-school English in rural community: "The financial struggle is discouraging and can overhang a day that should be bright with enthusiasm. Graduates make more starting salary than I do after all my years of teaching."

Married man, no children, salary $5,200 plus $400 from outside jobs, teaches English in city high school: "Every summer is a major crisis for my household. In the past few summers I have been dishwasher, ditch-digger, truckdriver, gardener, screendoor salesman, and tutor."

Married man under 30; 2 children, salary $4,250 plus $800 in outside clerking job, teaches mathematics in junior high: "I plan to leave teaching, it has become very discouraging to have to hold down 3 jobs to make a suitable living. Since I have now obtained my master's degree I can make more money in another profession."

Woman English teacher in city high school: "If the ends of education for democracy are to be achieved, teacher, and student must know one another. Classes must be reduced to a size which makes possible each child's opportunity to be heard each day in each class at least once, in a thoughtful contribution."

Woman English teacher—154 pupils per day in 5 city high-school classes: "My work-week is a 70-hour affair, and I am sure there are some whose load is even heavier * * *. There is no doubt in my mind that the quality of instruction I am able to give is proportional to my degree of fatigue."

Third-grade teacher, 35 children: "It is indeed frustrating to try to teach * * * 35 children in a classroom designed for 25 or less, and to try to reach each child effectively."

ON SUBJECT MATTER

Woman English teacher in high school: "In our school of about 1,400 students we have gone steadily downhill in our English aims and achievements. Respect for the teacher has gone down in a parallel fashion. Our children crave entertainment in the classroom and have no work habits in which they take pride."

Woman science teacher in high school: "I deplore the trend toward mediocrity and the attitude of the general public that any scholastic achievement should be looked upon with some suspicion, if not actual scorn. I am afraid we are letting a great deal of intelligence and ability go undeveloped while we are lowering our standards to teach to the average or low average group."

Male elementary schoolteacher: "Extra duties too heavy; my job consists of hall duty, banking, street patrol teachers' meetings, take children to concerts, collect for drives, recess guard, write reports for welfare groups, take field trips and serve on four committees."

Woman fifth-grade teacher: "I find myself frustrated because of the time consumed in so many areas not directly dealing with children. By that I mean the increasing burden of reports, bookkeeping, committees for this and that, reports in duplicate and triplicate, banking, stamp selling and book rental. The most often heard remark in our faculty room is 'I wish I had time to teach.' "

VITAL STATISTICS

The majority of teachers of both sexes are married. Of the women, 54 percent are married; of the men, 83 percent. The average salary of elementary and secondary teachers is $4,055. Some 5 percent, or more than 100,000, are paid under $2,000. Yet teaching is a stable profession, at least for the women. The median age for women is 45.5 years; for men, 35.4 years. The typical male teacher has had 8 years' teaching experience; the average woman has had 15 years.

Do they like to teach? For a majority the answer is yes. Despite the faultfinding, most teachers get some pleasure and satisfactions from their job.

This is what some teachers say about their love of the profession:

Male music teacher in city high school, $4,500 salary plus $500 earned as a tour guide: "I'm doing the one job in the world I want to do, often wishing it were an easier job, frequently worn to the very quick as problems mount and classroom difficulties persist or multiply."

Women English teacher in city high school: "Teaching children of all ages is a wonderful profession. Young people are a constant source of inspiration and amazement to me."

Woman fourth-grade teacher: "Teaching is the most consistently interesting, demanding and rewarding occupation I can imagine. As I look about me, there is no other job, no matter how much less tiring or better paying, for which I would exchange my present one."

THE TEACHER'S LOT

A "distressing" picture of the life of American public-school teachers is etched by the statistics in a recent National Education Association survey conducted by Dr. Hazel Davis. The main trouble seems to be that "people who would like to give their time to teaching have to give it to something else." For example, salaries are so low that about three-quarters of the men teachers and 17 percent of the women have had to take on other jobs to make both ends meet. They double as clerks, salespeople, bill collectors, tutors, camp counselors, even farm hands. One man reported he had been a spare-time dishwasher, ditch-digger, and truck driver.

The average teaching salaries were $3,932 ($76 a week) for women and $4,374 ($84 a week) for men. About one-third of the 6,000 teachers covered receive less than $3,500 ($67 a week). In contrast, workers in manufacturing average $82 a week, while those in the printing trades receive $93 and in construction $98.

Then, too, the teachers reported that they are called on to do a lot of other things than teach as part of their regular work—10 hours a week on the average. Such chores were listed as "planning," supervising, club activities, hall monitoring, collecting money for festivals, and the like. And a constant complaint was the too heavy pupil load they had to carry.

But Dr. Davis reports an encouraging "theme" which runs "most strongly" through the questionnaire replies: in spite of the drawbacks teachers love their work. Evidence of this is the fact that their job is not the stopgap kind that it is commonly supposed to be. The median length of service of those covered by the survey was 13 years. Then, too, those who reported belied the schoolteacher stereotype. Most of them are married, live in their own homes and support dependents. And their civic and social interests are wide. At least one-third belong to four or more community organizations. All in all, public-school teachers seem to lead lives that interest and satisfy them—in spite of their many professional troubles. But they surely deserve much better than they get.

Proposed Reductions in the Federal Budget

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9, 1957

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the March 28 issue of the Lancaster, S. C., News and an editorial from the same newspaper of April 1, 1957, and both relating to proposals to reduce the Federal budget. Both the editorial and the article deal with the efforts being made by the Lancaster Chamber of Commerce to have the Federal budget for fiscal year 1958 reduced so as to eliminate all unwise and unessential Government expenditures. The legislative action committee, headed by Dr. Reece Funderburk, Jr., made a very thorough and keen analysis of the budget, and in its report it made a number of recommendations for reducing expenditures and implementing various Hoover Commission recommendations designed to increase efficiency in Government. This report was adopted by the board of directors on March 27.

The Lancaster Chamber of Commerce has on many occasions manifested a deep interest in good government. This is just another example of the great work being done by this outstanding organization under the leadership of Mr. Dale W. Gordon and its other officers and directors.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Lancaster (S. C.) News of March 28, 1957]

CHAMBER DIRECTORS CALL FOR CUT IN FEDERAL EXPENDITURES—BOARD URGES CONGRESSMEN TO SEEK HALT IN SPENDING

The board of directors of the Lancaster Chamber of Commerce yesterday went on record asking that the size of the Federal budget be cut.

Acting on a recommendation of the legislative action committee, the business organization pointed out some dangers of the proposed budget. It was stated that a budget of this size would further add to the inflationary pressures which are endangering this country today. It was also pointed out that the billions in the Federal budget are depriving consumers of money to put into the economy as they see fit and are depriving business of funds needed to expand and make new jobs.

"We will always need more than we can afford and it's about time we started spend-

ing according to our ability to pay," stated Dr. Reece Funderburk, Jr., in making his report. "We also need to start paying off the national debt while there is a period of high prosperity. If we can't pay it now, what would happen if we had a recession?" he asked.

Making specific recommendations for areas where cuts can be made, the chamber urged that central purchasing and research facilities be set up for the Armed Forces. Also recommended were cuts in foreign aid and adoption of the Hoover Commission reports to increase efficiency.

The chamber opposed aid to depressed areas, Federal expenditures for school construction, and needless expansion of public power projects. It pointed out that reductions were possible in the veterans' benefits program and asked that Federal aid to local communities for such projects as water lines and sewage disposal facilities be discontinued. "This is purely a local matter that the Federal Government should not concern itself with," stated Dr. Funderburk.

Members of Congress from South Carolina will be advised of this position and chamber of commerce officials urged that all citizens who are interested in sound spending by the Government write their representatives in Congress. It was pointed out that Congressmen want to do what the public wants and will respond to efforts to achieve economy.

[From the Lancaster (S. C.) News of April 1, 1957]

THE CHAMBER AND THE BUDGET

For a grassroots reaction to the evermounting total of the Federal budget, we can offer the resolution adopted last week by the Lancaster Chamber of Commerce. Taken alone such a resolution is worth about as much as the paper on which it was written. Added to the weight of a growing protest over irresponsibility in governmental expenditures, it is an important action.

President Eisenhower is a strong personality who has, in his long public career, said or done a few things that are out of character. One of those moments came recently when he conceded the budget was out of hand by inviting Congress to slash it wherever savings could be made. Treasury Secretary Humphrey had already boggled at the $71 billion plus request in an unprecedented public repudiation of an important administration document.

While it may have been the President's intention to shift the burden of forced economy onto Congress, his attitude of helplessness in the face of rising governmental costs produced a shocked reaction in the United States. There is ample evidence that the strength of this reaction was miscalculated. President Eisenhower is now defensive of every item in the budget, but the reaction is growing.

Taxpayers, groups and organizations all over the United States are joining in a chorus of questions. They want to know why Federal expenditures can no longer be controlled; why every desire and whim of the outgrown bureaucracy must be met; why Uncle Sam's billions must be poured into foreign and often unfriendly nations in evermounting totals, and why the richest Nation on earth has a public debt which has passed all human comprehension.

When the Lancaster Chamber of Commerce says: "We will always need more than we can afford and it's about time we started spending according to our ability to pay,"—it is letting the light of reason in on a situation which, for all its magnitude, must be resolved on just such a homely basis.

The United States, buying world position on the installment plan, is no different from any homeowner who finds his monthly payments outrunning his ability to pay. Our national ability to pay is tremendous but it would appear that our present commitments have finally reached that point where the taxpayers are genuinely worried lest someone appear with claim and delivery papers.

Reductions in the Budget

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 9, 1957

Mr. HUMPHREY. Mr. President, one of our most distinguished economists, Prof. Seymour E. Harris, of Harvard University, has recently written a letter to the New York Times which appeared on April 3, on the subject of the budget cuts which are now in fashion. Mr. Harris discusses the size of the budget in relation to the growth of our gross national product, the proportional decline in our welfare services, the administration's dubious accounting practices, and the excessive burdens which have been placed on State and local governments during the past 5 years.

I ask unanimous consent that the text of Professor Harris' letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BUDGET CUTS QUESTIONED—DECLINE IN WELFARE OUTLAYS NOTED, WITH BURDEN ON LOCALITIES

To the EDITOR OF THE NEW YORK TIMES:

Is the budget too large? First, let me admit that on the basis of the experience of the last few years, actual expenditures will exceed budgeted ones (estimates of January 1957 for fiscal year 1958) by a few billion dollars. Second, let me agree also that the budget is not in as sound shape as the administration suggests.

For example, in 2 years roadbuilding in the budget is cut from $763 million to $43 million. But $1.7 billion of outlays has now been taken out of the budget and tucked away in a trust fund. But even with all that I am not worried about the size of the budget.

First, the size of the budget should be put against the size of the economy. In the last 4 years the budget has fallen from 20 percent of the gross national product to 16 percent of the GNP, or a relative decline of 20 percent. In the last 10 years the size of the national debt has declined by about one-half in relation to the GNP.

Second, the more germane criticism is that the Eisenhower administration has gone in too much for economy and not enough for needed Government services.

VIEWED AGAINST ECONOMY

Welfare outlays have dropped in a period (1952 to 1956) when gross national product rose by $65 billion and military outlays were cut by $10 billion or more and reductions of taxes, costing about $9 billion a year today, were made.

Even as our peril grew and our international position deteriorated, the Eisenhower administration increased the danger to our trillion-dollar economy and our security generally by serious cuts in our military budget and by a reduction of foreign economic aid of one-half as compared with the last Truman administration and two-thirds vis-a-vis GNP. Some estimates of cuts are much higher. At least there is now a disposition to reconsider the economy program for national security. For this we are grateful.

The budget upsets Secretary Humphrey especially because of promises made but not kept. The rise of $3 billion ($4.7 billion on a cash basis) in 1 year haunts the administration because, with the cash budget up by $23 billion above the 1952 Taft-Eisenhower commitment, they are embarrassed. They even had asked for cuts in the 1952 campaign of forty, twenty-five, and ten billion dollars.

But let us note even the $72 billion 1958 budget is more than 20 percent less in relation to gross national product than the 1953 Truman budget, which was under examination in the 1952 campaign. I say this is too great a cut considering our peril, our shortage of several hundred thousand schoolrooms, our slums, the inadequacies of our social security program, the unavailability of comprehensive health insurance, etc.

In the welfare area housing costs in the new budget are down, and outlays on labor and welfare (health, education, and public assistance especially) up by $506 million.

WELFARE PROGRAMS

Surely this is no New Deal program when allowance is made for the slashes in 1952–56 and the rise of prices and income. At the very most, the rise in welfare programs in the budget cost about 5 percent of the average annual rise of gross national product expected over the next 10 years. Is this excessive, especially in view of the history of 1952–56?

Those who are vexed by the size of the Federal budget would have much more reason to be concerned over the trends of State and local finance. The Federal Government tends to pass its responsibilities on to these governments. For example, new construction by the Federal Government declined from $4.8 billion in 1952 to $3.6 billion in 1956, or a drop of 25 percent; and by State and local rose from $6.1 billion to $9.8 billion, or a rise of more than 60 percent. Hence the latter became twice as important relative to Federal outlays in 4 years.

Total expenditures of State and local governments are up from $12 billion in 1946 to $28 billion in 1952 and $40 billion in 1956. On trends of recent years State and local governments will be spending $60 billion in 10 years. Is it fair for the Federal Government to tap the richest sources of revenues and put increased responsibilities on State and local governments?

In short, the size of the budget is not so serious as it seems to many, even if allowance is made for peculiar accounting. The adminsitration is to be criticized rather for promises not kept, for dubious accounting, for unwarranted slashes of security and welfare outlays, and for putting excessive burdens on State and local governments.

SEYMOUR E. HARRIS.
CAMBRIDGE, MASS., *March 29, 1957.*

Economic Outlook: Good

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 9, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Economic Outlook: Good," which appeared in Nation's Business for April 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ECONOMIC OUTLOOK: GOOD

Economists, Government officials agree on that.

Profit squeeze caused some uncertainty.

Feeling's general in Capital that uncertainty is giving way now to confidence.

Here are some basic indicators:

Total goods, services being produced—now about $425 billion annual rate compared to $403.4 a year ago.

Personal income—now at $335 billion annual rate compared to $316.7 billion year ago.

New construction—work put in place so far this year's slightly higher than for same period last year.

It's $44.7 billion annual rate compared to $44.3 billion total last year.

Manufacturers' sales—month's $28.7 billion total is $2.5 billion ahead of year ago.

Congress' Joint Economic Committee evaluates future this way:

"America today is prosperous, with employment, production, purchasing power at record levels.

"Wide range of economic indicators suggests we can achieve continuing growth of the economy in the year ahead."

Military Sea Transportation Service Role

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9, 1957

Mr. MAGNUSON. Mr. President, I ask unanimous consent that an article written for the Monday, April 1, edition of the New York Journal of Commerce by Vice Adm. John M. Will, commander of the Military Sea Transportation Service, be printed in full in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DESCRIBES MAKEUP: MSTS CHIEF CITES UNIT'S ROLE

(By Vice Adm. John M. Will, U. S. Navy, commander Military Sea Transportation Service)

In the more than 7 years since the establishment of the Military Sea Transportation Service, the American maritime industry has undergone a remarkable transition.

In October 1949, when MSTS was organized, shipping was in the doldrums.

Many ships were in layup or in the process of inactivation because of lack of cargoes and maritime employment was at a low ebb. New ship construction was at a virtual standstill and the outlook for the shipyards was bleak, indeed.

SITUATION CHANGED IN 1950

With the outbreak of the Korean emergency in late June 1950, conditions in the shipping industry changed radically and it responded in full measure to the heavy demands placed upon it for the movement of military material.

It was during this period that the development of relationships between MSTS and the maritime industry was initiated. In the course of this development, as might have been anticipated, mistakes were made and misunderstandings encountered.

By profiting from the lessons learned in these shortcomings, however, a fairly sound and comprehensive working basis has been established along mutually advantageous lines. For their part, it is believed the shipping industry much prefers dealing with a single agency in matters concerning ocean transportation, than with the several individual services as formerly.

The benefits derived from dealing with a single source are not confined simply to the booking of cargo or to the negotiation of charters and shipping contracts. They extend to the more expeditious settlement of invoices, the processing of claims and the many other administrative details with which transportation procedures are surrounded. From the standpoint of the Department of Defense, the centralization of its ocean transportation needs under a single head has proved to be most effective.

The welfare of the American maritime industry is a matter of direct and continuing interest to the MSTS. Considering the fact that MSTS depends upon privately operated shipping to transport approximately 70 percent of the military dry cargo movement, the reason for this interest is not difficult to understand.

The more favorable general business conditions are for the established American-flag berth lines, the more assurance MSTS has of the necessary dependability and frequency of sailings to provide capability for the military life. More and more, also, MSTS is availing itself of a share of the passenger space provided by the additional ships being placed in service on those routes on which military personnel regularly move.

Practically 100 percent of MSTS ship repairs and overhauls are performed by private yards. A healthy ship-repair industry, therefore, is of benefit to MSTS. This not only affords a wider range of competition for bidding purposes, but provides a broader base for expansion under conditions of mobilization.

In connection with the operations of MSTS, the principal target of criticism by industry, labor, and congressional groups has been the so-called nucleus fleet. Much of this criticism stems from a misunderstanding of the composition of this fleet and the purposes for which it is maintained. Many critics mistakenly assume the total number of units to represent so many oceangoing ships. Actually, of the total of 214 units now in active operations, 71 of these are small coastal craft or naval auxiliary types which have no counterpart in merchant service.

They are employed for short haul lifts in the Far East or on special missions in remote areas. Among the remainder, 64 are takers. Through activations from the reserve fleets, the number of these has been increased from 34 within the past 9 months because of the critical worldwide shortage of tanker tonnage made even more serious by the closing of the Suez Canal.

Even with these activations, MSTS is only now working out from a tremendous backlog of Department of Defense petroleum shipping requirements built up because of the unavailability of commercial tankers at any price. At no other time since the establishment of MSTS, has the value and purpose of the nucleus fleet been demonstrated more completely than in connection with the recent and continuing tanker crisis.

UNITS ARE TALLIED

Of the remaining 59 units, 34 are troop and dependent transports. Industry concedes its inability to provide accommodations for mass troop movements. On the routes where military dependents are moving, privately operated passenger liners are participating in the lift in excess of the capability of the MSTS dependent transports.

The balance of 25 units comprises 2 C–4 cargo ships converted as heavy-lift carriers with 150-ton boom capacity, 4 utility aircraft carriers, 3 C–2 refrigerated ships and 16 Victory-type cargo ships. Since there are no American-flag ships of adequate heavy-lift capacity, the only alternative would be for foreign-flag charters.

The carriers are necessary for lifting aircraft of which many of the present-day types cannot be accommodated on the decks of conventional cargo ships. Refrigerated ship capacity is in short supply at best as evidenced by the necessity for the bareboat charter of five Government-owned refrigerated ships to a commercial operator for the express purpose of moving military refrigerated requirements in the Pacific.

The victory ships are assigned to a variety of missions. Principal among these is the annual Arctic resupply operation each summer, while some participate in the Antarctic explorations. During the past several months, a number of these ships have been used on lifts for which privately-owned tramps would ordinarily be chartered. However, because of prevailing high market rates for other business, tramp owners have not been disposed to make their ships available to MSTS at rates determined by the Maritime administration to be fair and reasonable. Recently, also, on certain of the berth line routes, because of the generally good commercial market, space offerings to MSTS have been insufficient to meet military shipping requirements.

ROLE IS EXTENDED

It should be emphasized that the over-all mission of MSTS extends beyond its role as the coordinator of ocean transportation for the Department of Defense. In addition, it is responsible for providing immediate lift capability in an emergency and to provide an adequate base for necessary expansion to meet emergency or mobilization requirements. With consideration for these responsibilities, it should be recognized that the nucleus fleet which has been described represents the bare minimum essential for the implementation of the MSTS mission.

That this recognition is now generally accorded by the private shipping industry, has been demonstrated in many ways. It is believed, too, the industry has every confidence that in the event of any differences developing in its relationships with MSTS, the means are always readily available for a full and complete hearing.

Foreign Aid

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9, 1957

Mr. HUMPHREY. Mr. President, in a recent column on foreign aid, Mr. Walter Lippmann summarized the central issues which are facing the Congress this year as it considers the mutual-security requests. In recent weeks there has been a steady flow of staff studies, commission reports, articles, and other analyses of our foreign-aid situation. No one has summarized the situation better than Mr. Lippmann in his column which appeared in the Washington Post and Times Herald on April 4, 1957. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOREIGN AID

(By Walter Lippmann)

There is, as we know, widespread and growing public opposition to the foreign-aid programs of the Government. We have just about reached the time when a continuation of these programs cannot be taken for granted. Senator GREEN, who is chairman of the Special Committee To Study Foreign Aid, points out that while there has been a gradual decrease in the sums appropriated, there has been a gradual increase, as reflected by votes in the Senate, in the opposition.

In 1948, there were only seven votes cast against the final passage of the Marshall plan. Last year, there were 30 votes, equally divided between the two parties, cast against final passage of the mutual security appropriation bill. There would have been more votes cast against it had not the administration accepted a reduced appropriation and coupled that with a promise to reappraise the entire program. There is reason to think that this year the opposition is still larger and is more determined.

The subject of foreign aid is extremely complicated, and many of the important facts are either secret and unavailable or they are masked to affect opinion abroad or opinion in Congress. Sometimes, for example, in order to make a better impression abroad, what is really military aid is presented as civilian aid. At other times, in order to impress Congress, what is predominantly civilian aid will be presented as military aid. All in all, it is not astonishing that the American people do not feel happy about an expensive program which is so hard to understand.

In this atmosphere, there has grown up a general popular misapprehension about the whole subject. It is that the Government is taking every year something like $4 billion out of the American national income, at the expense of American standard of life, and is giving away this money to raise the standard of life of all sorts of people all over the globe. The truth is that virtually all the money is spent to support and to hold together the great military coalition, of which the United States is the head, that surrounds the Soviet Union and Red China. What we call foreign aid is the annual upkeep of the system of military alliances which was inaugurated under Mr. Truman and has been extended and elaborated under Mr. Eisenhower.

The popular notion about foreign aid was true enough in the immediate postwar years. Then, great sums of money were used to raise the prostrate economy of Western Europe, of Germany, of Japan, and of other countries which had suffered from the war. During the 5 years between the end of the war and the Korean invasion only about 1½ billions out of a total of 26 billions went for direct military assistance. Most of the balance went for relief, rehabilitation, and reconstruction. A great deal of what is now thought and felt about foreign aid in this country is based on what was done in the way of foreign aid before 1950.

Now it is different. In the 6 years after the Korean invasion, out of a total of $30 billion of aid, $17 billions or nearly 60 percent, has gone into direct military assistance, and it is fair to add that a very large proportion of the balance of economic aid has gone into indirect military assistance.

Thus for example in the current fiscal year Congress has appropriated $3.7 billion of which all but $600 millions—about 16 percent—is military in purpose either in the form of military equipment or of economic support. What is more, a large proportion of the nonmilitary aid is used for strategic and political purposes.

There are four conclusions which we might draw from the facts and they should be kept in mind when we discuss foreign aid.

The first is that foreign aid, tremendous as it has been in dollars and in effort since the end of the war, cannot be shown by the facts to have gone down the drain and to be nothing but an unending and self-perpetuating handout. The overwhelming bulk of our economic aid has gone for relief and war reconstruction. The countries we have helped—Europe and particularly our two former enemies, Germany and Japan—have made remarkable recoveries. This type of aid has now stopped completely. What we have now is military assistance, not assistance for reconstruction, rehabilitation, or even for development. By its very nature, military assistance tends to be at least partially a recurring demand.

The second conclusion is that we are not engaged on a large-scale program to promote the development of underdeveloped countries. There are some, myself included, who think we ought to have such a large-scale program, and that it is essential to the working out of a happy accommodation between east and west. But the fact is that we do not have such a program now, and it is time to stop fooling ourselves that we do have one. If we wish to undertake a genuine and effective program, it will involve larger appropriations for foreign aid—though not much larger—rather than smaller, and it will require a long-term commitment. What we have now is primarily and overwhelmingly a program to subsidize our military alliances.

This leads to the third conclusion, which is that when we debate cutting out or cutting down drastically the foreign-aid program, what we are really dealing with is the Eisenhower-Dulles foreign policy as they operate it. There is no way to separate the policy from the foreign aid, which is simply and almost solely the money needed to make the policy work.

And finally it should be clear from all this that foreign aid in its present form could not be entrusted to international administration or control. Nor could its burden on the American taxpayer be appreciably reduced by asking other nations to contribute to these programs. For they are in essence instruments of United States foreign policy and are designed to serve American national interests.

Nearly 40 percent of last year's expenditures was for military hardware, as they call it in the Pentagon, and for facilities essential to the maintenance of NATO. Another 45 percent or more went to subsidize the military efforts of such allies as Greece, Turkey, Iran, Pakistan, South Vietnam, Formosa, and South Korea. Total economic and military aid for South Korea is now costing $600 million a year. For Formosa and South Vietnam, it is costing between $200 million and $300 million each.

When the Congress does begin to discuss the appropriation for foreign aid, it cannot ignore the relation of these funds to our existing alliances.

Whether the policy of these alliances is wisely conceived is a totally different question, which very few, virtually none, of the opponents of foreign aid are as yet seriously discussing.

The Governments Role in Defending Civil Rights

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, April 9, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech by Warren Olney III, the Assistant Attorney General of the United States, entitled "The Government's Role in Defending Civil Rights," delivered on April 5, 1957, before the ninth annual conference of the National Civil Liberties Clearinghouse, and an editorial from the Washington Post of April 7, 1957, on a related topic.

There being no objection, the address and editorial were ordered to be printed in the RECORD, as follows:

THE GOVERNMENT'S ROLE IN DEFENDING CIVIL RIGHTS

(Address by Warren Olney III, Assistant Attorney General of the United States, before the ninth annual conference of the National Civil Liberties Clearinghouse, Statler Hotel, Washington, D. C., April 5, 1957)

This morning I should like to talk more of the future than of the past. I should like to explain to you why I believe that the administration civil rights program which is now pending before the Congress will, if enacted, give to the Government for the first time the authority necessary for effective enforcement of federally guaranteed civil rights. I should like also to warn against attempts now being made to emasculate this program by deceptive appeals for the protection of the right to jury trial.

The key civil right is the right to vote. Wholesale discrimination against substantial groups in a community cannot exist under our democratic system unless those groups are also deprived of an effective voice at the polls. Wherever, for example, Negroes have and exercise the right to vote they have the bargaining power necessary to insure reasonably equal treatment from local officials. Furthermore, they can rely on local law enforcement people to protect them against acts of violence committee by private citizens. The need for appeal to the Federal courts for protection of civil rights is at a minimum in those broad areas of the country where all citizens, regardless of race, creed, or color, are permitted to, and do, vote without discrimination.

Unhappily, there are areas in our country where by one device or another substantial segments of the population are denied an effective voice at the polls. We in the Department of Justice have been vitally concerned with this problem and have made a sincere and honest effort to do something about it. Reluctantly, however, we have come to the conclusion that with the legal tools now available to us effective action on any broad scale is impossible.

Presently the only course open to the Government is to institute criminal prosecutions against those State and local officials suspected of administering local voting regulations in a discriminatory fashion. Such prosecutions of necessity come after the harm is done. They cannot be used as a direct means of forcing local compliance with the national law. In individual situations they are often unduly harsh, resulting in acquittals based upon sympathy for the defendant rather than upon a finding that he did not violate the law.

Hence, a vital aspect of the administration program is the proposal to authorize the Attorney General to bring civil suits for preventive relief in cases of threatened violation of voting rights and of other federally guaranteed civil rights. Suits in equity for preventive relief are well adapted to the key problem of eliminating discrimination in voting situations. By means of a suit in equity a registrar of voters who has been discriminating against Negroes in the administration of a literacy test might be enjoined from such discrimination far enough in advance of an election to permit the Negroes to register and to vote. The use of

suits for preventive relief as a means of enforcing Federal law in this area would not be an innovation. The Department of Justice has used such proceedings in antitrust cases since 1890. The Government has similar powers to enforce the Atomic Energy Act, the Fair Labor Standards Act, the securities acts, and many others.

Vital to the effectiveness of such procedure, however, is that the Federal judges have sufficient power to enforce the decrees which they enter. If, for example, a registrar of voters should flatly refuse to obey a court order enjoining him for certain practices, prompt and vigorous action would be necessary, both to make effective the order in the particular case and to vindicate the authority of the Federal courts and the Federal law. Under present law the court, upon complaint made, could order the registrant to appear for an immediate hearing. After a full and fair hearing in which the defendant would be entitled to counsel and to bring witnesses and cross-examine opposition witnesses, the court would determine whether or not the defendant had violated the court order. If it found a deliberate violation, then the court would have the authority to impose a fine or order the registrar imprisoned for the purpose of compelling him to comply with the order. Proceedings might also be had before the court for the purpose of punishing the defendant for his defiance of the court order. In such proceedings for criminal contempt the registrar would be presumed to be innocent, his guilt would have to be proved beyond a reasonable doubt, and he could not be compelled to testify against himself.

Opponents of civil rights legislation contend that the use of these equity procedures in civil rights cases would deprive the defendants of their right to a jury trial. They have gone further and now advance a proposal (S. 1735 by Senators EASTLAND, THURMOND, and BYRD) to require jury trial whenever "a contempt charged shall consist in willful disobedience of any lawful writ, process, order, rule, decree, or command of any court of the United States by doing or omitting any act or thing in violation thereof."

Regardless of the intention of the authors, this is a dangerously deceptive proposal. Careful analysis, we believe, discloses that the proposal is not in furtherance of the constitutional right to jury trial as it has heretofore existed under our Constitution. Instead, the proposal is disclosed as a clever device to nullify the proposed civil rights legislation. If enacted with this amendment the new law would be no more effective than present laws in protecting the constitution right to vote.

Now what exactly is this proposed amendment for jury trial? It would create a right to jury trial in a wide variety of situations in which jury trial has never been known to the law. There is no constitutional right to jury trial in either civil or criminal contempt cases. As long ago as 1890 the United States Supreme Court said: "It has always been one of the attributes—one of the powers necessarily incident to a court of justice—that it should have this power of vindicating its dignity, of enforcing its orders, of protecting itself from insult, without the necessity of calling upon a jury to assist it in the exercise of this power." I am aware of neither State nor Federal legislation extending jury trial to civil contempt cases. In 1914 Congress passed a statute (now 18 U. S. C. 3691) extending the right to jury trial in criminal contempt cases where the acts constituting the contempt would also constitute criminal offenses under Federal or local law. This statute expressly excepted contempts arising out of disobedience to court orders entered in suits brought in the name of the United States. Since criminal contempt proceedings are not often sought in private litigation (the Clinton, Tenn., case is one of the few instances of its use), this statute has had little impact upon the enforcement of Federal court orders. In 1932 in the Norris-LaGuardia Act Congress, after removing almost all of the jurisdiction of the Federal courts to issue injunctions in labor dispute cases, provided for jury trial in contempt proceedings arising in cases under the act. It was only with the enactment of the Taft-Hartley Act in 1947 that the Government was given jurisdiction to seek injunctions in any substantial number of labor dispute cases and that act expressly provided that the jury trial requirement of the Norris-LaGuardia Act should not apply to it. Hence it is probable that the statute which appears to grant jury trial in contempt proceedings for violation of injunctions issued in labor dispute cases (18 U. S. C. 3692) has no application to injunction suits brought by the Government under Taft-Hartley, which are, for all practical purposes, the only type of injunction suits (private or governmental) in labor dispute cases over which the Federal courts have jurisdiction.

The effect of the current proposal for jury trial would be to weaken and undermine the authority of the Federal courts by making their every order, even when issued after due hearing, reviewable by a local jury. No better statement of the objections to such a proposal has been made than that of President (and later Chief Justice) Taft in his speech accepting the nomination for the Presidency in 1908. Referring to proposals similar to those now advanced, he said:

"Under such a provision a recalcitrant witness who refuses to obey a subpena may insist on a jury trial before the court can determine that he received the subpena. A citizen summoned as a juror and refusing to obey the writ, when brought into court, must be tried by another jury to determine whether he got the summons. Such a provision applies not alone to injunctions, but to every order which the court issues against persons. A suit may be tried in the court of first instance and carried to the court of appeals and thence,to the Supreme Court and a judgment and decree entered and an order issued, and then if the decree involves the defendant's doing anything or not doing anything, and he disobeys it, the plaintiff, who has pursued his remedies in lawful course for years, must, to secure his rights, undergo the uncertainties and delays of a jury trial before he can enjoy that which is his right by the decision of the highest court of the land. I say without hesitation that such a change would greatly impair the indispensable power and authority of the courts. In securing to the public the benefits of the new statutes enacted in the present administration the ultimate instrumentality to be resorted to is the courts of the United States.

* * * * *

"The administration of justice lies at the foundation of government. The maintenance of the authority of the courts is essential unless we are prepared to embrace anarchy. Never in the history of the country has there been such an insidious attack upon the judicial system as the proposal to interject a jury trial between all orders of the court made after full hearing and the enforcement of such orders."

The proposed amendment that is being advocated under the innocuous slogan of jury trial would permit practical nullification of the effectiveness of the proposed civil-rights legislation. The enforcement of any court order may require prompt and vigorous action if it is to be effective. Prompt action will often be vital in civil-rights cases, especially election cases where the registration period or the election may pass while enforcement is delayed. The injection of a jury trial between an order of a court determining, for example, that a registrar of voters is discriminating against Negroes in administering a literacy test and enjoining the continuance of the practice, and the enforcement of that order would provide numerous opportunities for delay beyond the time when the order could have practical effect.

Even more disastrous would be the completely novel power given the jury to substitute their interpretation of the Federal Constitution and laws for that made in the very case before them by the Federal courts. Suppose in the example given the registrar of voters continued his discriminatory practices after the court had determined their unconstitutionality and specifically ordered their cessation. Under present laws the court, after a hearing to determine whether in fact the registrar was disobeying the order, could itself assess that punishment necessary to secure compliance and to vindicate the authority of the court. Under the proposals made (significantly by opponents of more effective enforcement of the constitutional prohibitions against official discrimination based on race or color) the court would have to submit to the jury the question whether the registrar had violated its order. There would be no way in which the court could then prevent the jury from freeing the registrar not because they found he had not violated the court order but because they, the jury, disapproved of the policy of the 15th amendment to the Constitution and hence of the order itself and simply refused to enforce it.

I feel justified in appealing to you as representatives of the many private organizations in this country which are specially interested in problems of civil liberties and civil rights to give wholehearted support to the administration civil-rights program. This program (embodied in S. 1658 now pending before the Senate Judiciary Committee and H. R. 6127 now pending before the House Rules Committee) represents the very minimum needed to make the provisions of the United States Constitution effective in actual practice to protect minority groups now being discriminated against in certain areas on a wholesale basis. I appeal to your good judgment not to be misled by a deceptive slogan into supporting an amendment which will emasculate the law. The way to progress in this important area of civil rights is by the enactment without amendment of the administration's proposals permitting the Government to seek preventive relief in the courts enforceable by the historic processes in injunction cases.

[From the Washington Post of April 7, 1957]

QUESTION OF JURY TRIALS

Senator EASTLAND has launched a crafty flanking movement with his bill to grant jury trials to persons accused of contempt for disobeying Federal court orders or injunctions. Along with many other southern Senators, the chairman of the Senate Judiciary Committee is trying to defeat the administration's civil-rights bill by the pretense that it would encroach upon the "sacred right" of every accused person to a jury trial. This argument has collided with the fact that there is no right of trial by jury for persons who are accused of disobeying court orders, except in limited categories of cases. So Mr. EASTLAND, with the support of Senators BYRD and THURMOND, is seeking to overcome that deficiency by means of new legislation.

Much confusion surrounds the subject because of the popular belief that every accused person has the right of trial by jury. Actually, the Constitution guarantees trial by jury in only criminal prosecutions and civil actions at law for money damages in excess of a certain amount. In addition Congress has required jury trials in some

equity proceedings, notably some labor disputes, but these are very limited.

Sponsors of the Eastland bill seem to regard these limitations on jury trials as an oversight. Of course, they were not. The whole concept of equity in our judicial system grew up because there were many situations that could not be handled properly by criminal prosecutions or by regular lawsuits. Equity proceedings permit the issuance of court injunctions as a means of protecting the rights of the parties before the court. These injunctions are enforced through the power of the courts to inflict punishment for contempt.

Many critics of the bill buttressing the right to vote have feared that it involves an arbitrary swing away from jury trials because of the reluctance of southern juries to convict anyone of civil-rights offenses. But this ignores the general practice of not requiring juries in contempt cases. The reason for this practice is that, under a government of laws, the courts must be obeyed, unless reversed on appeal. If a person could defy the courts, relying on a friendly jury to prevent his punishment, law and order would suffer a perilous blow. And if the Federal Government, having obtained an injunction against a person threatening to make a mockery of the law, had to rely upon a jury trial to enforce such an injunction, many of its operations would be crippled in different parts of the country.

The present law does provide for jury trials in some cases where the willful disobedience of a court order also constitutes a criminal offense. But the same statute also expressly provides that jury trials shall not be required in case of contempt in disobedience to court orders in any action brought by the United States. Senator EASTLAND would sweep away this safeguard and leave the courts at the mercy of juries to enforce their orders, whether or not the action had been brought by the United States.

Enactment of this bill would not protect the right of trial by jury but would gravely impair the right of effective government. It is an ill-conceived assault on our judicial system. The right of trial by jury is indeed a sacred right wherever it is properly applicable—a right that must be upheld and protected; but it is not enhanced by projecting it into situations where it is not appropriate.

The real question at issue in the civil-rights bill is whether the Government may institute civil proceedings (as well as criminal prosecutions) to protect the right of citizens to vote. Wherever criminal prosecutions may be resorted to, trials would be by jury. But if civil proceedings should result in injunctions, those injunctions should be enforced by the established and traditional means now in use. Certainly the country cannot permit Senator EASTLAND and his colleagues to destroy these time-tested procedures in their effort to make any civil-rights legislation meaningless in the South.

Greater Lawrence, Mass., on the Way Up

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. LANE. Mr. Speaker, again we call attention to the success story of Greater Lawrence, Mass., as a model of community courage and enterprise, in fighting back from the brink of economic disaster.

We believe this to be an epochal story that, in capsule form, illustrates the sturdy American qualities of enterprise, inventiveness, and the determination to overcome insuperable obstacles.

The Greater Lawrence story is not only a blueprint for the economic recovery of other communities that may have to face this challenge. It is also an inspiring saga of a community's faith in itself and in its people.

We are proud of the victory we have won.

As an example of our high morale, under unanimous consent I insert in the CONGRESSIONAL RECORD the following editorial from the Lawrence Sunday Sun of April 7, 1957, concerning the Greater Lawrence story that was recently presented before the Advertising Club of Boston:

A GREAT DAY FOR GREATER LAWRENCE

The story of the rebirth of Greater Lawrence was told so well and completely at last Tuesday's meeting of the Advertising Club of Boston that to adequately describe the affair is difficult.

The program was conducted in the finest possible manner. Let it be said that a function of that nature can very easily be thrown off balance and develop into a round of verbal backslapping, armpumping and miscellaneous dribble. But the Greater Lawrence story was told with dignity and commendable restraint—and with a perfection of precision.

The principal address by Kurtz M. Hanson, president of the Champion International Co. and also president of the Associated Industries of Massachusetts, left nothing to be desired. His manner and delivery were excellent, as was his text, and no greater tribute could be paid to him than the fact that the large audience gave him its concentrated, undivided attention.

The Advertising Club of Boston and its president, Richard Berenson, merit the appreciation of all of us here in Greater Lawrence for presenting our community with such a matchless opportunity to get our story through to the country as a whole. A good story is always worth the telling, and ours was told memorably.

Congratulations are in order to Irving E. Rogers, publisher of the Eagle-Tribune, general chairman of the committee, and all those who assisted in any way, great or small, in the telling of the Greater Lawrence story.

Jewish War Veterans Schedule Observance of V–E Day May 8, 1957

EXTENSION OF REMARKS

OF

HON. LUDWIG TELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. TELLER. Mr. Speaker, the 1957 anniversary of V–E Day—victory in Europe—on May 8 should afford us all an opportunity for reverential pause, in memory of the more than 1 million Americans who suffered hurt and death in the holocaust of World War II. A somber lesson that terrible conflict is in its reminder that aggression, race hatred and expropriation must be combated without let or hindrance in its initial stages, before it becomes a pervasive threat to world peace and human decency.

Yet today we receive disquieting news that especially in Egypt, and elsewhere, expulsion and appropriation are again the order of the day. In Hungary the forces of liberty have been crushed and mock trials leading to execution are held to punish those who dared to stand up for freedom in daily living.

I am therefore happy to report that the Maj. Gen. Maurice D. Rose Post No. 188 of the Jewish War Veterans of the United States, of which I am proud to be a member, has scheduled a V–E Day dinner and a foreign affairs symposium on May 8, 1957, at the Wall Street Synagogue dining room, 46 Beekman Street, New York City. A foreign affairs symposium will be conducted by past national commander Abraham Kraditor and the JWV foreign affairs committee members.

Post Commander Jack Padawer, who is in charge of the dinner, has issued the following statement, which deserves to be recognized as an excellent expression of the significance of V–E Day in the history of our country:

V–E Day (victory in Europe) of the year 1945, when Hitler suffered his disastrous defeat after bringing the world to the depths of degeneration, is gradually being lost in the recesses of the blackest pages of history along with the stories of the gas chambers and the fiery furnaces, of the butchering and burying of human beings alive, of the making of lampshades from the skin of people, of the piling up high of gold knocked from the teeth of living humans, and of the other acts of pillaging and plundering and ravaging—savagery that had no brutal equal even amongst the most barbaric cannibal people. V–E Day which marked the surrender of the German armed forces and the end of the fighting against Germany is no longer noted on calendars, not even on those which show a multiplicity of days to be remembered for historical reasons, although V–E Day represents the end of Hitler and of a holocaust that brought death to at least 10 million people, that caused the United States of America almost a million casualties and an expense of hundreds of billions of dollars. V–E Day which in 1945 saw the end of Axis aggression in Europe, and the end of expropriations and expulsions, now in 1957 sees a new axis formation and a new set of expropriations and expulsions. Hitler may have died on the eve of V–E Day of 1945, but the pattern of Hitlerism has again come alive in 1957.

Commensurate Pay for Lawyers in the Armed Forces

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 25, 1957

Mr. MULTER. Mr. Speaker, the enactment of legislation to provide commensurate remuneration for lawyers in the Armed Forces is long overdue. After introducing my bill, H. R. 6025, to accomplish this purpose, I requested the

views of the American Bar Association.

The following letter, dated March 28, 1957, together with the table of current pay and allowances, was forwarded to me by the bar association.

A review of this table shows why it is impossible to retain such officers in the Armed Forces. The high turnover in the Judge Advocate's branch is not only uneconomical but results in inexperienced lawyers handling cases of great import:

AMERICAN BAR ASSOCIATION,
Chicago, Ill., March 28, 1957.

Hon. ABRAHAM J. MULTER,
HOUSE OF REPRESENTATIVES,
Washington, D. C.

DEAR CONGRESSMAN MULTER: I acknowledge receipt of your letter of March 25 requesting me to furnish you with any releases, statistics, and other pertinent data which we may have in connection with your bill, H. R. 6025. It is my understanding that H. R. 6025 is substantially identical with S. 1165 introduced in the Senate by Senator THURMOND.

At the meeting of the house of delegates of this association held on February 18 and 19, 1957, the following resolution was adopted:

"Unless legislation is promptly enacted by the Congress which will provide realistic, scientific pay schedule for all members of the armed services sufficient to provide the incentive to keep competent officers and technical enlisted men on a career basis, thus saving huge sums now lost by the rapid turnover of highly trained and experienced personnel in all branches of the armed services, then this association considers it essential to provide additional compensation along the lines of Senate bill No. 1165 of the 85th Congress (1st sess.) for members of the legal profession serving with the armed services commensurate with the special professional pay schedule now available to the other learned professions."

Thereafter, copies of the foregoing resolution were transmitted to the members of the congressional Committees on the Armed Services and to the Judge Advocates General of the Army, Navy, and Air Force.

Inasmuch as the resolution was offered from the floor of the house of delegates by a member thereof, there was no report or accompanying data submitted therewith. However, we have obtained on an unofficial basis a table showing the comparative compensation of doctors, dentists, and veterinarians who are in military service, a copy of which is enclosed. I also enclose a copy of the March 15 issue of the American Bar News, which goes to each of this association's 88,000 members. I direct your attention to the short article on this subject which appears on page 3 thereof.

I very much regret that your bill, H. R. 6025, was not brought to the attention of our house of delegates at the time the above-quoted resolution was adopted, and I wish to express to you the appreciation of this association for sponsoring this important legislation.

Cordially yours,

JOSEPH D. STECHER,
Secretary.

Current pay and allowances [1] for legal and medical personnel of the Armed Forces

1st lieutenant							94.20	77.10	47.88

[1] The current pay and allowances for all personnel of the Armed Forces are prescribed by the Career Compensation Act of 1949, as amended (37 U. S. C. 231 et seq). Basic pay is prescribed by sec. 202 of that act (37 U. S. C. 232); subsistence allowances by sec. 301 (37 U. S. C. 251); quarters allowances by sec. 302 (37 U. S. C. 253).

[2] Officers are not appointed in the grade of 2d lieutenant as judge advocates, veterinarians, doctors, or dentists.

[3] Under sec. 5 (a) (2), act of Apr. 30, 1956, 70 Stat. 122 (37 U. S. C. 324), veterinarians commissioned as such in a Regular component of an Armed Force, and Reserve officers commissioned as veterinarians, called to extended active duty for 1 year or more, receive an additional $100 per month.

[4] Under sec. 2, act of Apr. 30, 1956, 70 Stat. 121 (37 U. S. C. 233) doctors and dentists are given 4 years' constructive service for pay purposes, and doctors who serve an internship in addition to their professional schooling before entering on active duty are given an additional year of constructive service for pay purposes. Consequently, all doctors and dentists on active duty have 4 or more years' service for pay purposes. As a result of such constructive service, doctors are not called to active duty below the grade of captain, while dentists normally serve 1 year on active duty as a 1st lieutenant.

[5] Under sec. 5 (a) (1), act of Apr. 30, 1956, 70 Stat. 122 (37 U. S. C. 324), doctors and dentists commissioned as such in a Regular component of an Armed Force, and Reserve officers commissioned as such, called to active duty for 1 year or more, receive an additional $100 per month. Under sec. 5 (a) (3) of that act, this is increased to $150 per month after 2 years' active service as such, to $200 per month after 6 years' active service as such under sec. 5 (a) (4) of that act, and to $250 per month by sec. 5 (a) (5) of that act after 10 years' active service as such. Since dentists are given only 4 years' constructive service under sec. 2 of that act, as noted in footnote 4 above, they will qualify for increased longevity pay only after 2 years' of active service. Doctors, however, who receive 5 years' constructive service under sec. 2 of that act, qualify for increased longevity pay after 1 year of active service, but for increased extra pay only after 2 years' active service.

[6] 1st lieutenants with less than 2 years' service for pay purposes receive only $259.36 base pay per month. In all higher grades pay does not increase upon completion of 2 years' service.

[7] Provisions for extra incentive pay for hazardous duty, such as flight or parachute pay, apply to medical personnel and judge advocates assigned to such units if their duties so require. Other types of hazard pay generally have no application to such personnel.

Budget Cut Could Hit $4 Billion

EXTENSION OF REMARKS
OF
HON. JIM WRIGHT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. WRIGHT. Mr. Speaker, under leave to extend my remarks, I include an article written by Marshall McNeil which appeared yesterday in the Fort Worth Press and other Scripps-Howard newspapers throughout the Nation.

Mr. McNeil, an astute and experienced observer of the Washington scene, points out the reductions in the budget thus far approved in the House.

The article follows:

BIG "IF" INVOLVED IN HOUSE AND SENATE ACTIONS—BUDGET CUT COULD HIT $4 BILLION

(By Marshall McNeil)

A $3 billion to $4 billion cut in the President's $71,800,000,000 budget is now in sight—if:

The House maintains the economy rate it has already set; and

The Senate resists administration and other pressures to restore House reductions.

The House or its Appropriations Committee already have sliced slightly more than $1 billion from the President's spending proposals in 7 money bills for the coming fiscal year.

FIVE INSTANCES

In five instances, the House has approved these cuts, and the economy issues thus raised are before the Senate Appropriations Committee.

In two other instances, the House has not yet passed on its Appropriations Committee's recommendations. The record thus far has been for the House to approve its committee's proposals or even reduce them a little.

And the biggest money bills are still to come. The largest will be that for the Defense Department, for which the administration has asked about $38 billion.

TOPPED A BILLION

Budget cutting in the House, although yet to be formally approved by that body, topped a billion last week when the Appropriations Committee reduced the Commerce Department's budget by $217 million, or about 25 percent.

The committee rescinded an additional $65 million in prior-year appropriations which otherwise could have been spent in the coming year.

This hiked to roughly 7 percent the cuts in 7 bills passed by the House or recommended by the committee.

If the same rate of cut were applied to the remaining bills—other big ones will be for foreign aid, agriculture and the State Department—the savings could top $4,500,000,000.

CYNICAL GROUP

House Members have become pretty cynical about the fate of some of their thrift when made an issue in the Senate, sometimes called the upper body.

"Yeah, it's the upper body, all right," Congressmen say. "They always up our appropriations bills."

But economy pressures are on the Senate, too. Moreover, each spending bill changed by the Senate must go to a joint House-Senate conference committee where the House has ample power to stand behind its economies.

BUDGET-CUTTING RECORD

Here's the record to date of efforts by Congress to cut President Eisenhower's $71,800,000,000 budget. All actions have been in the House, the Senate having yet to act on a regular appropriations bill.

Department	Ike's budget	Cut by House committee	Total cut voted by House
Treasury and Post Office	$3,965,219,000	$80,364,000	80,364,000
Interior	515,189,000	60,794,000	60,794,000
White House	20,921,000	4,900,000	4,900,000
Independent offices	5,923,195,000	516,994,000	537,993,000
Labor-Health, Education, and Welfare	2,981,277,900	118,775,000	135,446,000
District of Columbia	25,504,000	3,000,000	(1)
Commerce	871,513,000	217,827,000	(1)
Total	14,302,818,000	1,002,654,000	819,497,000

[1] No action.

The Plight of America's Mentally Ill

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. FASCELL. Mr. Speaker, one of the most tragic problems of modern life is the plight of America's 10 million mentally ill.

For many years the number of patients in our mental hospitals has mounted at an alarming rate. In the last 2 or 3 years, however, there has been heartening evidence that number of discharges are beginning to catch up with or even exceed new admissions in many States. The National Association for Mental Health, which has long been active in this field, attributes this improvement in the situation to two main factors.

First, there has been a remarkable increase in the effectiveness of modern treatment methods. These include such developments as the use of tranquilizing drugs, psychotherapy, and electric shock treatment. The use of these new techniques has sharply changed treatment for the mentally ill, and has altered the atmosphere in mental hospitals. It is important to emphasize, however, that drugs and other new treatments are by no means a panacea. In many instances the new techniques only help make a patient accessible to other forms of treatment, or would require more funds and more personnel than are currently available.

The second major factor contributing to improvement in the mental health picture is the emphasis on treating patients with the aim of being able to return them to useful lives instead of providing a mere minimum of custodial care. There is, however, much still to be done before we can say that an optimum amount of treatment is being provided. A continued emphasis on treatment is important both in terms of human suffering and in reducing the cost of maintaining for a lifetime many patients who might have been cured and returned to normal life.

This year the slogan for Mental Health Week, which will take place April 28 to May 4, is "The Mentally Ill Can Come Back—Help Them." This appeal calls for participation by all interested Americans in the observance of Mental Health Week and in the fund-raising drive of the National Association for Mental Health.

Now that we seem to be within sight of checking the increase in mental illness I think it is particularly important that the people be made aware of the progress that is being made and of the tasks yet remaining. There is much to be done at the community level, at the State level, and at the national level.

To express the sense of the Congress concerning this serious problem with which the Nation is confronted, I have introduced, for appropriate reference, a joint resolution calling upon the President to issue a proclamation designating April 28 to May 4 as National Mental Health Week, and urging the fullest possible cooperation in the fight against mental illness.

Added Bonding Powers for the St. Lawrence Seaway Development Corporation

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. BROOMFIELD. Mr. Speaker, I introduced a bill, H. R. 5729, on March 7, 1957, to clarify the general powers, increase the borrowing authority, and to authorize the deferment of interest payments on borrowings, of the St. Lawrence Seaway Development Corporation.

To support this bill, I presented the following remarks before the Public Works Committee on April 9, 1957:

Mr. Castle and General Holle, and other members of their organizations, will explain in detail the reasons for the provisions of H. R. 5729, but as the sponsor of this bill I should like to make some general observations on its content. This bill is identical with H. R. 5728, sponsored by our chairman, Mr. BLATNIK.

First of all I wish to emphasize that this bill will not impose any burden on taxpayers. The seaway project is a self-liquidating and self-supporting enterprise. The cost of building and operating this waterway will be recovered from tolls without drawing upon public funds for appropriations. All borrow-

ings authorized under the Seaway Act of May 13, 1954, and under this amending bill will be repaid to the Treasury Department with interest.

In this respect the seaway is unique as far as waterways in the United States are concerned. Other waterways built and maintained in the United States by the Federal Government are financed by appropriations from public funds.

The seaway is also unique in that the United States is a partner with Canada in this enterprise. When the project is completed it will constitute an outstanding example to the rest of the world of the ability of two free nations to work together in carrying out a great and complicated engineering project for their mutual benefit and security.

Not only is the project an unusual one from the standpoint of financing and international partnership, but it is also one of the great engineering enterprises of our times. As has been the case with all pioneering ventures of this kind, problems have arisen in the course of construction which could not have been foreseen when the original plans and estimates were prepared. It required hard experience to solve such problems, as was demonstrated in the construction of the Panama Canal, the Suez Canal, and other great engineering feats in this line.

Consequently it is not surprising that various revisions of, and additions to, original plans and estimates would become necessary in the course of the actual construction of the seaway. Then, too, the considerable increase in construction price levels since the original estimates were prepared in 1952 have made themselves felt in a very marked degree. The cost of the Canadian section of the seaway project has also increased considerably for the same reasons.

H. R. 5728 and H. R. 5729 provide amendments to the Seaway Act which are needed in the light of the experience gained since the project was commenced. On looking into the background of these amendments, I have been informed that consideration was given to having a bill introduced into Congress last year, but it was found that this would not be feasible because the placing of several major contracts and solution of some problems was still pending at the time. Consequently, it was not possible to make definite proposals for amendments until this session of Congress.

These two identical bills provide for an increase in the borrowing authority of the Seaway Corporation by 33⅓ percent to meet the requirements for additional funds for the overall construction of the United States section of the seaway. The bills also provide for a clarification of the general powers of the St. Lawrence Seaway Development Corporation to permit the performance of necessary auxiliary services such as tug services, at reasonable prices, and to permit the Corporation to engage in the toll operation of the high-level bridge which must be constructed over the seaway channel between Rooseveltown, N. Y., and Cornwall, Ontario.

This bridge is an essential element of the seaway project since it will replace an existing low-level structure under which seaway traffic would not be able to pass. Through the bridge tolls, highway traffic will contribute to the cost of this feature of the seaway project instead of placing the total cost of the bridge upon seaway shippers.

The bills will also make it clear that interest during construction may be deferred. This clarification will place the financing of this portion of the interest charges of the seaway on the same basis as other Federal self-liquidating projects. Interest during construction will be accrued as a cost but payment will be deferred and compounded until construction is completed. I am informed that the Treasury Department and the Bureau of the Budget approve of this arrangement.

In closing, might I say it isn't often that the Congress of the United States receives a chance to act on a project so large, so beneficial and of such far-reaching consequence to such a great portion of our Nation.

And it is even less seldom when we find that such an enterprise can be accomplished without taking an additional penny out of the pocket of the already overburdened taxpayer.

As a member of this committee, I urge my distinguished colleagues to support me in seeking early favorable action on this proposal.

Friends of a Free Poland

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. GORDON. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including the following resolution unanimously adopted by the Friends of a Free Poland on March 30, 1957.

I strongly recommend to the Members of the House the reading of this resolution. The resolution graphically sets forth the present situation in Poland and the degree of progress so far achieved by the Polish people in their efforts to gain national freedom. The extension of United States aid to Poland is most timely and, as the resolution sets forth, should further assist the Polish people in their struggle for national autonomy.

The freedom-loving people of Poland have been able to open the door part way. Through it they can see further possible gains. It is in our own national interest as well as that of the entire free world to do nothing that would help the Communists slam shut the door. I most earnestly hope that the present negotiations will lead to the extension of adequate economic assistance that will help the Polish people in their courageous fight for freedom.

The text of the resolution follows:

Whereas the courageous fight for freedom waged by the Polish people inside of Poland has gained for them admiration all over the free world;

Whereas the emancipation from Soviet domination achieved after the mass demonstrations in Poland in October 1956, is only of limited extent;

Whereas the changes decreed under the existing communist dominated regime of Wladyslaw Gomulka should be considered as only the first step toward democratic freedom and political independence;

Whereas Poland, under the present regime, still cannot be considered as a free country;

Whereas the Poles, both inside and outside the country, are well aware of that regrettable fact, but having no choice, and guided by a realistic appraisal of their geographic and political situation, have decided to follow the leadership of Wladyslaw Gomulka;

Whereas the above decision was made possible by the understanding reached by Gomulka with Stefan Cardinal Wyszynski, Primate of Poland;

Whereas as the result of said understanding, the strongly anti-communist population of Poland gave a vote of confidence to Gomulka during the recent elections;

Whereas the reforms introduced by the Gomulka regime since his accession to power, represent, in fact, a strong deviation from the orthodox communist doctrine, as proclaimed and followed by the Kremlin;

Whereas it is in the vital interest of Moscow to defeat Gomulka and to put an end to the schism endangering the communist plan for world domination;

Whereas the Soviet Union, for reasons best known to her leaders, refrained from repeating in Poland the massacre perpetrated in Hungary, but, nevertheless, hopes either to strangle Poland economically, thus causing the downfall of Gomulka, or to bring the Poles to their knees, begging for help and ready to accept any conditions imposed on them, i. e. the return to orthodox communism;

Whereas the Poles in Poland are looking to the United States as their only hope in obtaining economic and moral assistance in their fight for liberation;

Whereas the Poles realize that any political or military assistance coming from the free world is, under the prevailing conditions, out of their reach;

Whereas extreme caution in not overstepping the limits of antagonizing Soviet Russia, must still remain the basis of Poland's present policy;

Whereas under those circumstances, Poland, surrounded by satellite nations and by Soviet Russia, with Soviet troops still stationed on her soil, is forced to compromise and, perhaps, to slow down her reforms, and even in some instances, to cede ground under Soviet pressure and threats;

Whereas in the light of the above, a rift between the Warsaw and Moscow regimes is both widening and deepening;

Whereas it is in the interest of the United States to assist any satellite nation in its fight for freedom;

Whereas the Polish bid for liberation, coming from within a satellite nation, finds no precedent and, not long ago, has been generally accepted as a practical impossibility;

Whereas the Polish attempt at liberation, if successful, would pave the way for other satellite nations in a similar direction;

Whereas such a development in Central and Eastern Europe, if peacefully achieved, would greatly diminish the responsibility assumed by the United States, and lessen the burden in the defense of Western Europe by reducing the danger of communist aggression;

Whereas there is little danger that Soviet Russia would profit directly or indirectly from economic help given Poland under her present regime, and a realistic appraisal of the situation points, rather, in an opposite direction:

Resolved, It is in the interest of the United States, as the acknowledged leader of the free world in its fight against communism, that adequate economic help be given to Poland at this particularly propitious and crucial moment.

Spirit of the Irish

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. BYRNE of Illinois. Mr. Speaker, under unanimous consent I would like to insert a very fine letter I had recently from Joseph P. Furey:

Recently a story appeared in the Irish World concerning you, and your background, and I just could not permit the opportunity

to go by without offering my heartiest congratulations on your election.

I was mighty proud to read this story since I, too, came from Killybegs—emigrated in 1926.

First of all your parents must be congratulated for the part they played in the scheme of things which resulted from their pioneering in this what to them then was a strange land; if an Irishman could actually call America strange. Anyway that be as it may the fact remains that they, and myself, came here from little towns nestled midst the beauty and tranquility of the Donegal Mountains. It was not so easy in the beginning, yet they forged ahead with vigor and might always trusting in the wisdom and goodness of God. This, sir, despite the fact that in those days occasions arose where an Irish Catholic was persona non grata. They cared not for inconveniences, and surmounted the barriers which were frequently placed in their way, for the poverty of life in Donegal which was not of their making became an incentive to prove to themselves and our Almighty God, that the goods our country possesses was just as much of theirs as the other fellows. This is the true spirit of the Irish—a spirit that all of the might of the hated British Empire from the time of the cursed Oliver Cromwell who plucked the suckling babes from their mothers' breasts and cast them into boiling pitch up until the glorious days of Easter week, 1916, when the young men of Dublin led by Padraig Pearce defied the British by distributing the proclamation of independence, and then fought for the principles enunciated therein.

You, too, are to be congratulated for the road you journeyed had the same booby traps as the ones others traversed, but could not make it. You have, and may God and His Blessed Mother be ever with you and yours to guide and guard you at all times during your life let it be public or private.

The State of New England

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. LANE. Mr. Speaker, New England is not only the regional group embracing the six Northeastern States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut.

New England is a state of mind, long known for its independence, its self-reliance, its God-fearing spirit, its awareness of its proud history, its reverence for the mind, and its eternal quest to discover what is beyond the horizons.

We may be small in area, but mighty in every other category.

The boundaries that presently separate our six States, are disappearing.

New England, which has given more of its sons and daughters to settle other areas, and more of its hard-earned substance in taxes to put other areas on their feet than any other comparable group, is now developing the regional spirit.

Hence the intriguing possibility of "A New State: New England," which is the theme of an editorial that appeared in the Boston Sunday Herald of April 7, 1957.

Under unanimous consent I reprint it in the CONGRESSIONAL RECORD, with the thought in mind that New England is on the threshold of new leadership as it pioneers the Atomic Age:

A NEW STATE: NEW ENGLAND

We give you the logical but (probably) the impossible—the new State of New England.

As visionary as the union of Canada and the United States is the union of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, and Connecticut. Yet how sensible such a union would be.

In area and in population New England is the smallest recognized regional area in the country. Yet it is divided into the six smallest States of the Union, with the exception of New Jersey, Delaware, and Maryland.

If it were made one State it would still have only 6 percent of the country's population and only 2.2 percent of the area of the country. The State of New England would still be 20th in size, only a quarter as large as Texas, and only an eighth of the size of that Territory clamoring to be a State, Alaska.

The geographic, economic, and cultural identity of the State of New England would be obvious.

This area is, in effect, a peninsula jutting off from the American mainland, as Alaska is in the other direction. It is a terminal area, where the rails end, the domestic airlines meet the foreign, and the highways reach the shoreline.

Partly as a result of our geographical position we have our own special economic problems. Because of the higher cost of fuel transportation, the cost of electricity averages 15 percent above the rest of the country. Because American oil is more expensive when it gets here, New England is especially interested in imports of foreign oil, and must, as a region, constantly oppose efforts to restrict such imports.

New Englanders stand together in a high-income range. The per capita income of the New England States ranges from $1,535 to $2,490. But the national-income range is from $946 to $2,513.

New England agriculture is of a type, neither as depressed as some in the South nor as prospering as some of the West. Income per farm varies here in the relatively narrow ranges from $1,718 to $3,592. The national range is from $886 to $11,900.

There isn't a doubt that we could do a better job of promotion, carry on a more efficient Government, exercise greater weight and prestige on the national scene (except for the admittedly heavy drop from 12 Senators to 2), if we had a single State.

Well, granted it's just a dream, what about doing the next best thing—draw the States closer together?

We now do some things together. The New England Council has found certain ways to unify promotion—we need to find more. We must strengthen the council and its work.

The New England governors have been able to work together in many fields as a unit, often under the spur of the council. We need to provide continuing interstate institutions which will expand such operations.

The Federal Reserve Bank of this district has done a superlative job in integrating research for the area, pointing out our guide posts and providing the drive for new efforts. More power to it.

Our New England delegations in Congress have, of recent years, pulled more and more together for regional rather than statewide purposes.

But until that distant day when logic will command more influence in man's affairs and a New England State arises, we must, for our own growth and prosperity, seek out more and more ways in which New England can be a match for the big States.

Mr. Nixon's Report

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1957

Mr. HILLINGS. Mr. Speaker, Vice President NIXON has made an excellent report on his recent trip to Africa on behalf of our country. The Washington Post and Times Herald in its issue of April 9, 1957, has editorialized on this outstanding report which stresses the importance of Africa to the free world.

The Vice President has once again made a major contribution to the efforts of our country and the other nations of the free world to convince all people that they should reject communism and dedicate themselves to the cause of human freedom everywhere.

The editorial follows:

MR. NIXON'S REPORT

Vice President NIXON's report on his recent visit to Africa is significant chiefly because it focuses national attention on an area too often neglected. The essence of his message is that "the United States must come to know, to understand, and to find common ground with the peoples of this great continent." Underdeveloped though it is, Africa is teeming with new activity and new aspirations for independence, freedom, and a higher standard of living. The very fact that a large continent is only beginning to come into its own, makes it the more important to encourage the building of lasting ties with the institutions of the free world.

As Mr. NIXON spent only 3 weeks visiting 9 countries, his comments are necessarily general. On the basis of his general conclusions, however, he makes a number of constructive recommendations. He suggests a new Bureau of African Affairs in the State Department to emphasize the emerging importance of this continent in the diplomatic sphere. He would improve the quality and quantity of American informational programs in Africa and step up the exchange of students and potential leaders.

Without putting his finger on any specific inadequacies, Mr. NIXON also pleads for strengthened diplomatic and consular representation in these countries. Some American offices in these lands are understaffed and lack funds for necessary travel. Economic sections of the American embassies are especially in need of strengthening if they are to afford American investors with information they will need in considering investments in the African countries. Mr. NIXON also favors American economic and technical assistance to these underdeveloped lands.

The good will of Africa is not to be won, however, with aid and information or even recognition of expanding aspirations. Human understanding and equality are essential to any lasting cooperation in international tasks. The continued existence of racial discrimination in this country, as the Vice President points out, results in irreparable damage to the causes of freedom and peace. It is not surprising that he concludes:

"We must continue to strike at the roots of this problem. We cannot talk equality to the peoples of Africa and Asia and practice inequality in the United States."

Patriotism in Modern America

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. SCHERER. Mr. Speaker, for many years, the American Legion has sponsored an essay contest among high school students. It is one of the many programs of the Legion which attempts to make Americans conscious of our great heritage and our obligation to preserve our institutions.

This year, the subject of the essay was "Patriotism in Modern America." I am tremendously pleased that one William S. Gehler, a freshman at Mariemont High School in my district, was one of the winners of this contest. His contribution to this contest is most remarkable, particularly when you consider that he is only 15 years of age.

His fine essay follows:

PATRIOTISM IN MODERN AMERICA

(By Wm. S. Gehler, Cincinnati, Ohio)

"Patriotism in Modern America," but a few words, and yet in these words may be the future of America, of the world. Behind these words the fate of our lives is being fulfilled, for in my evaluation, patriotism today is the loyal American citizen and his everyday actions.

He helps a neighbor in need, and this shows that he takes interest in others. As he performs his everyday deeds, his interests range farther afield than just in local functions, to distant localities unfamiliar to him. By gaining more knowledge of these distant neighbors and through understanding more of their problems, he is able more than ever to aid them not only materialistically, but with friendship and good will.

A patriot of today is not only one who performs a great historical deed but the common citizen and his duties and patriotism toward his fellow man. And at the head of all reigns the American way of life, with its unlimited opportunities, built upon the foundation of a most divine element, patriotism.

Today the American citizen who votes to keep his country foremost in magnitude, and takes part in civic affairs for the betterment of his community and greater enjoyment of life for himself and his family. He strives endlessly to bring his family's ties closer together, helping to build a lasting happiness for tomorrow. His home and his family, surrounded by love and well-being, play a prominent part in the stability and prosperity of his children's welfare. Whether he knows it or not, his family's happiness and contentment today may spell the difference between an obscure or a brighter America in his children's lives in the coming years.

In later years as his sons and daughters take their places in the world, he watches proudly his descendants as they carry on in the building of a better world and an even better United States.

Your own contribution to your beloved land, whether great or small, is your own sacred satisfaction which can never be taken from you. To the strong and the weak, the famous and the common, to them and to all, patriotism is synonymous. No title or strength can make one a better person, for with the patriotic heart, all men stand equal. Having the true courage of a citizen who loves his country, who supports it and its interests, and defends it against all dangers, you merit the supreme right to proclaim yourself a patriot—an American.

Tax Relief

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. HOFFMAN. Mr. Speaker, this being tax time, so many people writing their Representatives complaining about the Government's take, the March 24 broadcast over the Manion Forum out of South Bend, Ind., can well be read with profit:

FEDERAL GOVERNMENT COMPETITOR INSTEAD OF FRIEND

Dean MANION. Nearly everybody admits that the Federal income tax is bad and ought to be abolished. Nevertheless, a great many of these same people are honestly of the opinion that without the income tax we could not finance the necessary constitutional operation of the Federal Government.

My guest tonight has given years of intelligent study to this question. An industrial engineer and an analytical student of political economy, he organized the American Progress Foundation to resist the enenroachment of socialism upon our American way of life. For those who are interested in the Hoffman amendment, Mr. Willis E. Stone, of Los Angeles, has encouraging news. Here he is:

Mr. STONE. Thank you, Dean Manion. I appreciate this opportunity of discussing methods by which we can eliminate the income tax burden which haunts us all at this time of year.

Congressman CLARE E. HOFFMAN, of Michigan, recently explained to the nationwide Manion Forum audience that he has introduced into Congress a proposed amendment to the Constitution known as House Joint Resolution 232, which would repeal the 16th amendment and permanently abolish all Federal income taxes.

The basic needs for such a constitutional amendment are self-evident. The States in this Union cannot be sovereign if the Federal Government sustains and enlarges its power to tax the individual, and there can be no such thing as individual freedom if the Federal Government has first claim against all the productivity of each individual.

These truths have already been heatedly discussed, in great detail, by almost everyone. Although most Americans feel badly used by their government because of the income tax, and live in periodic fear and dread of it, it is to their credit that they hold our Federal Government in such affection that they approach this question of repealing income taxes with caution.

This caution, however, must be based on truth—and the truth is that income taxes have produced extremely little of value for either government or people. We should remember that, before the present income tax was imposed upon us in 1913, we had developed a barren wilderness into the greatest Nation of history.

We should also remember that the income tax is a primary tool recommended by the Communist manifesto for the destruction of America. And we might recall that the American people had two previous experiences with the income tax—both of them bad.

The income tax was first imposed during the Civil War, but was so unsatisfactory for so many reasons that Congress dropped the effort. Again, in 1894, Congress levied an income tax upon the American people, which the Supreme Court declared to be unconstitutional in 1895. Thus, on these two prior occasions, the corrupt, evil, and alien income-tax laws were abolished and both the Government and the people prospered.

We can abolish the income tax again, to the great profit of all our people and the Government. The principal product of the 16th amendment has been the development of a wild and spend-crazy bureaucracy, which has used our tax dollars in a relentless conquest of the lands and enterprises of the American people, and has created a national debt of fantastic proportions.

As we repeal the income-tax laws, we will, of course, put a stop to the fabulous bureaucratic empires our income taxes have financed. This is the purpose of a related project I have proposed, known as the proposed 23d amendment, and introduced into Congress by the Honorable RALPH W. GWINN, of New York, as House Joint Resolution 123. It has been approved by more than 6,000 organizations, formally adopted by the State of Illinois, and it is now pending before the legislatures of many other States. It provides that "the Government of the United States shall not engage in any business, professional, commercial, financial, or industrial enterprises except as specified in the Constitution."

The terms of this amendment can cut the costs of Government sufficiently to accommodate the repeal of income taxes with actual profit to the Federal Government. This is the way it will work:

FEDERAL FINGER IN 700 PIES

The American Progress Foundation, 6413 Franklin Avenue, Los Angeles, made a survey of the 1954 commercial activities of Government and discovered the identity of more than 700 Federal corporate activities which have taken over about 40 percent of the land area and 20 percent of the industrial capacity of the Nation.

House Joint Resolution 123 would force the sale of all the industrial capacity and most of the land area back to the American people from whom it was taken.

There have been various inventories of these commercial activities and the acquisition costs of the land and facilities involved. They all indicate that the sale of these properties would bring vastly more than $50 billion, which would apply to the national debt.

The combined interest and amortization charges on this volume of the national debt which taxpayers would no longer finance equals $2.5 billion. The losses of these Federal corporate activities would also be stopped, and they have accounted for an annual taxload of $10 billion since 1948.

There would be a transfer of payroll from the Federal general fund to private enterprise which would cut the cost of Government another $4 billion per year, and the services, facilities and goods which would no longer be required to make that payroll operative would add up to $12 billion per year.

Those five times—interest, amortization, losses, payroll, and facilities—add up to a potential yearly saving of $28.5 billion.

The proposed 23d, or Gwinn, amendment, House Joint Resolution 123, would also put a stop to the insane practice of taxing the American people to pay tribute to foreign socialistic and communistic nations—an item which costs us about $5 billion every year. Add this saving of foreign tribute to the savings resulting from the restoration of property rights to the American people and

the savings in governmental costs in such a year as 1954 totals $33.5 billion—which is about a billion dollars greater than all the individual income taxes paid by all the American people combined during the same year.

Now, I leave it to you. What do you think will happen when all this land and enterprise gets into private hands, to make more and better things for the American people, and the American people at the same time stop paying income taxes and have from 20 percent to 91 percent of their taxable income restored to them to spend as they choose?

The American people will then have an increase in spendable income of more than $33 billion. Your share will be exactly equal to the volume of taxes you pay on income this year. To have that amount of money added to your take-home pay without changing your rate of pay or the price of things will certainly prove to be the more abundant life we have long been promised.

The land and enterprises sold back to the American people will go on the tax rolls, yielding vast new tax sources to the Federal Government which can build the annual surplus well above the $8 billion mark, accommodating repeal of estate and gift taxes and still be able to pay off the national debt in less than 50 years.

This wonderful outlook is perfectly feasible. It looks toward the normal and natural use of our own facilities in a traditional American manner. Our trouble has been that these facilities have been taken from us and used to support the most amazing bureaucracy the world has ever seen. By abolishing that bureaucracy, we restore to every American the product of his toil and the greatness which is America.

ENORMOUS ADMINISTRATIVE SAVING

Repeal of the 16th amendment means there will be no more income tax to collect, saving the Treasury Department $200 million each year now spent to make these collections.

The cost of printing the forms, booklets, envelopes, stationery, and the rest of the items required for income-tax collections also will be saved—an item of $100 million per year.

We can also save the estimated $40 million per year deficit in the post office which results from handling the flood of mail connected with income-tax collections.

Then there is the increased volume of property that will go on the tax rolls to share our local and State tax burdens. The Federal Government now owns 48 percent of California, 87 percent of Nevada.

In such States as these, the increased volume of land and enterprise going on the tax rolls of cities, counties, and States will be enormous and will cut the burden for each individual taxpayer.

This is a glimpse of the enormous rewards available to the American people whenever we exercise our basic power of citizenship to spell out the terms of our own freedom, adding House Joint Resolution 123 to the Constitution to stop bureaucratic interest-free, rent-free, cost-free, tax-free competition with our citizens, and by adding House Joint Resolution 232, the Hoffman amendment, to the Constitution to stop the looting of our paychecks under the pretensions of an income tax.

Instead of groaning under an inhuman load of income taxes, these amendments will restore almost 20 percent to the net take-home pay of our citizens.

Instead of operating Government at enormous deficits, as we have this past quarter century, we will operate on a balanced budget and pay off the national debt.

Instead of the violent conflict between Government and people regarding which shall own and use the wealth created by the people, we will have a Government devoted to protecting our lives and properties.

Instead of our Federal Government being the greatest pauper in history, it will be returned to a solvent position, and will again earn the affection of the American people—and the affection of the citizen is the greatest asset any government can ever possess.

All of this is available to us when we attain the proposed 23d, or Gwinn amendment (H. J. Res. 123) and the Hoffman amendment (H. J. Res. 232) and make them a part of our American Constitution.

I have by no means mentioned all the advantages these two amendments can bring to us. Think of the benefits to business when the threat of interest free, rent free, cost free, tax free, cutthroat competition is removed and equal and just laws apply.

Think, too, of the wide variety of benefits which will come from a people whose genius is no longer restrained by the political straitjacket of bureaucratic control and competition and the blight of impossible tax burdens.

We know of the unlimited benefactions of operating this Nation under the basic plan set forth in the Constitution. This already has been proved by the unprecedented development of this Nation. The basic plan will work again when we revitalize the intents and purposes of the Constitution by adding these two additional amendments:

First. House Joint Resolution 123 to outlaw bureaucratic competition with the American people.

Second. House Joint Resolution 232, the Hoffman amendment, to outlaw the alien Federal income tax laws.

Dean MANION. Thank you, Mr. Willis Stone. I know that we will have thousands of requests for this interesting explanation of how our Uncle Sam can live more healthfully and happily without the Federal income tax.

Resolutions Commending Central Catholic High School, of Lawrence, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a copy of Senate bill No. 605, of 1957, offered by Senator WILLIAM X. WALL, of Lawrence, Mass., in the Massachusetts Legislature, entitled "Resolutions Commending Central Catholic High School, of Lawrence":

Whereas Central Catholic High School, of Lawrence, represented the best in Massachusets in the finals of the New England basketball championships; and

Whereas Central Catholic High achieved this honor after a brilliant record completed during a strenuous season; and

Whereas Central Catholic High was so courageous and fiercely competitive in the championship game and played as hard and as clean in losing as it had in winning, losing only to a great team representing Weaver High School, of Hartford, Conn.: Therefore be it

Resolved, That the Massachusetts Senate extends its heartiest congratulations to the players on the Central Catholic High School basketball squad, to their athletic director and coach, and to the faculty and students of said high school for the accomplishment in fielding a team of which the people of the Commonwealth were genuinely proud, even in defeat; and be it further

Resolved, That copies of these resolutions be transmitted forthwith by the secretary of state to the headmaster of Central Catholic High School, of Lawrence.

Missile Program Dwarfs That of First Atomic Bomb

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following two articles on the development of ballistic missiles in this country written by Mr. Richard Witkin which appeared in the New York Times on Sunday, April 7, and Monday, April 8, 1957:

[From the New York Times of April 7, 1957]

MISSILE PROGRAM DWARFS THAT OF FIRST ATOMIC BOMB—UNITED STATES TO SPEND MORE THAN $4 BILLION IN DEVELOPING 5 BALLISTIC WEAPONS

(This is the first of two articles on the development of ballistic missiles in this country.)

(By Richard Witkin)

A missile-development program more gigantic than the Manhattan District project that perfected the atomic bomb is just entering its flight test phase.

This is the program to create a frightful line of five thermonuclear weapons known as long-range ballistic missiles. These giant missiles—Atlas, Titan, Thor, Jupiter, and Polaris—are designed to travel 1,500 to 5,500 miles to enemy targets in a matter of minutes.

Within the last 3 months, the Thor and the Jupiter, both in the 1,500-mile class, have undergone their first test launchings from the Cape Canaveral, Fla., test range.

Also at the Florida range, being made ready for an even more ambitious leap toward space, is the first prototype of the 5,000-mile Atlas.

These are the hesitant beginnings of a long series of tests in what is by far the biggest weapon-development project in the Nation's history.

By the time the first proven weapon is delivered to a fighting unit—perhaps 2 to 4 years from now—the investment will be a good deal more than double the $2 billion spent to develop the first atomic bomb.

ONE HUNDRED AND TEN THOUSAND ENGAGED

But dollar figures do not begin to convey the magnitude of the long-range ballistic-missile effort.

More than 100,000 persons are engaged in the long-range ballistic-mission program, and the figure is growing steadily. Peak employment on the Manhattan district program was 125,000.

More significant than the lump figure is the high proportion of outstanding talent—scientific and engineering, civilian and military—the program embraces: Men responsible for World War II advances in radar, bombsights and atomic energy; others in the forefront of American ballistic-missile work since the importation of captured German V–2's; German immigrants who worked on the V–2 itself.

In cities and towns across the nation, in isolated mountain and grazing areas, workers have been throwing up acres of flat, rectangular factories with the speed of Sea-

bees performing construction miracles on newly captured islands.

Near Sacramento, Calif., land depleted by years of gold dredging has come to life in the form of a massive plant, being built for rocket-engine construction.

Twenty miles southwest of Denver, in the foothills of the Rockies, the natural ridge line has been interrupted by a plant that will turn out airframes and assemble complete, towering, finished weapons.

Symbolic of the new era is a strange array of test facilities situated as far as feasible from population centers. In recesses of the jagged Santa Susana Mountains, an hour from downtown Los Angeles, on ground where much of Hollywood's westerns have been filmed, more than 15 stands for rocket-engine tests have been anchored in rock. Hundreds of engine runups are conducted there every month.

Larger stands, for tiedown tests of complete missiles, have been built and put to work in a canyon behind San Diego and in the Muroc Desert northeast of Los Angeles.

LOOKS LIKE AN OIL DERRICK

When idle, a test stand looks a good deal like an oil derrick, only chunkier. In action, with an engine spewing flame and generating noise like the noise of 100 jet bombers taking off simultaneously, a stand resembles no earthly thing. Each costs more than $1 million.

As of February 1, a total of $470 million had been spent on facilities for the Air Force portion of the three-service program. The sum covered construction or conversion of 46 million square feet of development and manufacturing space. Outlays for the Army and Navy have been smaller but imposing.

Operational launching sites for the ballistic missiles will be ponderous installations of steel, brick, mortar, and labyrinth wiring. Construction of each site will be comparable to putting in runways for a major airfield. Initially, a single battery of missiles will be scattered over a 2,000-acre area. This will be compressed later.

At a symposium in New Orleans last summer, an Air Force general working on operational plans said each battery of ballistic missiles would be built so that a direct atomic attack could not destroy more than one-third of its power to retaliate. However, debate has revived on whether to obtain more protection by going underground or by enlarging the original criteria for disposal.

It requires no degree from the War College to deduce that perfection of the long-range ballistic missile will radically rewrite the world's military equations. Nations that now count on hours of warning in case of enemy attack will see the margin reduced abruptly to minutes. Bombers now standing ground alert will have to maintain day-and-night in-the-air alerts to make sure their power to retaliate is not neutralized by the first swift enemy blow.

BRITISH CHANGE POLICY

Only last Thursday, Britain reacted to the advance in the missile by adopting a revolutionary new defense policy. The policy emphasizes sharply increased dependence on missiles for air defense and eventually for nuclear counterattack.

There is a question, however, whether British policymakers may be outdistancing the scientists in their estimate of the pace with which missile weapons are maturing. There are many eminently qualified men in this country who strongly believe that the missile has been oversold and that the missile era is much further off than generally supposed.

For the free world, the primary aim of the long-range ballistic missile is the same as that of the nuclear bomber: To deter attack and prevent a world war.

Politically, it will equip diplomats with a new type of "big stick" with which to press short-of-war policies. Last year, the Soviet Union threatened rocket attacks on Britain and France when demanding a halt to the invasion of Egypt. There are many who believe they were phantom rockets. Still, it is only a question of time, and not much time, before the Communists will be able to make such threats with test-proved weapons to back them up. Intelligence sources credit the Russians with having tested some fifty 600-mile ballistic missiles. Other reports put the range of the Soviet missiles at 1,000 miles.

Psychologically, the ballistic missile will confront the resident of a major target with the insistent knowledge that nuclear death is only 30 minutes away. How much worse this will be than the knowledge that nuclear death is only a few hours away is still to be determined.

Economically, the ballistic missile will spawn new industries, peaceful as well as military. It will also wound, but not kill off, the conventional warplane industry, and cause sizable financial and geographical dislocations.

It has been frequently suggested that the missile might be the device that could finally level off the upward curve in defense spending and turn it downward. Certainly, a single ballistic missile will cost less, as a production item, than a single B–52 bomber. But few who have closely viewed the growing complexity of weapon design and blanched at the cost rises for computers, gyros, and other vital components confidently expect a downturn in the overall price for maintaining an adequate defense.

NEARING OUTER SPACE

Scientifically, the ballistic missile promises to vault the human race, willy-nilly, to the threshold of outer space and true three-dimensional existence.

There are many types of missiles in the Nation's arsenal—with different missions and different anatomies. They range from comparatively tiny plane-to-plane missiles such as the Falcon and Sidewinder, antiaircraft missiles such as Nike and Talos, and larger interceptors such as Bomarc, on up to nonballistic intercontinental missiles that have nothing like the speed and invulnerability of the ballistic missiles. All these missiles have important jobs. But they are dimmed in scope and striking potential by the ballistic-missile giants.

The 5,500-mile missiles—the Atlas soon to be tested and the Titan which is not as far along—are known as intercontinental ballistic missiles or ICBM's. They are designed to attain speeds of 15,000 miles an hour and more and reach their targets in about an hour. The 1,500-mile missiles, the Thor, Jupiter, and Polaris, are known as intermediate range ballistic missiles or IRBM's.

The term "ballistic" means that the missile flies the latter portion of its mission without benefit of guidance. It is guided on course only in the first phase of flight while its monstrous rocket engine is firing. When the fuel is exhausted, guidance stops, and the nose cone, with its thermonuclear charge, follows a free-flight path to its destination, like a bullet or artillery shell. ICBM's will reach a maximum altitude of well over 500 miles.

The average ballistic missile has something like 300,000 parts—pumps, gyroscopes, valves, tubes, meters, nozzles, and computers. But there are four main components: The airframe, which is largely a combination of fuel tanks; the rocket engine; the guidance system; and the nose cone containing the thermonuclear charge.

CARRIES OWN OXIDIZER

Since the missile is designed to climb far outside the earth's atmosphere, it cannot support combustion by breathing air as do piston and jet engines. It must carry its own oxidizer.

In a liquid-fueled missile, combustion is obtained by pumping a basic fuel, such as alcohol, and an oxidizer, such as liquid oxygen, into the combustion chamber at prodigous rates, and igniting them. In a solid-fueled missile, the propellants are already mixed in solid form.

Following are some of the vital facts and figures on the five ballistic missiles:

ATLAS

This ICBM is the oldest of the five. Convair, now a division of General Dynamics Corp., began working on the problem soon after World War II. The project, known as MX774, was backed by Air Force money, but funds were cut off for economy reasons in 1947, and Convair continued work on its own.

Much of the original work derived from close study of the German V–2. Sometimes the study was too close. A German who had worked on the V–2 was asked to look over some drawings. As he ran his experienced eye over the design, he burst out laughing.

"What are you laughing at?" the Convair engineer asked.

"The tail fins," he said, pointing to the rather narrow vanes designed to help stabilize the missile on its leap through the atmosphere. "Where did you get them?"

"We copied them from the V–2," he was told.

"Do you know why we designed them that way?" the German asked. "To fit through the railroad tunnels back home."

The Korean war revived Air Force interest in the Convair project, and a second contract was let. But the state of the art was so primitive that to perform the required mission the Atlas would have had to be a 3-stage vehicle as tall as a 20-story building with 7 engines developing 125,000 pounds of thrust each. Each jet on a B–52 has a thrust rating of about 12,000 pounds.

The Atlas program was kept "on the back burner." Pound for pound and dollar for dollar, the seven-engined monster did not promise significant yield in striking power compared with that provided by manned nuclear bombers.

DECISIVELY CHANGED

Then came the thermonuclear breakthrough of 1952–53, altering the problem of designing an ICBM in two decisive ways. The multiplication of blast effect from using a fusion instead of a fission reaction meant that the missile could miss its bull's-eye by several miles and still knock out the target. The enormous problem of guidance and accuracy was greatly simplified.

The scientific breakthrough also meant that the blast could be packaged in a much smaller and lighter container than previously required. This cut the monster to reasonable size.

The Atlas as it exists today is reported by the British magazine Flight to incorporate a main engine of 135,000 pounds of thrust, and 2 external booster engines of 100,000 pounds each. The main engine is said to burn about 3 minutes. The boosters burn out a good deal sooner and drop away to lighten the load. On the Atlas, as well as the Titan, the nose cone separates from the main fuselage after the propellants have run out.

Flight reports that the Atlas is about 100 feet long. The engines are all liquid-fueled designs developed by the Rocketdyne division of North American Aviation.

The first Atlas, minus a number of internal organs, was trucked to Florida from the Convair plant in San Diego on an enormous trailer. For security reasons, it was covered with a white shroud to keep the citizenry along the route from surmising that it was anything but an oversize furnace. The monster excited very little curiosity.

TITAN

About 2 years ago, the Air Force decided that perfection of an ICBM was so vital it

would be wise to back up the Atlas project with a second program approaching the problem in somewhat different fashion.

The new project was assigned to the Glenn L. Martin Co., which had gained vast experience as manufacturer of the Viking research rockets. A Viking still holds the altitude record of 158.4 miles for a single-stage rocket. Martin also is building the vehicle that will carry the first manmade satellite into space sometime during the International Geophysical Year that runs from July 1956 to December 1958.

Because of its late start, the Titan is a solid year behind the Atlas in its development. But it has been able to profit by some of the mistakes made on the Atlas, which had no ICBM predecessors from which to learn.

The Titan, in general, is a more sophisticated weapon than the Atlas, with somewhat better performance figures. Trade magazines say it is a two-stage missile—that is, the bottom stage drops away after burnout, and an engine at the breakoff point takes over to provide a second tremendous boost.

IGNITION TIMING VITAL

It is a lot easier to light an engine at the launching pad than up in space. The mechanisms for doing it will have had to withstand appalling vibrations and accelerations without effect on the efficiency and precise timing of the second ignition. Premature or delayed ignition can throw the minutely-calculated flight plan out of whack and catapult the missile to a vast area barren of useful targets.

Only dozens of test firings of both the Atlas and the Titan will supply the Air Force with the data to decide which to produce. Some think that, if both are perfected, quantities of both will be delivered to Strategic Air Command units in a sort of leapfrog sequence. The Atlas would come first, then a quantity of Titans, and after that perhaps an Atlas II that improves on the Titan I.

As one scientist expressed it:

"The Air Force is not thinking of scrapping the B–52 just because the B–58 is coming along. The Atlas and Titan are also complementary. This isn't a question of Fords and Chevvies."

There are an equal number of doubters who feel the budget will not support sizable production of both ICBM weapons.

It is for the Titan project that the Martin comany has burst the confines of its old Baltimore home and put up its excellently situated new facilities at the edge of the Rockies near Denver. The installation includes production, engineering, and administration buildings. In sound-muffling natural bowls in the mountains, four stands for tie-down tests of finished missiles have been built.

A number of scientists and engineers who had a lot to do with the Viking program have moved to Denver to work on Titan. General manager of the new Denver division is Albert L. Varrieur, a tall, personable engineer who jumped into the missile business after overseeing development of the P6M Seamaster, which Martin bills as the world's first multijet attack seaplane.

NOT OFTEN WITH FAMILY

Mr. Varrieur's family, like many aeronautic families, has had to learn to catch quick hello's with the chief because of his long hours and frequent trips associated with development work. Mrs. Varrieur greeted news of her husband's promotion to the Denver post with good-humored skepticism.

"Don't tell me there's another way to save the world," she said.

The Titan is moving along right on schedule. Its liquid-fueled engine will be made by the Aerojet-General Corp., a company organized in 1942 by Dr. Theodore von Karman, an Einstein-like figure in the aeronautics industry.

Aerojet was bought by the General Tire & Rubber Co. in 1944. Its headquarters are in Azusa, Calif., but the Titan's engines and solid-fueled engines for another of the ballistic missiles will be produced at its new plant near Sacramento.

THOR

This is a single-stage Air Force IRBM, with the airframe to be built by the Douglas Airplane Co. It is reported that its North American engine is the same powerplant that will be used for the two boosters on the Convair Atlas.

It was late in 1955 that the Pentagon decided to fill a hole in its program and develop the 1,500-mile missile, or IRBM. Apparently the decision stemmed from a combination of factors.

Information was beginning to filter out of Eastern Europe that the Russians had made good progress on IRBM's. (If figures on test firings are a valid criterion, the Russians have indeed built an imposing lead in this field.)

Soviet IRBM's, when perfected, would threaten many oversea bases of the Strategic Air Command and its fleets of B–47 medium jet bombers. They also would threaten the homelands of North Atlantic Treaty Organization allies.

Britain, for one, though hastening development of an IRBM of its own, cast glances across the Atlantic to see what its big NATO partner was doing. Undoubtedly, the desire to equip Allied Nations with a counter to the Soviet Union's impending missiles, as well as a desire to equip American forces in Europe and at sea, figured in the Pentagon decision to embark on an IRBM program.

FASTER DEVELOPMENT

An added consideration was the fact that the IRBM, with its lesser performance requirements, could doubtless be brought to combat status more quickly than the much larger companion weapon.

The Pentagon authorized not just 1 IRBM project but 2. In addition to giving the Air Force the go-ahead on the Thor, it authorized the Army and Navy to work jointly on the Jupiter. Because it split the program between services, where the ICBM program was concentrated in one, the IRBM plan was destined to produce before long an interservice struggle whose repercussions are only beginning to be felt.

Production of the Thor will be centered in expanded and remodeled Douglas facilities in Santa Monica, a Los Angeles suburb. For tie-down firings, $4 million worth of test stands, hangars, control buildings and miscellaneous facilities are under construction in the Sacramento area on land leased from Aerojet.

Getting the Thor to the firing range at Cape Canaveral, Fla., is simpler than transporting the ICBM's. The intermediate range weapon can be accommodated in an Air Force C–125 Globemaster.

JUPITER

This IRBM competitor to the Thor was assigned to the Army Ballistic Missile Agency at Huntsville, Ala. The assignment, shared with a Navy group that intended to develop a solid-fueled version of what was an Army-spawned original design, came as no surprise.

Huntsville was the workshop of the renowned German missile team headed by Wernher von Braun. He had had a lot to do with the development of the V–2. Then, after having been imported here after the war, he had directed development of the Army's Redstone, a relatively short-range (200 miles) ballistic missile soon to be delivered to combat units.

The acquisition of the Jupiter project did more than satisfy a normal scientific impulse of the Army group to move on to more challenging technical fields. It also encouraged Army strategists who felt it vital to broaden the Army mission to cope with military realities that were undergoing radical change because of the unbelievably rapid advance in technology.

But the Army's zealous reaching out for the right to operate weapons in the Jupiter class was abruptly rebuffed last fall. On November 26, the Secretary of Defense, Charles E. Wilson, ruled that while the Army would continue research and development on the land-based version of the Jupiter, responsibility for operation use would go exclusively to the Air Force.

ARMY RANGE LIMITED

The Army was limited by the order to operation of missiles with a maximum range of 200 miles. However, the door was left open for extending this limit later by a provision that the Army could continue limited studies of weapons of longer range.

Army officers disposed to look on the brighter side of the Wilson memorandum also regard the 200-mile cutoff point not as a limitation but as an extension of the earlier 50-mile limit.

The optimists had a little tougher time when Mr. Wilson, on February 26, said that the days of the Jupiter, as such, were numbered. He said that the final IRBM, however, might be as close to the Jupiter design as to the Thor.

Three weeks later, he amended his position somewhat. He said testing of both the Thor and Jupiter would continue, and that eventually "one or the other or a combination" would be produced for combat units.

Whatever the hedging in the Wilson statements, the impression they left in the public mind was that Jupiter was a doomed duck. A rancorous public debate erupted over whether the Army was being dangerously downgraded as a fighting force.

It was not long before the debate took a sensational turn. Col. John C. Nickerson, a senior officer at the Army missile center, was accused of divulging secret defense documents and a memorandum of his own disputing the Defense Department's missile policies. He was ordered court-martialed. The trial opens May 15.

LIKENED TO BILLY MITCHELL

Some attempts have been made to compare Colonel Nickerson with Billy Mitchell, who was court-martialed in 1926 in his fight for greater recognition of air power but was vindicated in the public eye by subsequent events. It is even being suggested that Colonel Nickerson has the support of top Army men.

Those holding this view feel that he is allowing himself to be sacrificed in a patriotic attempt to convince the country of the Army's desperate requirement of a broadened military assignment.

The opposite view is that the Mitchell and Nickerson cases have little in common. It is argued that Billy Mitchell was fighting for a broad principle and that Colonel Nickerson has involved himself in an interservice fight in which the issue is not principle but the question of who uses a particular weapon.

The Thor and the Jupiter are much more alike in design than the ICBM's, the Atlas and Titan. They are both single-stage missiles. The engines on both come from the same North American development program.

A really fundamental difference has to do with the philosophy of development rather than with basic design. With the Thor, as with the ICBM's, the Air Force is following an imaginative but still-to-be-proved plan that is a sharp break with most airplane development programs.

It has drawn up a tightly compressed timetable. It has designed its missile from the start in what it confidently thinks will be close to its final overall basic anatomy. It has programmed a large number of test launchings and decided that it will not be necessary to clean up every shortcoming exposed by one test before racing on to the next.

With the Jupiter, the Army agency, under command of the dashing and able Maj. Gen. J. B. Medaris, is spacing its test launchings much farther apart. It reasons that one test may show 1,000 or more adjustments and modifications that must be made and it intends to make them before the subsequent launching. The Army says this is a much more efficient and economic way to emerge with a usable weapon.

Contractor for the Jupiter airframe and final assembly is the Chrysler Corp., which also manufactures the Army's Redstone.

POLARIS

This is where the Navy comes in. The Polaris is a solid-fueled IRBM designed to be launched from submarines, even submerged, or from surface vessels. The main contractor is the Lockheed Aircraft Corp. The engine will come from Aerojet.

When the Navy announced a few months ago that it was abandoning its connection with Jupiter and going off on its own, the move inevitably led to rumors that these two services were feuding, too. This does not appear to have been the case.

From the first, the Navy had been working on a solid-fueled version of the Jupiter. Liquid propellants, dangerous as they are to handle ashore, are virtually anathema at sea, where crew and chemicals are so close together.

The Navy finally was assigned its own project because of technological advances and because the effort to meet requirements of both services was compromising the quality of the basic weapon.

Launching a weapon at sea entails solution of several problems not encountered ashore. The most important is the question of navigation. The location of a shore installation is known precisely. The distance and direction of the target also are known within tolerable limits.

But locating a ship at sea, by celestial or other navigation, is not so precise. Since a mistake in location at the launching end is compounded at the target end, the Navy will have to refine its navigation so that a wave at sea is almost as precisely located as the corner of Broadway and 42d Street.

Curiously, firing from underwater is in some ways simpler than firing from the surface. The water is calmer down below, and there is no tremendous difficulty in stabilizing the launching platform because the water does not interfere with combustion inside the missile.

The advantages of a ship-based IRBM are obvious. It is mobile and more difficult for the enemy to keep track of. It has the capability of bringing into range of American missile power enormous areas, particularly on the Eurasian land mass, that would be out of reach of any fixed missile bases.

The polaris project is not Lockheed's first connection with the ballistic missile program. The X–17, a 3-stage test vehicle manufactured by that company, has been instrumental in solving the problem that probably has required the most fundamental research of any phase of the missile effort.

This is the problem of keeping the nose cone, with its nuclear warhead, from burning up like a meteor when in plunges back into the atmosphere toward its target.

Lockheed's X–17 is a slender, 3-stage vehicle. The bottom engine shoots it vertically into space, after which the remaining two stages topple over and head back to earth. Firing these two stages successfully on the downward plung produces speeds comparable to those to be encountered by the ballistic missiles.

With the relatively inexpensive X–17's, the Air Force has been able to test various shapes and materials for nose cones. One experimental cone is reported to have been made of fibreglass and ceramics.

The shape that has emerged is far from the shape space cartoonists have been addicted to for years. The long pointed nose is passé. The X–17 tests have shown that what is needed for the reentry job is a bluntly rounded shape that would be frowned on in space-cadet circles.

Like Martin, Lockheed has set up branch operations outside its familiar home area to produce the polaris and work on another Air Force project so secret it has not public name or number.

The new operations are deployed in three locations on the peninsula south of San Francisco. Research and development headquarters is located in attractive new buildings at Palo Alto, near the Stanford campus. The director is Dr. Louis Ridenour, who directed development of an important radar system during the war and all airborne radar devices.

Eight miles to the southwest, adjoining a military airfield at Sunnyvale, Lockheed has put up a new plant for polaris production and two other structures for administration and research. Engine-test facilities have been installed 30 miles to the south, at Santa Cruz.

FACTS AND FIGURES ON UNITED STATES MISSILES

Following is a table of the missiles under contract from the Armed Forces, as adapted from Aviation Week magazine:

Category	Name	Service branch	Prime contractor	Research	Development	Production	Use	Approximate range (statute miles)
Air to air	Ding-Dong	Air Force	Douglas	X	X			
	Falcon	do	Hughes			X	X	
	Sidewinder	Navy	Philco			X	X	
	Sparrow I	do	Sperry			X	X	
	Sparrow II	do	Douglas		X	X		
	Sparrow III	do	Raytheon	X	X			
Air to surface	Bullpup	do	Martin		X			
	Rascal	Air Force	Bell		X	X		100
Air to underwater	Petrel	Navy	Fairchild				X	
Surface to air	Bomarc	Air Force	Boeing		X	X		200
	Hawk	Army	Raytheon		X	X		
	Nike-Ajax	do	Western Electric			X	X	25
	Nike-Hercules	do	do		X	X		
	Talos	Navy	Bendix		X	X		
	Tartar	do	Convair		X	X		
	Terrier I	do	do			X	X	10
	Terrier II	do	do		X	X		20
Surface to surface	Atlas	Air Force	do	X	X			5,000
	Corporal	Army	California Tech			X	X	100
	Dart	do	Aerophysics Development Corp.			X		
	Honest John	do	Douglas			X	X	15
	Jupiter	do	Chrysler	X	X			1,500
	Lacrosse	do	Cornell	X	X			8
	Little John	do	Emerson		X	X		
	Matador	Air Force	Martin			X	X	
	Navaho	do	North American		X			5,000
	Polaris	Navy	Lockheed	X	X			1,500
	Redstone	Army	Chrysler		X	X		200
	Regulus I	Navy	Vought			X	X

MISSILES WILL NOT SUPPLANT PLANES SOON, EXPERTS SAY

(This is the second of two articles on United States progress in the development of long-range ballistic missiles.)

(By Richard Witkin)

The guided missile is not on the verge of replacing the old gray airplane. Only a modest number of relatively short-range missiles have begun to perform missions traditionally reserved for manned planes.

It will be at least 5 years before missiles—both those doing the jobs of planes and those simply replacing guns carried by planes—are allocated even half the Air Force procurement dollar.

The foregoing is a distillation of views held by an impressive collection of men in top echelons of the Nation's missile program. For obvious reasons, they are keeping to themselves the planned dates for delivery of long-range ballistic missiles to combat units.

But the general belief is that the 1,500-mile intermediate range ballistic missile, IRBM, is 2 to 4 years from true operational status and that the 5,500-mile intercontinental ballistic missile, ICBM, is several years further away.

The cautious prognosis of those high up in the program may strike incredulous ears at this particular time. On the basis of last week's news the public could be expected to look for a much more rapid and extensive retirement of manned craft in favor of the missile.

The news from Britain was an especially compelling portent. The British, noting likely progress of ballistic rockets and missile defense, announced abandonment of work on a supersonic bomber and on fighters more advanced than their English Electric P–1. The P–1 is Britain's first production fighter capable of supersonic speeds.

In this country, Air Force officials were quoted Friday by Senator RICHARD B. RUSSELL, Democrat of Georgia, as saying that an IRBM would be operational in a matter of months. This fed the popular impression that the missile era was bursting into full bloom. Actually, a spokesman said later, the Senator had been trying to discourage this notion. He had been seeking to counter reports that a new technical advance had been made that would bring IRBM into service within the year.

But denials generally run a poor second to original statements. And Senator RUSSELL's comments, plus the news from Britain, left an erroneous impression that the long-range ballistic missile was around the bend.

MATTER OF YEARS

By contrast, the impression given by experts in the field is that the IRBM will not become operational for a matter of years. They feel that the overall art of missilry is not much past the stage of the wire-braced biplane.

One who has sought to temper the public feeling that the missile era is here is the man

directing the Air Force's long-range ballistic-missile program, Maj. Gen. Bernard A. Schriever. In a New York speech last January, General Schriever said that widely publicized spectacular missile kills and record-breaking flights were "still the exception rather than the rule."

"We are still a long way from the push-button type of warfare," he said. "The guided missile, as a weapons category, is still in its infancy and subject to many growing pains."

Dr. Dean E. Wooldridge of the Ramo-Wooldridge Corp., the company that sits at General Schriever's right hand and is responsible for technical direction of the entire program, said in February:

"In the next 10 to 15 years, we will find guided-missile weapons systems will come to be important in our arsenal of weapons but will not be available even in limited numbers to perform many Air Force functions * * *. Much more than 10 or 15 years will elapse before manned aircraft become as unusual in our airpower as guided missiles are now."

JUST COMING OFF LINE

Dr. Wooldridge noted that "even the attainment by the manufacturer of high production rates does not mean that the Air Force then has a force in being." He said the weapons had to be installed and combat units had to be activated and trained. This process, he added, rarely take less than 2 years.

Far from having attained a high-production rate, the IRBM is just beginning to come off the line. What the services are getting are a few prototypes whose innards will have to be modified as the first test launchings reveal inevitable weak spots.

In a recent interview, a high-ranking naval officer assigned to the missile program put the issue this way:

"For a very long time, we will have to use the missile and the more conventional craft in conjunction.

"I think you will never do everything with missiles. The best guidance system in the world was produced by the little Japanese mother who spawned a son to ride in a kamikaze—pilot who makes a suicidal crash on a target. The human mind will never be equaled in our lifetime by an electromechanical combination."

The top scientist in the research division of a major manufacturer said:

"Any manned vehicle will always have the advantage of being able to select the target en route and of carrying out reconnaissance."

It is for such reasons that scientists at all major companies are making design studies for manned craft that will constitute the next weapon advance after the I. C. B. M. They are working on manned rocket ships and manned satellites. They are not dreamers. They are very accomplished, practical and serious men.

There is some industry concern that some policymakers, like a large segment of the public, have written off even conventional aircraft too soon.

It is feared that these policymakers may cause this country to neglect a generation of manned craft that should not be neglected.

PILOTS TO STAY

The vice president of a major aircraft manufacturer deep in the ballistic-missile program said:

"There is a feeling that the airplane is going to disappear from the scene. This just isn't ever going to be * * *.

"Even some people in high places have been swept off their feet. But an individual with eyes and ears and brains cannot be replaced in warfare. It is bad enough thinking the airplane will disappear. But even worse, we are cutting off airplanes before the missile is perfected."

This view was enthusiastically concurred in by a vice president of an equally important company. Yet, the director of a third company's missile program and a highly placed general did not share these fears.

The long-range ballistic missile program includes five thermonuclear weapons. There are two 5,500-mile I. C. B. M.'s, the Atlas and Titan, both under Air Force development. There are three 1,500-mile I. R. B. M.'s—the Air Force's Thor, the Army's Jupiter and the Navy's Polaris.

THE MISSILE EXPLAINED

A ballistic missile is distinguished from other guided missiles by the fact that it is guided only in the initial phase of its flight. Course and altitude corrections are made only in the first minutes, while the rocket engines are firing. After propulsion has ceased, the point of impact has become a fixed and unchangeable location. The missile follows a free-flight unguided course to its target, like a bullet or artillery shell.

The story of the American ballistic-missile project might start during World War II at Peenemuende, Germany, where the V–2 was developed. Or at Convair's San Diego plant in 1946, where a 7-engine 20-story monster was eventually designed. Or in the early 1950's at Eniwetok atoll where American scientists proved radical new theories that made feasible a missile of more manageable proportion.

But the story of the massive, accelerated program now underway might best start in an unobtrusive parochial school in the Los Angeles suburb of Inglewood. The parochial school came into the picture in the summer of 1954, after the decisive scientific breakthrough. The Pentagon had decided to pick up the old Convair venture and pursue the I. C. B. M. with the sort of singlemindedness that had been devoted to the wartime atom-bomb development.

It was at the parochial school that the small cadre of Air Force officers assigned to the project initially held their first planning sessions. The place was a decoy. So were the civilian clothes that everyone wore.

Looking perhaps most at home in his civvies—usually a tasteful sport jacket, slacks and strollers—was the 6-foot-2 44-year-old man in command, General Schriever. He had only one star then.

THREE-CORNERED ORGANIZATION

General Schriever's outfit is known as the Western Development Division of the Air Research and Development Command. It has since graduated to a row of rectangular new buildings a few blocks from Los Angeles International Airport.

General Schriever is overall director of a three-cornered organization. His Western Development Division has top jurisdiction over the program and has direct channels, bypassing eight customary echelons, to the highest Pentagon level.

On one side of Western Development Division is the Ramo-Wooldridge Corp., a phenomenon of the electronics revolution. It was formed in 1953 by two men who developed the Falcon air-to-air missile for the Hughes Aircraft Co.

Ramo-Wooldridge has charge of weapons systems engineering and technical direction of contractors. Briefly, two main activities are encompassed:

One is making arrangements. It entails devising a program covering every phase of the missile project from design and testing to training and operation. The program is drawn up in such a way that thousands of pieces are supposed to drop neatly into place in accord with a precise schedule.

COORDINATES CONTRACTORS

The second activity involves coordinating the work of 16 prime contractors working on major items in the program, plus the work of more than 200 subcontractors. It involves consultations with a contractor when a technical snag threatens to upset the delicate timetable.

Some contractors think the system works fine. Others think the Ramo-Wooldridge teams are little better than kibitzers getting in the way. Overall, there seems to be less friction between the oldtime contractors and the johnny-come-lately firm than might have been expected. The majority feels that someone has to do the coordinating in such a complex program and that Ramo-Wooldridge is well qualified for the task.

The third organization at the Schriever headquarters is the Ballistic Missile Office of the Air Force's Air Material Command. Its job is to speed contract agreements so the massive project will not stumble over legalities. Its companion job is to keep critical materials flowing to contractors as fast as they are needed.

The ballistic-missile program of all three services will have absorbed an investment of well over $4 billion by the time the first perfected weapon is delivered to a combat unit. The sum is more than twice the investment in the Manhattan District project that developed the first atom bomb.

ARMY AND NAVY PLANS

The Army equivalent of the Schriever organization, much smaller in scope and differing in philosophy, is the Army Ballistic Missile Agency at Huntsville, Ala. It is commanded by Maj. Gen. J. B. Medaris, a dynamic individual who started his military career as an elisted marine.

The Navy equivalent, also smaller than the Schriever outfit and somewhere between the Air Force and Army in philosophy, is the Special Project Office of the Secretary of the Navy, in Washington. Its commander is Rear Adm. W. F. Raborn, an energetic, red-haired Texan.

The Air Force approach is a bold one that admittedly involves a certain amount of risk. The danger is in trying to anticipate precisely the shape, the operation, and the installation of numerous components that are not due to mature for months and years. The danger is in trying to gear training, operational and maintenance programs now to a preconceived plan that is certain to require some reworking.

The purpose of such an approach is to compress the time interval between design of the weapon and its delivery to combat units.

ARMY TAKES RISK

For years, the Air Force has been allowing extensive lead time between design and use of an airplane. The B–52 was designed soon after World War II. It made its first flight in April 1952. The first B–52 was delivered to an operational unit in June 1955.

The case of the B–52 is typical. The long lead-time policy has been cited as a major reason for the Soviet Union's swift shrinkage of this Nation's lead in airpower.

In breaking with this policy on the missile program and dovetailing developments that used to follow in succession, the Air Force is taking some risk. But it is trying to hedge the gamble by conservative design of major items.

The coordination of activities is something fascinating to watch, like slow-motion movies of a razzle-dazzle football play.

One military group is planning, years ahead, how the ballistic missiles will be operated and maintained when they are finally perfected. It is headed by Col. William Large, a former B–47 wing commander.

The group is worrying about how tough to build the missile installations; what maintenance equipment will be needed; what type of fire truck should be ordered now for coping with misfires. It is even discussing whether the chaplain will have different problems because of the isolation of missile units and the switch of personnel from

glamorous flying duties to sedentary push-button activities.

AND THE GI, TOO

The group is worrying, too, whether the average GI will be able to operate the complex machines efficiently.

To get a reading, the group sent for a master sergeant who had spent years as a supervisor of aircraft crew chiefs. They showed him a full-size model of an Atlas ICBM and asked how it looked from a point of view of mantenance.

He knew nothing about the workings of a missile. But he knew about crew chiefs. He took one look at a group of electrical connections and said they wouldn't do. The male halves of the connections were identical and so were the female halves. Sure as anything, he said, some crew chief would come along and mate the wrong plugs.

The missile's innards were redesigned so that each male plug would go with only one female.

The Ramo-Wooldridge group riding herd on the Thor IRBM program is devoting a lot of attention to transport and supply since the IRBM will be able to operate from overseas bases.

It is reliably reported in Washington that the Air Force missile outfit sent Britain months ago detailed data on the type and size of real estate that would be required for installing Thor missile batteries. This was long before the formal Bermuda agreement specifying that the United States would supply such missiles to its British allies.

The Strategic Air Command has a liaison group at the Schriever headquarters planning, years ahead, how the ballistic missiles will be operated. The Air Training Command has a liaison group planning a detailed training program.

A significant departure for the missile program is the plan to have the research and development branch, represented by General Schriever's outfit, shepherd the new weapons all the way through initial operational status. The Air Force has taken over from the Army 66,000 acres of an almost inactive 86,000-acre Army base at Lompoc, Calif., about 60 miles northwest of Santa Barbara, for training crews.

READY IN WAR

The installation, Camp Cooke, will double as the Nation's first operational missile base. It will be ready to fire in case of war.

There are people in the Air Force project who feel that the Army's IRBM the Jupiter, could not reach operational status for 2 years after the Air Force's Thor. They say the Jupiter development will be handicapped by the infrequency of test firings and by failure to start all phases of development planning simultaneously.

The teams working on all three Air Force ballistic missiles are buoyed by the fact that, up to now, all milestones in development have been reached on schedule.

The Army says the Air Force will not have a missile until it runs off successful tests and that a milestone is not as good as a missile.

The Army group, with the experience of the Redstone development behind it, is confident the Jupiter will prove its superiority in the tests getting underway on the Florida coast.

NAVY NOT IN SQUABBLE

The Navy, with its Polaris, is a good distance from the tests stage and can afford to detach itself from the interservice squabbling.

The ICBM often has been referred to as the definitive weapon. But to scientists whose relentless reaching out for new clues to the order of the universe has imparted such momentum to the technological revolution, the ICBM is just another step. Unless, that is, man uses it to blow up the world.

General Schriever expressed confidence in a recent speech that weapons such as the IRBM and ICBM would greatly assist the Air Force in keeping at peak strength "a deterrent force which no aggressor in his right mind would dare challenge."

But, at the same time, he expressed doubt that "any one single weapon, no matter how powerful, can itself enforce peace in this uneasy world."

"In the long haul," he warned in another speech, "our safety as a nation may depend upon our achieving space superiority. Several decades from now, the important battles may not be sea battles or air battles, but space battles, and we should be spending a certain fraction of our national resources to insure that we do not lag in obtaining space supremacy."

ENVISIONS SPACE RESIDENTS

Dr. Simon Ramo, cofounder of the civilian firm that has technical direction of the Air Force program, looks on development of the ICBM as an enormous step toward man's extending his province into space.

"Sooner or later," he warns, "the population on earth will get beyond us." He envisages, a century from now, a sky filled with vehicles supporting permanent space residents taking all their energy requirements from the sun.

Unfortunately, this highly respected scientist points out, the energy required to vault into space will be so enormous that, put to destructive uses, it could blow up the world.

"It is impossible to imagine we can populate space without an international agreement," Dr. Ramo believes.

"We will either have chaos or we must learn to get together."

Dave Beck and His Conservative Friends

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. ROOSEVELT. Mr. Speaker, as a friend of the laboring man, I have been shocked by the recent revelations of racketeering and fraudulent conduct on the part of Dave Beck, president of the Teamsters Union. I applaud the action of the AFL–CIO council in suspending Mr. Beck from that body and am disgusted with the small minority of labor leaders that have betrayed the Teamster membership and have placed their own personal interests above and beyond their duty to the labor movement. The damage which Mr. Beck has done to those dedicated, sincere and honest union leaders and members who have helped build modern day America through organized labor is incalculable. This is Mr. Beck's greatest crime.

I am surprised, however, that in condemning the practices of Mr. Beck, I find myself in the company of the same Republican press which over the years has featured laudatory articles concerning him.

It is important for us to recall that Mr. Beck, the only major labor leader who attempted to persuade the AFL not to endorse Governor Stevenson in the past two Presidential campaigns, is basically a businessman. Business Week of February 14, 1953, reports that Mr. Beck shows "as much interest in the success of the trucking industry as most trucking executives," and Time notes that Mr. Beck considers himself a "self-made United States big-business man"—April 12, 1954—and has addressed Harvard Business School alumni groups.

Mr. Beck himself often announced "Some of my best friends are employers"—Reader's Digest, September 1954. In fact the conservative Republican Seattle Times wrote editorially in December 1946:

Many are wishing that there could be more Dave Becks in the national labor picture.

The Seattle Post-Intelligencer, which has played down the recent investigation, has periodically killed any national syndicated columns when they were critical of Dave Beck.

A recent issue of the Reporter magazine reports, March 21, 1951:

Thinking of themselves as businessmen rather than leaders of labor, (they) have often bailed out employers with funds from the union treasury and occasionally set up innocuous unions for them at a price. Perhaps it is no wonder therefore that congressional scrutiny of their doings has come to nothing in the past. Only 4 years ago a Republican-controlled committee called off an investigation of Hoffa, allegedly in return for his support of a Republican senatorial candidate. * * * All this indicates to us that the venality of the teamster brotherhood can be neither studied in a vacuum nor viewed primarily as a problem of organized labor.

Some time ago, long before the present disclosures and at a time when the teamsters were being praised by conservative elements and when Beck was sitting on the Washington State Parole Board, the Seattle Civil Service Commission, and the Washington University board of regents, the State CIO in Minnesota published a searching series under the title "Dave Beck—Traitor to Trade Unionism."

Mr. Speaker, the trade union movement will be well rid of influences like Dave Back. But it would indeed be a sad commentary on the state of the Nation if these disclosures were used to harm the legitimate aspirations of the American workingman for dignity and economic security by the very same forces that not so long ago were Beck's best friends.

In conclusion, Mr. Speaker, under leave to extend my remarks I wish to include a thoughtful discussion of these problems by Mr. Al Hayes, president of the International Association of Machinists and chairman of the AFL–CIO ethical practices committee, which I commend to the attention of my colleagues:

LABOR'S WAR AGAINST CRIME AND COMMUNISM

(By Al Hayes)

In looking at the problem of ethics and unethical practices in the labor movement, it is important to realize that labor, like any other segment of our society, does not operate in a vacuum.

It is part and parcel of the larger community, being influenced by it, and, in turn, exercising some influence upon it.

Since the labor movement is still in the nature of a minority group in most commu-

nities, the influence of the community upon a union is likely to be more important than the influence of the union upon the community.

Corruption in the labor movement is generally the result of either 1 of 2 situations. Either it involves weak union officials who have succumbed to some form of bribery in their dealing with other segments of the community or it involves infiltration into the labor movement by corrupt elements in the community at large who seek to use the labor movement for their own nefarious purposes.

Basically, I consider the job of establishing and maintaining high standards of ethical practices within the labor movement as being the primary responsibility of organized labor. But we cannot do the job alone, both because corruption in the labor movement is largely a part of corruption in the general community, and, also, other segments of the community, by their expressed opinions and their activities, can either aid or impede the labor movement in the job of keeping its house clean.

The struggle against undesirable elements in the labor movement is not new. It has been going on for years. The history of the labor movement shows that many unions have expelled Communists and crooks and corrupt officials throughout most of this history.

What labor should do in the field of ethical practices is, of course, to rid itself of every vestige of persons and practices which tend to pervert a union, at any level of organization, from its fundamental reason for existence. That reason is the economic and social well-being of its members and the community at large.

What the labor movement can do in this field is circumscribed by its nature and by the limitations on its authority. In the final analysis the most severe penalty which can be imposed by a labor union at each level of organization is to expel the guilty individual or unit of organization.

I would like to point out that in trials and appeals procedure our union has no right to compel attendance at a trial of a defendant or of any witnesses. Placing witnesses under oath in a union trial or investigation is little or no help in obtaining truthful answers, since it is doubtful that a witness lying under oath in such a proceeding could be prosecuted for perjury. Participation in the trial proceedings of our own, or any other union, is strictly a voluntary matter.

It cannot be expected that the procedures of the American labor movement can substitute for our legal processes of justice in indicting and trying officers or members charged with violating local, State or Federal laws.

A labor-union official, like any other individual in our society, is entitled to his full day in court before he is judged guilty of any practice which constitutes a crime under the laws of the land.

On the other hand, a labor official need not be found guilty of legal wrongdoing in order to be judged unfit to continue in his office. The maintenance of the high ethical standards to which members of the American trade-union movement are entitled demands much more than this.

They are entitled to protection against conduct which, although completely legal, is antithetical to the purposes of the trade-union movement and to the good and welfare of its membership.

For example, there is nothing illegal about the officer of a union having a substantial business interest in an enterprise with which his union bargains collectively. But, most certainly, any such interest would be likely to compromise the ability of that official to bargain most effectively for the best interest of the union's members. Thus the holding of any such interest, while perfectly legal, is considered unethical by the AFL–CIO and has been proscribed in one of its codes of ethics.

Similarly, there is no law which prevents an officer of a union from splitting with an insurance agent or broker the commission received by the latter for writing or placing a policy underwriting the union's health and welfare plan. Yet, certainly any such arrangement would be reprehensible and it is proscribed in the AFL–CIO code covering the administration of health and welfare funds.

Let me return briefly to the matter of the punishment which may be imposed by unions for violation of their various laws, including laws relating to ethical standards.

The most severe punishment which may be applied to an offending member or union is expulsion from the labor movement. And on the other hand, an offending member or union may escape lesser penalties by the mere action of disaffiliation.

In my mind there is no injustice worked by the expulsion of an individual who has been found guilty of violating his union's laws or ethical standards.

However, when it comes to the expulsion by an international union of one of its affiliated locals, or by the AFL–CIO of one of its national or international unions, there is a factor which may result in substantial injustice. That injustice lies in the fact that the act of expulsion, usually aimed at one or a few officials of the organization, serves to deprive the union's members of the benefits of affiliation. They are the real victims of expulsion and they are innocent victims.

It may be argued that they share in the guilt of the offending officials by the mere fact that they continue to tolerate those officials in office. But that is a completely unfair judgment. Who, for example, would wish to indict and punish all of the citizens of a city because it was being run by a corrupt political machine?

The only true remedy for an organization in the grasp of vice and corruption—be it a political entity or a labor union—lies in arousing its citizens to the exercise of their rights. And this end is not furthered by depriving those citizens of the benefits of continued affiliation with the larger body politic.

I have never heard it advocated that a graft-and-vice-ridden city be cut off from the rest of the United States by depriving its citizens of their rights and their citizenship.

The expulsion of a labor union at any level of organization is not a matter to be undertaken lightly, although at times there may appear to be no other recourse.

Let me point out that democratic procedures are common to the constitutions and laws of all American labor unions. Where corruption and communism have existed in the past and exist today, it is because the membership has been lethargic in the exercise of their democratic rights.

The phenomenon is not unique to the labor movement. All of us have seen the tragic results of similar lethargy in communities and in other segments of our society. In the labor movement, as in any free, democratic organization, the solution to any form of corruption lies in an aroused and an alert citizenry.

In a very real sense, the expulsion of a wayward affiliate from the AFL–CIO does not solve the problem of unethical practices at all. It is a sort of hand-washing ritual by which the greater labor movement publicly absolves itself of any blame for the situation, a situation which continues to exist.

We need only to look at the International Longshoreman's Association, expelled several years ago by the former AFL for corruption, and at any of the unions expelled by the former CIO several years before, to realize the truth of this statement. Most of the expelled unions continue to exist in spite of vigorous efforts of the rest of the labor movement to attract their members.

It is far better that every opportunity be given a union to clean its house. Within the greater labor movement expulsion is a drastic action and must be reserved as a matter of final and regrettable recourse.

With this in mind, I invite attention to the steps the AFL–CIO has taken to clean its own house.

Patriotism in Modern America

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include one of the prize-winning essays in the contest sponsored by the American Legion of Ohio on the subject of Patriotism in Modern America. This essay was written by Miss Nancy McMillen, of Shadyside, Belmont County, in my district, and I am happy to present this fine prize-winning essay to readers of the CONGRESSIONAL RECORD:

PATRIOTISM IN MODERN AMERICA

(By Nancy McMillen, Shadyside, Ohio)

I am an American, and I am making a plea for a most essential cause—that of patriotism—"the love of one's country." To many of us patriotism is only a word to speak meaninglessly; to some it represents the saluting of the American Flag or singing the Star-Spangled Banner; to others it means the responsibility of answering the call to duty, but to me, a girl, young yet in years, it means a symbol of great American tradition and faith. Could this be because at home we have mementos of my father's years away at war? Could it be that I remember my mother saying often to her children that our father was helping to fight a war to end all wars, so we as well as millions of other boys and girls could grow up in a peaceful nation?

I believe these factors are underlying causes, but I firmly believe that because we young people are living in such challenging times, it is of a deeper significance. Because to me patriotism must have faith as its roots. How can we be true to our beliefs and ideals as loyal Americans if we don't have a real belief in God and one's fellowman?

This brings to mind a true story told to me recently. A young boy was convalescing in a hospital; he was trying hard to put a puzzle of the world together when his daddy visited him. "Daddy, I can't get the world together," he said. His father answered, "Son, on the other side is a picture of man; put man together first, then you'll have the world together." Let us pause to think of this. If man is united with his fellowman, then harmony will prevail, peace will be secure, and faith in our country will shine as the guiding beacon in our lives.

Let's list a few of the symbols of patriotism in this great land of ours: The Statue of Liberty with her torch of peace raised high welcoming everyone to America's freedom, the American Legion, the junior auxiliaries, the beautiful American Flag with its white stars showing unity, the countless number of churches with their doors open at all times to all races and creeds, wonderful

schools equipped with men and women striving always in their teaching of boys and girls to be fine citizens in this modern age, and on and on we could go, but the important thing is to realize that together these form the firm bulwark for patriotism with faith in God.

Patriotism is primarily spiritual; it lives in our hearts and comes first, not from the material objects mentioned previously but from our hearts. Through this spiritual love in our hearts for our Creator and for our fellowman will we find unity in the great common goal of our citizenship—patriotism—"the love of one's country."

I, an American with a prayer in my heart, a love for my fellowman, and a pride in my country, speak for all youth to loudly proclaim: God bless America.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. BOSCH. Mr. Speaker, we are fast approaching the time when we as representatives of the American people as well as our constituencies in our congressional districts will be asked to approve an expenditure of some $4.4 billion all over the world. I know my mail from my constituents is ever increasingly opposed to what they commonly call giveaway programs. The people find it very difficult to understand how other countries can give their citizens tax reductions and other benefits while no such relief is being passed to the American people.

Only the other day it was reported in leading newspapers throughout the country that Great Britain was going to cut taxes, reduce its draft program, and cut back its military commitments; while we, on the other hand, are asked to forgive their interest payments and to advance further financial economic and military assistance.

I sincerely trust that my colleagues will read and carefully consider the attached item by John O'Donnell which appeared in the New York News of April 9, 1957, and when the mutual security—foreign aid—program comes up for consideration give due and serious thought to the plight of the American taxpayer.

CAPITOL STUFF

(By John O'Donnell)

WASHINGTON, April 8.—We'd like some American to put down in about 1,000 words of reasonably intelligent prose just why he thinks that he—Joe Doakes, native-born American citizen—is better off today than he was just about 40 years ago this week.

American life 40 years ago was mighty pleasant. Federal income tax was insignificant. By and large, you trusted the great men in the Nation—such as Teddy Roosevelt and the wise and congenial William Howard Taft. Until the outbreak of World War I, you could travel through the countries of Europe, except Russia, without a passport or a visa. Then we got global-minded under Woodrow Wilson, who put this country into war with Germany 40 years ago this week.

Now, take the condition of the average American citizen. On Capitol Hill this morning Secretary of State Dulles pleaded with a Senate committee for more billions of taxpayer money to hand out to European nations.

Personally we didn't think Dulles made a very good argument. After making out the check for the tax on our modest income, we hope that his and Eisenhower's plans for greater giveaways to foreigners get hit over the head.

Privately we exulted that the public plea to Congress asking for more of our dough coincided with the time when voters were paying their tax bills and the lawmakers were sensitive to howls of resentment.

If Dulles could say that any of our dollars given away abroad since the end of World War II had paid off—in the fantastic idea that undying affection and eternal loyalty of foreigners could be bought by American tax money—he might have had a point.

The reverse is true. The more money we've kicked in—particularly in the last 10 years—the more the foreigners have welched on us.

As Chairman RICHARD RUSSELL (Democrat, of Georgia), of the Senate Armed Services Committee, pointed out to Dulles, the more billions we spend to strengthen our foreign allies in NATO the weaker they become. Ten years ago there were eight French divisions pledged to NATO. Five years ago these were shaved almost in half. Today there are only two divisions.

NOW COMES BRITAIN'S BIG DECISION

On the heels of the French runout powder comes the really shocking decision by Britain to save money by calling an end, so far as modern warfare is concerned, to the once proud British Navy, ending her draft, and slashing her armed forces from 700,000 to 375,000.

The reason? British taxpayers can't afford the money necessary to defend their country. Too much of their cash goes to support the Socialist welfare state. If you Americans want to defend us, just take it out of your own taxpayers April 15.

Furthermore, the Queen's navy is now starting to scrap her battleships, aircraft carriers, and end the costly production of jet bombers and fighter planes. If you Americans want to kick in and pay for our defense, well and good. The British taxpayer is not going to pay.

In the last Senate hearings on our foreign-aid program it was revealed that we Americans have actually kicked in to ungrateful foreigners the astronomical figure of $114,042,942,280.07. Along with the billions we doubt if we'll get any of the 7 cents back.

Today, Dulles had more rosy hopes of getting back some of this cash as he pressed for passage of Eisenhower's plea for more billions to give away—and give promptly.

SENATOR RECITES THE HUGE FIGURES

But, as South Carolina's Senator OLIN JOHNSTON had said earlier—and the facts haven't changed:

"Our Allies in World War I are indebted to us, and in many instances are in default, in the sum of $17,297,981,019.07.

"Our lend-lease aid cost us the sum of $42,020,779,261.

"Foreign aids in grants and loans to June 30, 1955, aggregate $51,339,142,000.

"We have advanced to the International Monetary Fund the sum of $2,750 million.

"We have advanced to the International Bank the sum of $635 million.

"These items aggregate the astounding total of over $114 billion. They alarm me. They should alarm every thinking American. They should be of great concern to the banker, the businessman—large and small—the worker, the housewife, and to every average American. These totals press everyone of us for we carry on our shoulders the back-breaking load of taxes which have made such gifts possible."

Secretary Dulles in private life is a great corporation lawyer. Perhaps it's true that a lawyer is his own worst witness. When Dulles was asked why he believed that if Great Britain strengthened its position by cutting the budget for defense why wouldn't we Americans become stronger by cutting taxes for the same purpose, the answer drifted off into the wild blue yonder.

Astounded, Senator RUSSELL pressed: "Do you really think the English are going to contribute more to the strength of the free world with these reductions than without them?"

Dulles said he wasn't going to exclude the probability that the British might even be stronger with a navy reduced to zero, modern planes eliminated, army ground strength cut in half and no draft. The natural question, of course, is why can't the same rule apply to the United States? The State Department passed that one over to the Pentagon. It was all very silly and hypocritical. It doesn't make sense. Just the same, we're happy it happened when Joe Doakes, American citizen, was figuring out his income-tax return.

How To Solve the Segregation Problem

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. DIGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial by Harry Golden, Sr., editor of the Carolina Israelite. It is entitled "How To Solve the Segregation Problem—The Golden Out-of-Order Plan."

The article follows:

[From the Carolina Israelite, Charlotte, N. C., of January-February 1957]

HOW TO SOLVE THE SEGREGATION PROBLEM—THE GOLDEN OUT-OF-ORDER PLAN

While I still have faith in the golden vertical Negro plan, which I announced last summer, I have found it difficult to get a school board to try it (take the seats out of the classrooms, and let the kids stand, since no one pays the slightest attention to a vertical Negro).

Now, however, I am on much firmer ground. This time I submitted my plan to a successful test and I am ready to formally announce—the golden out-of-order plan.

I tried my plan in a city of North Carolina where the Negroes represent 39 percent of the population.

I prevailed upon the manager of a department store to shut the water off in his "white" water fountain and put up a sign, "out of order." For the first day or two the whites were hesitant, but little by little they began to drink out of the water fountain belonging to the coloreds; and by the end of the third week everybody was drinking the "segregated" water, with not a single, solitary complaint to date.

I believe the test is of such sociological significance that the Governor should appoint a special committee of two members of the house and two senators to investigate the golden out-of-order plan. We kept daily reports on the use of the unsegregated water fountain which should be of great value to this committee. This may be the answer to the necessary uplifting of the "white" morale. It is possible that the

"whites" may accept desegregation if they were assured that the segregated facilities still exist, albeit, out of order.

As I see it now the key to my plan is to keep the out-of-order sign up for at least 2 years. We must do this thing gradually.

Mother Anna Dengel, M.D., Missionary Nun-Doctor

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. LANE. Mr. Speaker, in our relations with other peoples too little credit is given to those true ambassadors of good will, the dedicated men and women who serve God in the missionary field.

In the spirit of the Divine Healer, they follow the example of our Lord Jesus Christ "in healing the body while teaching the mind and fortifying the soul."

Developing good will among men.

The patience, the courage, and the pure hearts of young women who forsake all the comforts of our civiligation to labor among the poor, the ignorant, and the diseased of nations that are striving to catch up with the 20th century, command universal admiration and gratitude.

The world sometimes pauses in its busy pursuit of money, beauty, and power—pauses to see, and appreciate, and give honor to these remarkable, but self-effacing missionaries.

One of these notable occasions was the annual Laetare dinner of the Guild of St. Luke, held at the Sheraton Plaza in Boston on Sunday, March 31, 1957.

It was there that Archbishop Richard J. Cushing paid eloquent tribute to Mother Anna Dengel, M. D., founder of the medical missionaries. Mother Dengel, recipient of the Laetare award this year as an outstanding physician-surgeon, is the first woman, the first nun, and the first missionary to receive this award.

With your approval, under unanimous consent, I include in the CONGRESSIONAL RECORD Archbishop Cushing's glowing account of the life and achievements of Mother Dengel, reprinted from the April 6, 1957, issue of the Pilot, published in Boston, Mass.:

FROM INDIA'S SUNNY CLIME—MISSIONARY NUN-DOCTOR AWARDED ST. LUKE'S GUILD LAETARE MEDAL

Archbishop Cushing paid tribute to "a great missionary, great foundress, skillful physician, and far-sighted leader of the medical missionary movement" when he addressed members of the Guild of St. Luke of Boston at the Sheraton Plaza Hotel, on Sunday, March 31. Occasion was the annual Laetare dinner of the physicians's guild.

Recipient of the archbishop's high praise was Mother Anna Dengel, who was present to receive the fourth annual award of the guild, archdiocesan chapter of the National Federation of Catholic Physicians' Guilds. Mother Dengel, a native Austrian who for many years served as a missionary doctor in India, was the founder in 1925 of the Medical Mission Sisters. Her organization, which today conducts houses of training for postulants in America (Philadelphia), Holland, and England, also operates mission stations in India, Pakistan, Indonesia, Africa, and South America.

The guild each year chooses an outstanding physician or surgeon upon whom to bestow the Laetare Sunday award. Mother Dengel is the first woman, the first nun, and the first missioner to receive the award. Previous recipients were Dr. Edward McCormack, former president of the American Medical Association; Adm. Bartholomew W. Hogan, Surgeon General, United States Navy; and Dr. Francis M. Foster, dean of the Georgetown University Medical School.

Following are excerpts of the archbishop's address:

"The technique of medical missions did not originate with Mother Dengel nor with the Catholic Church," the archbishop said, "except insofar as it imitated its Founder, Our Lord Jesus Christ in healing the body while teaching the mind and fortifying the soul. For nearly a century this technique was in use by Protestant sects, and in the Moslem world. Protestant missionaries, man and wife—both often medical doctors, had established and were directing some of the best hospitals in India and elsewhere in Asia. Moreover, then as now, an impressive number of dedicated young physicians, interested in Protestant missions, helped in those hospitals, knowing that while they were giving generously with the right hand, their left hand held a residency of vastly wider experience than most of them could gain at home.

NUN-DOCTORS

"The Catholic Church had no such treasury for its missions. Its lay doctors were not aware of this field for service; it had no heavy endowments earmarked for missionary activity; its missionary personnel were not in a position to staff hospitals, even when it had the money to build them. Such costly work with us must be in the hands of religious orders, with their continuity, their corporate responsibility, their relatively low cost. To make missions effective, the time had come when nuns must study and practice medicine.

"When Dr. Anna Dengel first faced this need, a seemingly insurmountable obstacle existed in the canon which forbade to nuns the performance of any but the most lowly and lay of medical service. Until this prohibition was removed, no religious institute of women doctors consecrated by solemn, public vows could become in the strict sense a religious order. Yet Dr. Dengel, successful young doctor, just turning 30 years of age, a lay woman of extraordinary vision and talents, listening to the call of Christ and the direction of the Holy Spirit, set out to assemble a medical unit of nuns, confident that the day was at hand when her little band would take its place among the illustrious orders of holy mother church.

HINDI TONGUES

"I like to think of Dr. Dengel as this confident young woman, stepping off the ship in New York on the last lap of her trip from the Orient. She knew nothing of America or of Americans, except their reputation for generosity of service as well as of money. Between her and the excellent English she had learned during 5 years of study in Ireland stood 3 years of living in the Hindi tongues. But her assets were many—the faith and high resolve of her Austrian forebears, a good education in Austria and France, a medical degree from the University of Cork, a brief medical practice in England, and 3 years of astounding medical experience in Pakistan.

"Indeed, the prowess of that young physician, thrown into the primitive conditions of the Himalayan area, is still a topic of conversation among veteran missionaries in India. In a normal day she dealt with from 50 to 150 patients afflicted with what someone summarized as 'every disease in the medical books.' She was obstetrician, internalist, surgeon, specialist in tropical diseases, and specialist, indeed, in all those categories which the layman can no longer spell nor pronounce.

"Nor was this all of her extraordinary experience. Each of her patients came accompanied by father, mother, sister, brother, husband, and in-laws, who interrogated, advised, and not infrequently threatened Dr. Dengel in languages she was only beginning to understand and to speak. Against all these odds Dr. Dengel worked, while it became clearer and clearer to her that if the church was to exercise the charity of Christ among the Moslems and other peoples of India she must do so through the instrumentality of religious orders of women trained for medical service on its every level.

"Hence it arose that Dr. Dengel should be coming down the gangplank in New York in the spring of 1925 with the following list of agenda clutched in her hand: (1) Visit the hierarchy to obtain permission to present the graduating classes in Catholic schools the vocation of medical missionary; (2) establish necessary religious order; (3) set up a house of studies in the Catholic University and a motherhouse where convenient and welcome; (4) arrange for the religious formation of the new order and for the education of its members as doctors, nurses, pharmacists, therapists, technicians, etc.; (5) build hospitals, first in Rawalpindi and then elsewhere in India and other missionary territory; (6) staff and direct these hospitals; (7) collect funds for all this construction, for the support of the order, for long expensive educations, for transportation to India, etc.; (8) interest some prelate in further appeal to Rome to change the canon law affecting medical missions. There were other items, but those were written in invisible ink and would appear as surprises to Mother Dengel as the years wore on.

"Thus did Dr. Dengel lay aside for awhile her stethoscope and her scalpel to become a director of medical education, a builder of hospitals, a programer of hospitalization, a foundress of medical sisterhood, a woman, in short, to write a new chapter of mission history on the ancient palimpsest of India. * * *

"I shall devote the few moments which remain to me to the saga of the accomplishments of Mother Dengel and the Medical Missionary Sisters during the 30 years which have elapsed since their foundation. Within 3 years from her arrival in this country, Dr. Dengel had a house of studies at the Catholic University in Washington, a motherhouse in Philadelphia, a flourishing novitiate, young nuns studying in various colleges, and her pioneer group transported to Rawalpindi. On February 2, 1928, 3 medical missionaries—1 an M. D., the other 2, registered nurses—took over the Rawalpindi Hospital of 16 beds, and with the help of 5 student nurses administered to nearly 17,000 patients that year—200 of them hospitalized for operations or extended medical care.

"In 1955, in the Rawalpindi Hospital, now grown to 300 beds, a full complement of doctors, nurses, pharmacists, technicians, therapists, and aids handled 60,000 patients, nearly 5,000 of whom were admissions. Six hundred babies were born there, and the medical missionary surgeons performed 2,212 operations. In case any surgeon present here thinks lightly of those sister surgeons, Mother Dengel has the statistics of their success and the names of Brahmins who have forsaken their own Oxford-educated, London-trained surgeons in favor of these clever, well-equipped nuns."

Bad for the Kids, but Good for the Old Folks

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 27, 1957

Mr. HOFFMAN. Mr. Speaker, the following is a recent decision of the United States Supreme Court declaring unconstitutional the Michigan law designed to lessen the publication and dissemination of obscene, immoral, lewd, or lascivious language, prints, pictures, figures, or descriptions:

SUPREME COURT OF THE UNITED STATES, No. 16, OCTOBER TERM, 1956—ALFRED E. BUTLER, APPELLANT, *v.* STATE OF MICHIGAN—ON APPEAL FROM THE RECORDER'S COURT OF THE CITY OF DETROIT, MICH., FEBRUARY 25, 1957

Mr. Justice Frankfurter delivered the opinion of the Court.

This appeal from a judgment of conviction entered by the Recorder's Court of the city of Detroit, Mich., challenges the constitutionality of the following provision, section 343, of the Michigan Penal Code:

"Any person who shall import, print, publish, sell, possess with the intent to sell, design, prepare, loan, give away, distribute or offer for sale, any book, magazine, newspaper, writing, pamphlet, ballad, printed paper, print, picture, drawing, photograph, publication or other thing, including any recordings, containing obscene, immoral, lewd or lascivious language, or obscene, immoral, lewd or lascivious prints, pictures, figures or descriptions, tending to incite minors to violent or depraved or immoral acts, manifestly tending to the corruption of the morals of youth, or shall introduce into any family, school or place of education or shall buy, procure, receive, or have in his possession, any such book, pamphlet, magazine, newspaper, writing, ballad, printed paper, print, picture, drawing, photograph, publication, or other thing, either for the purpose of sale, exhibition, loan or circulation, or with intent to introduce the same into any family, school, or place of education, shall be guilty of a misdemeanor."

Appellant was charged with its violation for selling to a police officer what the trial judge characterized as "a book containing obscene, immoral, lewd, lascivious language, or descriptions, tending to incite minors to violent or depraved or immoral acts, manifestly tending to the corruption of the morals of youth." Appellant moved to dismiss the proceeding on the claim that application of section 343 unduly restricted freedom of speech as protected by the due process clause of the 14th amendment in that the statute (1) prohibited distribution of a book to the general public on the basis of the undesirable influence it may have upon youth; (2) damned a book and proscribed its sale merely because of some isolated passages that appeared objectionable when divorced from the book as a whole; and (3) failed to provide a sufficiently definite standard of guilt. After hearing the evidence, the trial judge denied the motion, and, in an oral opinion, held that "* * * the defendant is guilty because he sold a book in the city of Detroit containing this language [the passages deemed offensive], and also because the court feels that even viewing the book as a whole, it [the objectionable language] was not necessary to the proper development of the theme of the book nor of the conflict expressed therein." Appellant was fined $100.

Pressing his Federal claims, appellant applied for leave to appeal to the Supreme Court of Michigan. Although the State consented to the granting of the application "because the issues involved in this case are of great public interest, and because it appears that further clarification of the language of * * * [the statute] is necessary," leave to appeal was denied. In view of this denial, the appeal is here from the recorder's court of Detroit. We noted probable jurisdiction. (350 U. S. 963.)

Appellant's argument here took a wide sweep. We need not follow him. Thus, it is unnecessary to dissect the remarks of the trial judge in order to determine whether he construed section 343 to ban the distribution of books merely because certain of their passages, when viewed in isolation, were deemed objectionable. Likewise, we are free to put aside the claim that the Michigan law falls within the doctrine whereby a New York obscenity statute was found invalid in *Winters* v. *New York* (333 U. S. 507).

It is clear on the record that appellant was convicted because Michigan, by section 343, made it an offense for him to make available for the general reading public (and he in fact sold to a police officer) a book that the trial judge found to have a potentially deleterious influence upon youth. The State insists that, by thus quarantining the general reading public against books not too rugged for grown men and women in order to shield juvenile innocence, it is exercising its power to promote the general welfare. Surely, this is to burn the house to roast the pig. Indeed, the solicitor general of Michigan has, with characteristic candor, advised the Court that Michigan has a statute specifically designed to protect its children against obscene matter "tending to the corruption of the morals of youth."[1] But the appellant was not convicted for violating this statute.

We have before us legislation not reasonably restricted to the evil with which it is said to deal. The incidence of this enactment is to reduce the adult population of Michigan to reading only what is fit for children. It thereby arbitrarily curtails one of those liberties of the individual, now enshrined in the due-process clause of the 14th amendment, that history has attested as the indispensable conditions for the maintenance and progress of a free society. We are constrained to reverse this conviction.

Reversed.

Mr. Justice Black concurs in the result.

---

[1] Section 142 of Michigan's Penal Code provides:

"Any person who shall sell, give away, or in any way furnish to any minor child any book, pamphlet, or other printed paper or other things, containing obscene language, or obscene prints, pictures, figures, or descriptions tending to the corruption of the morals of youth, or any newspapers, pamphlets, or other printed paper devoted to the publication of criminal news, police reports, or criminal deeds, and any person who shall in any manner hire, use, or employ such child to sell, give away, or in any manner distribute such books, pamphlets, or printed papers, and any person having the care, custody, or control of any such child, who shall permit him or her to engage in any such employment, shall be guilty of a misdemeanor."

Section 143 provides:

"Any person who shall exhibit upon any public street or highway, or in any other place within the view of children passing on any public street or highway, any book, pamphlet, or other printed paper or thing containing obscene language or obscene prints, figures, or descriptions, tending to the corruption of the morals of youth, or any newspapers, pamphlets, or other printed paper or thing devoted to the publication of criminal news, police reports, or criminal deeds, shall, on conviction thereof, be guilty of a misdemeanor."

Operating Merchant Ships—Immediate Availability

EXTENSION OF REMARKS
OF
HON. JOHN J. ALLEN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. ALLEN of California. Mr. Speaker, the immediate availability of merchant ships which are operating in contrast with the availability of ships which are in laid-up condition has a value to our Defense Department which has often been pointed out.

The ships of our subsidized merchant marine subject as they are to provisions of contracts with the Government which require them to operate on regular routes on regular schedules contribute an additional advantage. The specified trade routes take them to all parts of the world and at any one moment 1 or more of the nearly 300 ships of the subsidized fleet is likely to be found fairly close to any given port in which substantial operations are carried on.

The availability is immediate and, as one high-ranking Navy officer told the Merchant Marine Committee some months ago, can put a ship under Navy control in 90 minutes that it might take 90 days to get out of a laid-up fleet, supplied and manned and ready for sea. To illustrate the point, I quote a paragraph from an article which I will set forth in full following these remarks:

While at sea the ship's master, Capt. E. B. Ellis, received a wireless from Adm. W. F. Boone, Commander in Chief, United States Naval Forces Eastern Atlantic and Mediterranean, taking over the ship and assigning it to task force 61 as a passenger carrier for evacuating Americans from Egypt.

The ship involved was the steamship *Exochorda* which operates on Trade Route No. 10, which requires the American Export Lines to operate a number of ships on regular schedules from the North Atlantic Coast of the United States to the ports that stretch the length of the Mediterranean.

I include as a part of these remarks an article taken from the March 1957 issue of Maritime Affairs, published by the Committee of American Steamship Lines, which reads as follows:

EXOCHORDA TAKES 295 CITIZENS TO SAFETY OF NAPLES

Nearly 300 American men, women and children evacuated from war-torn Egypt in October, owe their safety—perhaps their lives—to the fact that a ship of the American Merchant Marine was readily at hand and available to carry them out of the war zone.

The ship was the American Export Lines' Steamship *Exochorda*, which on October 31, operating under orders of the Commander in Chief, United States Naval Forces Eastern Atlantic and Mediterranean, evacuated 295 Americans from Alexandria, Egypt.

With berths available for 124 persons, the *Exochorda* carried 352 persons—57 were regular passengers—from Alexandria to the safety of Naples. On the 2½-day voyage women and children slept in public lounges, men on decks or wherever they could find space.

On October 29, when the Middle East was aflame with war, the *Exochorda* was proceeding to Alexandria, one of its regular ports of call on American Export Lines' service over trade route 10.

While at sea the ship's master, Capt. E. B. Ellis, received a wireless from Admiral W. F. Boone, commander in chief, United States Naval Forces, Eastern Atlantic and Mediterranean, taking over the ship and assigning it to Task Force 61 as a passenger carrier for evacuating Americans from Egypt.

With Alexandria on a complete war footing and amid mounting hostilities and tension, the *Exochorda* stood at dockside for a full day while American refugees from war streamed aboard.

On October 31 the ship steamed out of the harbor for Naples, omitting its regular call at Piraeus, Greece.

Upon arrival in Naples, Clare Boothe Luce, former United States Ambassador to Italy, boarded the ship to welcome the evacuees and extend congratulations to the ship's crew for a job well done.

Two other American Export Lines ships, the steamship *Exchequer* and the steamship *Exermont*, both in the area, were subject to Navy control, but were not called upon for evacuation duty.

This is one further example of the importance of having American-flag ships and shipping lines available not only in times of peace but in national emergencies as well.

American Export Lines is 1 of 14 American steamship companies which operate nearly 300 modern United States passenger and cargo ships under subsidy contracts with the Government as provided under terms of the Merchant Marine Act passed by Congress in 1936.

Polio Vaccine

EXTENSION OF REMARKS
OF

HON. MERWIN COAD

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. COAD. Mr. Speaker, this week marks the passage of 2 years since the effectiveness of the Salk vaccine in preventing polio was announced. During those 2 years great strides have been made toward the achievement of final victory against that dread disease. Through the Poliomyelitis Vaccination Assistance Act, Congress made available more than $50 million to assist the States in providing the protection of the Salk vaccine to children and expectant mothers. The National Foundation for Infantile Paralysis and other public and private organizations have done magnificent work in promoting widespread use of the vaccine.

But a tremendous job remains to be done before polio is conquered. Testimony last month by the Surgeon General before a Government Operations Subcommittee headed by Representative L. H. FOUNTAIN showed that only about half of our people under age 40 had received even 1 shot of vaccine, and that only about 10 percent had received the full 3-shot series.

The subcommittee hearing also disclosed that a number of States had not yet used all the Federal funds made available for polio vaccine. My own State of Iowa on March 15 stood 47th on a list of 48 States having used only 24 percent of the $875,000 available to the State.

It is unforunate that Iowa has not already used more of the available funds to provide vaccine for its children. However, I am glad to learn that Governor Loveless, who was inaugurated only a few weeks ago, has taken a personal interest in the situation and is taking steps to encourage more widespread use of vaccine in Iowa. More than $600,000 in Federal funds will be available for purchase of vaccine for Iowa only until June 30. However, the appropriate officials of the Department of Health, Education, and Welfare have assured me that they expect to have no difficulty in furnishing the full quantity of vaccine by June 30 if the State is able to use it.

Mr. Speaker, I include as a part of my remarks an article from the Sioux City Journal of March 9 and a letter written by State Representative John M. Naughton, of Woodbury County, to Governor Loveless on March 16:

STATE OF IOWA,
HOUSE OF REPRESENTATIVES,
57TH GENERAL ASSEMBLY,
March 16, 1957.

The Honorable HERSCHEL C. LOVELESS,
Governor of Iowa, State Capitol, Des Moines, Iowa.

DEAR GOVERNOR LOVELESS: I should like to commend you for the interest you have shown in the Iowa polio-vaccination program. I am sure that the prompt attention you have given to this matter will do much to improve a situation that badly needs improvement.

As you know, I have also been interested in the polio-vaccine situation and have been studying the matter. I am particularly concerned by reports that more than $700,000 in Federal funds available to Iowa for Salk vaccine has been left unused, while only 1 out of every 3 Iowa high-school students has been vaccinated. These funds will no longer be available after June 30, 1957. I am also concerned because, prior to your intervention, there appears to be little evidence of any effective steps by the State health department to promote and encourage mass vaccination programs, either by the schools or by other public or private local agencies.

Furthermore, in my opinion, past handling of federally financed vaccine in Iowa has been contrary to the spirit of the Federal law. The Poliomyelitis Vaccination Assistance Act specifically provides that no discrimination based on financial ability of individuals will be imposed. Despite this clear provision, State authorities have in the past permitted to exist and fostered the impression that Federal vaccine was available only to medical hardship cases. It is my belief that this situation and the fact that Iowa authorities in the fall of 1956 reduced the amount of vaccine requested for public agencies from 100 percent to 10 percent of the Iowa allocation, are primary reasons why Federal funds are still unused and far too many Iowa children are still unvaccinated.

While I believe there is just cause for criticism of past actions, my purpose is not to criticise or to attempt to fix blame. My intention is rather to try to make a constructive contribution to the establishment of a more effective vaccination program. I should like, therefore, to propose for your consideration the following suggestions:

1. Immediate steps should be taken to obtain and utilize all vaccine available through Federal funds before the 1957 polio season. It should be made clear that the Federal vaccine is available to all persons under age 20 and to expectant mothers without charge for the vaccine. If possible, arrangements should be made for free vaccination of schoolchildren at their schools.

2. Appropriate action should be taken to promote and encourage mass vaccination programs by local public and private health agencies, business firms, etc. This type of program has been used very successfully in many areas of the country. Since the price paid by public health agencies for Salk vaccine is about 65 cents per shot, many of these programs have been conducted at a cost to the recipient of a dollar per shot or less. It is my understanding that the National Foundation for Infantile Paralysis will make available $10 million throughout the country during 1957 to assist in such local vaccination programs. In the event there is a temporary shortage of vaccine it would be advisable, of course, to see that vaccine is made available first to those in the under 20-age group. However, plans for vaccination of adults could be set up on a standby basis to go into effect without delay as soon as vaccine is available.

As a pilot program, the State of Iowa might well establish a vaccination program for its own employees. If you desire information about some of the polio-vaccination programs that have already been put into effect throughout the country, I should be glad to obtain it for you.

In closing, I should like to add a personal note. As a father whose son had polio, but was spared its paralysis, I am well aware of the suffering that can be caused by this dread disease. We now have an effective means of preventing polio, developed by Dr. Salk and other dedicated scientists, and made possible through the voluntary contributions of the American people to the polio foundation. It would be a great tragedy for even one Iowa youngster to be needlessly crippled through failure to receive the protection that is available. I hope we will do everything possible to prevent such a tragedy.

Sincerely,

JOHN M. NAUGHTON,
State Representative.

[From the Sioux City (Iowa) Journal of March 9, 1957]

LOVELESS SEES POLIO AID UNUSED—ASKS WHY $133,967 ONLY OF $875,695 SPENT IN STATE

DES MOINES.—Gov. Herschel Loveless said Friday he wants to know why Iowa has used only $133,967 of the $875,695 in Federal money allocated to Iowa for purchase of Salk polio vaccine.

He said he is planning to get the details from the State health department, along with information on "how good a coverage we now have in Iowa."

The Governor said his inquiry was prompted by two things.

He has received a report from the Public Health Service which shows only three States have used less of the Federal money to purchase the vaccine than Iowa has.

He also has heard conflicting rumors about the status of the vaccine in Iowa.

When the Salk vaccine first was made available to the public and was in short supply, Congress appropriated funds to be prorated to States for use in purchasing the vaccine.

FREE SHOTS FOR POOR

Under the program, which still is in effect, Iowa has been eligible to spend up to $875,695 for the vaccine. All of the $133,967 worth it has purchased to date have been distributed free through clinics for medical indigents and hardship cases.

Loveless said the Public Health Service report indicated that only Delaware, Nevada, and Vermont have spent less Federal money than Iowa for the vaccine.

He noted that expenditures in neighboring States range from $1,687,000 in Illinois to $177,229 in Nebraska.

WANT $1 INOCULATIONS

The Polk County Labor Council last week recommended a program of mass inoculation for both children and adults with Salk vaccine for a charge of not to exceed $1 a shot.

The labor group contended that exorbitant costs have prevented the securing of the shots by some persons.

The Iowa State Medical Society has recommended that county medical societies throughout the State consider the establishment of special fees for polio shots between March 15 and April 15, with all persons under 40 urged to get the vaccine.

The medical society said that some fee should be charged in the mass inoculation programs because of medical and legal implications.

FEW FOR HIGH SCHOOLS

The State health department reported last month that more than 90 percent of Iowa's elementary school youngsters have received 1 or more shots of the vaccine, but that only about 1 out of 3 high school pupils have received any.

Dr. Edmund Zimmerer, State health commissioner, said that every county medical society polio committee has received all the vaccine it has asked for.

A Veteran's Carefully Considered Protest on Housing

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. KELLEY of Pennsylvania. Mr. Speaker, we are all familiar with the consequences of the tight money squeeze on housing and particularly on housing for veterans under the terms of the GI bill.

With just over a year remaining before the GI bill home loan provisions expire for veterans of World War II, I think it is important and urgent—and only fair—that we assure those veterans who have not taken advantage of their rights in this respect to buy a home under fair and reasonable terms.

Higher interest rates are self-defeating—the answer is to make GI loans effective by ending the squeeze on interest rates, not by continually raising them.

One veteran who has written me from Jeannette, Pa., suggests the direct loan approach, as we have now for veterans in rural areas. His letter is thoughtful and well-considered, and I submit it for the attention of the Members of Congress as follows:

Hon. AUGUSTINE B. KELLEY,
Member of Congress,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN KELLEY: I have noted with extreme interest the recent FHA move which increased the interest rate on home building loans of that agency. Such move is, in my opinion, highly inflationary and has already resulted in greater expense to construction by both Government and private groups.

As specific example of cost increase to Government, please note that Jeannette's new high school will be affected by a substantial cost increase for the full 40 years of rental.

Having been made eligible for GI studies through military service during World War II by congressional action, I appreciated the tremendous financial relief in finishing a college education. Though eligible for some 3 years and 8 months, I used but 2 years of these available benefits. I chose not to use the additional benefits in equivalents, such as applying same to book purchase, etc., though that was also provided in the GI bill.

To me, the GI bill was a token of appreciation from the American people to that portion of the same American people who were directly exposed to the inconvenience and peril of war. I, as other veterans, felt the GI bill to be a most appropriate encouragement to veteran endeavors in improving this Nation.

The record of veterans in college and business or industry as a direct consequence of the GI bill, has, I think you will agree, overwhelmingly convinced that this Nation did benefit through the GI bill.

Now, 12 years after World War II, the gougers are back at work. With home construction markedly dropped from the 1955 level, and a housing shortage still existing, the GI bill has practically become unavailable for home purchase. I can borrow money—at 6 percent. For a $100/month payment over 20 years, I can now borrow $14,000, even though the GI bill should make possible a $15,800 loan at the same payment. I must pay $1.71 for every dollar borrowed at 6 percent over 20 years, where the GI bill would cost $1.52 for every dollar at 4½ percent over 20 years.

With building programs down, and with many veterans in my position requiring larger building quarters, it seems reasonable that our Government exercise every means to retain the effectiveness of the GI bill. With just over a year remaining before GI bill building provisions are terminated, I request that you consider affecting prompt and adequate action through Congress which will make GI building loans at 4½ percent available until such time as the bill expires.

May I further suggest that it could not be construed as inconsistent with the "intent and purpose" of such bill if Congress found it necessary to establish the Veterans' Administration as a financing agency, supported by such funds as are necessary, to preserve the purpose of the GI bill.

Please consider this letter a formal protest directed against action taken by my Government relative to its operation of the Housing Administration, a Government agency, and the effects of that action on provisions of the GI bill, in which I am vitally interested.

Hawaii on a Swivel

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Friday, April 5, 1957

Mr. PORTER. Mr. Speaker, while I am aware of the fact that many Members of the Congress read the editorials of the Washington newspapers, I want to draw the attention of the Members of Congress to a perceptive editorial which appeared in the Washington Post of April 3, 1957, which particularly deserves their attention:

HAWAII ON A SWIVEL

Is the Department of Justice doing a shimmy over the question of Hawaiian statehood? A letter from Deputy Attorney General Rogers to Senator JACKSON makes it appear as if the Department is considerably less than enthusiastic about statehood for Hawaii despite the President's flat endorsement. Mr. Rogers' letter is noncommittal on the substantive question, but his treatment of the issue of communism in the islands is such as to invite doubts.

Unquestionably there is a Communist problem in the International Longshoremen's Union dominated by Harry Bridges and Jack Hall. This is not a new problem, but it was given new currency by the investigation of the Senate Internal Security Subcommittee last fall. There would be more reason to respect the subcommittee's investigation if the communism charge had not been employed ad nauseam to hold up statehood heretofore. Some southern members of the subcommittee, it may be suspected, find this a convenient screen for their real opposition to statehood on racial grounds.

The Hawaii Statehood Commission points out emphatically that the so-called Communist stranglehold on the ILWU was totally ineffective during the Korean war; that Communist propaganda has been devoid of practical results; that candidates associated with the ILWU have been drubbed in local and Territorial elections; and that Communist Party strength in the islands has consistently declined. It adds:

"To charge that Hawaii's 500,000 Americans are under the Red thumb of a handful of Red leaders who can use the 24,000 members of the ILWU as the leverage for whatever nefarious purposes suit the Soviet is an insult to 500,000 Americans."

It is time for the administration to state its position unequivocally and with one voice. Under Secretary of the Interior Chilson attempted to do this yesterday in a strong statement on behalf of Secretary Seaton recommending statehood for both Hawaii and Alaska. Mr. Seaton, in an eloquent letter to this newspaper 10 days ago, said that "simple justice demands that each be admitted to the Union" irrespective of any political considerations. This is an admirable criterion to present to Congress, but there would be more room for encouragement if it were certain that all parts of the administration were pulling in the same direction.

The Greater Lawrence Story Continued

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. LANE. Mr. Speaker, a few days ago, I brought you a preview of the Greater Lawrence story. With the promise of more details concerning the amazing economic recovery of a community that was down for the count but rallied to win an impressive victory over the disaster that threatened it.

This is a real story, built on facts. The story of a community's will to win and the successful methods it employed to replace the industries and the jobs that had vanished.

The experience of Lawrence and its courageous people, has become a guide and an inspiration for other communities that may be faced with the problems of economic readjustment.

The program for the Greater Lawrence story was arranged by a committee of local citizens under the leadership of Irving E. Rogers, publisher of the Eagle-Tribune, as general chairman; assisted

by Timothy J. Scanlon, president of the Greater Lawrence Chamber of Commerce.

The advertising club of Boston, on Tuesday, April 2, 1957, paid special tribute to Lawrence for its outstanding achievement. It was in the grand ballroom of the Hotel Statler, that the Greater Lawrence story was presented to a large and appreciative audience. In order that it may win national recognition, I have asked permission to include in the CONGRESSIONAL RECORD the following coverage of that event from the Lawrence, Mass., Tribune, of Wednesday, April 3, 1957:

GREATER LAWRENCE HAILED

(By George J. Cullen)

From a rostrum provided by the Advertising Club of Boston in the splendor of the grant ballroom of the Hotel Statler. The Greater Lawrence Story was unfolded Tuesday noon to an audience of nearly 1,000 luncheon guests, several hundred of whom traveled from the honored area for the glowing tribute.

The unprecedented honor to the city and its neighboring communities of Methuen, Andover, and North Andover was marked by the largest assembly of the year at the Statler and brought a telegram of congratulations from President Dwight D. Eisenhower at the White House.

Commendation came too from Gov. Foster Furcolo, vacationing in the South, Commerce Commissioner Richard Preston and executives of the Admen's organization who hailed the successful part advertising played in the city's industrial rebirth.

The epic account of the community's transition from the woolen and worsted center of the world to a region of widely diversified industry was told in a colorful setting, backdropped with a huge outdoor advertising sign which emblazoned the day's theme: "The Greater Lawrence Story."

Seated at the head table on the stage were State and local leaders, many of whom played important roles in the stabilization of the Greater Lawrence economy.

PEOPLE NEVER LOST FAITH

Seated at hundreds of tables on the ballroom floor and in the balconies were the men and women of Greater Lawrence who never lost faith even in the face of adversity. Dining with them were the men and women of many other communities who came to learn at first hand "The Greater Lawrence Story."

This was presented in most able manner by Kurtz M. Hanson, president of the Associated Industries of Massachusetts and the Champion-International Co., of Lawrence, who outlined in detail how Lawrence and her neighboring towns joined hands in a spirited cooperative enterprise.

TRACED 7-YEAR SPAN

The narrator of the city's success story traced the 7-year span back to the period when textiles were depressed, mills were closing and moving away from the region and 20,000 were jobless. He related how the Federal Government classified the area as the most distressed in the United States, even in the midst of the nationwide prosperity.

Without pressing seriously for governmental assistance, the leaders of Greater Lawrence rolled up their sleeves and went to work. The Greater Lawrence Citizens Committee for Industrial Development was organized to assist and work with the existing Lawrence Chamber of Commerce which at that time expanded its services to the surrounding towns.

Mr. Hanson pointed out that Lawrence had plenty of first-class manufacturing space and a highly skilled labor pool. The need was for jobs and firms to provide them.

FUNDS PROVIDED

The speaker told how funds were provided by the city to advertise the community assets, and praised those who refused to be lured away from the area for employment elsewhere.

He related that the first break came when Western Electric took over the Monomac mills. This fact was featured in additional advertising and became an important means of attracting other large industries.

Mr. Hanson told of the formation of the Greater Lawrence Industrial Associates and their acquisition of the former Arlington mills to which they attracted many new industries.

Encouraging events followed swiftly, the audience learned. Western Electric built its multi-million dollar plant in North Andover, Avco moved into the Wood mill, Raytheon took over the Shawsheen mill, Congoleum-Nairn and Sylvania-Corning joined the newcomers.

"We can also point with pride to our older, established industries which stayed with us and expanded," Mr. Hanson declared.

In conclusion, he advised the Statler assembly to "keep your eyes focused on our community where every citizen is a salesman to make Greater Lawrence the greatest Lawrence ever."

WORDS OF WELCOME

The Advertising Club's pleasure at presenting the Greater Lawrence story was expressed by President Richard Berenson, who opened the program with words of welcome "to a great Massachusetts city which pulled itself up by hard work and sales promotion."

He called upon Very Rev. Vincent A. McQuade, O. S. A., Ph. D., president of Merrimack College, to give the invocation.

The audience stood as Father McQuade gave the following invocation:

"Let us pray. Almighty and Eternal God, grant us peace and contentment, in this joyful hour when we review our accomplishments and exult in our achievements, may we pause and give thanks to Thee from Whom all blessings and prosperity flow. May we always remain in Thy friendship, find courage in Thy graces and follow Thy counsels. Bless us, O Lord, and these Thy gifts which we are about to receive from Thy bounty. Through Christ our Lord. Amen."

Following the luncheon, President Berenson congratulated the hundreds of Greater Lawrencians who joined in the motorcade to Boston and presented Commerce Commissioner Preston as chairman of the day. The latter read the following message from President Eisenhower:

MESSAGE FROM PRESIDENT

"IRVING E. ROGERS,

"General Chairman, Greater Lawrence Day Committee, Hotel Statler, Boston, Mass.:

"Please give my congratulations to the enterprising people of Greater Lawrence on the splendid progress they have made through well-earned cooperative effort in developing new industries and in increasing employment. Their example is an inspiration to other communities which are striving to advance area development. Greetings to those attending today's celebration and best wishes for the continuing success of your endeavors.

"DWIGHT D. EISENHOWER,
"President of the United States."

INSPIRING STORY

The chairman said, "The Greater Lawrence Story," with emphasis on the "Greater," was the inspiring story of a New England mill city, typical of many other Massachusetts and Rhode Island communities.

"The Advertising Club selected the Greater Lawrence story as the most dramatic that could be told," Commissioner Preston advised. "Five years ago it suffered desolation. In 1957 it is an inspiration to all other communities."

He went on to praise the men and women who assessed what was wrong and proceeded with an intelligent program to bring recovery from within. So dramatic has been the recovery of Lawrence, the chairman said, that it has been told to the world on television, radio, magazines, and in countless newspapers. He recommended that the visitors view the dozens of exhibits of Lawrence products displayed in the hotel foyer as further proof of what the city has accomplished.

CHAMBER PRESIDENT SPEAKS

Timothy J. Scanlon, president of the Greater Lawrence Chamber of Commerce and coordinator for the Advertising Club program, was next introduced.

In his opening remarks, Mr. Scanlon declared: "This is indeed a proud moment for the people of Greater Lawrence. It is a happy and thrilling experience for us to be here, to share this day with you, and to have the glorious opportunity of presenting to you the Greater Lawrence story."

The chamber head then presented those seated at the head table. The group consisted of ad club president Berenson, commissioner Preston, Mr. Hanson, Fred H. Dodkin, assistant to the general manager of the Bolta Products division of the General Tire & Rubber Co.; Chester W. Woekel, chairman of the Methuen selectmen; Father McQuade, Arthur E. Rasmussen, vice president of Congoleum-Nairn, Inc., Walter V. Demers, organizer and first president of the Greater Lawrence Industrial Associates; Mayor John J. Buckley; Irving E. Rogers, publisher of the Eagle Tribune and general chairman of the Greater Lawrence Day committee; Dr. Lloyd P. Smith, president of the research and advanced development division of Avco Manufacturing Corp., Roland R. Siskind, chairman of the Greater Lawrence Citizens Committee for Industrial Development; Capt. David R. Hull, vice president and general manager of equipment operations of Raytheon Manufacturing Co.; Sidney P. White, chairman of the Andover selectmen; Harvey Mehlhouse, works manager, Merrimack Valley Works, Western Electric Co.; Attorney Ralph E. Finck, chairman of the North Andover selectmen; and Mr. Scanlon.

OTHERS PRESENTED

Also presented to the audience by Mr. Scanlon were the Greater Lawrence members of the general court; State Senator William X. Wall, Representatives Frank S. Giles, William Longworth, Arthur Williams, John C. Bresnahan, William J. Casey, John J. Cronin, and Rene J. Bernardin; members of the Lawrence city council, Aldermen John W. Fallon, Louis S. Scanlon, Nicholas J. Callahan and Gerard A. Guilmette; and Greater Lawrence selectmen Stafford A. Lindsay and Dr. William V. Emmons of Andover; Roger Ingalls and William S. Quinn of Methuen; and William A. Finneran and Philip Sutcliffe of North Andover.

Directing his remarks to members of the advertising club of Boston, Mr. Scanlon declared:

"President Berenson, officers and members of the advertising club: Please accept our heartfelt thanks for the generous hospitality you have extended to us today. In the daily lives of every one of us, we feel the tremendous impact of advertising. It is one of the most powerful forces in keeping our economy dynamic and healthy. You men, therefore, play an important role in the development of an expanding economy—the very subject that we want to discuss with you today. We thank you for the opportunity you present

us. We trust our story will be of interest and value to you."

In presenting the featured speaker of the day, Mr. Scanlon said:

"Ladies and gentlemen, now comes the real treat we have been waiting for—the principal address by one of Massachusetts' most vigorous and aggressive industrialists, better known to many of you in Boston as 'Mr. Industry.'—the president of the Associated Industries of Massachusetts.

"We in Greater Lawrence know this man first of all as an individual of the highest character. He is a kind husband and father, a successful businessman and administrator, guiding skillfully one of the great industries of Lawrence, our own Champion-International Co. His talents are devoted to the highest welfare of the country, the Commonwealth, and of our city. By an appointment at the hands of Governor Herter, he became a member of the committee which planned the Massachusetts Business Development Corp. He is a director and a member of the executive committee of that corporation, which has aided the city of Lawrence by loans to business and industry approximating $1 million. As a member of the board of directors of the Greater Lawrence Chamber of Commerce and of the Greater Lawrence Citizens' Committee for Industrial Development, he has been and is continuously aware of the city's problems and the remedies proposed and applied.

"These are the accomplishments of the man we have asked to present the Greater Lawrence Story. It is my pleasure and my honor to present to this most distinguished audience our good friend, Kurtz M. Hanson."

At the conclusion of Mr. Hanson's address, President Berenson characterized the Greater Lawrence story as an inspiration to other communities, and suggested it may have contributed in some way to the present refurbishing of Boston.

PRESENTED ENGRAVED BOWL

On behalf of the Ad Club, he then presented Mr. Hanson with an engraved Paul Revere silver bowl.

The awarding of gifts then took place. The many gifts donated by Lawrence merchants and manufacturers were donated to the Advertising Club for drawing among their own members.

In turn, the Advertising Club awarded a number of other prizes to those who came from Greater Lawrence.

The program, which began at 12:30 p. m. ended at 2:15 p. m.

A large part of the Greater Lawrence contingent at the Boston event were transported in 10 buses accompanied by a Lawrence police escort. An area in front of the hotel was reserved for the vehicles and a detail of Boston police was on hand to direct them to the curb.

Before leaving for home, the visitors had an opportunity to view the many attractive exhibits which were installed by Greater Lawrence industries.

ACTIVE COMMITTEE

The program for the Greater Lawrence Story was arranged by a large and active committee under the leadership of Irving E. Rogers, publisher of the Eagle-Tribune, as general chairman, assisted by Timothy J. Scanlon, president of the Greater Lawrence Chamber of Commerce. Serving on subcommittees were: attendance, Arthur R. Flynn, chairman; William W. Kurth, Ernest R. Withrow, Geoffrey Glendinning, Leslie N. Hutchinson and Paul J. Greeley; exhibit, John N. O'Malley, chairman; John J. Carroll and Howard A. Stockwell, Jr.; prizes, Edward B. Bruce, chairman; John J. Carroll and Charles J. McCabe; invited guests, Walter V. Demers and Roland R. Siskind; signs and decorations, Eugene A. Bernardin; brochure and club announcement, John P. S. Doherty; publicity, Fred A. Sullivan and Bernard F. Ostreicher. Others serving on the general committee are: Walter E. Billings, David J. Christensen, Dewey A. Dyer, Kurtz M. Hanson, Harry D. Hargreaves, James P. Holihan, Thomas F. Killeen, Russell W. Knight, William F. Lucey, Albert P. Manzi, Harvey G. Mehlhouse, Thomas F. O'Leary, David H. Simonds and Ivan M. Woodward.

HANSON RECOUNTS STORY OF GREATER LAWRENCE RECOVERY

(EDITOR'S NOTE.—The address The Greater Lawrence Story, as delivered before the Advertising Club of Boston, Tuesday, by Kurtz M. Hanson, president of the Associated Industries of Massachusetts and the Champion-International Co. of Lawrence, follows:)

The Greater Lawrence story begins with the Greater Lawrence that was—a community with 65 percent of its factory employment centered in 1 great industry—woolen textiles—and known far and wide as the capital of the woolen worsted industry.

The exodus and liquidation of a major part of this industry 7 years ago brought unemployment to approximately 20,000 persons. It caused a pall to hang over the area which was tottering on the brink of a major depression. In the midst of a nationwide prosperity, our community had the dubious distinction of being labeled the country's No. 1 distress area by economists and Government authorities.

Out of this darkness, leadership asserted itself. Clear minds evaluated the situation and balanced the area's assets against its liabilities. A drive was spearheaded to reverse the trend and counteract the insidious pessimism that could strangle this traditionally flourishing industrial stronghold.

An easy way out, and one that I confess met with some support in those trying days, was to appeal to Washington for help and subsidies. And, indeed some feeble efforts were made in that direction. However, true to the New England tradition, we took off our coats, rolled up our sleeves and met the situation ourselves, relying on our courage, our enthusiasm and modern selling strategy to win the battle for new industries, new payrolls, and above all a diversified industrial economy.

TOWNS PLAYED PART

One of the most thrilling chapters in The Greater Lawrence Story is the account of the part played by the towns of Methuen, Andover and North Andover, the three adjoining communities which with the city comprise Greater Lawrence.

At the first warning that disaster threatened, and as preliminary plans were being hastily made to grapple with the problem, the three towns rallied in the common cause. Their contribution to the overall effort was spontaneous; it was genuine; it was unanimous, and its magnitude just cannot be measured. Town officials, civic leaders and suburban citizens in all walks of life offered their services, worked on committees and contributed money and ideas in the common effort.

The first forward step in our program was the reorganization of the Lawrence Chamber of Commerce into a revitalized Greater Lawrence Chamber of Commerce, with new leaders, a greatly expanded membership and a budget five times larger than before.

This done, the thinking of our people crystallized into a determination which led to the formation of a committee by the mayor of Lawrence to coordinate every force at our command in order to tackle the problem and to devise ways and means toward a solution. The committee was named the Greater Lawrence Citizens' Committee for Industrial Development. Its membership was carefully selected to provide a cross-section of community life. Its function was to serve as a clearinghouse—and to supplement already existing community agencies.

Our task was to find jobs for our people. What better way to do this than to put to use the advertising and merchandising techniques with which you are all so familiar.

First came an inventory of community assets. We had space—manufacturing space—12 million square feet of it—ready for immediate occupancy in well constructed buildings.

WE HAD PEOPLE

We had good local government willing to encourage and cooperate with the industries which would give to the community its life blood—payrolls.

But above all other assets—we had people—a great reservoir of skilled workers—ready and eager to work. These people were accustomed to factory work—alert, manually adept, and with an unusual ability to adapt to different work. These people who could, would and did produce at a rate second to none proved to be our greatest asset.

There were whole families of these highly skilled men and women particularly well equipped to take their places in new industries where they would be able to perform with dexterity any intricate and delicate manipulations required. Many new industries required work that was similar in many respects to the processes they had learned so well in handling textile fibers. They required a minimum of training for the new industries we wanted to attract to Lawrence.

Their natural aptitude was matched by their loyal attitude. Deeply rooted in the community in which they lived and where many of them were born, they steadfastly resisted the blandishments of outside industries. To their everlasting credit, they were determined to remain in greater Lawrence and to offer their great reservoir of skills as an incentive to new industries to move to our area. For example, the efforts of a Connecticut manufacturer to lure 200 of our people to our sister State were unsuccessful. Only six responded. This was important to us.

Other communities had manufacturing sites and vacant space—other communities had good local government but not all had a skilled labor pool. We did.

These, then, were our assets. Now, to sell the package.

ADVERTISING CAMPAIGN

The first recommendation of the newly formed committee was for the establishment of an advertising budget and the appointment of an advertising agency.

A campaign was envisioned which involved the use of sizable advertising space in major national media directed at industries which we believed we could attract.

Obviously, this meant money. And our only source of funds was the city government. You can appreciate that, under existing conditions, a request for any sum would be given very close scrutiny. However, a budget was established, and with the courageous action of our mayor there was minimum of resistance and the money was appropriated.

The theme of our campaign was to dramatize the existing plant space and our pool of skilled, experienced men and women.

We deliberately aimed at the high spots in this early copy. We tried to entice industrial firms that might be faced with the necessity for quick expansion in those post-Korean days. We also aimed our copy at those industries needing the type of workers for whom the break-in period could be held to the minimum.

For the sake of expediency, we hung our hopes on these two primary attractions—there was no time for selectivity; we needed

payrolls fast to bolster our shrinking economy.

We needed also to show the country that we were aggressive and fighting back hard. In fact, the very size and brashness of our advertising messages were part of our technique to establish that we had confidence in the merchandise we had to sell—and the courage to spend money to say so.

We were successful in inducing a number of small firms to locate in Lawrence. But this was not enough. We needed a big name corporation to dramatize our advantages to other big corporations.

As you know, industries like people, want to be with a winner. We needed that first important breakthrough to convince prospects of the advantages that we knew we had.

WESTERN ELECTRIC FIRST BIG FIRM

The first big prize was the acquisition by the Western Electric Co. of the former Monomac Cotton Spinning Mills in Lawrence. They needed space immediately to expand their eastern operations.

Western Electric had chosen Lawrence. We played this magic name for all that it was worth and other firms of similar caliber began to show interest.

We were underway. Our consistent schedule of advertising was also beginning to prove its cumulative value by turning previously perfunctory inquiries into live, active leads and real momentum developed.

Manufacturers were beginning to realize that our mill properties were better adapted to their accelerated needs than new, custom construction, with its delay and high cost.

Textile manufacturing requires more square feet of space per employee than any other industry; hence our vacant textile mills provided ideal floorspace where the streamlining of production lines could be established.

For example, the Wood Mill—formerly the largest woolen worsted mill in the world—had 135,000 square feet of floorspace on each floor of two 7-story buildings—a total of 189,000 usable square feet of space.

In addition to this advantage of space, our labor pool was found to be exactly as advertised in every detail of efficiency and craftsmanship.

Newspapers in leading metropolitan cities, and trade papers in carefully chosen fields constituted the major part of the initial advertising schedule. We operated on a budget of approximately $20,000 a year, with funds provided out of the city treasury under a special act of the Massachusetts Legislature.

LOCAL INITIATIVE

After some 3 years of this type of conditioning, we decided to diverge slightly from our original promotional course and concentrate more fully on exploring the inquiries and interest which had been created. In the meantime, other developments had taken place in Lawrence—notably the formation of the Greater Lawrence Industrial Associates, Atlantic Enterprises, and similar private endeavors.

The Associates, for example, is a dramatic instance of the initiative of private citizens, banded together for the civic good, 26 leading local business men and women invested $154,000 of their own money in a venture for the sole purpose of creating jobs in Lawrence.

They acquired the ownership of the former Arlington Mills with approximately 2 million square feet of usable plant space in more than 15 buildings.

To finance this purchase, they borrowed $325,000 from the Massachusetts Business Development Corp.

This loan was repaid within 1 year by the Greater Lawrence Industrial Associates who used direct mail and other promotional media to fill—within 6 months—two-thirds of the space that they had purchased.

This property is now almost completely occupied and its facilities form a large part of Lawrence's present diversified industrial family. This one venture has been responsible for 4,368 new jobs with an annual payroll of $16,380,000.

MASSACHUSETTS BUSINESS DEVELOPMENT CORP.

I should like to take a moment at this point to explain the part that the Massachusetts Business Development Corp. plays in the economy of the commonwealth.

Many of you will recall that the Massachusetts Business Development Corp. was authorized by special act of the legislature upon Governor Herter's request. I should like to quote from part of the enabling legislation:

"The purposes of the corporation shall be to promote, stimulate, develop, and advance the business prosperity and economic welfare of the Commonwealth of Massachusetts and its citizens."

This corporation is privately owned by its stockholders and has no connection with the State or Federal Government. It is a striking example of what can be done by private enterprise in answer to the constant plea for continuing government aid, whether local, State or Federal.

The Massachusetts Business Development Corp. has an authorized capital of $4 million. This money is provided by the sale of stock, and for each dollar in stock members of the corporation may loan $8. In other words, we have leverage of 8 to 1: a possible $4 million in capital and $32 million borrowing power for a total of $36 million.

Those members who loan the corporation money do it on a sound businesslike basis whereby they receive one-fourth of 1 percent above the prime rate in Boston at the time the loan is made.

To date, this corporation has loaned a total of $11,207,000 and is responsible for having generated over $40 million in payrolls.

One of the strongest supporters of the Massachusetts Business Development Corp. has been the city of Lawrence, whose citizens—both corporate, and individual—have purchased more than 11 percent of all the stock sold by the corporation. Boston is the only other city in the Commonwealth that has purchased more stock.

Now back to the Greater Lawrence story.

NEWSPAPER SUPPORT

The methods of promotion used for this venture had taken a different direction, to be sure, but our efforts remained unabated in force and intensity.

Letters to prospects continued in steady flow. Personal calls, collateral contacts by business people, bankers, utility companies, and others—contributed to expand our advertising impression and supplement the use of scheduled advertising in our program.

One of the most important adjuncts to this continued effort has been the magnificent support we have received from our local newspapers and radio stations. As you know, success comes from within—and the influence exerted by the splendid help from the Lawrence Eagle-Tribune and other community news media aided immeasurably in creating the renewed citizen confidence and enthusiasm so vitally needed to back up the organized local action.

For the past year and a half, the mainstay in our public relations picture has been the widespread publicity which we have been able to attract because of our dynamic revitalization.

We now find that we can employ a more selective approach to our prospects. In contrast to our previous broad-coverage technique, we are currently exploiting the pinpoint method of going directly to the heads of industries for whom we believe we have superior attractions.

As a preliminary to personal correspondence and solicitation, we have compiled a desirable list of firms known to be considering relocation or expansion.

In addition, we have created what we call "The Lawrence Letter," a newsy type of fact sheet presenting capsules of events as they might relate to the individual requirements of the firms on our mailing list.

This procedure is paying off in helping us to sell the remaining plant space. It is also creating active interest in the industrial park zones of Greater Lawrence which are now receiving the major attention in our plans and projections for the future.

We can now capitalize on the selection of our area by such industrial giants as Western Electric, AVCO, Raytheon, Congoleum-Nairn, Sylvania-Corning. We can also point with pride to our older, established companies who have stayed with us and expanded such as Tyer Rubber Co., Bolta Division of General Tire & Rubber, Champion-International Paper Co., John W. Bolton & Sons, J. P. Stevens Mills, and other equally renowned but smaller firms.

DIVERSIFIED INDUSTRY

We come to the present—the Greater Lawrence this is.

It is a community of diversified industry—where we formerly had 85 percent textiles and 15 percent other industries—we now have 15 percent textiles and 85 percent other industries. Greater Lawrence is now truly diversified.

In the past 5 years bank deposits in greater Lawrence have increased 35 percent. Carloadings have gained 387 percent. United Fund contributions have almost doubled. Traffic at the Lawrence Municipal Airport has increased by a phenomenal 980 percent.

I could quote many more interesting statistics arising out of this very successful campaign of selling a community by modern advertising and merchandising techniques. However, the facts you are interested in are to be found in the folder at your table place. Take that folder with you. Read it and see at firsthand a case history of the results of area cooperation, planning, initiative, and action.

ONLY THE BEGINNING

Encouraged as we are by our progress to date, we appreciate that this is only the beginning—and we are determined that the past few years of our rebirth will serve merely as a springboard to even greater accomplishment.

There are many more chapters still to be written in the years that lie ahead. We are determined to pursue with undiminished vigor the program which has brought rich rewards in the form of new industries, diversified industries, growing industries.

We shall continue to follow the inspired leadership of press, pulpit, municipal officials, public-spirited groups and individuals.

We are particularly proud of the generous and the wholehearted support of our citizenry. They have indeed lived up to the reputation which greater Lawrence has enjoyed for many years, namely, "The friendliest community in the United States."

MODERN PIONEERS OF PROGRESS

Ladies and gentlemen—this has been a summary of the greater Lawrence story. But, of course, it is not the whole story—despite the recognition that you have given us here today and the acclaim that we are currently receiving from the Nation's press.

Don't let anyone ever tell you that the day of the pioneer has passed from the American scene. Let no one say that enthusiastic enterprise no longer prevails in New England. When the attitude of the people in the community is right and they honestly strive to help themselves, they will

be successful. Success begets success. There will never be a substitute for right attitudes and right motives.

If you really want to see community cooperation in the promotion of civic endeavors; if you want to see modern pioneers of progress blazing new trails that others may well follow; if you want to see effective advertising and modern marketing methods employed productively and profitably at the community level—from now on keep your eyes focused on our community where every citizen—is a salesman—to make greater Lawrence the greatest Lawrence ever.

Erase the Double Standard

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 2, 1957

Mr. MULTER. Mr. Speaker, refugees from oppression in Egypt should be given the same opportunity for sanctuary as refugees from oppression in Hungary, but they are not. The recent announcement by Assistant Commissioner of Immigration Rudnick is indeed a strange paradox.

In this connection, I commend to the attention of our colleagues the following editorial which appeared in Congress Weekly, the official publication of the American Jewish Congress, on April 1, 1957:

ERASE THE DOUBLE STANDARD

The Assistant Commissioner of Immigration, Edward Rudnick, has informed the American Association of Jews from Egypt that the Government does not plan to use the parolee section of the immigration law for any refugees other than those from Hungary. This blunt statement will disturb all those Americans who have been profoundly troubled by Nasser's persecution of the Egyptian Jewish community and who have urged the administration to extend sanctuary to his victims.

The generous response of our Government in acting promptly to admit the Hungarian refugees accorded with our finest traditions of hospitality and sympathy for the oppressed of all nations. It is difficult to understand why this humanitarian impulse should have exhausted itself in a few brief months. For the deplorable fact is that the solicitude we demonstrated for the Hungarian refugees has been little in evidence with regard to the Egyptian expellees. Expressions of sympathy have been forthcoming; concrete action not at all.

Freedom, we have often been reminded, is indivisible; so, we may add, are assaults on freedom. Nasser's brutal assault on Egypt's Jews is morally no less revolting than the Soviet attack on the freedom of the Hungarian people. This is not merely a question of balancing rights: A sense of justice and compassion expresses itself not in cautious and pinched weighing of rights but in spontaneous and generous response to the victims of oppression.

In a letter to Attorney General Brownell last week, Senators JAVITS and IVES of New York and Senator CASE of New Jersey urged emergency action to give asylum to a "reasonable number" of Jewish expellees from Egypt. The Senators estimate that the number of such refugees "who have families here and would seek admittance to the United States is relatively small—not over 5,000 at the largest estimate." Senators JAVITS and IVES have also proposed an amendment to the immigration bill now pending before Congress so as to permit the entry of refugees not only from Iron Curtain countries but from the Middle East as well. This new legislative proposal, however, as is recognized by the Senators themselves in their letter to the Attorney General, does not obviate the need for prompt action by the Attorney General within the framework of already existing law.

Under the present immigration laws the Attorney General is empowered to admit the Egyptian Jewish refugees as parolees, as he has done for the Hungarian escapees. Neither in logic nor in humanity should we prefer one group of helpless victims of tyranny over another, when both find themselves in equally desperate circumstances. We urge the administration to reconsider its decision and erase the double standard it has applied, with such grievous effect, to the unfortunate victims of oppression.

Msgr. George G. Higgins Urges Enactment of Kelley Minimum-Wage Bill

EXTENSION OF REMARKS
OF
HON. AUGUSTINE B. KELLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. KELLEY of Pennsylvania. Mr. Speaker, one of the best articles which I have seen recently on the question of expanding coverage under the Fair Labor Standards Act, the minimum-wage law, has been written by Msgr. George G. Higgins, of the National Catholic Welfare Conference, one of the outstanding leaders of liberal thought in our country.

This article appeared in numerous publications, among them the Catholic Standard. It takes pains to point out that the long-overdue extension of coverage of minimum-wage protections to many not now covered would not be "inflationary, interfere with States rights, cause business to go bankrupt, curtail employment, be difficult to enforce," and so on, any more than similar charges applied to the act in 1938 have been found to be valid.

Monsignor Higgins, who is director of the social-action department of the NCWC, adds in his article that 19 States have no minimum-wage legislation, and only 1 State has a minimum as high as $1 an hour. He adds:

It is obvious, then, that meaningful legislation must come at the Federal level.

The full text of the article by Monsignor Higgins, under the title "The Yardstick," is as follows:

Congress is now considering extension of the coverage of the Fair Labor Standards Act. Hearings are in progress in the Senate on S. 1267, introduced by Senators MORSE, MURRAY, NEELY, and MCNAMARA, and in the House on a similar bill (H. R. 4575) introduced by Congressman AUGUSTINE KELLEY, of Pennsylvania.

In addition, Secretary of Labor Mitchell has presented an administration-backed proposal. These bills and the Secretary's proposals all seek to bring the benefits of the wage-and-hour law to more employees.

The Fair Labor Standards Act, enacted in 1938, has remained virtually unchanged except for periodic adjustments in the minimum wage to conform with the cost-of-living index. It provided a minimum wage and time and a half for hours over 40 in a workweek. However, at that time Congress believed that conditions justified covering only a portion of employees who needed protection.

As a result, the full powers of Congress over interstate commerce were not exercised. Furthermore, many exemptions were placed in the act, removing additional large numbers of employees from the act's protection because, it was claimed, they were employed in so-called sick industries.

MANY OUTSIDE ACT

The present act covers about 25 million employees. An almost equal number remain outside of its protection. Thus, the original act fell far short of the policy declared in section 2—to eliminate "the existence in industry * * * of labor conditions in detrimental to the maintenance of the minimum standard of living necessary for health, efficiency, and general well-being of workers." It is of significance that, for the most part, those remaining outside of the act are rereceiving low wages and working long hours.

The problem, then, is whether under today's conditions there is any longer any economical or practical need for denying minimum wage-and-hour standards to the several millions of employees not covered under the terms of the existing law. In our opinion, there is not. For that reason, we strongly favor the enactment of the Morse-Kelley bill.

The Morse-Kelley bill tackles the problem in two ways: (1) By amending the coverage provisions to include activities which affect commerce; (2) by limiting or entirely eliminating certain of the exemptions. It is estimated that the Morse-Kelley bill would bring wage and overtime benefits to approximately 9 million employees.

Those who oppose the Morse-Kelley bill argue that changes in the act to provide minimum wage-and-hour standards to any number of new employees would be inflationary, interfere with States' rights, cause business to go bankrupt, curtail employment, be difficult to enforce.

In answer to this, the proponents of expanded coverage point out that all of these arguments were made at the time the law was originally enacted, but that none of the dire consequences resulted. It is suggested that if industry could conform in 1938, it could easily do so in 1957.

MAJORITY CONFORM

As a matter of fact, the major part of industry is already conforming either because of the Fair Labor Standards Act, or because they voluntarily adopted fair standards, or because they operate under collective-bargaining agreements. The vast bulk of employers in the United States now pay $1 per hour and recognize the 40-hour week. So, except for some unusual circumstance, it would seem that the maintenance of such minimum standards would not constitute a crippling burden.

Finally, the argument in favor of having the States handle this type of legislation is meaningless for all practical purposes. Despite discussions of minimum-wage and maximum-hour legislation over the past 40 years, State action has been incomplete and inadequate.

Nineteen States have no minimum-wage legislation. Anly eight States have minimum wages for men. Only one State has as much as a dollar an hour as a statutory wage. It is obvious, then, that meaningful legislation must come at the Federal level.

Kansas Democratic Club

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. BREEDING. Mr. Speaker, the Kansas Democratic Club held their annual rally in Topeka, Kans., on April 5 and 6 and on the night of April 6 we were indeed honored to have with us a most distinguished gentleman, the former President of the United States, Harry S. Truman, who spoke on the occasion of the Kansas Democratic Club's victory celebration dinner. This was the largest Democratic gathering of its kind in the history of our State, over 1,300 people being in attendance at this dinner. It is indeed fitting and proper that the former President's speech be included in the RECORD and it is, therefore, set forth below:

Never did Kansas need a Democratic approach more than it does at this time. But sometime, and the time gets closer, Kansas will awaken to the fact that its interests are the people's interests. Then the public servants of Kansas will belong to the party of your governor and the people's interests in this great State will be in safe hands.

We had a national political campaign last November, and glamour and demagogery cost us the top job. But Kansas came across with a Democratic governor and a lot of local Democratic officials.

I have been from Aroostook, the potato county in Maine, to San Diego, Calif., from Seattle and Bellingham, Wash., to Key West, Fla., from Minnesota to Louisiana and all the States in between—east, west, north, and south.

All are great in some particular. Kansas is great in many particulars. Its people are independent thinkers and are willing to listen to facts and act accordingly. It has a western approach to things, and it is recovering from that bleeding era which affected both Kansas and Missouri.

I have been in many countries in Europe, South and Central America. I have been to Mexico and Canada. And while I had great receptions and cordial welcomes in all of them, I still favor this part of the world as the best place in which to live.

I have had every political office, nearly, from precinct worker to President of the United States, and I came back home to live at the end of it all, and I'm your close neighbor.

The only reason I have gone over this is to lead up to what happened on November 6, 1956.

On November 7 I issued the following statement:

"The people have spoken, and good citizens abide by the result.

"I am, of course, disappointed that Mr. Stevenson was not elected. I did all I could to help in his campaign.

"I am very happy at the results in Missouri, Kansas, Iowa, and South Dakota and a number of other States, Pennsylvania, Washingtno, Oregon, and Idaho, for instance.

"Since we have a Democratic Congress, I am sure that the country will continue to go forward with Democratic advice and help."

In 1948, when an unusual victory took place, I told all the smart boys and the big newspapers to take down their crow-eating signs and come into the Government to help the winner make good. Most of them did. There were some of that had a notion all was wrong with the country. But this great Republic of ours cannot and will not go completely wrong.

I am a Democrat and believe in the principles and policies of the Democratic Party. At this meeting celebrating the victory of Governor Docking in Kansas and Missouri's overwhelming victory for the Democratic Party, I am repeating some of the things I have said before. To start with, the party in Congress needs aggressive, fighting leadership. The Democrats in Congress need a program for domestic and foreign policy. The leaders in Congress can give us such a program.

Each period of our national history has had its special challenges. Those that confront us now are as momentous as any in the past. Recent happenings mark the beginning of a period that will be eventful, perhaps decisive, for us and for the world.

It may be our lot to experience, and in a large measure to bring about, a major turning point in the long history of the human race. The first half of this century has been marked by unprecedented and brutal attacks on the rights of man, and by the two most frightful wars in history. The supreme need of our time is for men to learn to live together in peace and harmony. Right now we are faced with terrible situations in Hungary, Egypt, Syria, Poland, and East Germany.

The peoples of the earth face the future with grave uncertainty, composed almost equally of great hopes and great fears. In this time of doubt, they should look to the United States as never before for good will, strength, and wise leadership.

It is fitting, therefore, that we proclaim to the world the essential principles of the faith by which we live, and to declare our aims to all peoples.

The American people stand firm in the faith which has inspired this Nation from the beginning. We believe that all men have a right to equal justice under law and equal opportunity to share in the common good. We believe that all men have the right to freedom of thought and expression. We believe that all men are created equal because they are created in the image of God.

From this faith we will not be moved.

The American people desire, and are determined to work for, a world in which all nations and all peoples are free to govern themselves as they see fit and to achieve a decent and satisfying life. Above all else, our people desire, and are determined to work for peace on earth—a just and lasting peace—based on genuine agreement freely arrived at by equals. Most of us believe that aggressors should be stopped in their tracks—stopped before they start. And that can and has been done by the United States of America.

In the pursuit of these aims, the United States and other like-minded nations find themselves directly opposed by a regime with contrary aims and a totally different concept of life. That nation boldly threatens to bury us and all free nations.

That regime adheres to a false philosophy which purports to offer freedom, security, and greater opportunity to mankind. Misled by this philosophy, many peoples have sacrificed their liberties only to learn to their sorrow that deceit and mockery, poverty and tyranny are their reward.

That false philosophy is communism.

Communism is based on the belief that man is so weak and inadequate that he is unable to govern himself, and therefore requires the rule of strong masters.

Democracy is based on the conviction that man has the moral and intellectual capacity, as well as the inalienable right, to govern himself with reason and justice.

Communism subjects the individual to arrest without lawful cause, punishment without trial, and forced labor as the chattel of the state. It decrees what information he shall receive, what art he shall produce, what leaders he shall follow, and what thoughts he shall think.

Democracy maintains that government is established for the benefit of the individual, and is charged with the responsibility of protecting the rights of the individual and his freedom in the exercise of his abilities.

Communism maintains that social wrongs can be corrected only by violence.

Democracy has proved that social justice can be achieved through peaceful change.

Communism holds that the world is so deeply divided into opposing classes that war is inevitable.

Democracy holds that free nations can settle differences justly and maintain lasting peace.

These differences between communism and democracy do not concern the United States alone. People everywhere are coming to realize that what is involved is material well-being, human dignity, and the right to believe in and worship God.

The United States has invested its substance and its energy in a great constructive effort to restore peace, stability and freedom to the world.

We have constantly and vigorously supported the United Nations and related agencies as a means of applying democratic principles to international relations.

We have consistently advocated and relied upon peaceful settlement of disputes among nations.

We have made very effort to secure agreement on effective international control of our most powerful weapon, and we have worked steadily for the limitation and control of all armaments.

We have encouraged, by precept and example, the expansion of world trade on a sound and fair basis.

We have strengthened the free nations to prevent aggression, and when aggression came in Korea, we took the lead in hurling it back.

We have, through our programs of foreign aid and technical assistance, restored the economy of the free Western nations, opened new opportunities in the lives of the people of the underdeveloped countries, and demonstrated to all the world that the way of freedom is the way to higher standards of living.

This is a great record in foreign affairs. It is a record of generosity and devotion to the cause of peace that no nation in history can surpass. We have spent our money, we have sacrificed lives, we have assumed great burdens at home and abroad in this great effort.

But in spite of all our achievements, we have not yet reached our goal. Indeed, 4 or 5 years ago we seemed closer to success than we do today. We now seem to be slipping backward, as the forces of communism advance in the Middle East and the Far East, and the alliance of free nations is beset by differences and doubts.

The fault lies in the lack of leadership in the State Department and the White House. Our allies have come to the conclusion that they cannot trust our foreign policy, and our foes have decided that most of the time our leaders are bluffing and they need not fear them. Our country is still admired and respected, but our Government has lost both confidence and respect. This is a situation of great danger for the future of our Nation.

However, in this perilous situation, our reaction must not be one of panic or impatience. We must not abandon the basic policies which we have followed so far, because they have saved the world from another world war, and they remain our only hope for the future. We must insist that the President and the Secretary of State fol-

low these policies; we must put all the pressure we can on them to do their jobs right, and continue to lead the free world with courage and decision.

The only way we can do this is through the Democratic leaders in Congress. The President has the main responsibility in foreign affairs, but he has to work with the Congress, and strong congressional leadership can make up, to some degree, for weakness in the executive branch. So we must encourage our congressional leaders to hold the country firmly to the great effort we have been making for peace, and to correct the blunders and vacillation that come from the executive branch.

This means certain specific courses of action in the years ahead.

We, as citizens, must call for continued support for the United Nations and its related agencies. We must strengthen the authority and effectiveness of these international organizations. But we must insist that the United Nations shall not be used as an excuse for failing to have a foreign policy of our own. We must not develop a "let-George-do-it" attitude toward the United Nations. This country is a leader in the United Nations, and, as a leader, it must decide where it wants to go. The idea of dumping all the knotty Near East problems in the lap of the U. N. without proposing any solutions is a shameful abdication of our international responsibilities.

Second, we must insist on the continuance of our defense programs and our programs to strengthen the power of the free nations to resist aggression. Here the danger comes from unwise budget-slashing. Unfortunately, the balance of military power is still essential to world peace. If the free nations become weaker than the Communist nations, all hope will be gone. If, on the other hand, our defense expenditures and those of our friends demonstrate our unflinching determination to meet any armed attack with overwhelming force, such an armed attack may never come. Now is certainly the time we need such a policy, and we need it badly.

Third, we must continue and expand our programs to aid the economic development of the poorer countries and to give them the benefits of our scientific advances and industrial progress.

Foreign aid is under attack today. But most of our foreign aid is for military and defense equipment. Only a small fraction of it is for economic development and technical assistance—the program that was launched, when I was President, as the Point 4 program. Yet this small fraction may be the most important part, for the only sure defense against Communist infiltration in the underdeveloped countries is progress toward a better life for the average man.

More than half the people of the world are living in conditions approaching misery. Their food is inadequate. They are victims of disease. Their economic life is primitive and stagnant. Their poverty is a handicap and a threat both to them and to more prosperous areas.

For the first time in history, humanity possesses the knowledge and the skill to relieve the suffering of those people.

The United States is preeminent among nations in the development of industrial and scientific techniques. I believe that we should continue to make available to peace-loving peoples the benefits of our store of technical knowledge in order to help them realize their aspirations for a better life. And, in cooperation with other nations, we should foster capital investments in areas needing development.

Greater production is the key to prosperity and peace. And the key to greater production is a wider and more vigorous application of modern scientific and technical knowledge.

Only by helping the least fortunate of its members to help themselves can the human family achieve the decent, satisfying life that is the right of all people.

Democracy alone can supply the vitalizing force to stir the peoples of the world into triumphant action, not only against their human oppressors, but also against their ancient enemies—hunger, misery, and despair.

If we are to be successful in carrying out these policies, it is clear that we must have continued prosperity in this country, and we must keep ourselves strong.

Recent events, unfortunately, have brought about a lack of confidence in our influence abroad. These events test our courage, our devotion to duty, and our concept of liberty.

Steadfast in our faith in the Almighty, we must continue our advance toward a world where man's freedom is secure.

To that end we should devote our strength, our resources, and our firmness of resolve. With God's help, the future of mankind will be assured in a world of justice, harmony and peace.

This world concept requires the effective and militant leadership of the United States of America, the greatest Republic in all the history of the world. It is perfectly apparent that the world must look to the Democratic Congress for that leadership.

Now is the time for the people and the Democratic Party to awaken to their opportunities everywhere. Here in this great State of Kansas you have a governor you can follow and on whom you can rely. Wake up and take advantage of your opportunity.

Shopping Abroad

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial:

[From the Philadelphia Evening Bulletin of April 8, 1957]

SHOPPING ABROAD

This country can no longer go it alone on the natural resources within our borders. The American Iron and Steel Institute reports that last year 34 million net tons of iron ore came to us from abroad. That is 11 times as much as was imported 10 years ago.

A fair share of this came up the Delaware from iron mines in Venezuela. Canada alone contributed nearly 16 million tons. Brazil, Chile, Liberia, and Sweden each accounted for more than a million tons.

Steel is an industry basic in importance to a great power. Our own steel industry in its tremendous expansion uses ever greater quantities of iron ore, and it cannot find them any longer in the United States in sufficient measure.

The Government is well aware of our lack of home supply of vital metals. That is the reason for the stockpiling program of copper, nickel, and a large number of other materials. We cannot afford to be caught short of these in time of war.

Underlying our present foreign policy of cooperation with other nations and assistance to them lies this fundamental economic situation. We are no longer a self-sufficient nation, as we were at the opening of the century. We dare not risk acting like one in our foreign policy.

Alaska's Economy Doesn't Warrant Immediate Statehood

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. PELLY. Mr. Speaker, the following letter to the editor of the Seattle Times was printed in the April 4, 1957, edition under the caption: "Times Readers Have Their Say."

This is a most thought-provoking presentation of facts and figures which all add up to the conclusion that Alaska's economy does not presently warrant statehood. It makes timely reading for all Members of Congress, and dovetails with my suggestion that Alaska be given Commonwealth status for an interim period with Federal tax exemption in order to give industry an incentive to establish plants and payrolls in the Territory to develop the vast resources there. Once investors are able from a cost standpoint to support themselves and make a profit, Alaska will be able to afford statehood which I have personally supported by my vote in Congress. I think Congress should give full consideration to the Commonwealth plan.

The letter follows:

ALASKA'S ECONOMY DOESN'T WARRANT STATEHOOD

EDITOR, THE TIMES:

I have been an Alaskan since 1933, and my future is tied in with Alaska. The majority of voters in Alaska have indicated desire for statehood, but I am not sure that everyone realizes just what it might mean to their personal economy. * * * Many proponents of immediate statehood may very well be motivated by personal gain rather than desire to see Alaska benefited.

Many have an honest reservation in mind as to whether or not Alaska's economy can support the added expense of statehood without a definite threat to the ability of industry to continue to operate in Alaska—let alone the expansion necessary to make Alaska self-supporting. * * *

Brief summary is here made of income-producing industries in Alaska; also analysis of taxes collected on this income and appropriation demands against those taxes:

Total Territorial income for 1956 has been estimated at $500 million. This is broken down as follows: Mining, $24,919,000 (this includes $8,300,000, from sand and gravel production); forestry, $34,395,000; fishing, $78,000,000; farming and miscellaneous, $8,000,000; defense and/or Government spending, $335,000,000.

Mining offers a potentially greater source of income. Forestry products should increase. Since fisheries income has remained relatively stable for the past 3 years, it could be assumed a plateau has been reached. Testimony before recent statehood hearings in the House subcommittee by General Twining indicated that Government will have continuing expenditure for an indeterminate period for maintenance, but that heavier construction spending would probably fall off. How much is open to conjecture.

Reduction in Government spending must be made up in additional income from other industry or sources in order to maintain tax revenues at present levels.

Taxes collected by Alaska for 1956 totaled $20,354,126.67; certain of these revenues are

earmarked and approximately $14,500,000 will go to the general fund and $1,500,000 to support of schools—a total of $16 million. For a 2-year period, or biennium, we can assume collections going to the general fund and school support will amount to $32 million.

The biennial appropriation bill recently brought out in the Territorial legislature totals $36,507,264.36; added increases in taxes were passed to close the gap between appropriations and tax collections.

Obviously, the same taxpayers are being loaded with heavier taxes to meet the additional expenditures, with no indication that the top has been reached in Territorial budget appropriations. Compare growth of appropriations and population for the past several years.

Population in 1939 totaled 55,000—53,000 civilian and 2,000 military. In 1950, there were 152,000—119,000 civilian and 33,000 military. Last year, there were 212,000—162,000 civilian and 50,000 military.

Budget appropriations (general fund) for the 1938–39 biennium amounted to $3,500,000. For 1950–51, $17,973,000; for 1956–57, $36,507,000.

There are several obvious conclusions to be reached by analysis of these facts and statements:

In order to maintain a tax income sufficient to meet even the present rate of appropriation, the annual income must remain the same. This is not going to happen, because heavy construction represents roughly $90 million of the present income. Obviously, the $8,300,000 production of sand and gravel is tied to heavy construction.

Industry will have to make up the loss in heavy construction incomes; to expect industry to make up more than $90 million annually is not reasonable; particularly since mining and forestry, which I believe represent the great potential, now have total annual income of the only approximately $60 million.

Consider what the added cost of statehood will mean to the taxpayers. Very conservative estimate would be $3 million per year. Since $500 million income resulted in approximately $20 million in taxes, let us say that 4 percent of income represents taxes.

Working it backward, $3 million added cost of Government would necessitate slightly under $80 million in additional income. For industry to add this additional $80 million would indeed be a monumental task.

It certainly doesn't seem that Alaska has an economy that is based on sound enough facts to warrant any real enthusiasm for a change to statehood at this time.

GLEN D. FRANKLIN.

I'm Just a Number Now

EXTENSION OF REMARKS
OF
HON. OTTO KRUEGER
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. KRUEGER. Mr. Speaker, millions of Americans filing their income-tax returns once again are going through the annual business of searching for their social security number. It is just one more blank to be filled in before the return can be filed. At least some Americans object not only to this, but to the fact they have been brought under social security aaginst their wishes. C. A. Waldron, of Minot, N. Dak., well-known in the northwest as "Dakota Cal," sums up his feelings and the feelings of many in his poem entitled "I'm Just a Number Now":

Today I'm just a number; it is one
I did not seek;
When men were wrapt in slumber
Congress dumped it on the meek.

Another freedom late enjoyed
Has vanished up the spout
We've lost a voice in what we join;
Its gone; we're left without.

Do-gooders who are in the know
Have bound us to obey
They've put a clincher on our dough
We spent it as they say.

For, e'er we pay our income tax
We're "numbered" for the kill
They've all but stitched it on our backs
They've nailed it on the till.

No longer may one choose a source
From which to buy insurance
Now bludgeoned into it by force
We sign, on pain of durance.

To pick insurer as we did
Is down the drain by order
They take the pro quo from the quid
Until we can't afford 'er!

You're put upon to pay the toll
Improvidence has courted
To build great arsenals of dole
That drones may be supported.

It matters not how man may squirm
Nor how, in vain he fidgets.
He rates a number; like a worm
He's stretched in endless digits.

Thus socialism grows apace.
Like octopi it reaches
Until the whole darn human race
Is strangling at the breaches.

EPITAPH

Here lies old number 651-s.s.-8947;
His present whereabouts unknown—
He hoped and aimed for heaven.
American his heritage—they fleeced him of that surety
And made him just a number
Under socialized security.

Same Old Suckers

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. GROSS. Mr. Speaker, from the Deep South—Jackson, Miss., and the Daily Clarion-Ledger—comes an editorial reminder of who is being gouged as a result of the Suez Canal fiasco that was engineered by the British, French, and Israelites.

Cleanup of the canal mess has been heralded far and wide as a "United Nations project." But, as the Clarion-Ledger points out, you have only to look in the nearest mirror to determine the sucker in this deal.

Here is the Clarion-Ledger editorial of April 6, 1957:

If you are wondering who has been footing the bill for clearing the Suez Canal in Egypt, stop right now and go take a good look in the mirror. You and other American taxpayers have contributed the tidy total of $17,410,000 to open the Middle Eastern waterway again to international shipping. This officially has been a "United Nations project."

Usually, the United States pays one-third of all U. N. costs. However, this U. N. venture is costing us many times the usual quota. A Washington report offers some inside information on the Suez project.

Russia has paid only $1,396,000. Egypt, which closed the canal when attacked by Britain, France, and Israel, will pay only $36,000. Israel's cost is $16,000. Britain and France have made no payments to date. Total costs may approximate $50 million.

In the long run, we suspect the usual situation will prevail. Good old Uncle Sam will let other nations do the talking, then will quietly pick up most of the tab. As an American taxpayer, you will pay a share of this expense even though your share may be far too small to compute.

Foreign Aid Under Attack

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. SCHERER. Mr. Speaker, Eugene Castle a few years ago wrote Billions, Blunders, and Baloney, a book dealing with America's foreign-aid program. Recently his latest work on the same subject entitled "The Great Giveaway" has been published.

In view of the fact that Congress shortly will debate the foreign-aid authorization and appropriation bills for the fiscal year 1957, it seems to me every Member should read Eugene Castle's new book before voting on this important and controversial legislation.

Constantine Brown, in the Evening Star Saturday, March 30, 1957, comments both on the book and its author in a very well done column. Mr. Brown's article as it appeared in the Washington Star is as follows:

FOREIGN AID UNDER ATTACK—GROWING GROUP DETERMINED TO CUT DOWN 'GLORIOUS' GIVEAWAYS TO REST OF WORLD

(By Constantine Brown)

Whatever may be the success attained by the growing group of Senators who are determined to put the brakes on Uncle Sam's glorious giveaways to the rest of the world, they will at least succeed in alerting the American people to the facts of the indiscriminate raid on the taxpayer.

And as the battle in the Senate shapes up, a new and discerning book by one of America's most patriotic and public-spirited citizens adds facts and disclosures to the still-limited public awareness of what has been going on.

Eugene W. Castle, a self-made man, a successful publicist more as an avocation than a profession, and an understanding student of world affairs, has published a startling book called The Great Giveaway. In it he sets forth the true balance sheet of America's long and costly effort to play Santa Claus to the rest of the world.

Never in history has any nation even begun to approach the magnitude of the United States giveaway program that began during and after World War II. The whole spectacle of foreign aid has been an astonishing one—1 nation, wealthy but with limited resources—trying singlehandedly to prop up the rotten economies, the poverty-stricken populations, of 2 whole continents.

Of course, the pressure of the cold war, the ominous threats of Stalin's Russia, the welding of the shackles on the helpless satellite captives of Eastern Europe, had much to do with the incredible ease with which the global planners were able to foist their generous program on the American taxpayer. But there was even more than that involved: The precedent for Yankee bill paying had already been established in our national thinking. Years of the Roosevelt New Deal had hardened our people to the facts of government largess, unbalanced budgets, massive boondoggling.

The all-out drive to dissipate the resources of America and at the same time to support an immense army of professional do-gooders began with the Marshall plan in 1947. This was sold to the gullible public and to Congress as a temporary aid program made absolutely necessary by Europe's postwar poverty and despair. If the aid were not forthcoming, the do-gooders warned, all Western Europe would succumb to Communist infiltration.

Of course, according to the sales talk, all the plan was to aim for was the rehabilitation of European industry and production. Once that was accomplished, there would be no further need for any United States economic assistance to foreign lands. They could then take care of themselves.

At the time that the Marshall plan was being debated, warning voices were raised in Congress. There were lawmakers there then who knew, as practical patriots, that there would be no end to organized giveaways once they got started. Such schemes are self-perpetuating. They build up enormous payrolls of people who stand to lose soft jobs and high salaries when the program ends. And they build up long handout lines, in America as well as abroad, of persons, firms, and political groups who subsist on the bounty of free dollars.

The warning voices were correct. There has been no letdown in the clamor for more and more foreign aid. Even the White House has uncritically joined the clamor—foreign aid, to the administration, is a necessary adjunct to American foreign policy.

All the old rules, the old adages, of our heritage have been junked. Self-help is reactionary. Self-reliance is stupid. Economy and care are antiquated nonsense. What we need, the giveaway artists insist, is a world prosperous on the wealth of the American producer. Then everybody will be happy, the Communists will wither on the vine, and "Uncle Sugar" will be every man's security.

Of course, as Mr. Castle amply demonstrates in his book, this happy ending is still a long way off. Billions every year have been poured down the ratholes of every flea-bitten, impoverished, and worthless corner of the world, yet the United States is still hated still suspect, and still opposed If the dollar shower were to end, and even if it doesn't these countries for the most part could never be depended on to support the United States in a shooting war.

Bakers Forge a National Cemetery

EXTENSION OF REMARKS
OF
HON. HOWARD H. BAKER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. BAKER. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include therein an editorial from the LaFollette Press, LaFollette, Tenn.:

BAKERS FORGE A NATIONAL CEMETERY

We like the proposal of Congressman HOWARD BAKER to establish a national cemetery at Bakers Forge Cemetery in Campbell County. We hope the bill can get through and that the dead of all wars, from the American Revolution to the Korean war, of Campbell and this whole section can be gathered in this place under the perpetual care of a grateful Nation.

The remains of soldiers of all wars are now interred in Bakers Forge. It is fitting and proper that they should be allowed to sleep in peaceful slumber under the protection of the Stars and Stripes.

Many will remember that when the Tennessee Valley Authority was preparing the reservoir of Norris Lake, the remains of many honored dead were removed to Bakers Forge. Hundred of these were soldiers, some of them the very first to cross the mountains and join the Union Army in Kentucky at the outbreak of the War Between the States.

So, already the cemetery takes on the character of a national cemetery. We hope it will be so recognized and so proclaimed, and so cared for, as proposed in Congressman BAKER's bill.

What the President Cannot Do

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. GWINN. Mr. Speaker, there are some things the President cannot legally do. Other things he ought not to do. However, both the President and the Congress have operated for so many years beyond the bounds of the Constitution that they have grown morally insensitive to that fact.

Mr. Robert B. Dresser, a distinguished lawyer of Providence, R. I., in a letter to the President which follows complains in no uncertain terms about this.

On February 18, 1953, the President wrote that he regarded as inappropriate that he should express his views on proposed constitutional amendments. Such amendments are matters solely for the Congress and the States, not for the President. Nevertheless since then he has on a number of occasions actively and vigorously opposed such amendments. He went to such lengths in opposition to the Bricker amendment that the proponents of the measure were put in the position of petitioning the President for his support. In legislative matters too the presidential and administrative officers not only interfere but become the chief proponents of legislation—the chief source of propaganda, publicity and releases to offect public opinion. They are often the principal witnesses before the committees to advocate their measures at taxpayers' expense. This has been particularly noticeable recently in determining policy and appropriations in the issue of Federal aid to education. We have had a first-class demonstration of what thought control is by Government. In this the President and the Secretary of Health, Education, and Welfare have become active proponents and extensive propagandists and publicists. They have held conferences and made speeches and handed out releases and untold quantities of publicity and arguments to bring pressure to bear upon the Congress. They propose to reverse the longtime policy of regarding education as the exclusive concern of the States and the people in the local school districts.

Mr. Dresser points out the interference and pressure by the administration in connection with the McCarran-Walter Immigration Act and the Bricker amendment.

Mr. Dresser's letter follows:

PROVIDENCE, R. I., *March 16, 1957.*
President DWIGHT D. EISENHOWER,
White House, Washington, D. C.

DEAR MR. PRESIDENT: As a devout believer in the Constitution of the United States and the form of government which it established, I have been disturbed by the trend away from that form of government in recent years. As a consequence, I am writing you this open letter.

Some years ago, the late President Woodrow Wilson made the following statement, which has been often quoted:

"The history of liberty is the history of the limitation of governmental power, not the increase of it."

With a full understanding of this truth, a group of men representing the Thirteen Original States met in Philadelphia 170 years ago and drafted the Constitution of the United States, which was subsequently ratified by the States.

By this Constitution a Republic was formed, and certain powers were delegated to the Federal Government thereby established. The powers not delegated to the Federal Government by the Constitution, nor prohibited by it to the States, were expressly reserved "to the States, respectively, or to the people."

The limitations imposed by the Constitution upon the power of the Federal Government and the reservation by it of the powers to the States or to the people were designed to prevent the concentration of power in a single government, which, as history has time and time again demonstrated, leads ultimately to the destruction of a people's liberty.

As a further safeguard, in both Federal and State Governments the powers were divided among the legislative, executive, and judicial authorities.

For some years past, the Federal Government has been encroaching steadily upon the rights and powers of the States. It has built up a huge bureaucracy until today there are over 2,400,000 civilian employees on the Federal payroll in the executive branch.

This concentration of power in Washington at the expense of the States has been effected largely through the abuse of the taxing and spending powers of Congress and the unwarranted extension of the power of Congress to regulate interstate commerce beyond the limits of any reasonable interpretation of that phrase.

The end result of all this if continued will be the substitution of some form of socialism for our American system of private enterprise and constitutional government.

The continued maintenance of our liberty requires that this trend toward socialism be reversed.

The remedy seems clearly to lie in the amendment of our Federal Constitution. It would be foolhardy to rely wholly on Congress. A conservative Congress today may be followed by a radical Congress tomorrow.

In the words of Thomas Jefferson: "In questions of power, let no more be said of confidence in man, but bind him down from mischief by the chains of the Constitution."

It is the opinion of many that among the needed amendments to the Constitution are amendments limiting the treatymaking power, the taxing power, and the power to spend more in a given year than the Government's receipts. Resolutions proposing such amendments have been introduced in the Congress during the past several years. To each of these amendments you, either personally or through your executive assistants, have expressed your opposition to the Members of Congress, and in the case of at least one of the amendments, you have actively and successively opposed favorable action by the Congress. I refer, of course, to the Bricker amendment limiting the treatymaking power. There is good reason to believe, I am told, that but for your opposition the amendment would have been approved by the Congress and proposed to the States.

This action has been taken by you despite the fact that the power to amend the Constitution is vested solely in the Congress and the States, and the President has no power to veto and his approval is not required.

It is difficult for me to believe that either your or your executive assistants for whose actions you, of course, are responsible, would knowingly disregard the Constitution, and yet I am forced to the conclusion that the action referred to has been taken with full knowledge of the limitations upon the executive power.

Under date of February 18, 1953, you wrote a letter to a Member of Congress from which I quote the following:

"I appreciate your letter of January 30, soliciting my views on House Joint Resolution 103, proposing a constitutional amendment limiting individual and corporate income taxes and forbidding Congress to levy gift and death taxes.

"While I share your feeling that our taxes must be reduced as soon as possible, as expressed in my recent message to the Congress, I feel that it would be inappropriate for me to express my views on a proposed constitutional amendment, since a joint resolution proposing an amendment to the Constitution is not presented to the President for his approval."

This was a clear and sound statement of a well-recognized principle, and it is to be greatly regretted that you have not since adhered to it.

Unfortunately, your interference with the powers of Congress has not been confined to the matter of constitutional amendments. It has extended to the field of legislation as well. I will cite only one instance.

In 1952, after 5 years of the most thorough investigation, a Democratic Congress passed and repassed over President Truman's veto the McCarran-Walter Immigration Act. If ever a piece of legislation was thoroughly studied and prepared, this was one.

And yet, since coming to office, you have used your great influence with Congress to render this law to a large extent nugatory.

There was published in the May 1953 issue of Reader's Digest a splendid article by Representative FRANCIS E. WALTER, one of the authors of the act, entitled "The Truth About the Immigration Act." The article ends with the followir.g quotation:

"The aim of the opponents of this law is not to better its execution or revise its provisions but to destroy it. The issue thereby raised is clear. Are we to have an immigration policy—impossible of fulfillment—based primarily on the desires of Europe? Or are we to have a policy which is based primarily on what is good for America?"

According to a press dispatch of July 23, 1953, Representative WALTER, who has opposed the attempt to destroy the McCarran-Walter Act, said: "The pressure from the White House is stronger than any I've seen in my 21 years in Congress and by far the most effective."

Perhaps you feel that you are better able to decide these important questions than the Congress. But would you feel that all future Presidents would be equally well qualified?

I had supposed that the division of powers by the Constitution among the legislative, executive, and judicial authorities of our Government was regarded as a most necessary safeguard against the establishment of an autocratic Government and of basic importance for the preservation of individual freedom.

If this or any other provision of the Constitution is to be changed, may I suggest that it should be done in the manner provided by the Constitution itself, namely, by action of the Congress and the States.

Ours was intended to be a Government of law, and not a Government of men.

Respectfully yours,

ROBERT B. DRESSER.

Senators and Congressmen may be glad to receive from the people an expression of their opinion, with a copy of the foregoing letter.

A Little Here, a Little There

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1957

Mr. MULTER. Mr. Speaker, according to the following editorial which appeared in the Wall Street Journal of April 4, 1957, the administration has cut its expenditures by $1,680 per year. The editorial will be of interest to our colleagues, and it is as follows:

A LITTLE HERE, A LITTLE THERE

The Treasury Department took a step in the interests of economy just the other day and the way we get the story is this:

Mr. Nils Lennartson, a special assistant to Secretary Humphrey, knew of his boss' remarks about that haircurler of a depression that faces us sooner or later if somebody in Washington doesn't start saving money. Mr. Lennartson knew also that Congress and a lot of newspapers had been yelling about reducing the budget and that people had been writing letters about all the spending. So Mr. Lennartson canceled 2 of the 3 news wire services the Treasury used to keep step with what was going on.

One of the wires was the Dow Jones news service, which is offered by the publishers of this paper, and a good one, too. When the men who sell the wire service for Dow Jones heard about the cancellation one of them went right down to Washington to find out what the trouble was.

Our man was told by Mr. Lennartson that he had been so impressed by the Wall Street Journal's position about Government economy that he had decided to save the Treasury Department $1,680 a year by canceling the Dow Jones service.

Well, our reaction to all this is, fine. If the Treasury Department doesn't need the Dow Jones service, it would be wasteful of the tax money Dow Jones and everybody else pays into the Treasury to keep the service.

Furthermore we're glad that our editorials about saving the taxpayers' money are getting some results in Washington, even if the economy we're all for seems to start with us.

And while $1,680 doesn't look like very much of a start on a budget of $71.8 billion, well, maybe we all better remember that, as this newspaper has pointed out a number of times, the way to begin is to begin. And that a little here and a little there can amount to a lot of savings in the end.

That, of course, still goes. We do hope, though, that the Treasury's economy drive doesn't stop just where it started.

Pan American World Airways Proposes To Make Florida International Air Gateway

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. FASCELL. Mr. Speaker, Miami, Fla., is rich in its history of aviation pioneering. Her peoples have assisted and encouraged this great industry since the date of its inception. The advent of the airplane brought Miami a better understanding of the peoples of other countries of the world, particularly those in Latin America. We in Miami and throughout Florida are cognizant of the many benefits that have been derived from the mutual friendships that have thus been created.

Now vast new possibilities for enhancing Florida's international friendship and her tourist and other industries are opened in a proposal by Pan American World Airways to link Florida through Miami by a southern transatlantic route to Europe and on around the world. The Miami International Airport for many years has been termed "the gateway to the Americas." Miami International Airport should be recognized as an "international air gateway." It is a logical center for international travel and trade.

The Pan American World Airways proposal would permit this great airline to pioneer this route from Miami to Puerto Rico, the Azores, Lisbon, Madrid, and Rome. The Governments of Spain and Puerto Rico are supporting the PAA bid. Airlines of six foreign countries now are flying the mid-Atlantic route from various terminals in the Carribean area to southern Europe, but to date no United States airline has been given permission to fly the route. I am advised that Pan American is the only United States carrier currently seeking it.

The greater Miami area, statistically, is the fastest growing area east of the Mississippi. Its population of 495,000 in 1950 has been growing at an average of about 10 percent per year and today is estimated to have in the neighborhood of 1 million permanent residents. Retail sales in the greater Miami area have quadrupled in the past decade. They were $350 million in 1945, rose to $665 million in 1950 and soared to $1,393 million in 1956.

South Florida is one of the world's outstanding resort centers and each year is adding facilities to entertain thousands more people. During the past 12 months it is estimated by State officials that 6,268,000 tourists visited Florida. Since the war, Miami Beach alone has built 62 new hotels and added to 9 others, to provide more than 8,000 additional hotel rooms. At the moment, at least 5 new hotels, with a total of about 2,000 rooms, are being planned for construction in Miami and Miami Beach. Additions are being planned to others that will add another 1,000 rooms or so. New motels and apartment buildings will add thousands more available tourist rooms within the next few months. Comparable building booms are going on in adjacent Broward and Palm Beach Counties.

Today the Florida Hotel Commission estimates there are about 45,000 hotel rooms in Dade County. There are more than 8,000 motel rooms, 200,000 rooms and apartments and more than 21,000 rooms in private homes, or approximately 275,000 available at any one time for visitors.

Other surveys show Latin Americans are spending about $40 million a year for transportation alone on trips to and from Europe. Many of them enroute, would like to visit Florida, a land in which Latins feel a strong community of interest.

Florida's tourism and industry are expanding at a tremendous rate. Today's tourists are airminded. In the 5-year period from 1951 through 1955, for example, passengers at Miami International Airport nearly doubled from 1,655,000 to 3,590,000. The Miami International Airport handles nearly as many international passengers as all New York airports combined. Complete availability of international transportation would appear to be a logical addition to Miami's existing services.

Address by Hon. Morris F. de Castro, Chairman of the 40th Anniversary Celebrations Committee at the Transfer Day Program Held at the Emancipation Garden, St. Thomas, V. I., on Monday, April 1, 1957

EXTENSION OF REMARKS

OF

HON. EARL CHUDOFF

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. CHUDOFF. Mr. Speaker, on Monday, April 1, 1957, the Virgin Islands of the United States celebrated its 40th anniversary of the transfer of the Virgin Islands from Denmark to the United States. I was hoping that I could be present for this occasion, but due to the necessity of remaining here in Washington attending my congressional duties, I did not have the good fortune to attend the ceremonies. The principal address of the occasion was delivered by the Honorable Morris F. de Castro, former Governor of the Virgin Islands. It was an excellent address, worthy of the attention of every Member of the House of Representatives. I believe it would be worth while for everyone in the House to read it.

ADDRESS BY HON. MORRIS F. DE CASTRO, CHAIRMAN OF THE 40TH ANNIVERSARY CELEBRATIONS COMMITTEE, AT THE TRANSFER DAY PROGRAM HELD AT THE EMANCIPATION GARDEN, ST. THOMAS, V. I., ON MONDAY, APRIL 1, 1957

Mr. Chairman, Governor and Mrs. Walter Gordon, distinguished guests, and my fellow citizens of the Virgin Islands in St. Croix, St. Thomas, and St. John, for the honor and privilege—as I esteem the call to me to be—which Governor Gordon granted me to head the 40th anniversary celebrations throughout the Virgin Islands I shall ever be grateful, I present my heartfult thanks, Your Excellency.

GREETINGS

To celebrate these historic days with us, many of our friends from official Washington have been good enough to put aside their own business—even pressing engagements, I understand—and, in many instances, have traveled far. We appreciate very much the kindness. To each and every one in the official party, and to the representative of the Secretary of the Interior, Mr. Carl T. Junge, we extend a hearty welcome, yes, a welcome as warm and as pleasant as the famed Virgin Islands sunshine which drenches our gathering here today.

Particularly, I want to salute an old friend of these islands: the Ambassador of Denmark to the United States. Ambassador Kaufmann, we recall with much pleasure your visit to St. Thomas in July 1948 when you joined in our Freedom Centennial. We were happy to see you again in August 1952 in St. Croix to present, in the name of beloved Denmark, the replica collection of elaborate furnishings for the government house on that island, in commemoration of 1½ centuries of diplomatic relations between our respective countries.

It is good to have you here with us, Your Excellency. Please turn your steps frequently to these shores to renew with us those many ties that still remain between Denmark and the Virgin Islands. As our voices resound, Ambassador Kaufmann, in the traditional cheer "Hans Majestaet Kong Frederik den IX laenge leve"; we know that you join with our prayers for the continued well-being of our illustrious leader, President Dwight D. Eisenhower.

GRATITUDE TO COMMITTEE

I want to thank, particularly, Dr. Roy W. Bornn, who is today in Washington on urgent business, and Messrs. Henry Rohlsen and George Simmons, the chairmen of the three steering committees; as well as the active members of our committee: Commissioner Leon A. Mawson, Messrs. Adolph Gereau, J. Antonio Jarvis, Raphael Wheatley, and my onetime private secretary, Mr. Frederick A. Esannason. These officers have accomplished an effective translation of historic recapitulation into pageantry and praise and have crowned it with beauty and dignity. I know that you appreciate their work as much as I do.

Outstanding was the distant journey back into the nostalgic past, in which we were led by Mr. Jarvis yesterday, to stand in the presence of history as enacted with the changing of the guard over our island home 40 years ago. We do appreciate the fine planning and much effort, and particularly the genuine interest, which developed into delightful and remarkable focus the spontaneous outpouring of a people's gratitude to our sovereigns, past and present.

THANKS, EVERYONE

In this harmony of interests, we recognize and we congratulate the participating arms: the United States Navy, the insular government departments, our industries and other fields of private enterprise, and many others, some appearing in the programs and parades of yesterday and today, for their part in this impressive portrayal of the Virgin Islands success story of twoscore years.

GOLD OF THE ISLES

And, now, with your kind permission, I would like to discuss a few anniversary thoughts in the chatty suppertime style which we used some years ago. I would like to talk to you this morning about gold. Now, please do not look surprised; I am no longer the Commissioner of Finance, and I no longer prepare the revenue estimates. And I do not have any gold in the bank's vaults, either. So, just relax and hear me through, please. Since I have hardly done any public speaking over the past 3 years, I just had to find some familiar ground from which to sound off. That is why I have chosen gold, the well known yellow metal, one of the heaviest substances known. I will endeavor to point out that gold, not exactly the raw ore, but its equivalent in cultural and material value, is being discovered and being developed every day in the Virgin Islands.

ITS ATTRIBUTES, SURELY

I understand that when Interior Secretary Seaton visited the Virgin Islands last December he received an application from a group of prospectors for mining rights at the newly opened national park on the island of St. John. I hope they find gold, or silver, or uranium, or even oil. But, my dear friends, the gold that I speak about, the treasure of the Virgin Islands of the United States, sparkles in the loveliness of our sunrise and sunset, in the panoramic splendor of our landscape and seascape, in the wonders of our climate, and in the peace and quietness here, so far removed from the roar of the concrete jungles.

Gold, pure and refined, gleams forth in our man's humanity to man, in the richness of our culture and character, in the ready hospitality among all Virgin Islanders. Golden too, I must add, is the absence from these shores of the ugly blotches of organized crime, of subversive movement, of racial discrimination. Thank God, that this is so.

OUR HERITAGE

We must repeatedly refine this precious ore by the constant cultivation of harmony and goodwill. These days of retrospect—yesterday and today—crowd us with fond memories of the gracious and gentle life of yesteryear. We are proud of those memories; for they represent the skein with which we fashion the rich fabric of our folkway. It is good that me maintain in our towns the Old World jewels of architecture; it is better when we embellish the refined taste in our morals; but we are at our very best when we can pass on this heritage to succeeding generations as theirs to keep and to increase. God grant that this will always be so.

PAYMENT IN GOLD

In gathering the notes of this talk, we visited our public library and found there a treasure trove of Virgin Islands material: many, many volumes dealing with the historical—and the folk interest, drawn from a wide field of scholars, educators, government officials, and other writers.

We found in Zabriskie's account of the transfer, this incident which took place on a Saturday afternoon at 4 o'clock, on the last day of March 40 years ago, in the large diplomatic reception room of the State Department (State, War, and Navy Building) in the city of Washington. There the then Secretary of the Treasury, William G. McAdoo, handed to Secretary of State Robert Lansing

a Treasury warrant, representing $25 million in gold, and smilingly explained that he had brought the money in the form of a warrant because the actual gold coin would weigh nearly 48 tons. Approximately 96,000 pounds, that is.

PROSPERING POORHOUSE

That incident was definitely not the first time, of course, that gold in substantial quantity jingled in Virgin Islands history. In bygone years, as you will recall from history, our cities and towns were used as sanctuary for freebooters in from the Spanish Main. Here they counted and shared the loot, we understand. March 31, 1917, was definitely not the last time that such bullion was linked up with our islands. A President of the United States once labeled our islands as "an effective poorhouse." That was unfortunately (?) tacked on to us back in 1931. Unfortunately or fortunately? Let us discuss the phrase in the light of what has transpired since.

We can venture this explanation: As part and parcel of our Nation we experience the rise and fall of the national economy. Therefore, when the lamented depression shook the country two and one-half decades ago, it is quite understandable that the islands, too, as its miniature, had to bear the brunt of a damaged economy as well. That was the time of the classic proposal to Congress that Denmark be paid to take us back.

That remarks, however sincerely meant or well intended, from the honored guest aboard the U. S. S. *Arizona* made us do things * * * and do them in a big hurry. For, since then, the poorhouse has paid off the mortgage, every cent of it. Yes, we have definitely done so. Official documents have proved that the internal revenue taxes which have been paid into the Treasury of the United States on liquors produced in these islands have more than covered the total cost of the islands' government to the United States, including the purchase price of the islands from Denmark.

The mortgage settled, we next proceeded to prove that we would not be a liability to the United States. We installed modern conveniences to our little cottage, planted ornamentals, and tidied the spot spick and span. Yes, we built hotels, schools, hospitals, roads, increased public and private housing. We fashioned monuments to a people's indomitable will, courage, and persistence. You know what happened following that renovation, and still continues * * * before the paint was dry on our "Rooms to let" signboard, the world same hurrying over to register. So great is the crowd that continues to push up to our gates that we had better do something fast to save some room for our own children. And now we should like to extend a gracious invitation to the author of that disturbing phrase for him to return to spend his retirement years in this tranquil and prospering paradise of the Caribbean—the onetime poorhouse. Unfortunately or fortunate * * * disturbing or inspiring. * * * What do you think now of that label of 1931 compared with communal results in the 26 years since. I will give my answer—President Hoover's 1931 "poorhouse" has been transformed during the administrations of President Roosevelt, President Truman, and President Eisenhower into the 1957 prospering "guest house".

OUR OWN HANDIWORK

In August 1953, I made a statement that, since the year 1950, total bank deposits in the Virgin Islands had increased $2,200,000 in that 2½-year period, imports into the Virgin Islands had increased by $2 million and exports by $300,000, and that travel statistics showed that 94,000 tourists visited St. Thomas and spent $4 million in the year 1952, and that 123,000 arrived during the following year and spent approximately $5,400,000.

But look what happened to these same indexes since that 1953 suppertime chat: Total bank deposits in the Virgin Islands, which were $6,475,669.49 on June 30, 1953, are shown on the published statements of the 2 banks in the Virgin Islands to be $16,806,928.84 on December 31, 1956, an increase of over $10 million in 3½ years. Total income taxes paid in the Virgin Islands in 1953 were $720,314.36. Total income taxes paid in the Virgin Islands in 1955 amounted to $1,059,631.61, and in 1956 income taxes increased to $1,549,309.68—or double the amount paid 3½ years ago.

Our Tourist Development Board estimated that in 1953 visitors to the Virgin Islands, in the tourist economy of the islands, spent approximately $5,400,000. In 1956 gross tourist expenditures were estimated to be $11,645,988, again more than double the amount spent by tourists 3½ years ago. In 1952 total imports into the Virgin Islands were $11,162.88. In 1955, our imports jumped to $16,255,575, an increase of $4 million. During the same period exports from the Virgin Islands increased from $2,477,655 to $4,277,314, an increase of $2 million.

Do you care to listen to a few more startling comparisons? The assertion was made not so long ago, that Virgin Islanders are not industrious, not given to hard toil and sacrifice. Well, I looked for the facts and I found that in the year 1956 there were 8,138 workers in all the Virgin Islands covered by workmen's compensation, of whom, incidentally, 4,345 were engaged in private, I repeat, in private employment and 1,793 in Government work. This figure represents nearly four times as many workers in private employment as in Government employment on these small islands where Government naturally combines all levels of city, county, State, and Federal activities. Let it be remembered, too, and let it be quoted widely, that the people of the Virgin Islands today raise more than 10 times the local revenues than they did 20 years ago, and 2¼ times the local taxes they raised 10 years ago. Here are the figures: In 1936 local revenues totaled $288,438; in 1946 local revenues had increased to $1,374,259.61; and in 1956, revenues from local taxes amounted to $2,911,775.08.

Unlike the buccaneers of old, we have not been trundling wheelbarrowsful of bullion down Main Street lately, nor are we paving the new waterfront highway with the heavy, yellow ingots. Yet, despite the pinch of poverty, felt here as elsewhere among our ill-housed and ill-fed citizens, grass is definitely not growing on Main Street * * * and that is not because of any water shortage, either. And here's another fact: Keeping pace with our economic advancement, we have been building steadily solid and lasting monuments—not alone of stone and of concrete—but of human resources as well in the health and well-being of our citizens, in the letters, and in the arts.

Dear friends, I am moved to bring to witness this Transfer Day, the firm faith of Virgin Islanders in the traditional American virtues of hard work, in thrift, in resourcefulness, and in our sturdy self-reliance. How very often, these days, we have to fall back on their support. Nevertheless, we are experiencing years of progress, and, God helping us, we can look ahead with confidence.

GOVERNMENT HAS HELPED

Government has had no small chapter, of course, in this success story. I would like to pass on to you the definition given by Lincoln in his first inaugural address: "The legitimate object of government is to do for a community of people whatever they need to be done, but cannot do at all, or cannot so well do, in their separate and individual capacities."

We believe that no American—no one group of Americans—can truly prosper unless all Americans prosper. For we are one family made up of millions of Americans with the same hopes for a full and happy life. We believe that the slum, the outdated highway, the poor school system—deficiencies in health protection, the loss of a job, and the fear of poverty in old age—in fact, any real injustice in the business of living—penalizes us all.

We know that our Government stands ready to help us to help ourselves and to do those things for us which we cannot so well do in our individual capacity. I strike into this record our full appreciation for the golden millions which the Federal Government has poured into our islands to equip us with modern sewerage systems, improved communications facilities, the very latest in hospital and school plants, in low-cost housing, airport and highway construction, among the substantial physical improvements over the past decade. On the other hand, let us never undervalue or underestimate the many things I have here recited in part only, which we, in the march of progress have done, and daily continue to do, for ourselves as we should, by intelligent planning, skill, and by the sweat of our brow.

PATRIOTISM UNLIMITED

I listened very carefully a few weeks ago to my good friend, Col. Joseph A. Christmas, USAF, the selective-service officer in the Virgin Islands, as he was interviewed by the Women's League over radio station WSTA. Among his many remarks commending the spirit and valor of Virgin Islands servicemen, Colonel Christmas brought out the fact that there were approximately 544 volunteers of the 1,073 Virgin Islands servicemen processed through the local board, or roughly 50 percent of the total enlistments. I just had to point out that fact because, these days, we hear too little of the patriotism and sacrifice of Virgin Islanders; and hear far too much, these days, of the economic benefits which these islands receive from the Federal Government * * * although we receive such grant-in-aid at less than par, in many instances, along with the other Territories and certain States of the Union.

PROGRESS DEMANDS DEDICATION

Unhesitatingly I wish to state my firm conviction that the people of these islands are well advanced in the application of the principles of American democracy and of self-government. We have a tremendous reservoir of leadership ability just waiting to be tapped. But, my friends, these times cry out loudly for more constructive suggestions. We need less complaints and less criticism of each other. Progress is not for the lazy and indolent. Progress demands character, it demands will, it demands dedication. Progress requires quiet decision, self-respect, and self-reliance.

Let us cherish our island home with a love that does not count sacrifice, a concern that thrives under constant and determined effort. Let us remember, you and I, that our child and our children's children will benefit or suffer by what we do today. The element of gold—here pure, there adulterated—has marked our progress over the 40 years, 1917 through 1957. Progress demands more than lip service or a mere recitation of its elements. How well we have learned the lessons along the way. Have we profited well from the experience? We should be building foundations now under our castles in the sky, if there they be, so that our next anniversary celebration, in 1967, may be truly golden in word and in deed.

THE HIGHER LEVEL

And so this morning, richly endowed as we are in the good things of the earth, in the fellowship of our neighbors and the closeness of our Nation, would it not be fitting for each of us to speak in prayer to the Father of the Nations to ask that He help us and teach us and receive our thanksgiving?

Might we not pray that He teach us? Teach us, and teach our leaders, to seek to understand the problems and needs of our people. Teach us how those problems may reach solution in wisdom, and how best those needs may be met. Teach us to require of all those who seek to lead us, and teach us, too, to require of ourselves, these things: integrity of purpose; the upright mind, selfless sacrifice, and the courage of the just. Teach us trust and hope and self-dependence. Teach us the security of faith.

THE ROAD AHEAD

Four decades ago, when old Dannebrog was replaced here by the Star and Stripes, the United States stood on the brink of World War I. Today we celebrate this anniversary at a time when the nations seem to be gathered on the verge of a most serious catastrophe of our times. This sombering thought should bring us solemn pause. Today, as we meet here in peace and quietness, our statesmen are striving valiantly to settle international issues around the conference table rather than around the watch fires of a hundred circling camps. Today the democratic countries, led by our mother country, and by our great President, are earnestly and eagerly seeking ways and means to keep the peace.

This is a serious moment. And it behooves us as good American citizens to be loyal to our country and flag and to the eminent principles for which they stand, to proclaim our faith in righteousness and justice, and to be proud to give ourselves in meeting the everyday needs of our Nation, by willing sacrifice. Thus we strengthen, likewise, our own homeland.

OUR COMMISSION

To each individual gathered here, and to those within the reach of my voice, I express, first, our satisfaction that you could join with us in reviewing this parade of events. Secondly, my great faith that you, each and every one of you, can contribute something to render more precious the social, economic, and political fabric of these islands so dear to us all. And, thirdly, that in so doing you will gain the satisfaction of knowing that you are moving along the high road of constructive progress on all fronts and not banding together to achieve the defensive or negative concept of mere physical security. When we place our desires and designs into proper perspective, to which we can attend right now, we would move into better position to celebrate the golden anniversary laden with achievements beyond our fondest dreams. It is a great faith that must march forward. With it we cannot stand still.

IN SUMMARY

In closing we wish to emphasize that a real, pulsing drive, adorned with deep human concern, has marked these Virgin Islands as the showplace of American democracy. Our gold is in our hearts and in our homes, and our monument not the shaft of stone, but a tower of true spiritual and cultural values and of great material accomplishments. From that viewpoint, and with these self-evident truths, we have surveyed with pardonable pride, yet with humility, these past 40 years.

It is well that we solemnly pledge, this instant, to build a stronger and better nation and home—of greater security and increasing prosperity for all. Working together for the common welfare is an American habit. Let us continue to cultivate and to keep that habit strong. We know that we have not failed to do our full share in this good work. We know what has been done. We know whither our goal. With sincere and unswerving dedication to the tasks ahead, with confidence in our ability to accomplish them, with abiding faith in Almighty God, we cannot fail—we shall not fail.

For the honor of appearing once again before you, my countrymen, thanks to each one of you.

God bless you all.

Going Nasser's Way

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Times of April 3, 1957:

GOING NASSER'S WAY

In his press conference yesterday Secretary Dulles again expressed hope for a satisfactory settlement of the immediate problems of the Middle East, including firm Egyptian commitments on the Suez Canal, a greater voice for the users in operating the canal than Egypt proposes to permit, and Israel's right to use both the canal and the Aqaba Gulf. But his statements reveal his own doubts, despite his lifting of the ban on tourist travel to the area.

Indeed, the trend of events, the air of resignation at United Nations headquarters and of pessimism in Washington all point in one direction. This is that everything is going President Nasser's way and that he is riding to a political victory. Unless this trend is reversed there is grave danger that all the brave words uttered in United Nations resolutions, in Secretary General Hammarskjold's reports, and in declarations by President Eisenhower, Secretary Dulles, and other western statesmen will turn to ashes, with unforeseeable consequences for the future.

These words were to the effect that the liquidation of the British, French, and Israeli military countermeasures against Nasser's belligerent provocations should be followed by action to assure progress toward more peaceful conditions and toward a greater degree of justice and compliance with international law than existed prior to these events. These conditions were to be secured and supervised by the United Nations police force and were to include the restoration of secure freedom of navigation in the Suez Canal and an end to Egypt's unilaterally proclaimed state of war with Israel, involving a renunciation of belligerent rights and therewith an end to Egyptian guerrilla raids and blockades.

But Nasser has thus far paid small heed to any of these words, and events are rapidly returning to the state of affairs which precipitated the recent hostilities and could precipitate new ones. Far from restoring the definitive system established by the 1888 Suez convention to guarantee "secure freedom of navigation" in the canal, or paying any attention to the Security Council resolution calling for insulating the canal from Egyptian politics and for agreement between Egypt and the canal users on the tolls, Nasser has served notice that Egypt alone will own and operate the canal under his terms, that it will collect all tolls and determine their allocation, and that at most he would be willing to arbitrate complaints while continuing the cause of the complaints.

At the same time he proclaims his determination to maintain his state of war and his belligerent rights against Israel and in defiance of a special Security Council decision to resume the Suez blockade immediately and the Aqaba blockade as soon as the United Nations force has left. He has enlisted the support of King Saud on the latter blockade, although Saudi Arabia decreed in 1949 that a claim to territorial waters does not infringe on the right of innocent passage by vessels of other nations.

Furthermore, in the face of Mr. Hammarskjold's assurance that the takeover of military and civilian control of Gaza in the first instance would be exclusively by the United Nations forces, Nasser has imposed his own civilian and military police control of this strip and has relegated the United Nations forces to patrolling the border jointly with his own "police." He has made a gentleman's agreement not to send direct military forces into Gaza during the interim period and to reimpose regulations against guerrilla raids. But since the first instance lasted only a few days, the question arises how long the interim is to last, and in any case the guerrilla units are already reassembling.

In his speech of February 20, President Eisenhower declared that if, unhappily, Egypt does hereafter violate the armistice agreement or other international obligations, then this should be dealt with firmly by the society of nations. It remains to make good these words, and the society of nations may be taken to mean not only the United Nations but also other international associations and alliances in which the United States is a partner.

Further Opinions on the 22d Amendment

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. UDALL. Mr. Speaker, I have been been heartened by the replies of distinguished American historians and political scientists to my opinion survey on the 22d amendment.

Heretofore I have presented the views of 6 experts in this field, and today I present 4 additional replies from California, Tennessee, Washington, and Colorado.

Those whose views are included herewith are: Dr. Dayton D. McKean, political scientist, of the University of Colorado; Dr. Robert J. Harris, of the Vanderbilt University, political science department; Dr. Claudius O. Johnson, of Washington State College; and Dr. John D. Hicks, Morrison professor of history at the University of California.

The letters follow:

UNIVERSITY OF COLORADO,
Boulder, Colo., March 18, 1957.

Hon. STEWART L. UDALL,
House of Representatives,
Washington, D. C.

DEAR MR. UDALL: In my opinion the 22d amendment should never have been adopted, and it should be repealed as soon as possible.

I have three principal objections to it. First, its antidemocratic character, the distrust of the American people that it embodies. It denies voters the opportunity to vote for someone they may want. Second, it could in a time of national emergency, involve the Nation in unnecessary danger, forcing out of office an experienced President who had the confidence of our country and the world to replace him at a critical moment

with someone who did not. Third, the amendment produces a 4-year lame duck President who cannot be expected in his second term to be able to lead his own party, since its other leaders, perhaps each seeking to succeed him, are free to defy him or not as they please. This condition can only lead to a further (to me regrettable) weakening of the two-party system.

I wish you all success in your attempt to get the amendment repealed.

Sincerely yours,

DAYTON D. MCKEAN, *Dean.*

VANDERBILT UNIVERSITY,
DEPARTMENT OF POLITICAL SCIENCE,
Nashville, Tenn., March 19, 1957.

Hon. STEWART L. UDALL,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE UDALL: In reply to your letter of March 13, I am making a number of observations concerning your proposal to repeal the 22d amendment.

In general, it was my opinion at the time the 22d amendment was submitted that it was an error. Subsequent events have not changed my opinion in this connection. In my opinion, the amendment will have the long-range effect of weakening the President not only with respect to his legislative relations with Congress, but also with respect to his negotiation with the governments of foreign states. To be sure no conclusions can be reached now concerning the impact of the amendment upon President Eisenhower's relations with Congress. At his age and in his physical condition it is most unlikely that even Mr. Leonard Hall would regard him as a possibility for a third term. Moreover, most generalizations have to make an exception of General Eisenhower. It is my belief that President Eisenhower's popularity and prestige are such that he could continue to exercise a considerable influence upon Congress should he choose to do so. If it is true that his grip has loosened on his party and upon Congress, then that is more than likely due to laziness, indifference, incapacity, or a combination of these. It is hardly likely, however, that very many presidents are going to enjoy the enormous personal popularity of General Eisenhower and that in their case the amendment would seriously impair them as legislative leaders and foreign negotiators. Moreover, it seems to me that in the last analysis, as you indicate in the enclosed remarks, that it is for the American people to decide whether they desire a president for 1 term, 2 terms, 3 terms, or any other number. That at least seemed to be the design of the original framers of the Constitution and in general their judgment has stood the test of time better than the judgment of the framers of the 22d amendment is likely to stand the test of time. Many of the original objections to a third term, you will recall, were due to Jefferson's fear of a monarchy. And, Jefferson, it must be remembered, was inclined to see the danger of a monarchy in every nook and cranny and in every dark corner. He, himself, however, indicated that in order to avert such a danger he would be willing to stand for a third term. After Jefferson's objections to a third term were more practical than philosophical and, indeed, in some instances the opposition to a third term for some presidents were made by those who thought they never should have had one term.

In general, unlimited reeligibility makes for better government than for worse because so long as a man is reeligible to public office there is a prospect that he will endeavor to exert his best talents in the event he will decide to stand on his record for reelection. This, to me, is an ample safeguard against abuses of power.

A more important consideration is that in the world that we live in, we know not what crises may confront us. It is inconceivable in the midst of a serious crisis that the American people would want to change the presidency merely because of a constitutional mandate which decrees that a president can serve no more than 2 terms or a maximum of 10 years should he come in by the route of the vice presidency. This could be a serious flaw in our Constitution in the perilous conditions in which we live.

If there are any specific questions you would like to raise concerning this problem, I shall be only too happy to discuss them. For the time being, I shall content myself with these very general remarks and trust that they will be of some value to you.

With best wishes for the success of your proposal, I am,

Sincerely yours,

ROBERT J. HARRIS.

STATE COLLEGE OF WASHINGTON,
DEPARTMENT OF POLITICAL SCIENCE,
Pullman, Wash., March 19, 1957.

Hon. STEWART L. UDALL,
House Office Building,
Washington, D. C.

DEAR MR. UDALL: You pay me the honor of asking my opinion on House Joint Resolution 182 which would repeal the 22d amendment. Although I favor the 2-term tradition for the President as a general policy, I believe the occasion will arise from time to time when it may be wise to depart from the tradition. I do not, therefore, hold the opinion that the 2-term tradition should be frozen into the written Constitution. Consequently, you may record me as favoring the resolution to repeal the 22d amendment.

In my opinion a provision which restricts the political freedom of the people in the choice of their officers has no place in our fundamental law. I believe further that no group, liberal or conservative, should use the power it may have at a particular time to impose upon a minority a restrictive political provision. Quite aside from the questionable ethics of such action, it is almost certain to return to disturb or plague its promoters. Factions which at one time would prevent from running for a third or fourth term a President they happen not to like would, by that action, set for another time the same obstacle in the way of a President they may wholeheartedly approve and earnestly desire to continue in office. Furthermore, restrictive provisions of this character represent a negative concept of government, the idea that the public is better served when its officers serve under rigid regulations. It is well to remember that the restrictions which may be designed to prevent incapable or corrupt officers from making mistakes or promoting sellouts and giveaways will also operate to prevent capable and trustworthy officers from achieving the best results. I think it is right to assume that our Presidents will be qualified men of integrity who have a sense of their responsibilities in a democratic system. This I regard as a calculated risk, one that we may intelligently take in a day when we need affirmative, positive government.

Sincerely yours,

CLAUDIUS O. JOHNSON,
Professor of Political Science.

UNIVERSITY OF CALIFORNIA,
DEPARTMENT OF HISTORY,
Berkeley, Calif., March 23, 1957.

Representative STEWART L. UDALL,
Congress of the United States,
Washington, D. C.

DEAR MR. UDALL: The 22d amendment was in my judgment a mistake. I share the opinion of George Washington that the Nation should have the right to choose any citizen for the Presidency for as many times as it may see fit.

Sincerely,

JOHN D. HICKS,
Morrison Professor of History.

St. Lawrence Seaway Will Make Chicago the Nation's Largest Grain-Exporting Port

---

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 4, 1957

Mr. O'HARA of Illinois. Mr. Speaker, on the financial page of the Chicago Daily News of April 2, 1957, is an article by Ed Kandlik that will prove of interest to all my colleagues who have given thought to the great changes that will come in the opening of the St. Lawrence seaway when the cities on the Great Lakes become ocean ports, competing with the ports on the seaboard.

According to a study conducted at Indiana University, and which Mr. Kandlik presents in his most illuminating article, by 1965 Chicago will become the Nation's largest grain-exporting port with Duluth ranking second. The seaboard ports will suffer in proportion. Mr. Kandlik's article follows:

Chicago may become the Nation's leading grain export center by the mid-1960's as a result of the St. Lawrence seaway.

This is the conclusion of the 252-page printed report, The Effects of the St. Lawrence Seaway on Grain Movements, prepared by the Bureau of Business Research, Indiana University, in conjunction with the Chicago Board of Trade.

Robert C. Liebenow, president, the Chicago Board of Trade, said many of its members are already preparing for the opening of the seaway by expanding their facilities.

"When the new waterway is ready for use, Chicago will have a minimum of 20 million bushels of new grain warehousing capacity," he said.

"When this is added to the more than 50 million bushels of space formerly available, it will give this port water facilities for handling grain second to none."

Low freight rates will draw the grain from an area extending from the Rockies to the Appalachian Mountains north of a line that follows the Ohio River and extends through northern Oklahoma and central Missouri. Points as far as Enid, Okla., may direct their shipments through Chicago.

By 1966 from one hundred and fifty to two hundred million bushels of grain will be moving into export annually through the St. Lawrence seaway, the report said. Much of it will be grain that formerly moved through gulf and Atlantic ports.

The report said the seaboard ports will suffer substantial losses of grain traffic and the effect will be intensified by the seasonal traffic on the seaway.

Eastern and southern transportation carriers also are expected to experience hardship from the change.

While the diversion of grain export shipments to the Great Lakes will spread to many ports, Chicago will gain the most, the report said. Its position was termed "strategic" to attract grain from the Corn and Soybean Belt and from the Winter Wheat Belt.

Chicago's exports will probably range from eighty to one hundred million bushels by the mid-1960's, the report said. If this potential is realized, Chicago would become the Nation's largest grain exporting port. Milwaukee will handle part of the potential.

Duluth is expected to rank second to Chicago in volume. Its increase will be disap-

pointingly small because it already handles most of the spring wheat shipped eastward, the report said.

Transportation charges via the seaway route will be from 15 to 20 cents per bushel less than over existing eastern routes, the report found, but may be cut to 10 cents by intensified competition.

While the cost advantage will be so great as to attract the vast bulk of grain exports, prospects were said not to be bright for shipments via the seaway for consumption along the east coast.

Water rates for seaway grain shipments to Europe are expected to exceed by 4 to 8 cents a hundred pounds those from North Atlantic ports. The rates from Great Lakes ports are expected to be on a par with those from New Orleans and gulf ports.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government, submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 139, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

957

Appendix

Address by Hon. Alexander Wiley, of Wisconsin, Before Midwest Federation of College Young Republican Clubs

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 10, 1957

Mr. WILEY. Mr. President, I have just returned from a visit to my State, during the course of which I addressed a wide number of organizations of all types.

One of my most memorable pleasures was the honor and privilege of addressing, on Saturday evening, April 6, in the capital city of my State, Madison, the Midwest Federation of College Young Republican Clubs, a group of Young Republicans representing 13 States and 40 colleges. I am very happy to say it was a good meeting.

I ask unanimous consent that the address delivered by me on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY SAYS GOP MUST SHOW IT "IS A PARTY OF PROGRESS IN ATOMIC AGE, NOT PARTY OF REACTION OF HORSE AND BUGGY DAYS"; SAYS PARTY MUST FOR "AMERICA'S GOOD AND ITS OWN GOOD SPEARHEAD WORLD LEADERSHIP"

I am indeed happy to be with you tonight.

It is a real pleasure to join with you in looking forward to the role of the Republican Party in the future.

It is most appropriate that you who are the leaders of tomorrow, should consider this vital question of the future of our party—your party and mine.

You Young Republicans have demonstrated that you are aware of your responsibilities as citizen-leaders in the dynamic period up ahead.

I cannot commend too highly your participation in YR Club activities.

REAL ASSETS OF YR MEMBERSHIP

As you well know, your membership provides a splendid opportunity to acquire a broader understanding of government, as well as enjoying an ideal training ground for future leadership.

Certainly, an active role in a Young Republican organization is a valuable supplement to any course of education, and an asset to you personally.

Your experience, I believe, provides each of you with a greater appreciation of our political process, and an understanding of techniques and tasks of a truly responsible political party.

All in all, your YR Club provides a "real-life" laboratory in which to acquire a better understanding of politics—theoretical, and especially, practical.

MY THEME TONIGHT—MODERN PROGRAM ESSENTIAL

My theme tonight is comparatively simple but it is composed of many elements.

My theme is this: America today is advancing in the jet-atomic age, advancing, as it must, irreversibly up the high road of leadership on the world scene. It is the GOP's task, the "Grand Young Party's" task to spearhead such leadership.

The American people will vote at the polls in November 1958 and in November 1960, for the party which provides a program geared to the needs of this age, geared to the needs of a shrunken globe.

The American people will vote for us if they believe that we are "the party of the future."

They will vote against us if they have the idea that we are a party of the past, the past when the Atlantic and Pacific Oceans represented barriers in space and time.

If however, in this age when space and time has been virtually annihilated by man's inventiveness, if we supply a modern program, tailored to the needs of a dynamic Nation of 170 million in the jet-atomic age, then we will win and retain America's support.

If, on the other hand, the American people believe that we are a party which only looks backward to "the dear old days," a party which is patterned after the McKinley era of the horse and buggy, then they will not vote with us.

The question is, therefore, what must be the elements in a modern program for a brighter future for all?

And, secondly, what are the techniques, what are the organizational methods by which we can get this program adopted?

Let us first take up the latter question. Why? Because I think that there will readily be almost universal agreement on this matter of new-type techniques.

Then let us frankly approach the latter challenge—the challenge of new programs.

At this time, let us look "right in the eye" at those issues on which there is and will be an honest difference of opinion.

THREE-HUNDRED-AND-SIXTY-FIVE-DAY CAMPAIGNING

First, we'll look at the matter of techniques.

I think that you Young Republicans have yourselves set a fine pattern for tomorrow's victories at the polls.

You have been showing what an enterprising campaign organization can do and must do. And I mean 12 months a year, not simply in the latter part of September and the entire month of October.

You Young Republicans have shown that there is a salesmanship job to be done 365 days a year; a literature distribution job in the wards and precincts; a TV and radio job; a doorbell-ringing and volunteer-registration job; and all the other types of grassroots activities which must keep the Republican Party in the minds and eyes of the people.

ATTRACTING ALLEGIANCE OF STAY-AT-HOMES

You and I remember that, according to 1956 statistics, out of a potential vote of about 104 million, only about 62 million—or three-fifths of those eligible—voted.

Of this number, Ike received almost 36 million—a majority of votes cast—10 million more than his opponent.

However, this points up an important factor: There is a "political gold mine" of 42 million votes, either inactive or untapped.

To fully utilize our opportunities—for the benefit of our party, and the Nation—we must do two things:

1. First, this stay-at-home group must be persuaded to vote; and

2. Second, our programs—Republican programs—must be proven to so benefit the national interest as to attract these voters.

This cannot be a taken-for-granted task; for, as we know—even though the stay at homes are inactive—many of these are traditionally either independents or are Democratic inclined.

THE DIFFICULT CHALLENGES OF 1958 AND 1960

Now, let me ask, "How important is it that we do all these things?"

The answer is, "Very important, indeed."

In the first place, in November 1960, we face one of the most critical challenges in Republican history.

At that time we will be going to the polls without that great standard bearer, Dwight D. Eisenhower.

He will, we know, play an active part in the campaign. But his name will not head the ticket, and our party will not automatically have the benefit of his enormous personal prestige.

We should have, however, the same mass of independent voters whom Ike attracted and whom we definitely need to win. I repeat: We need the independent voters to win. We need the "swing" voters. That does not mean that we must forsake our Republican standbys, our loyal GOP adherents. But it does mean that we must broaden the base of our party and not run it as an exclusive social club.

HARD BATTLE FOR NEXT CONGRESS

In the second place, we face an even tougher challenge—much earlier—in November 1958.

The fact is we face difficult contests for control of the Senate and House, for many key governorships and other State and local offices.

You Young Republicans are more than familiar with the specific issues involved in many of the statewide contests which are coming up.

But, I can tell you that from a national standpoint—so far as the battle for the 86th Congress is concerned, we have rarely faced a tougher problem.

Of the Senate seats coming up—21 are for Republicans incumbents' seats, 11 for Democratic incumbents.

And half the Democratic seats are in the safe "solid South." By contrast, most of our Republican Senate seats are in the so-called marginal States of the country—which could pivot either way, including right here in our State of Wisconsin and elsewhere in the Midwest.

PARTY'S POOR RECORD SINCE 1933

Obviously, the House elections too, could likewise go either way.

But here is an overall fact to remember: Since 1933, we Republicans have been in majority in the Senate and House for but 4 years out of the 24.

When we attained control, I personally was privileged to serve as Chairman of the Senate Judiciary Committee in the 80th Congress and of the Senate Foreign Relations Committee in the 83d Congress.

I say: let us find out why we as a party have so repeatedly lost the Congress, even when we were winning the Presidency in November 1952 by such a landslide of electoral votes.

We must find out why it is, that in all this quarter century, (which represents the lifetime of virtually every member of this audience) the American people have selected a Republican Congress only twice.

I ask you ladies and gentlemen: "Why?"

Obviously, because we could not win the complete confidence of the voters in the 48 States.

Let us, then, come face to face with the issues. Doing so will spell, I believe, the difference between more possible defeats in the battle for the Congress and the Presidency, or new victories, such as we deserve to win.

WE MUST DISPEL A KEY ILLUSION

I say, that, to win America's confidence, we must dispel the illusion that the Republicans represent "special interests," especially the interests of so-called big business.

As we recognize, no political party can survive as a "pawn of any special interest" (neither yours, nor mine, nor anyone else's).

If it attempts to do so, one of two things will happen:

1. It will be defeated at the polls; or

2. If not, then it will exist, not as a servant of the people but as the pawn of the special interests.

In either case, it loses effectiveness as a political party.

We can only attain our political goals by successfully performing our general political responsibilities to the entire country.

WE WANT ALL GROUPS TO PROSPER

I say: "Our party must be identified with all America."

We can be proud of what we have accomplished for business (because of what business means to 170 million Americans). But so, too, we can and should be just as proud of what we have accomplished for labor, agriculture, consumers, and veterans.

But we should be proud of our record and we should advance that record—not because we are special pleaders for so-called big business, but because we want strong, healthy segments in a strong, healthy America. We want all groups to prosper and none to be "whipping boys."

And, parenthetically, I say that when so-called big business is mentioned, let us recall: The 8½ million stockholders who truly own America's corporations; the hundreds of thousands of small businesses who subcontract work for large enterprises; and the fact that, under our profit and loss system, we must not penalize groups simply because they have succeeded by superior initiative, organization, and resourcefulness.

THE HEART OF THE CHALLENGE TO THE UNITED STATES

And we come now to the nubbins of our being here tonight: The future role—the future program of our party.

In my judgment, as I have earlier indicated, the only factor in this role is the changed world in which we live.

It is a role symbolized by such up-to-the-minute facts as—a reported testing soon of America's first intercontinental guided missile; the flight last December of X B–52 bombers, nonstop, around the earth in 45 hours; the vulnerability of continental United States in this air age, both to air attack and, for example, to possible attack from missile-firing submarines off our coasts.

WILL THE GOP BACK UP OR ATTACK IKE'S LEADERSHIP?

All of these facts spell the need for United States leadership.

And that means, I say, Republican leadership, Republican statesmanship.

The GOP must not furnish, as it has in the past, misguided direction in the fight against America's leadership.

The GOP must back up Dwight D. Eisenhower instead of inadvertently undermining his leadership on the world stage.

Thus, here in the Midwest and elsewhere, one of the greatest challenges facing the Republican Party is acceptance of this modern fact: That the United States of America literally has no alternative but to be a leader of and a partner with all the free nations of the world in combatting Communist aggression.

The American eagle cannot be and must not be turned into an American ostrich.

The entire world, yes, including the 900 million people behind the Iron Curtain, look to this country for leadership.

WHAT CAN HAPPEN IF WE DEFAULT

The alternative to American leadership would be American default. The result of American default could be (1) a Communist world and/or (2) world war III.

We intend neither of these terrible eventualities to come about.

There must be no war, and there must be no Communist world.

I know that I need hardly remind you young people who recognize that you have to bear the brunt of military training, that there really is no alternative to adequate preparedness. Yes, even though preparedness takes a good many years out of a good many lives.

But it is better to be alive with 18 months of training "under your belt" than it is to be dead amidst the radio-active ashes of a bombed-out American city, a city caught in a Pearl Harbor-like blitz.

As you may have noticed, I have referred thus far only to the international phase of our modern program.

DOMESTIC PART OF MODERN GOP PROGRAM

Now, there is a vast domestic phase as well.

Here on the home front, the atomic age requires these things:

1. A strengthened American education program. I mean higher education, and I mean improved elementary- and high-school education. We are in a life and death race with the Soviet Union for technical superiority. We cannot be second best in the quality of our scientific, industrial, and other manpower.

2. An expanding economy which will provide still more jobs. More and more jobs for the American people. Every year 400,000 of you young people enter the labor force. That means there must be 400,000 or more jobs awaiting you.

As a part of this challenge, more and more women are entering the labor force. A third of the 66 million employed Americans today are women.

The young men in my audience who have marriage in mind know that many of their future wives will want to continue to work. The American people are determined that there shall be sufficient jobs for all who want to work.

RESHAPING THE FACE OF AMERICA

3. A new look for America's very geography. A new look for the face of our countryside and our cities. I mean speeding up of the development of our 41,000-mile toll road system; improvement and expansion of our already overcrowded airports so as to be ready for the jet airliners which will soon be rolling off our assembly lines; aid to our cities for slum clearance and urban redevelopment. Remember, many sections of our cities are blighted with decaying areas which, in turn, are breeding grounds for vice and misery; a "shot in the arm" for lagging housing construction; acceleration of the application of atomic energy for peacetime purposes; speeding the dredging of the Great Lakes connecting channels so the full St. Lawrence seaway will be open for 2,700 miles of deep-draft passage as soon as possible.

OTHER HOME FRONT GOALS

And, of course, there are many other elements as well in our domestic program. I refer, for example, to resolving the issues of our farm problem; strengthening America's social security (for your own mothers and dads who have worked a lifetime for our Nation); reforming our obsolete tax structure, as proposed by the Wiley bill for a Hoover-type National Tax Commission; enacting long-delayed civil-rights legislation; strengthening conservation of our natural resources; and there must be action on many other fronts, as well.

THE PROBLEMS OF THE COST OF THESE PROGRAMS

Naturally, some of the programs which I have outlined cost a considerable quantity of money. The mutual security program, which President Eisenhower is recommending to the Congress and the Nation, costs money; aid for airports costs money; aid for improved navigational aids for air traffic cost money; and so on, down the line.

CRASHES AVOIDABLE ABROAD AND AT HOME

But I ask you, my friend, which would you rather read, news that Congress has acted to approve mutual security legislation and airport and air-aid legislation, or would you rather read that because of our inaction, one of our allied countries has crashed—has fallen into the Communist orbit?

And would you prefer to read news right here in the United States of some new air collision, some new accident, in which a giant airplane has cracked up in one of our overly congested airports, or has collided headon with another plane in midair because of lack of traffic control?

(Remember, for example, that Civil Aeronautics Authority reports literally hundreds of almost disastrous near misses—of both civilian and military planes in the air, during a period of each few months.)

Do we want more near misses in domestic and foreign policy?

Do we want to be pennywise and pound foolish?

Do we want to risk more crashes?

I say that to provide for the needs of the modern age will cost a good deal. But not to provide for them will cost infinitely more.

A crash abroad, a crash at home—these will prove far costlier in the long run.

I AM A TRUSTEE IN TERMS OF CONSERVING FUNDS

You will understand, my friends, that I am not recommending the signing of any blank checks. I am not recommending that a dollar be wasted, or be casually spent, in an extravagent fashion.

I am a trustee of taxpayers' funds.

As a trustee, I believe in husbanding, in conserving. But I don't believe in "stand-pat-ism" or in looking backward.

So, I am recommending that we take the blinders off our eyes. I am suggesting that this country must prove itself further that it is a dynamic country in a dynamic world.

WE ALL NEED A YOUTHFUL APPROACH

And while we want to hold on to the landmarks of past times; while we want to be true to our traditions of the past, we want also to advance to the horizons of the future.

This is, I believe, the youthful approach which is so necessary.

It is the approach which is not limited to people like yourselves who are young in number of years, but extend to all people who are young in mind—as I trust we all are.

CONCLUSION

It has been a great joy to be with you tonight.

Some of the things which I may have said have undoubtedly "struck sparks" with some of the members of this audience.

Others of my suggestions may be regarded favorably, perhaps quite unanimously.

I have spoken frankly, however, in order to provide food for thought for you because I know that you are anxious to come up with solutions to the problems such as I have enumerated—problems affecting the very life of this Republic and problems affecting the future of our party.

Thank you for your kind attention, and good luck to you all.

Address by James Patton Before Utah Farmers Union

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 10, 1957

Mr. HUMPHREY. Mr. President, Mr. James Patton, president of the National Farmers Union, recently delivered an important address before the annual convention of the Utah Farmers Union at Salt Lake City.

I ask unanimous consent that excerpts from Mr. Patton's speech be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS FROM ADDRESS BY JAMES G. PATTON, PRESIDENT, NATIONAL FARMERS UNION, TO THE ANNUAL CONVENTION OF THE UTAH FARMERS UNION, SALT LAKE CITY, FEBRUARY 23, 1957

I came here essentially to talk some bare, raw, economic facts which respect no party or person and to suggest some new ideas for increasing farmers' bargaining power regardless of political party in power.

* * * * * *

The blunt fact is that, in spite of 25 years of national farm programs, farmers now have little or no bargaining power in the commodity and money markets of the United States and the world.

* * * * * *

The Congress of the United States is still basically sympathetic to farm problems and to taking action which would help, but farmers and Congressmen alike have less sympathetic leadership in the executive branch of the Federal Government than they have had since the days of Hoover and Coolidge. The net result is that farmers have less bargaining power in the Nation's Capital than they have had in many years.

* * * * * *

The fact comes sharply home to me that the farmers—yes, and farm leaders—have been real pikers. Farmers are the only group in our economy or our population which have been going hat in hand and asking for less than half of what they deserve and what they can get.

* * * * * *

It is difficult, I am sure, for all of us to realize how far short of the goal parity of price actually was, even when we had it. But in the past few years, two major hoaxes have been perpetrated on American farmers which speeded up the economic decline and the destruction of our Federal farm program.

The first is the sliding scale, with its sugar-coated synonyms of "flexible" or "variable." This system, as you well know, was supposed to adjust supply and demand of the basis farm commodities. * * *

Against these promises, the performance has been an agonizing failure. The sliding scale has neither ended the over-supply nor the so-called surpluses, and it has actually put farmers even deeper in the hole than they were when the system went into effect. Nor has it helped the consumer. Housewives are still paying as much, if not more, for their groceries.

* * * * * *

The second hoax is the cheap feed policy. This is the idea that livestock and dairy farmers had one chief problem, namely, that they were paying too much for their feed, and it was reasoned that they were paying too much because the commercial grain growers of the Midwest had artificially high supports under their commodities.

* * * * * *

It should be obvious by now that the cheap feed policy is a false one—that cheap feed means cheap livestock just as surely as night follows day. * * *

The cheap feed philosophy has been one of the real keys to the recent business of dividing commodity groups against each other, which in turn is destroying the farm bloc in the United States Congress. * * *

There is a bitter feeling that there is little reason to bail out the corn farmers, who now face both low price supports and lower acreage allotments. I hope that some of the splits will be healed, but they run deep.

* * * * * *

It is past time for the American farmer and his elected leaders to sit down and take the toughest, most hard-boiled look at their situation. * * * We must put aside sentiment and emotion and get down to some really hard considerations about the future.

* * * * * *

Several conclusions are apparent: First, the American farmer is the only nonintegrated basic producer. He is the only one in the economy turning his product loose at the gate without subsequent control of it, and he is getting a shrinking proportion of the final price of his commodity.

Second, farmers can't catch up by increasing efficiency alone. Unlimited and increasing production will not solve the farmer's problem. Instead, it frequently digs him into a deeper hole. To increase his bargaining power, he must understand the problems of consumers and of the whole market.

Third, if farmers are truly concerned about the conservation of human and natural resources, they will know that they have too little organization, rather than too much organization. To offset the gigantic organizations of corporations and processors, who are not engaged in the conservation of resources—in fact, many are engaged in the destruction of resources—farmers must band together much more tightly than they ever have.

* * * * * *

The Department of Agriculture reported only a few weeks ago some depressing results of its study of the realized return to all farm labor and capital. Although it deducted an unreasonably low-interest rate on the current value of farm real estate and on farm inventory values and an allowance for working capital, the returns to farmers for their labor in 1956 came to only 70.3 cents an hour. This is a drop, mind you, of 28 cents per hour from the high point of 1947. And it is far below hourly returns in other businesses—$1.98 in manufacturing, $2.79 for building and construction, $1.86 for telephone business, and $1.57 in retail trade.

* * * Now let's look at the other side of the coin, at the extent of integration, monopolistic practice and price administration which characterizes the market in which farmers have to buy what they need and the market which takes their products at the gate.

* * * * * *

There we see vertical integration forward toward the consumer and backward toward the farmer, as well as horizontal integration. Vertical integration, you know, is a $50 word for what happens when a chainstore buys a feed lot and slaughters its own cattle for retail sale.

Let's look more closely at one of those food chains—Safeway Stores, Inc. Unfortunately, we don't have any really current figures, but we do know that between 1940 and 1947, Safeway Stores acquired 12 meatpacking companies in 10 States, 15 cheese plants (mostly in Wisconsin), 8 butter firms, 1 fish-processing plant, 1 poultry-processing plant, 1 beverage plant, 1 biscuit and cracker company, 1 cake and cookie company, and 1 dessert-powder company. For good measure, it also acquired a chain of 498 stores in New York, 14 in Washington State, and 454 other stores, mostly in New Jersey. We know that more of this integration has been going on since. To show the magnitude of it, Safeway obtained 32 percent of its meat supplies from its own packing plants in a 6-month period.

* * * * * *

Only last year the Federal Trade Commission prevented 11 canners of tomato products, including two of the biggest, from boycotting a bargaining cooperative of tomato growers in Ohio and surrounding territory.

* * * * * *

A list of corporations acquiring other firms during a recent 6-year period shows Foremost Dairies at the top, with 48 acquisitions, and Borden Co. in second place with 17 acquisitions. Borden and National Dairy Products, Inc. have recently been asked by the Federal Trade Commission to explain why they have not violated the antitrust laws by acquiring control of companies processing and distributing various forms of milk products, cheese, biscuits, cream, and many other foods.

The alarming growth of mergers, acquisitions, and integrations have been accompanied by unprecedented corporate profits. * * * Here are some of the increases in profits after taxes during 1955, compared with 1952, for various companies: The 4 top flour millers, 48 percent; the 5 top baking corporations, 36 percent; the 3 top meatpackers, 12 percent; the 4 top dairy processors, 45 percent; the 5 top canners, 73 percent; the 4 top retail-food chains, 30 percent; the 1 top food company, 48 percent; the 2 top soap companies, 38 percent.

This is evidence of the profit advantage in vertical integration, monopolistic influence, and administered prices, all contrasted to the individualistic competitive situation of the millions of farmers.

* * * * * *

We see in many regions of the country a kind of integration of very dubious benefit to family farming. The prime example of it is the broiler industry, in which the farmer becomes one cog in a system whereby a feed dealer supplies him with chicks, equipment, feed, and credit. For some time this was regarded as a rather unique venture in agriculture, but the technique has spread to beef cattle, hogs, and other commodities.

A recent advertisement by General Mills shows that corporations already highly integrated in the feed industry are interested in entering the poultry business where small-town feed dealers have been the principal source of capital. The February issue of Farm Journal calls it egg business in a package and describes the plan of General Mills to supply feed, pullet houses, and a guaranteed market as vertical integration.

This is bringing business integration right onto the farm, somewhat reminiscent, I fear, of a notorious sweatshop system for sending piecework into tenements for cheap hand labor.

Vertical integration controlled by middlemen puts farming at the bottom of the pyramid. If the food business is to be ver-

tically integrated the heart of the matter is whether it will be controlled for the benefit of farmers and ultimate consumers or for the benefit of a comparatively few corporations.

This question is more than economic—it is also moral and political. Its answer depends on whether farmers retain a fair share in what they work so hard to produce and on whether we have democracy in the agricultural economy or something approaching a corporate state.

I am dedicated to the proposition that whatever further integration takes place in the food business must be done for the benefit of farmers, and I suggest that the time is ripe for farmers to seize this economic device as one way to put the laws of supply and demand to work in their favor, instead of against them.

Professor Willard Cochrane, of the University of Minnesota, outlined at a recent meeting of the American Farm Economics Association a plan whereby farmers, with legal aid, might restrict their production to the point at which prices would be forced up to a fair level. Compared with "agribusiness," Professor Cochrane has put the horse out in front of the cart where it belongs.

Many of us have been reluctant to discuss the deliberate shrinking of market supply in order to achieve higher prices because of the monopolistic aspect of it, and we would rather get along without monopoly either for us or against us. But to some extent we have been suckers.

We have made ourselves hoarse trying to tell the American people that there is no true surplus so long as people are hungry at home or abroad. We have shouted from the housetops about the necessity for large national reserves against crop failure or international disaster. We have supportported appropriations for experiment stations and research to increase our productive techniques.

And what has been the result? We have furnished the free nations of the world with an abundance of food so far as the standard of market prices is concerned and enough about that to give large quantities away or sell them at cut-rate prices. We have provided the American housewife with a consistently higher selection of food than any other housewife in the world has.

In doing this we have lost about 100,000 farmers a year from the land, watched farm net income drop about one billion dollars a year, to less than 45 percent of parity, watched our prices fall by almost a third in relation to our costs, and have found ourselves in one of the worst cost-price squeezes of all time.

We have seen the Federal farm program, which we fought to get on the books as a reasonable exchange for an abundant production, destroyed in effectiveness by administrative interpretation in a Department of Agriculture dominated by middlemen.

I still believe strongly in a large national reserve of food and fiber, and some of you know me as a leader in the unsuccessful movement to establish the same policy on an international basis. Farmers Union has also advocated the stockpiling of food on the perimeters of areas most likely to be bombed in the event of an attack. And I still feel as strongly as ever that there is no true surplus of commodities so long as people are hungry.

Farmers Union is dedicated to all of those propositions and will continue to be. We are also dedicated to democracy in America and specifically within agriculture. We believe in the institution of a Congress of popularly-elected representatives of the people, and we believe in holding popular elections even though our friends don't always win.

But the raw truth is that American farmers must turn some fire back against the fire which has been scorching us. We must get our hands on the tough kind of bargaining power which we meet coming the other way every time we go to market. We must increase our take-home pay just as others have increased theirs, including the corporate officers who get it in the form of salaries and the corporate investors who get it as dividends.

American farmers must take over the management of their abundance, must take more control of their product. This may mean taking a page from the books of the auto industry, the steel industry and the big food processors. In some of these cases it may mean moving in on them before they move any farther in on us.

* * * * *

Perhaps a line should be drawn representing a price which will return a parity of farm income and no commodity allowed to cross that line unless it brings that price. And I am not talking about $21 hogs, which is a parity price—I am talking about $28 hogs, which is the price it would take to bring farmers parity of income. I am not talking about $2.49 wheat, I am taking about the $2.99 a bushel it would take to bring parity of income. I am not talking about $1.80 corn, but about $2.18 corn.

Every time farmers have come through with a good production job, what the economists call inelasticity of demand has come into play to penalize them instead of rewarding them. I propose that this law be used by farmers instead of against farmers. If the volume of farm production were reduced by only 1 percent, the average price received by farmers would increase 6, 7 or even 10 percent. This is the factor, in reverse, which has worked against us.

Even the most extreme critic of our national reserves, who thinks of them as wasted and wasteful burdens on the taxpayers' backs, would have to concede that what he calls a surplus is only a small percentage of the total farm production. But it has been this small percentage that has been the difference between success or failure on many farms and ranches because of the adverse effect of allowing the law of supply and demand to be used against farmers.

* * * * *

Managing our abundance for the primary benefit of farmers might be done by a close calculation of the national requirements, including reserves, figured right down to the point where we come out even. This figure for each commodity might then be translated into a bushelage or poundage quota for each farmer, in which case I propose that it be done on a graduated basis to benefit the family type of farmer.

This system might require a national board acting in the behalf of farmers, much as the Federal Reserve Board acts to stabilize money and banking. It might require other marketing boards to enforce the price established legally as a fair one, below which no commodities would move into commerce.

This outlines a tough proposition, but it is no tougher than the conditions on most of our family farms today. With it might go other features. For example, I would propose that parity income deficiency payments be provided to the extent that the estimaters of national requirements might overestimate.

This, in effect, would turn around another apparatus which has been used against us. Our farm policies have actually been subsidizing * * * the mounting profits of food processors and other middlemen, while farmers have been declining year after year.

* * * * *

We believe there should be declared a national food policy based on augmented consumption at home and abroad but rewarding those who produce it.

We would increase farmers' bargaining power by a comprehensive farm income improvement program consisting in part of a workable combination of parity deficiency payments and price supporting loans and purchases, marketing agreements, and production adjustments. We would put corn and the other feed grains into one package and gear their support directly to livestock. Instead of dragging the higher commodities down to the lowest denominator, we would pull the low ones up to a fair level and stop the vicious divisiveness between commodity groups.

We propose creation of a Federal Yardstick Family Farm Credit Agency to undo some of what is being done to our family farmers in this "tight money" era. We propose that crop insurance should be extended, not withdrawn, in times of disaster, such as drought.

We would increase the rate of payment in the soil bank and make more commodities eligible for the higher acreage reserve payments, also tightening up the conservation requirements.

We would restore to elected committees of farmers the administration of their programs, expand social-security protection for farmers and farm workers, and expand consumption at home and abroad by a food stamp plan, stepped-up school lunches, a broader milk for children program, international commodity agreements and an international food and fiber reserve bank.

We have not lost faith in the democratic processes of people using their Government for their own benefit. Unlike a contemporary farm organization and many officials of this administration, we do not believe in anarchy, either as a political system or as a means of handling the farm problem.

Our farm abundance can be managed; but, if it is to be managed for the primary benefit of those who produce it, we will have to take much bolder action than anything we have seen yet. We will have to match our economic opposition blow for blow, all within the framework of constitutional democratic processes.

Address by Secretary of Agriculture Benson Before Central Valley Empire Association

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 10, 1957

Mr. KUCHEL. Mr. President, on March 19 last the distinguished Secretary of Agriculture, the Honorable Ezra Taft Benson, spoke before the Central Valley Empire Association in Fresno, Calif. He delivered an interesting and constructive speech, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON BEFORE CENTRAL VALLEY EMPIRE ASSOCIATION, FRESNO, CALIF., MARCH 19, 1957

It is always a pleasure to come to California—our leading agricultural State and one of my adopted home States. And it is a special pleasure to come to Fresno, the foremost agricultural county in the Nation. Mrs. Benson and I are happy to be here.

Back in 1938, while working on a marketing study at the University of California, I traveled into every county in this State.

Now, 19 years later, I still recall with a flood of happy memories those joyful busy days. I recall the delight I had out here in the Golden State in seeing your noble mountains and green valleys, your clear skies and blue sea, your bright sun and huge trees—and besides all this the most diverse agriculture in the United States.

These valleys are an inspiration to me and I love to see the progress you are making. Last summer I visited in Stockton where the Diamond walnut growers were dedicating their new processing plant. Today I gazed out over this great valley, this famous "fruit bowl" of California, this fabulous area in which you produce nearly every fruit from deciduous to subtropical, an unbelievable variety of vegetables, together with nuts, dry beans, rice, barley, sugarbeets, potatoes, cotton, alfalfa, and irrigated pasture—and besides all these, chickens, turkeys, dairy herds, beef cattle, sheep and goats. Truly, it is breathtaking. As I surveyed all this I could not help thinking how grateful we should be to the Almighty for the blessings He has visited upon our people here in California and throughout this choice land.

We are blessed by freedom and by the opportunity to use freedom as responsible citizens. We are blessed by prosperity—by plenty in a world wherein so many have so little.

And we are blessed by the possession of a basic philosophy of self-help—a philosophy that is the theme of this meeting of the Central Valley Empire Association.

I urge you—no, I challenge you—never to lose this fundamental philosophy. It was the spirit of the pioneers. It was the making of the West. It is the hope of the future. And it has paid dividends to California agriculture.

The cash farm income of the farmers and ranchers of this State last year reached an all-time high—$2,796 million dollars. This was the highest cash farm income any State has ever had in a single year.

Moreover, your realized net income per farm was also an all-time high—more than 50 percent above the level of 1949 and 9 percent above the previous high of 1955.

I wish we could say the same for the Nation's agriculture as a whole.

I have been reporting certain facts about the agricultural situation to the American people. Some of our critics do not seem to want me to mention these facts. Apparently they feel that only those things should be mentioned that support their particular political point of view.

A few years ago surpluses were mounting rapidly and rigid price supports on the so-called basic crops were encouraging more and more production of crops already in surplus. We called attention to that situation, and our critics did not like it. Last year we pointed out that the surpluses cut farm income an estimated 20 percent, or $2 billion, and they were upset.

And now that we are pointing out some encouraging developments in the agricultural situation, our critics are, if anything, even more indignant than they were before. We have been reporting farm developments on a consistent basis. We will not be swayed by pressure to paint either a rosier or a darker picture than the facts justify.

Fi[illegible] are facts, and the truth is that prices receive[illegible] by farmers in February were 3 percent above a year ago and 5 percent above the low of December 1955.

The truth is that on a nationwide basis, realized net farm income last year, as recently revised, was 4 percent above 1955—the first peacetime year, by the way, in which farm income has increased since 1947.

The truth is that exports on farm commodities are running at an all-time high.

And there is every indication that we have passed the peak of the storage problem and that Commodity Credit Corporation investments in price supports are declining. It is expected that the total CCC investment in farm commodities will be about $7.6 billion on June 30, 1957. This will be a net readuction of $700 million in a period of 12 months and a net reduction of approximately $1.3 billion below our peak holdings of February 1956.

These are the facts. I believe that the American people are entitled to know them.

We all know that, despite these more favorable developments, agriculture in general has been having some difficult times these past few years.

Many of these difficulties can be traced directly to policies which kept agriculture in a price-support straitjacket.

This dependence on rigid supports—on a form of guaranteed markets—on ever smaller allotments and quotas to fit shrinking demand—this was defeatism. This was submission to fear. This was following the path of least resistance.

We cannot make progress that way. That is the road to a Government-dominated agriculture, a socialized agriculture.

More than a century ago the French philosopher and historian De Tocqueville wrote: "Democracy and socialism have nothing in common except one world—equality. But notice the difference, while democracy seeks equality in liberty, socialism seeks equality in restraint."

Was not that the pattern—equality in restraint—being forced on agriculture under rigid supports?

The relative position of California agriculture provides a striking endorsement for the philosophy of self-help as opposed to dependence on Government. Last year your farm operators had a realized net income of $1.66½ billion—a record high for any State at any time.

Out here in the Central Valley where so large a proportion of our oranges, grapes, peaches, and dried fruits and tree nuts are grown, you believe in self-help through marketing agreements rather than in Government control through direct price support. You believe in farmer-owned and farmer-controlled cooperatives and you have many good ones. You have Federal marketing agreements and orders on raisins, prunes, figs, almonds, and walnuts—and you have, moreover, promotional efforts under State marketing orders on raisins, prunes, and figs.

You are firm believers in the value of research and education to increase efficiency, to improve quality, and to expand markets.

Of course you have your problems, too. Water is your great need here just as it is in many other areas. During November and December, I understand, you had near-record dry weather which held back planting and germination of grain crops and retarded growth of new grass in range areas. Despite some good rains, which relieved the worst immediate effects of the drought, your seasonal total precipitation has thus far been much below normal.

On the other hand, weather conditions have been favorable for getting work done.

But always there is this problem of water. I am told that February snowpacks for irrigation water were deficient and that ground-water levels are still dropping in pumping areas because of heavy usage.

As President Eisenhower said in establishing his Cabinet Committee on Water Resources in May 1954: "If we are to continue to advance agriculturally and industrially we must make the best use of every drop of water which falls on our soil, or which can be extracted from the oceans."

We must use more effectively the best storage we know about—the earth itself. Our soils and underground reservoirs constitute the greatest potential storage we have.

Here again the best programs are programs of self-help—programs initiated and developed by local people and managed by them, with the help of both State and Federal Governments where needed. Soil-conservation districts and the small watershed program are examples. The watershed program is a great step forward in our national efforts to conserve soil, water, range, timber, and wildlife resources. It supplements the efforts of the Bureau of Reclamation and the Corps of Engineers in seeking maximum utilization of available water supplies.

The small watershed approach recognizes that three kinds of management go hand in hand—soil management, water management, and local management. It is undeniably one of the great conservation developments of our time.

Our Soil Conservation Service is assisting in the investigation, planning, or conservation treatment of seven locally initiated California watershed projects under the Watershed Protection and Flood Prevention Act. We are helping in the development of land use and structural works of improvement in two pilot small watersheds and the Los Angeles and Santa Ynez flood-prevention projects. We recognize that larger projects are needed for the rapidly growing requirements of your State.

Water is now perhaps the greatest limiting resource factor in the further development of this Nation. We must deal with this problem promptly and effectively. I repeat, we must deal with it cooperatively—on a partnership basis.

In the easing of drought and other disasters, there is need for more State and local participation. As President Eisenhower recently said in a message to the Congress: "State and local governments should assume a greater part in alleviating human distress and hardships and in meeting other local needs in times of disaster, calling on the Federal Government only to supplement their own resources."

With this in mind, legislation has recently been offered requiring a minimum of 25 percent State contribution in certain future emergency agricultural programs for disaster relief.

This is in line with the philosophy that the proper function of the Department of Agriculture is to help farmers and local communities to help themselves. Government must not dominate—it must not dictate. Government is the instrument of the people to serve them and to work with them, while preserving the basic freedom of the people to make their own decisions.

Government should do for the people what they cannot do for themselves as individuals or as groups. It is a legitimate function of the Department of Agriculture, for example, to help farmers and ranchers work their way out of unbalanced supply-demand situations. But such help must be sound. It must not sow the seeds of Government domination—it must not lead to dependence on Government to take over the marketing of farm crops.

Last summer when you had an oversupply situation in plums, we announced a purchase program. Over a 2-week period 90 carloads of fresh plums were purchased. The program was announced on August 1 and buying began a week later. On only one day after announcement of the program did the daily average auction prices fall below $3. During the 10-day period prior to the announcement, the average market price was above $3 on only 2 days.

This is sound help—it is temporary. It does not pile up commodities in Government warehouses where the accumulated cost of storage mounts day by day and where the fruits of the good earth are subject to deterioration and spoilage.

Hand in hand with this philosophy of sound, temporary help as needed goes the philosophy of producer responsibility. Conscientious producers recognize that they must help prevent oversupply problems by

commonsense plantings. Growers in California now produce most of the Nation's crop of tomatoes for processing—you grew 60 percent of the national total last year. Because of a record California crop of some 2¾ million tons, and greatly increased output elsewhere, the total supply of tomatoes for processing in the 1956 season was about 40 percent more than it was a year earlier. To prevent overproduction and depressed prices in the 1957–58 season, we have recommended acreage reductions which with normal yields would stabilize the situation in 1957.

These are all various aspects of self-help in agriculture—of the philosophy which you are saluting in this meeting.

But the most important and effective long-term program of self-helf for agriculture has been, and remains, a program of research and education in more efficient production and marketing. The better crop varieties and the better breeds of livestock and poultry we now have, the improvement in the management of fields and animals, the new industrial uses for soybeans, corn, cotton, and many other commodities, the techniques that we now have for conserving and improving natural resources—all these are based in large part on research and education.

Some will say, of course, that it is all very well to talk about research and education as the best long-term ways of improving agriculture's position—but the hard fact is that research and education are too slow. The lag between finding a new fact in the laboratory and applying it on the farm is too great.

True, we cannot expect research and education to solve our immediate surplus problems. This situation had become so critical—because the wartime emergency policies were continued for nearly 10 years after the war ended—that drastic temporary expedients had to be adopted.

We have such temporary measures in the vast disposal programs now in operation and in the soil bank. These, together with flexibility in price support, are the major tools with which we are gradually cutting down the surpluses and increasing farm prices and income.

The cost is heavy. President Eisenhower has submitted the largest agricultural budget in history for fiscal 1958—$5.3 billion.

But there was no alternative—we had either to pay the heavy cost of these emergency programs now or face a loss to the Nation, caused by a depressed agriculture, that would have been far greater.

But not for a moment should we allow ourselves to lose sight of the fact that these programs are emergency—are temporary. We must make sure that they win their objectives.

The acreage reserve program of the soil bank must indeed be used to reduce production of crops in surplus. Our disposal operations must not simply empty Government warehouses so they can be filled again, or reduce inventories so they can be built up again.

In a terrific rainstorm it may be necessary to use buckets to catch the water from a leaky roof. But the permanent solution is to fix the roof.

The permanent and sound solutions to agriculture's difficulties are lowered costs, competitive prices, improved quality, and expanded markets—largely through research and education.

California has long been a leader in agricultural research—and in marketing cooperatives also. I know you do not need to be sold on the value of research extension and cooperation. We all recognize, however, that in the past fact using has lagged far behind fact finding. We are seeking remedies. We are now getting speedier and more thorough communication to farm people.

It took about 10 years to put hybrid seed corn on farms. If a development of equal significance were introduced today, I wonder if a comparable job could not be done in one-third the time.

In the past, agricultural production research has outrun marketing research. We have set up in our Agricultural Marketing Service a research establishment whose exclusive interest is improving the marketing of farm products. In our Agricultural Repie through the Extension Services and the other agencies of the Department.

search Service we are giving increased emphasis to the development of new uses for agricultural products. This work is now being administered separately under a deputy administrator for utilization research and development.

As you know, the President's Commission on Increased Industrial Use of Agricultural Products has been preparing recommendations for the wider use of agricultural raw materials. An interim report of this Commission will shortly be presented to the President and the Congress. Current industrial consumption takes the products from less than 7 percent of our farm acreage. This is undesirably small. We feel sure it can and will be enlarged.

I wish there were time enough to go into the fascinating story of the research in marketing and new uses now going on. I could tell you about new merchandising methods that they increased store sales of fruit as much as 75 percent. Studies of storage and transportation are producing facts that will result in big savings.

New methods of preventing insect infestations of dried fruit have been developed. In another study our researchers have found that temperature control can greatly increase the storage life of dates. For example, dates that have a storage life of 3 months at 60° F., can be kept for considerably longer than a year at zero degrees.

A study is now getting underway on the marketing costs of eggs in certain areas in California.

With the help of our technicians, plans for a complete modern wholesale food center in San Francisco have been prepared and preliminary surveys are underway of facilities in Oakland and Los Angeles. I might say, in this conection, that construction was begun last year on a new wholesale food market in Philadelphia which is expected to save more than $6 million annually in food handling costs.

In the field of new uses, we have developed an excellent whole-milk powder which, with water added, makes milk of good flavor. When we find out how to make the powder retain its good qualities in storage and how to produce it economically, it should go a long way toward bringing supply and demand of milk into balance.

The new fruit and vegetable powders may open entirely new markets.

Improvements in processing and handling of frozen foods will lead to a further tremendous expansion of this young industry.

New forms of dried eggs and greatly improved frozen poultry products will stimulate consumer demand.

The commercialization of potato granules, or instant potato, has moved ahead rapidly in the past few years. The mashed potatoes are indistinguishable from the product made with fresh potatoes. Several companies which have adopted our findings are now producing this form of dehydrated potato.

Who can say that the progress we have been making in marketing and new uses will not burst forth in a flood, just as the 20 years of production research, which had been damned up by the depression, suddenly broke forth during World War II? Who is to say that there is not at this moment in the fields and laboratories of our Federal and State research establishments a crop, perhaps more than one, which will do for the farmers of the West, the South, the Northwest, or the East, what the soybean has done for the farmers of the Middle West?

Who is to say that there is not now in the laboratories a development in the field of marketing which might rival the effect of the development of the frozen food industry?

Already we see the shadow of things to come—of amazing advances in the production and marketing of food and fiber.

Nowhere is the marketing outlook brighter than here in California. Your population growth continues to be astounding. California producers who used to look to the East for markets now find a vast and rapidly expanding market on their own doorstep. Despite the tremendous agriculture of this State—and I repeat it ranks first in the Nation—your sources of meat are moving eastward. You get hogs from Iowa and you buy beef in markets farther and farther East.

Besides the expanding Western market, your products are in demand throughout the country. And as more outlets open in Asia, you will have strategic advantages there also.

Let us move forward this exciting future through a return to the concept of full partnership between the Federal and State governments, on the one hand, and the people on the other.

There is fine cooperation between your State department of agriculture and the Federal Department—between your land-grant college and the USDA. I firmly believe that we need on the national level people who intimately know State problems. I have appointed several former Commissioners of Agriculture to my personal staff. They have been extremely valuable. We are making progress in our struggle to restore the concept that responsibility for farm programs resides in the people.

The drift toward centralization of power has been slowed down. Next we must halt the trend—then reverse it.

Here in your "Salute to Self-help in Agriculture" you are rendering a true service to the cause of responsible freedom.

I am most happy to join you in this reaffirmation of a vital American principle.

May God bless this tremendously important work.

Dangerous Program

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 10, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Dangerous Civil Rights Program" from the March 25, 1957, issue of the Waycross, Ga., Journal-Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DANGEROUS CIVIL RIGHTS PROGRAM

Senator HERMAN TALMADGE sees the Eisenhower administration's civil rights program as a threat to "the very roots of constitutional government."

Along with many other lawmakers from all parts of the Nation he insists that the legislation violates the 10th amendment to the Constitution.

The proposed civil rights program would give broad powers to the Federal Government. These are regarded by many as clearly in violation of the rights of the individual States.

"The powers not delegated to the United States by the Constitution," says the 10th amendment, "nor prohibited by it to the States, are reserved to the States respectively, or to the people."

One of the proposed civil-rights measures would authorize the Attorney General of the United States to seek injunctions to restrain persons who are about to engage in any acts or practices which would give rise to a cause or action.

As we understand it the Attorney General would be permitted to file injunctive proceedings and civil suits in the names of private individuals whom he considers to have been deprived of their civil rights whether these individuals desire to go to court or not.

There are other aspects of the civil-rights program which are objectionable. The whole program appears to be designed to expand Federal bureaucracy and to further diminish the power of States.

There are many Members of Congress who think, among other things, that the civil-rights proposals are too vague.

They point out, for example, that they could be misused by overzealous officials in the Government and perhaps even could be used against religious and nationality groups.

While it is doubtful if this would be done it is apparent that many lawmakers don't like the proposed measures and are inclined to vote against them.

But it is unlikely that many outside the South will do so. The reasons all boil down to political expediency.

Many Democrats think they must support the civil-rights program to win back Negro votes the party lost in the last election. Republicans will support it in order to woo even more Negro voters.

It now is freely predicted that the program will eventually pass, though it is expected to run into a lot of trouble in the Senate where it is difficult to shut off debate.

Our Constitution contains adequate provisions to protect the rights of all citizens. The proposed so-called civil-rights program is both dangerous and wrong.

Lost Youth Group Threat of This Era

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 10, 1957

Mr. HUMPHREY. Mr. President, as the sponsor of S. 872, the Youth Opportunity Act of 1957, I have taken special interest in the problems of our young people from the ages of 14 to 24.

Malvina Lindsay, in the Washington Post and Times Herald for April 8, 1957, has given us an article entitled "'Lost' Youth Group Threat of This Era." I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By Malvina Lindsay)

A big lost generation of tender age, 14 to 17, will be chalked up to the 1955–65 decade unless some way is found to make productive the many youngsters of that age who lead idle, aimless lives. They are the school dropouts who can't get jobs, also the in-school boys and girls who merely mark time.

Teen-age population is rising again, reflecting the early 1940's upsurge in the birth rate. Since about 40 percent of high-school students drop out of school before graduation, the number of untrained and uneducated youth in the job market is steadily increasing. Yet, ever higher skills and more education are demanded by employers. Moreover, farm youth is being displaced by machinery.

Educators, civic workers, and officials of the United States Department of Labor are urgently seeking means to develop and train adolescent drifters. Much interest throughout the country is now being centered on community work-experience schools through which part-time schooling is combined with part-time paid employment.

Through such projects, potential drop-outs are often induced to remain in school. Indifferent students and those of low ability often find new meaning in their school work through relating it to job experience.

Work experience schools also provide a bridge of adjustment between school and the working world for 16- and 17-year-olds who do not intend to seek higher education. In some ways they are a modern equivalent of the old system of apprenticeships for youth.

This system, says George Macaulay Trevalyan, in his English Social History of the 16th and 17th centuries, was a better method of protecting youth between the dangerous ages of 17 to 24 than anything discovered today.

That much further study of the work-experience schools needs to be made was brought out at a recent conference here of the Advisory Committee on Young Workers of the United States Bureau of Labor Standards. This group, representing educators and juvenile and employment advisers from throughout the country, heard reports on a work-experience school project in Philadelphia, and on research that the United States Office of Education is doing on projects for the idle teen-ager.

It was brought out that no single pattern has been developed for the work-experience school, and that different kinds of such schools will be needed to meet the varying needs of adolescent misfits. It was also emphasized that no project offers a single answer to the question of how to find a place in society for the early school leaver unprepared for today's labor market. School, home, church, community services have their responsibilities in meeting his needs. Often the adolescent misfit needs psychiatric care.

Much interest in youth conservation camps is now developing. Nine States are operating 29 forestry camps for juvenile delinquents and 5 more States have camps underway. Many suggestions have come to the Bureau of Labor Standards that such camps be extended to provide opportunity for other youth than delinquents.

There is also interest in having unemployed youth help restore public facilities in the national parks, which have suffered because of labor shortages. The National Parks Association will operate a pilot program of volunteer conservation service this year for a total of 52 high-school and college students, who will work for experience and school credit, though lodging will be provided.

In order to find out which approach is best in helping unemployed and disadvantaged adolescents, the Bureau of Labor Statistics plans to undertake a program of assistance to five demonstration communities—if it receives funds requested in the President's budget.

Since by 1965 the 14–17 group in the population is expected to increase by 55 percent, there is urgent need to get ready now to develop the productive capacities of that big segment of the population.

Presidential Disability

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 10, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Arlington (Va.) Daily Sun on presidential disability. In recent months there has been considerable discussion of how the difficult problem of who should determine whether the President of the United States is physically capable of continuing in office if the President is not in physical condition to make the determination himself. President Eisenhower is to be commended for the steps he has taken to bring this problem before the public and to find a solution.

The principal current proposals on this matter would designate either the Vice President, or a majority of the Cabinet, or the Supreme Court, or the Chief Justice—sometimes in conjunction with Congress—to make the determination of disability.

Last week the Arlington (Va.) Daily Sun put forward a new proposal which differs from the principal suggestions that have been made. The Sun proposes that Congress make the determination. Briefly, the proposal is as follows:

If two-thirds of each House of Congress votes to approve a finding of Presidential disability, the powers and duties of the President shall devolve upon the Vice President.

If, subsequently, a majority of each House of Congress approves a finding of renewed ability and competency on the part of the President, his powers and duties will be restored to him, provided he wishes them restored to him.

The principal argument which the Sun advances in support of its proposal is that, unlike designating the Vice President, the Cabinet, or the Supreme Court to make the determination of disability, the designation of Congress to do so would establish no radical departure from the present Constitution and no basic alteration in the constitutional balance of powers, since the Constitution already grants to Congress the power to remove the President for a high crime or misdemeanor. The Sun argues that its proposal would merely extend Congress's removal power to cover disability.

I think this is an interesting and constructive proposal that deserves further study. In order that it may be studied along with the other plans that have been proposed, it is my intention to have it drafted in proper form and introduced as soon as it can be prepared.

I commend the editorial from the Daily Sun to my colleagues' attention.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Arlington (Va.) Daily Sun of April 5, 1957]

PRESIDENTIAL DISABILITY: A NEW PROPOSAL

President Eisenhower has rendered a service to the country in bringing public atten-

tion to bear on the constitutional difficulties involved in determining Presidential inability.

The principal question the Founding Fathers left unanswered (although the question was raised in the Constitutional Convention) is: Who shall determine whether a President has been disabled to such an extent that he cannot properly perform the duties of the office?

President Eisenhower has put forward one answer: Let the Cabinet decide, by majority vote. This suggestion has been criticized, justifiably, we believe, on the ground that Cabinet members, completely indebted to the incumbent President for their jobs, would be interested parties, loath to remove him from power.

Others have suggested bringing in the Supreme Court or the Chief Justice in one way or another. But what is involved here is the transfer of political power from one person to another, and many believe that it would be a mistake to involve the Court or any of its members in that kind of a decision.

Both of these suggested methods of determining Presidential disability would establish entirely new and untried procedures for removing or displacing the President. But in our opinion it is not necessary to move into these untried fields, for in drafting the original Constitution, the Founding Fathers envisaged the possibility of having to remove the President from office in extreme circumstances, and entrusted the removal power to Congress. At that time, the Founding Fathers provided only for removal of the President by impeachment for a high crime and/or misdemeanor. Experience has since shown that a physical or mental disability might also be cause for his removal from office. If the Founding Fathers were willing to entrust the power of Presidential removal to Congress in the first instance, why shouldn't we today follow the pattern they originated by extending Congress' existing power of removal so as to cover disability? In that way, there would be no radical departure from the past, no basic alteration of the balance of powers established in the original Constitution.

Moreover, since the transfer of political power is involved in finding a President unable to perform the duties of his office, is it not wise to entrust that function to a representative body, accountable to the people?

It is for these reasons that this newspaper believes the determination of presidential inability should be made by the Congress of the United States in the following manner:

1. If Congress, by two-thirds record vote in each House, approves a finding that the President is physically or mentally incapable of performing the duties of his office, the powers and duties of his office shall devolve upon the Vice President until the next presidential election or until those powers and duties are restored to the President, as provided below.

2. If, subsequent to a finding of disability by the Congress, the President feels himself competent to perform the duties of the office, and if he desires to have those duties restored to him, he shall so advise the Congress in writing. If Congress, by majority vote in each House, approves a finding that the President is physically and mentally able to perform the duties of his office, the powers and duties of the Presidency shall be restored to him.

3. For the purpose of considering any finding of disability or ability, in the event Congress is not in session, the President pro tempore of the Senate may, with the concurrence of the Senate minority leader, convene the Senate, and the Speaker of the House may, with the concurrence of the House minority leader, convene the House of Representatives.

It would not be appropriate, in a Constitutional amendment (which would probably be required to deal with this problem), to outline in detail the procedure by which Congress would arrive at a finding of disability. It would be the duty of Congress to establish such a procedure as soon as possible after the ratification of the amendment.

But in order to answer questions that may arise about our proposal, we suggest the following procedure:

1. The creation of a special joint committee of Congress, made up of 8 Senators and 8 Representatives, with an equal number from both major parties, appointed respectively by the majority and minority leaders of the respective Houses. The committee would be created pursuant to a concurrent resolution which could be introduced by any Senator or Representative, which would be entitled to immediate consideration, and which would become effective when passed by a majority of both Houses.

2. The special joint committee would hear such testimony from such witnesses as it deemed appropriate and if two-thirds of its members concluded that the President was unable to perform the duties of his office, they would submit a finding of disability to both Houses which would then, by roll call vote, either approve or disapprove the finding of disability. Failing a two-thirds vote in the joint committee or in either House, the President would retain his powers.

3. If the President desired reinstatement, the same special committee would be reconvened (vacancies to be filed in the same manner in which the committee was originally chosen), and hear appropriate testimony. A majority vote in the committee would be required to submit a finding of renewed ability to both Houses, and a majority vote in both Houses required to approve that finding. Failing a majority vote in the committee or in either House, the Vice President would continue to exercise the powers of the President.

(We believe that the President should be reinstated by a majority vote even though we would require a two-thirds vote to displace him, because we do not think that a minority of one-third of either House should be in a position to prevent the man elected by the people as their President from resuming his office.)

Any plan for solving this difficult constitutional problem is bound to have some drawbacks and imperfections. Were that not the case, the problem might have been solved long before this. No doubt some may find drawbacks to our suggestion of having Congress determine Presidential disability, but we believe it to have merit.

1. Because it involves no new or radical procedures and no alteration of the traditional constitutional balance of powers. Instead, it merely extends a procedure written into the Constitution by the Founding Fathers themselves.

2. Because it would mean the determination of this delicate and difficult question by the most representative, and hence the most democratic institution available, an institution each of whose Members is directly accountable to the people.

In short, if we can't trust two-thirds of the Congress to act responsibly on such a grave matter as displacing the President then we can't trust democracy.

Dangerous Proposal

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 10, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Dangerous Proposal," published March 26, 1957, written by Turner Rockwell, editor of the Valdosta (Ga.) Daily Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DANGEROUS PROPOSAL

(By Turner Rockwell)

Senator HERMAN TALMADGE has joined with other Members of Congress from the South and some from other parts of the country in voicing bitter criticism of the Eisenhower administration's so-called civil-rights proposal as a threat to "the very doors of constitutional government."

Senator TALMADGE and many others feel that this proposal violates the 10th amendment to the Constitution.

The proposal would give broad powers to the Federal Government which many thoughtful people feel would be wholly without justification. They feel that the proposed legislation is clearly in violation of the rights of the individual States and individuals.

The 10th amendment says: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people."

One of the provisions of the proposed civil-rights legislation would authorize the Attorney General of the United States to seek injunctions to restrain persons who "are about to engage in any acts or practices which would give rise to causes of action."

As I understand the proposal, the Attorney General, if it is enacted, would be allowed to file injunctions and civil suits in the name of private individuals whom he feels have been deprived of their civil rights whether these individuals desire to take legal action or not.

This is not the only objectionable feature of the proposal. The whole project appears to be an effort to enlarge Federal bureaucracy and to take more rights from the States and individual citizens.

Many Members of Congress—both Houses—feel that the proposed legislation is too vague and indefinite. It is pointed out that overzealous officials could abuse the powers conferred on them and might even be used against religious and other groups. Maybe it is doubtful if this would be done, but some see the danger of such activity.

The whole proposal smacks too much of political expediency. Some Democrats favor it as an effort to win back Negro votes and many Republicans feel that it will enhance their strength among the Negro voters.

It is apparent that the proposal will be passed, although it is probable it will run into a lot of trouble in the Senate, where efforts to limit debate have in the past been defeated.

The Constitution provides ample provisions to protect the civil rights of individuals and the proposed civil-rights legislation does not

appear to be needed. To enact this legislation is to give Federal officials too much power over individual citizens and it is just another step in taking away from the States rights which are guaranteed to them by the Constitution.

There are a lot more important matters which should be given attention by the Congress than this proposal.

Squandering American Aid

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 1, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, considerable doubt has been cast upon the effectiveness of our foreign-aid program. As an illustration of waste and outright disrespect for the help we have been giving to countries around the world, I am inserting at this point in the RECORD a copy of a letter from an individual who has seen the waste of our goods abroad.

The letter follows:

MARCH 12, 1957.

DEAR SIR: The writer of this letter is a Pennsylvania Dutchman, perhaps the closest, tightest-fisted man on earth. And it hurts me to see my fellow countrymen throwing money around like drunken sailors. We inspire contempt, not respect or affection.

I recently spent 14 months in Haiti. There I saw canvas chairs, tarpaulins, and sails made from American mailbags. Apparently no American mailbags are ever returned to the country of origin.

Two years ago they had a hurricane which brought half the country to the brink of famine. The United States promptly sent about $9 million in money and food. However, the Haitian Government refused to spend 1 penny distributing this food even though people were fainting in the streets from hunger. They did turn over some of it to the Catholic Church and to Protestant missions who distributed it at their own expense. Corrupt officials sold vast quantities of butter, rice, powdered milk, and other foodstuffs and put the money in their own pockets. The rest was piled up and allowed to rot.

The United States is advancing the money to build a big dam in the Artibonite River. Now I may be mistaken (I generally am) but I suspect that that huge reservoir will be silted up and useless in a few years. That Artibonite River is not filled with water but with liquid mud and, so far as I know, no effort is being made to halt erosion.

I am not opposed to sharing our food and our money with the hungry children of the world. What I do criticize is the lack of intelligence with which it is distributed. It is time to sober up. We are trying to buy friendship but what we get is mostly contempt. Of course, I am not a world traveler, but I have had a better chance than most Americans to know how other peoples feel toward us.

Sincerely yours,

P. S.—Some years ago I sent $10 to a Baptist missionary after a hurricane had passed over his country. The reply I got was an angry one. He said that the Government had turned the American money over to the politicians and that they had not spent it to relieve distress but for purely political ends. We Americans are suckers.

Increased Prices

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 10, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD a press release by me containing a letter from Mr. George J. Burger, vice president of the National Federation of Independent Business concerning "administered prices" in certain industries, and the need to determine the contributing factors in bringing about increased prices. This letter is timely inasmuch as it was received by me during the time the hearings were being held on S. 11. I think this letter deserves wide circulation.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

Senator ESTES KEFAUVER, Democrat, Tennessee, chairman of the Senate Antitrust and Monopoly Subcommittee, today released the following letter commenting on the subcommittee's proposed investigation on the problem of price increases in "administered price" industries:

NATIONAL FEDERATION
OF INDEPENDENT BUSINESS,
Washington, D. C., March 19, 1957.

Hon. ESTES KEFAUVER,
Chairman, Senate Antitrust and Monopoly Subcommittee, Senate Judiciary Committee, Senate Office Building, Washington, D. C.

MY DEAR SENATOR: We believe the announced hearing of your subcommittee in exploring administered prices in certain industries would be a very important move provided that in the study and the hearings all contributing factors in bringing about increased prices which the consumer has to bear are considered, and that action is taken along the lines suggested above.

The Federation's official position directed by our members nationwide is that we condemn and oppose monopoly wherever it exists in our economy.

Something must be done, and done quickly by the Congress to stop the spiral of inflation, all tending to reduce consumer buying. Every day in every way we hear: "Will prices ever stop going up?"

A good example of what could have been done is that in the recent steel strike of last summer, at that time Congress or the administration should have explored the situation and if the earnings of steel corporations permitted increased compensation for employees, then steel should have been told: "Grant the increase, with no increase in prices."

Then again, if the demands of labor on the steel industry were unjust or the profits of the steel corporations were not there to grant the increase to employees, then the employees or their representatives should have been told: "It can't be done."

The strike was settled, and as was to be expected—up went the price of steel products, and from that moment on other industries followed the same pattern.

If the present trend as to the action in the bigger industries in this Nation continues—and we are referring to all segments in the bigger industries—just as surely as this letter is being written the public and the Nation will face the greatest spiral of inflation in history—and with no end in sight.

Senator KEFAUVER, let me conclude by saying that if such a study and investigation is made along the lines outlined above, and such action would be all inclusive, your committee would be doing a great service for the American public, and more important, for the Nation's future.

Sincerely yours,

GEORGE J. BURGER,
Vice President.

Fred Dillon

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Wednesday, April 10, 1957

Mr. FREAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a tribute which appeared in the Green Bay Press-Gazette, Green Bay, Wis., to a very well-known sports figure in that State who passed away recently.

This individual, by name Mr. Fred Dillon, was for many years associated with numerous forms of athletic endeavors. While he was, perhaps, best known for his work at St. Norbert High School and College, his dedicated interest to the field of athletics won him scores of friends all over that State.

Mr. President, although I am not a native of Wisconsin, I have been very close to the Badger State, and for that reason I feel it most appropriate to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FRED DILLON—THE UNPOLISHED GEM

(By Jack Yuenger)

Many years ago a German thinker remarked, "What is not in a man cannot come out of him."

Used as a yardstick for human measurement, there must have been a lot in that unpolished gem—Fred Dillon.

Travel anywhere in Wisconsin and the reputation of the late all-sports coach at St. Norbert High School will have preceded you.

You'll hear as many different kinds of things about him as you will people you meet, but from each you will detect a certain awe, respect, or personal admiration.

Yet the outside world never really knew the man who put the Squires on the athletic map.

To most he was the scowling taskmaster who grunted commands, hurled acid remarks, gave no quarter and asked for none.

He was the dynamo of the basketball court, the football field or the boxing ring. He lived by sweat, hard work, and rigid discipline. Anyone who played for him got the same rule book or quit.

But there was another side of Fred Dillon. His salty wit gave away a bent for prankishness. Despite pressures or setbacks, Fritz valued the power to smile.

Take a year ago, for instance, when the Squires were to meet Menasha St. Mary in the finals of the St. Norbert College invitational.

The excitable St. Mary coach, Ralph McClone, stopped by Dillon's dressing room to shake hands. As the former was about to leave, Fritz asked him he wanted a few feet

of rope. "What for?" asked the Zephyr coach.

"Oh, just to tie yourself down during the game," fired Dillon.

This ability to lighten the nerve load was a special knack of Dillon's and one which his oppenent coaches never quite understood. St. Norbert men received a reputation as "a tournament team" because they rarely were tight when the chips were largest.

The fact that St. Norbert won more of the Catholic tournaments than any other Wisconsin high school was a tribute to Dillon's practical psychology.

But, you don't win 312 basketball games, or baseball titles on the strength of winsome humor.

Dillon demanded more of his men more times under more situations than almost any coach in the country. He could growl, and did. He could spit acid sarcasm, and he did. He could put a size 11 brogan in a tender spot, and he did that too.

For some unexplainable reason, Fritz got a big kick out of people speaking of him as a scowling, gruff Irishman. But he tried throughout his life, and not successfully, to hide a very human heart.

Ask the ex-GI's who got scrawling letters from Dillon throughout the war, along with packages on occasion.

Ask the former St. Norbert students who were treated to movies when they were broke, or fishing trips, or who got Fred's best clothes to wear.

Ask the ex-Squires who got up first, ate last, and talked the lonely out of homesickness. Find out where the most popular room on the campus was, at all hours, for understanding, advice, direction, or just a friendly game of cribbage.

Yes, there was much more to "the age of Dillon" than met the eye.

The "sons" of St. Norbert High School learned many lessons from tireless, demanding Fred Dillon, from 1930 right up to last week.

They learned courage and determination, teamwork, and honesty, loyalty, and the capacity for hard work. And, wherever they go in life, they carry the stamp of Dillon upon them with his personal slogan, "never quit."

As late as 3 weeks ago, when the Squires forged from behind in the final seconds to capture the State Catholic championship to years before, in the thirties, St. Norbert teams oozed Dillon's determination to win.

Remember back in 1939? The Squires were having a bad year and the basketball squad lost an awful lot more than they had won. Dillon, in exasperation, said he'd pull the starting lineup for the Catholic tournament out of a hat, if he had a hat. Two friends, including the then college coach Mickey McCormick, obliged him. They put all of the team names in a hat and pulled Fred's starting lineup. That makeshift squad, despite every odds in the book, went on to win the tournament.

If I could pick one spot that will live with me longest, it would be a cluttered locker room in the basement of Van Dyke gym following last year's Catholic tournament. The Squires had just picked up their sixth tourney title and pandemonium reigned on the playing floor. Under the cover of the confusion, Dillion stole from the playing area and shuffled unnoticed from the crowd.

Upstairs, the cry began to mount. "We want Dillon." But Dillon was too proud to appear and show his emotion. "They won it, I didn't," was all he said. And—there was a suspicious wet line down two leathery cheeks as he said it.

Yes, sir. You took Fred Dillon as you found him, or you left him alone. Most people took him—and they were better off somehow.

National Sunday School Week

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 10, 1957

Mr. JOHNSON of Texas. Mr. President, this is National Sunday School Week—a campaign with which I am highly sympathetic. The Longview, Tex., News-Journal had some excellent points to make in a recent editorial about the present endeavor to stimulate regular Sunday school attendance and the meaning of the institution in our way of life.

The Longview News-Journal is a distinguished, responsible, and influential newspaper published in east Texas; and I ask unanimous consent that this splendid editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Longview News-Journal of April 7, 1957]

FOUNTAIN OF STRENGTH

The week of April 8-14 had been dedicated to America's youth in religion and set aside as National Sunday School Week. The sponsor of the week, the Laymen's National Committee, has chosen as the guiding theme for the occasion: Sunday School—Source of Spiritual Strength.

No particular faith or church sponsors the week. The Laymen's National Committee is an all-faiths organization. State and local officials, leaders in industry and business, fraternal, civic, and ministerial associations are united in programs to encourage Sunday school attendance.

That man is more than an animal is a fact all of us must realize. As President Eisenhower some time ago expressed it, "Either man is the creature whom the psalmist describes as a little lower than the angels, crowned with glory and honor, holding dominion over the works of his Creator, or man is a soulless animated machine to be enslaved, used and consumed by the state for its own glorification."

There is a strength for man that is greater than his physical strength, greater than his organized strength as represented by government, greater than his strength as expressed in education and culture. Many men throughout the ages have found this greater strength in what we recognize today as Christianity—the worship of the one true God through His Son Christ Jesus.

Our forefathers who founded this Nation recognized the source of this great strength and based our Government upon the moral law and practice incorporated in the principles of Christianity—the Christianity that remained strong and virile while the great cultures of Rome and Greece crumbled, the Christianity that survived the flood of barbarism that overran Europe in the dark ages, the same Christianity that today lives and flourishes independently of worldly power and organization.

As adults, most of us realize that the basic appreciation of moral principles which our people gained in Sunday school has made an incalculable contribution to America's present welfare. As Cola G. Parker, national chairman of Sunday School Week, recently expressed it:

"Now, our rapidly increasing younger generation must be imbued with these principles if it is to be prepared to exercise its priceless heritage of democracy in a free world. Unless based on moral principles, our civilization cannot long survive. The Sunday school is a vital source of spiritual strength for our Nation's future."

More than ever before, our young people today need the guidance and enlightenment of religious training and education. It is through our Sunday schools that tomorrow's leaders are introduced to fundamental principles that lay the groundwork for a fuller, happier, and more useful later life. It is through the Sunday school that religious appreciation and understanding can be applied in terms of everyday living, and help our young people to become better citizens.

That our Nation observes Sunday School Week is highly significant. This is nationwide recognition that in our Sunday schools we have a great fountain to which as young and old we can come for spiritual strength and understanding through which we may be lifted above the mortal levels of the animal world into that spiritual realm to which God invites all men.

Make Sunday school attendance a weekly part of your life's schedule.

Its High Time

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. SCHWENGEL. Mr. Speaker, in further reference to the lack of corn legislation, I ask to have printed in the Appendix of the RECORD an editorial from the Tipton, Iowa, Conservative of April 4. I commend it to the attention of my colleagues. The editorial follows:

IT'S HIGH TIME

Politics and farm legislation are difficult to separate.

Consider the recent activity on corn legislation in the House of Representatives which was intended to be "nonpartisan."

No sooner had the program been defeated than the National Republican Congressional Committee sent out a letter and a picture of newspaper headlines.

They also sent a "suggested caption" for the picture: "These headlines tell the story of what happened to the Republican-sponsored emergency corn legislation in the United States House of Representatives. Despite warnings from the administration that corn and livestock prices might collapse without the legislation, the Democrat-controlled House in two separate votes killed off Republican plans to provide emergency relief for corngrowers this year. The GOP-backed plan would have increased corn acreage from 37.3 million acres to 51 million and enabled corngrowers to place acreage equal to 15 percent of their allotment into the soil bank."

It was "smart politics" to place the blame on the Democrats and the credit with the Republicans.

Dan B. Murphy, writing in the March 30 Farm Bureau Spokesman, has a different idea of what happened:

"Everyone is analyzing the stalemated House action on corn legislation. Are we without legislation because the two parties are nearly equal in strength? Because the

'farm block' failed? Or why? A look at the final vote, on the compromise bill Farm Bureau recommended as a bipartisan solution, tells the story.

"First, farm-area Congressmen did ignore party lines. (As predicted, they hasselled over the Democratic Cooley bill and the Republican Andresen bill, but they then teamed up to support the local-choice compromise.)

"Tabulation shows 63 Democrats (18 Midwest) and 125 Republicans (76 Midwest) supporting; 61 Republicans and 156 Democrats opposed * * * in as bipartisan a vote total as we're likely to see.

"The corn-States bill lost 70 votes in the southland but picked up 33 there, almost all Democratic. The western region broke almost even, 27 against, 24 for.

"What really killed us was massive opposition from the big cities. We lost 37 votes in New York, got only 5 of 14 in Massachusetts, 2 of 12 in New Jersey, etc.

"The same pattern held true in the Midwest. We lost 8 of 25 Illinois votes—all Chicago. The Detroit area put its 6 votes in the nay column, the rest of the State going 11 to 1 for.

"Ohio's 4 lost votes were from Cleveland, Wisconsin lost only a Milwaukee district out of 11. Indiana, Iowa, the Dakotas, and Nebraska were solid 'for.'

"We lost 7 rural votes (2 in Kansas, 3 in Missouri, 2 in Minnesota). These, plus Chicago's 8, would have given us a win. But we were only close, and close spells loss."

Congressman FRED SCHWENGEL also charges the Democratic leadership in the House Agricultural Committee with "Indian giving" because of the failure to support a corn program which was, in effect, the same program as a year ago.

In a statement made on the floor of the House March 28, SCHWENGEL said: "The RECORD shows that 156 Democrats joined with 61 city Republicans to defeat a corn measure that would help farmers in 1957 balance supply with demand. The Democratic forces against the corn bill were led by the chairman of the Agriculture Committee, a Democrat from North Carolina, and the ranking member of that committee, a Democrat from Texas.

SCHWENGEL said he is hopeful that prompt action will be taken on the corn bill reported out by the Senate Committee on Agriculture and Forestry March 25. "Time has just about run out," he said, "but we can do a lot of good for our whole economy by enacting the Senate bill right away."

"It is high time," SCHWENGEL concluded, "when all of us—Democrats and Republicans alike—did something to take the vital farm issue out of partisan politics and started to come to grips with the real problem with effective legislation."

Then the American Farm Bureau, in a letter signed by Frank Woolley, legislative counsel, said:

"It is probably too late for legislation to be passed that will make any real contribution to lifting the price-depressing surpluses off the backs of farmers.

"Farmers have made their plans and corn planting time is practically here * * *."

Two days later Secretary Benson agreed with the Farm Bureau that enough corn farmers had, between March 13 and 28, made up their minds on planting and that it was now too late to do much good.

He also added that it would be necessary to take more than $108 million from other farm funds to support corn: $60 million from cotton, $32 million from wehat, $16 million from tobacco; and a half million from rice. This killed the bill.

Benson apparently supported the House bill, which was almost the same as the Senate bill. But 2 weeks later he found that corn farmers had decided on their plantings and found that there wasn't enough money for the program.

This series of events is both fascinating and confusing to watch. The Republican Representatives and Senators have made a valiant but unsuccessful attempt to keep up. Farmers are probably more confused.

So the problem goes—"too little, too late, too much politics."

SCHWENGEL is right when he says that it is high time for Democrats and Republicans alike to take the farm issue out of politics and come to grips with the real problem of effective legislation.

It is also high time that politicians and farm organizations stop damning each other for the corn farmer's plight and sit down together to agree on a plan that will provide effective legislation.

One Nation Under God

EXTENSION OF REMARKS
OF
HON. ALVIN R. BUSH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. BUSH. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include the following essay written by Miss Patricia Otterbein, Williamsport High School student, which placed first in the senior division of the American Legion Auxiliary contest on the theme, One Nation Under God:

One of the most beautiful sights in the world is that of a family walking together to church. In every town in America the bells ring out on Sunday morning, calling together the families who know that our most precious privilege is freedom of worship.

From the beginning Americans have been conscious of God. Most of the families who first settled here came in search of religious freedom. The Quakers who founded Pennsylvania under William Penn came from England because they were persecuted by the King. The colonists who established Maryland under George Calvert, wanted a place of refuge not only for Catholics but for any who sought freedom from persecution. In 1636 Roger Williams who had fled Massachusetts established a settlement called Rhode Island, where for the first time in the history of the world all human beings were welcome regardless of race, color, or creed.

Although the men who wrote our Constitution were of many different national backgrounds and religions they all had a common objective—establishing a place where they could live and worship as they pleased. Despite the many problems caused by these differences they believed that all men are created in the image of God. The authors of our Constitution were not all men of great knowledge, yet they were God-fearing men who worked under Divine guidance. By guaranteeing freedom of religion, freedom of speech, security for persons and homes, and freedom from enslavement they secured for us a way of life consistent with the will of God.

Even in our everyday life there are signs of our consciousness of God. Our coins are inscribed with the words, "In God We Trust," a philosophy Americans have believed in from the beginning. When pledging allegiance to the flag every day millions of school children repeat the phrase "America, one Nation under God." As we travel along our highways we see many signs reminding us to attend church and worship according to our different faiths.

As a result of our religious training we are taught to have compassion for others less fortunate. And through agencies such as the United Fund, March of Dimes, and Crippled Children, we serve God by helping others.

Throughout our history, religion has played a big part in the lives of our people. Because of this, religion will continue to be one of the outstanding reasons why America is the greatest Nation in the world.

American Foreign Policy Leadership

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 10, 1957

Mr. KNOWLAND. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a review which appeared in a recent issue of the American Mercury of the book entitled "The Enemy at His Back," written by Elizabeth Churchill Brown.

There being no objection, the book review was ordered to be printed in the RECORD, as follows:

THE ENEMY AT HIS BACK

(By Elizabeth Churchill Brown; foreword by Senator WILLIAM F. KNOWLAND)

Elizabeth Brown has done for us what we should have done ourselves—research on an important modern problem. We were too lazy, too smug, or too indifferent. No one could be brash or stolid enough to call the problem insignificant. In his foreword, Senator KNOWLAND makes it clear in two sentences:

"At the time of Yalta, 11 years ago, there were 200 million people behind the Communist Iron Curtain. Now there are approximately 900 million who have lost their freedom to the most godless tyranny the world has ever known."

How can such things happen? The author of this book has made it inexcusable to be ignorant of the answer to this question.

She has collected enough combustibles to turn our burning indignation into conflagration. During exacting years of warfare, we offered, upon the altars of our devotion, holocausts of human and economic riches. At the price of unimaginable sacrifices we won battles and wars. We surrendered liberties, luxuries and leisure to an efficient process of production for war needs. Our fearless, loyal and indefatigable soldiery and military leadership, generally speaking, were of a high order. They won. Then, after our enemy surrendered, we handed over our welfare and destiny to tenth-rate minds, scurrying in the devious alleys of international diplomacy, allegedly for the good of all of the nations. They had not even brought the affairs of a single nation to the level of their ambitions. Now they were going to lead all nations to Utopia.

This book horrifies us with many reminders that our own peacetime leaders were often as 10th-rate as the others. They, too, were men who fumbled and stumbled from one failure to the next. The pattern was invariant and one is tempted to believe that perverse and malicious planning could not more surely have complicated chaos.

The unmistakable record of events portrayed by this book makes the blunders and the botchery of Democratic leadership, from

Roosevelt to Truman and Acheson, so conspicuous that I marvel that Adlai Stevenson during the last campaign dared to bring up the subject of foreign affairs. If, today, we devote 59 percent of a $72 billion annual budget to purposes directly or indirectly tied to military preparedness and its incidents—if this must happen in the shadow of definitive military victory and in the gloom of an insecurity which neither victory nor a grandiose United Nations can dispel—there can be no blinking the fact that the heaviest responsibility rests with men like Roosevelt and Truman. They squandered the fruits of military victory during the succeeding truce.

The military prowess of the West defeated Hitler and Mussolini as well as Japanese militarism, but the incompetent leadership which sought to work out the still-elusive peace simply prepared the way for Stalin and Khrushchev. It needed no hindsight to warn against this. This same incompetent world leadership was adept with eloquent moralisms, such as those found in the Atlantic Charter or the first chapters of the United Nations Charter, but it cringed from the sternness and discipline demanded by morality.

In effect, we say to Poland: "Go in there and fight, we're behind you." Then we sit back and watch. Where is Poland today? We promise self-determination for little nations, then we sit by, inanely impotent, while Soviet Russia gobbles up a dozen or so satellites and its diplomats enjoy postprandium cordials at the U. N. We grow sanctimonious about the way German militarists regarded a treaty as a scrap of paper. Yet we tolerate our own leaders when they betray Nationalist China at Yalta. We rescue Korea by deluging it in blood and then leave it in a situation probably worse than that in which we found it. Our constancy in moral indignation evoked by the spectacle of ravished Hungary evaporates like a 7-day wonder. Perhaps it was even a greater wonder that we should have retained any capacity to be indignant about the way the Communists mowed down defenseless Hungarians. Certainly, we were not equally indignant when our own Ambassador to the United Nations publicly stated that in a period of 6 or 7 years, beginning in 1949, the Red Chinese had liquidated 15 million Chinese on the mainland of China.

In a sense, when the Republicans took over from the Democrats, they inherited a house still in flames and half burned down. They would have to be miracle workers (and they decidedly are not miracle workers) to do well in such a situation.

They did not even do well in the last campaign. They might effectively have used some of the ammunition in this book. They did not, perhaps largely because men like General Marshall—one of the prize dunderheads of the postwar period—constituted for the Eisenhower administration too much of a link with the two previous administrations.

If you want to get an accurate and summary view of such maddening episodes as Yalta, the effect of Communist propaganda on our foreign policy, Potsdam and the MacArthur hearings, you can't afford to go without reading this book.

Mrs. Brown deals out evenhanded justice, with objectivity and intelligence. She limits her editorializing, and stresses the damning facts. I don't know whether she is a Democrat or a Republican, but I do know that she is an American. She is lethal in criticising the Democratic misleadership during the war and immediate postwar period, by the sheer logic of events accurately described. She is, however, equally devastating with Mr. Eisenhower:

"On April 16, 1953, our new President Dwight Eisenhower, assured the American people that 'an armistice in Korea that merely releases aggressive armies to attack elsewhere would be a fraud.' Yet we signed an armistice which prepared the ground for the fall of Indochina and released thousands of Red troops which are now threatening Formosa. * * *

"In his state of the Union speech in early 1953, President Eisenhower had announced we would unleash Chiang Kai-shek. * * * But on March 2, 1955, the President startled the public by saying that if Chiang attempted to liberate the mainland of China, 'the United States is not going to be a party to aggressive war.' * * *

"For almost 2 years President Eisenhower repeatedly said that under no circumstances would he participate in a Big Four meeting with the Russians until their leaders had shown by deeds and not words that they meant to live peaceably with the rest of the world. And yet, in July 1955, the famous summit conference took place, even though Russia had in no way indicated by deeds that she had changed her spots."

What we need is more books like the one Mrs. Brown gives us which might serve to shake us out of our lethargy. They might make us realize that we have indeed enemies at our back.—Godfrey P. Schmidt.

Teachers' Day

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 10, 1957

Mr. MUNDT. Mr. President, on May 4 of this year, the 375,000 members of the Ladies Auxiliary to the Veterans of Foreign Wars in 6,700 home communities across the United States will be leading their fellow citizens in a special observance: celebration of a national Teachers' Day. It is the hope of the auxiliary that other organizations and individuals will join them in this worthy project, and that May 4 will be proclaimed nationally as a day for paying tribute each year to the schoolteachers of the Nation. I should like to commend the VFW Auxiliary for launching this program, which has been too long overlooked, and which I believe will receive the hearty endorsement of the American people. I should also like to commend the fine explanation of national Teachers' Day which appeared in an editorial in the April 1 edition of the New York Daily Mirror.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEACHERS' DAY

Disturbed by the fact that the teacher is so often neglected and deprived of rightful community recognition, the Ladies Auxiliary to the Veterans of Foreign Wars is sponsoring a project to make May 4 Teachers' Day.

They've chosen the date because it is the birthday of Horace Mann, the great American educator, and they hope it will help enhance the dignity of the teaching profession.

Senator TOM MARTIN, of Iowa, has already placed a resolution making May 4 Teachers' Day, before Congress and the chances of its being approved are good.

The VFW Ladies Auxiliary dedicates itself to promoting civic responsibility and good will; its works are a valuable contribution to American life.

Numbers Versus Ideas

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an editorial, Numbers Versus Ideas, appearing in the Boston Herald of April 5, 1957, commenting on a speech recently made by Prime Minister Menzies, of Australia, in Melbourne, Australia.

From the quoted remarks in the editorial of the prime minister's address, there are many in the United States who are in agreement with him.

As far back as November of 1956 I called attention in a speech in Boston, Mass., of the risk of abdicating our foreign policy in the Middle East, and also in Hungary, to the United Nations.

I am in agreement with the comment in this editorial:

But we must not hide behind the U. N.'s skirts. We must not conceal a lack of policy by turning difficult problems over to the U. N. and our hot-and-cold policy in the Mideast has raised the suspicion that we have been doing just that.

The editorial follows:

Prime Minister Menzies of Australia tossed out some harsh words about American foreign policy the other day, and many Americans will reluctantly have to agree with them.

The Australian leader, who is normally quite pro-American, charged that the United States was passing the buck to the United Nations on the Mideast crisis and abdicating its responsibility for directing the western coalition.

"It isn't a foreign policy," he told a university audience in Melbourne, "to say we will take this to the United Nations.

"Every great power must get to understand that if it goes to the United Nations it must go with its own ideas hammered out so it will move in and say we have considered this; this is the right thing to do.

"That means that you determine, though you may not announce, your own policy before you take it into this community of of nations. Otherwise we shall have international affairs dominated by numbers. I much prefer to have them dominated by ideas."

We have made the same point in these columns more than once in recent months. The President and Mr. Dulles have intervened actively and effectively at several stages in the crisis, but at others their policy has been to withdraw and let the United Nations take the lead. These shifts have proved both confusing and disheartening to our friends and have seemed to play directly into the hands of Egypt's President Nasser and his Red backers.

Undoubtedly the United States was right to dissuade Britain and France from occupying the Suez Canal when the Egyptians first nationalized it. But was it right, after that, to leave the problem to the U. N., which was obviously too divided to use peaceful measures effectively?

Again it was honorable to join the U. N. majority in forcing all the belligerents to withdraw after the French-British-Israeli

handicapped could do. But he said

attack on Egypt. But should we have left it there? Was it equally honorable to leave the resulting chaos for the international body to clear up?

Our Government acknowledged serious doubts when it intervened once more to prevent the voting of sanctions against Israel. It was American diplomacy which persuaded Israel to leave the Gaza strip and positions along the Gulf of Aqaba. But after that we left the U. N. Emergency Force to iron out the details, and if it fails we shall still have much to answer for.

Where the United States has deferred to the U. N. as a matter of thought-out policy, it should not be criticized for weakness. We are pledged to work through the U. N. wherever feasible and appropriate, and it is definitely to our interest to cooperate with the new nations that are finding a voice in the world body. But we must not hide behind the U. N.'s skirts. We must not conceal a lack of policy by turning difficult problems over to the U. N. And our hot-and-cold policy in the mid East has raised the suspicion that we have been doing just that.

The role of world leader is still new to the United States. We still accept it with diffidence. But we cannot escape it. We cannot turn it over to others. If ideas, instead of mere numbers, are to prevail in the world ,we must supply them, or at least put our weight behind them.

Mr. Menzies' criticism is both friendly and to the point.

Labor Stand on Civil Rights Ignores Our Battle of Thirties

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. ABERNETHY. Mr. Speaker, it is with profound shock that leaders of the AFL–CIO, the Nation's great labor organization, are in the forefront to deny the right of trial by jury in civil rights proceedings. The memory of these leaders is so short. Their consistency is most irregular. Labor's very existence was threatened similarly a quarter of a century ago. It was only after a vigorous effort that labor secured for itself this ancient right in passage of the Norris-LaGuardia Act of 1932. Who would now dare question labor's right of such a sacred privilege.

In recent months much has appeared in the national press about this issue. One of the finest articles I have read on the subject was written by Morris Cunningham, a prominent Capitol Hill news reporter. It appeared in a recent edition of the Commercial Appeal, an outstanding newspaper published in Memphis, Tenn. I would like to include it as a part of my remarks. It follows:

DIXIE, UNIONS, AND JURY TRIALS—LABOR STAND ON CIVIL RIGHTS IGNORES OWN BATTLE OF THIRTIES

(By Morris Cunningham)

WASHINGTON, April 7.—With jury trial of contempt charges long since guaranteed in labor cases, today's labor union leaders show no concern over a threatened denial of this right in civil-rights proceedings.

On the contrary, today's union leaders are actually advocating that in civil-rights cases the Nation return to the judicial procedure they once denounced as a "Gatling gun on paper."

It was this procedure, before the passage of the Norris-LaGuardia Act in 1932, that was used to enforce the "yellow-dog" contracts which banned union membership and which employees had to sign to get jobs.

Felix Frankfurter, now an Associate Justice of the Supreme Court, wrote in 1930 that this situation posed "a threat to the very existence of labor unions."

PERILOUS PAST FORGOTTEN

Yet today union leaders appear to have forgotten this perilous past in their zeal to enforce so-called civil rights.

Andrey J. Biemiller, chief lobbyist for the AFL–CIO, is one of the several present-day union leaders who has testified in behalf of the administration's civil-rights bill, which would provide for injunctions to enforce civil rights and which would contain no guaranty for jury trial of contempt charges.

TABLES TURNED NOW

"The AFL–CIO strongly advocates this proposal," Mr. Biemiller told a House Judiciary Subcommittee last month.

He said his now powerful labor organization favors the administration bill, and its injunctive procedures, because present laws on civil rights require that charges arising from them must be tried "before a jury drawn from the locality in which the crime was committed."

"Experience shows," he continued, "that in certain types of cases—not limited to civil rights—the local juries simply will not convict, regardless of the evidence."

With that, the modern-day labor lobbyist disposed of an argument that his predecessors in the labor movement vigorously advanced for many bitter years until they finally won their point with the passage of the Norris-LaGuardia Act.

And, by a curious coincidence, Mr. Biemiller's contention that the right of trial by jury must be bypassed because juries will not convict in some cases was precisely the same as that advanced against giving labor that right in 1932.

It was raised, among other critics of labor, by Representative Thomas L. Blanton, Democrat, of Texas, the only southerner in 1932 who voted against passage of the Norris-LaGuardia Act in either the House or Senate.

FEARED SYMPATHIZERS

Mr. Blanton charged that juries hearing contempt cases arising from labor disputes would be composed of labor sympathizers. And pointing to prolabor Representatives in the House debate that preceded passage of the Norris-LaGuardia Act, he demanded:

"What kind of juror would our friend from New York (Representative John J. O'Connor) make in a case like this, a man who says he hates the Federal courts? What kind of a juror would Mr. (L. C.) Dyer make in an injunction case? What kind of a juror would Mr. (Fiorello) LaGuardia make? They would have the case decided before it was ever called. I do not want that kind of a juror in my case."

That was the type of argument that was being made against labor only 25 years ago. Yet today union leaders join with the NAACP and other pressure groups in echoing the same arguments in respect to southern juries in civil-rights cases.

And Mr. Biemiller is not alone in his latter-day contentions. Walter Reuther, a vice president of the AFL–CIO and head of the Automobile Workers Union, and other modern union leaders also are advocating passage of the administration's civil-rights bill.

NO MENTION OF TRIAL RIGHT

At its February 4 meeting in Miami Beach, the AFL–CIO executive committee adopted a resolution stating:

"We urge that the present civil-rights laws be strengthened by authorizing the Attorney General to bring civil actions to prevent or redress certain acts or practices which violate existing civil-rights acts."

This 1957 labor resolution made no mention of preserving the right of trial by jury in contempt cases arising from the court injunctions. Since the introduction of the administration's civil-rights bill last year labor union leaders have maintained a notable silence on this issue. But it was not always so.

In 1932, labor witnesses before the House Judiciary Committee, then considering the proposed Norris-LaGuardia Act, made vigorous arguments in behalf of trial by jury in contempt cases arising from labor injunctions.

The hearing transcript shows that James S. Easby-Smith, counsel for the American Federation of Labor, thumbed the lawbooks all the way back to 1200 A. D. to try to prove the validity of jury trials in contempt cases.

CITED ENGLISH LAW

Mr. Easby-Smith argued that English law, from which American jurisprudence was derived, clearly provided for jury trials in such cases.

He said the Magna Carta, the English bill of rights, decreed that no man shall be destroyed nor punished save upon the judgment of his peers and the law of the land. And, he said, "that meant a jury trial."

Donald R. Richberg, representing railroad unions, picked up the argument where Mr. Easby-Smith left off.

"The prevailing English practice up to the adoption of the Constitution of the United States," Mr. Richberg told the committee, "was to punish contempt of court through trial by jury, usually upon indictment or information.

"And yet the argument was made and had been made in the Supreme Court of the United States for 100 years that it was the inherent power of a court of equity to try contempt cases by the court, and that when the court was created by the Federal Government that power was poured into the court. It was absolutely untrue historically, and it was untrue as a fact, and of the intention of the framers of the Constitution who passed the first judicial act.

"I have made this point here because one of the questions here involved (in the proposed Norris-LaGuardia Act) is the right of trial by jury."

The Norris-LaGuardia Act became law March 23, 1932. In addition to banning "yellow dog" contracts, it assured for labor two rights which southerners now seek to incorporate into the administration's civil rights bill—a hearing before the issuance of injunctions, and jury trial of contempt charges resulting from any alleged violation of the injunction.

Milwaukee Exposition of the Handicapped at Work

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 10, 1957

Mr. WILEY. Mr. President, last month there was held at Marquette University, Milwaukee, Wis., a most significant regional conference on the excellent theme, "The Handicapped at Work."

I had previously commented on this conference in the Congressional Record

At the Oakland Naval Hospital, Ray got

RIGID TESTS SET UP

effective rehabilitation of the mentally han-

on February 25, as recorded on page A1425 of the RECORD.

The conference featured not only an outstanding group of civic leaders and experts in the rehabilitation of the handicapped, but it met with an enthusiastic reaction from extremely interested audiences.

I have been pleased to receive from Mr. William P. McCahill, executive secretary of the President's Committee on Employment of the Physically Handicapped, sponsor of the regional conference, the text of the program, along with many fine newspaper articles which reviewed some of the principal points made in the course of the program. The articles describe a few of the many inspiring instances of disabled individuals fighting their way back, against all odds, to their rightful places in communities.

I ask unanimous consent that the articles referred to be printed in the Appendix of the RECORD following my remarks.

I cannot state too strongly this paramount fact, which I have emphasized down through the years: For the good of the handicapped themselves, for the good of their families and other loved ones, for the good of the Nation, we must make better use of the talents and skills of America's disabled.

We must enable them to be the strongest possible assets to our society, rather than liabilities in any sense. We must help them to help themselves.

The handicapped have proven themselves whenever they have been given the chance. The only trouble is that we have not given enough of them enough of a chance enough of the time.

We have rehabilitated many handicapped, but infinitely more needs to be done still, if we are to cope with the tremendous backlog of unattended needs. I hope, therefore, that American employers, in particular, will give to the President's Committee and to the various State committees fullest support. Nothing proves a better "tonic" for the morale of a disabled person than a suitable, gainful job.

I renew my request that the articles forwarded by Mr. McCahill be printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD as follows:

[From the Milwaukee Journal of March 11, 1957]

FIND APPRENTICE JOBS FOR DISABLED SCARCE—VA CHIEF DECLARES ON THE JOB TRAINING FOR EX-SERVICEMEN HARDER TO LOCATE

It is becoming increasingly difficult for Veterans' Administration training officers to find apprentice and on the job training opportunities for partly disabled former servicemen, Harvey V. Higley, Administrator of Veterans' Affairs in Washington, D. C., said here Monday.

He was the principal speaker at a luncheon of some 200 persons representing agencies for aid to the handicapped in 7 States. Officially a regional meeting of the President's Committee on Employment of the Physically Handicapped, the meeting was cosponsored by the Wisconsin governor's and Milwaukee committees on employment of the physically handicapped.

The meeting, which runs through Wednesday, is at Marquette Universary's Brooks Memorial Union, 620 North 14th Street.

MARQUETTE UNIVERSITY GETS CITATION

Three persons and Marquette University received citations at the luncheon. Recipients were District Judge Robert W. Hansen, chairman of the governor's committee on employment of the physically handicapped, Kenneth W. Haagensen, director of public relations at Allis-Chalmers Manufacturing Co., and Willett S. Main, Milwaukee district manager, Wisconsin State Employment Service.

Hansen was cited for his work on the governor's committee, Haagensen for his work in encouraging industries to employ the handicapped, Main for his part in the effort by the State employment service here in getting jobs for the handicapped, and the university for its service in the field, especially in the medical school's occupational and environmental medicine.

NOW PAY TAXES

Governor Thomson told the group that the State's program for training the handicapped was good business. For example, he said, in the year ending last June 30, the State trained 111 handicapped persons who had been on relief rolls at an annual cost of $162,000.

After they had completed their training under the State's vocational rehabilitation program, they obtained jobs and now are earning annual income of $287,300, on which they pay State income taxes, the governor stated.

He said that in the same year another 1,450 handicapped persons not on relief rolls were trained and obtained jobs. He suggested that the State vocational and adult education board consider establishing a citizens' committee to help with the development of its program.

"We have much to do and we want to do it with efficiency and maximum economy," Governor Thomson said. "At the same time we must look behind mere figures and dollars to the human needs of these courageous people who overcome problems that most of us can scarcely conceive."

LESS THAN 20 PERCENT ENROLL

Higley, formerly of Marinette, said that less than 20 percent of the 45,000 Korean war veterans who had taken vocational rehabilitation training had enrolled in on-the-job courses afterward.

Nearly 40 percent of World War II veterans who took similar training—and there were nearly two-thirds of a million of them—found training jobs in industry, he said.

"Can it be that employers, convinced of the desirability of hiring fully trained handicapped workers, are not yet convinced of the desirability of taking on the untrained, even though VA's vocational counseling has shown that they have the aptitude to learn the job?" he asked.

"Can it be that we've kept the emphasis on the well trained handicapped worker for so long that we have overshadowed the advantages of providing on-the-job training for the inexperienced?"

NEED NEW CONCEPT

Another serious problem on which little progress is being made is the employment of persons with physical impairments that keep them from working a full 35- or 40-hour week, he said.

"We have encountered many roadblocks: Employment policies * * * employers' reluctance to take a chance with the seriously handicapped * * * firms that simply haven't given enough imaginative thought to how they could utilize the services of such people," he said.

In this country, he declared, there is need of "a new concept of work * * * that measures ability not by the number of hours spent on the job but by what's done with those hours."

He suggested that the need probably was for education of employers on what the handicapped could do. But, he said, the handicapped themselves must be aided in seeking the confidence and the will to seek return to normal life.

JOB SERVICE PRAISED

Rehabilitation, he declared, is never complete until the partly disabled are returned to satisfying meaningful employment.

That feeling also was stated by Maj. Gen. Melvin J. Maas, a retired and totally blind marine officer who is chairman of the President's committee. He lives outside Washington, D. C.

He congratulated the State employment service on finding jobs for 5,701 handicapped persons during the last year. He also praised the State vocational rehabilitation program.

The objective of the President's committee, he said is to "give a new birth of freedom to the physically impaired—a freedom to work, to earn a living by their own honorable toil, to give them opportunity, not a Siberia of hopelessness and unemployment merely because a small part of their abilities have been lost."

CALLED GOOD BUSINESS

The general, like the governor, said it was good business to train and place handicapped persons in jobs. There are 295,000 handicapped persons employed in this country, he stated.

"It costs an average of $600 per person to train a handicapped individual," he said. "The national average for keeping a person on relief is $1,500," he said.

The attitude in this country toward employing the handicapped, the general stated, is helping this Nation's international relations in the struggle against communism, especially in Asia and Africa. "People in those areas are acquainted with the employ the handicapped programs here," he said.

Supervisor Eugene Grobschmidt, vice chairman of the county board, explained that the county employs some 470 handicapped persons.

[From the Milwaukee Sentinel of March 11, 1957]

HANDICAPPED LAY OLD GHOSTS TO REST

(By Jerry Cahill)

Some ordinary Joes who have overcome some extraordinary physical disabilities gathered together Sunday at Marquette University's Brooks Memorial Union to lay to rest some old ghosts about the handicapped.

They said:

They don't want pampering or pity.

Talking about their handicaps is not a taboo.

Most of the handicapped can do just about as much as you can do—sometimes more.

They want a chance to prove it.

The men interviewed are members of a special United States Navy team of amputees assembled here by the Oakland, Calif., Naval Hospital to show the Milwaukee public what rehabilitation means—and the public's stake in it.

OPEN TO PUBLIC

Just 1 of the 26 exhibits set up at Marquette for a 7-State conference and exposition on employment of the physically handicapped, the Navy display, like the others, will be open to the public from noon until 9 p. m. Monday, Tuesday, and Wednesday.

You can learn a lot at the exposition. Take 26-year-old Corbit Ray, a strapping former marine who grew up on a farm near Hemingway, S. C. Seven years ago he won a Silver Star—and lost his right arm—in Korea.

"They told me, 'You're going to have to lose your arm, or lose your life,'" Ray recalled Sunday. "I said, 'Go ahead and take the arm,' and now I'm kind of glad they did. I've never had a qualm about it, or felt sorry about it since."

had a 2-mile walk to his rural home ahead of him.

lished in 1915. This is certainly the

Mr. Bennett was largely self-educated. He was a student of Shakespeare and the

At the Oakland Naval Hospital, Ray got a new arm and learned to use it. Today he's a member of the hospital staff, teaching other amputees. He drives his own car, hunts, fishes, and likes to putter around the yard of his new home in Castro Valley, Calif., with his wife, Betty, and children Susan 5, and Thomas Charles, 2½.

Or take Jack Bates, sport-shirted and suntanned. He served in the Army Air Corps during World War II without a scratch. Two months after discharge he lost his left leg above the knee in an auto accident.

WILLING TO TALK

Today you'd never know he's an amputee. He goes up and down stairs, walks, runs, and even skips with hardly a trace of a limp. He got the artificial leg and the training at the Oakland Hospital, where he now teaches as a prosthetic researcher for the University of California.

It was Bates who made the point about most amputees being willing to talk about their handicaps.

"When you're in a group of people, you can feel them giving you that look out of the corner of the eye. You know they're curious, and you can't blame them.

"I usually get the conversation around to the handicap myself, and tell them about it openly. Most well-adjusted amputees are the same. They're glad to talk about it. It's a good way of educating the public."

OVERKINDNESS KILLS

"You can be killed with too much kindness," Ray said. "It does you more harm than not enough kindness.

"When I got home to South Carolina the first time after the amputation, I think it was harder on my family than it was on me. They wanted to do everything for me—help me dress, cut my meat, brush my teeth.

"Finally I had to tell them, 'Leave me alone, I can do it myself.' "

Ray learned he could do it himself at the Oakland Hospital where the rehabilitation staff from the top down gave him a straightforward appraisal of what was possible for him, as an amputee.

Leaders of that rehabilitation program are here with the men. They are Capt. Thomas Canty, a former Milwaukean who is head of the hospital's amputee service, and Lt. Comdr. Charles Asbelle, Dr. Canty's first assistant.

In addition to Ray and Bates, other members of the amputee team are Albert Wenger, formerly of Deer Park, Wis., who lost both arms and legs as a teen-ager, and Bill Smith, a World War II amputee who is now a metallurgist living in San Jose, Calif.

[From the Milwaukee Journal of March 12, 1957]

ABILITY URGED AS TEST IN AIDING HANDICAPPED—CONFERENCE TOLD THAT TOO MANY EMPLOYERS GIVE THEM JOBS ONLY OF SYMPATHY

Until business management is sold on the idea of employing handicapped people for what they can produce rather than out of sympathy, rehabilitation work will lag, a Minnesota commissioner of employment security said here Monday. He is Frank T. Starkey, a panel speaker at the seven-State regional conference on employment of the physically handicapped which is now holding sessions at Brooks Memorial Union and at the medical school auditorium at Marquette University.

About 275 are attending. Formal sessions run through Tuesday, and an exhibition of the work done by handicapped persons in the union ballroom will continue from noon to 9 p. m. Wednesday. It is open to the public.

To help employers make progress in the rehabilitation field, Starkey said, five barriers must be recognized and in some way circumvented.

RIGID TESTS SET UP

Many, he said, require rigid physical examination as a prerequisite for any kind of employment.

Strict seniority practices which place limited importance on the amount of productive work done by an employee make employers fearful of taking on workers who may be unable to do a full job, he said.

There is a widespread belief, which may or may not be right, that the presence of handicapped workers will increase the cost of the employer's compensation insurance, Starkey said.

There is also a let-George-do-it attitude in some plants and in others a genuine desire to help but lack of information about how to go about it, he said.

It may be necessary to modify some of the legal responsibilities fixed on employers to permit hiring of the handicapped without penalizing the employer, Starkey said.

Much, he said, could be done by such organizations as governors' committees on employment of the handicapped. However, he recommended against big year-round volunteer agencies.

What is needed, he said, is a group of people whose regular work is in the fields of personnel, labor management, physical medicine, and the field of compensation-insurance law.

At one time, he said, Minnesota undertook to organize a committee on employment of the handicapped in at least 25 of the 33 centers in which there is a local office of the State employment service.

DEMAND, SUPPLY VARIED

It was found, he said, that many of the communities had few handicapped workers who needed help or few employers big enough to provide them with work. The few who could were better reached through individual contact than through public campaigns.

The local committees became just meeting groups at which State officials were asked to speak or show movies, and the committees existed largely for their own entertainment, he said.

"I doubt very much that unemployed handicapped people are helped, even a little bit, by activities that are essentially entertainment," he said.

Starkey is chairman of the Minnesota Governor's Committee.

In a spech prepard for delivery Tuesday afternoon, Stanley L. Hanson, Boston, Mass., assistant vice president of the Liberty Mutual Insurance Co., said that hiring the handicapped worker was good business for everyone.

SAVED FIRM MONEY

"All available statistics emphasize that the properly placed handicapped worker is a safer, more productive, and more conscientious worker than those without handicaps," he said.

Insurance rates are not increased if workers with disabilities get carefully planned jobs, he said.

Liberty Mutual has completed rehabilitation of 84 paraplegics (persons paralyzed from the waist down) on whom it carried insurance, Hanson said. The total estimated indemnity and medical costs which his firm would have had to pay during the lifetimes of the 84 would have totaled $8,449,891, he said. Actually paid to them was less than $5 million for claims and about $895,000 for rehabilitation and training, he noted. The injured persons have the satisfaction of performing useful work, and the insurance company has saved more than $2,700,000, he said.

One of the discouraging aspects of rehabilitation, Hanson said, has been that although services for the disabled have been increasing rapidly the number of persons needing the services is increasing even faster. Contributing to the problem is the general aging of the population and more effective rehabilitation of the mentally handicapped, he said.

ILO AIDE SPEAKS

Ralph Wright, Washington, D. C., a labor counselor in the International Labor Organization (ILO), in a luncheon talk, said that rehabilitation of the handicapped had made slow progress in many parts of the world because of its cost, comparatively plentiful labor supplies and a lack of understanding of its values.

The ILO, an agency with 71 member nations, the sole surviving remnant of the League of Nations, was organized in 1919 and has headquarters in Geneva, Switzerland. Wright said it had been steadily increasing its handicapped rehabilitation work. It provides technical advisers to governments, fosters international cooperation, provides an international information exchange and operates blind training programs in Egypt and Brazil, he said.

Justin Johnson, Van Nuys, Calif., director of public relations for the Hughes Aircraft Co. and chairman of the California Governor's committee, recommended big organizations.

FALSE PRIDE

California has 53, he said. He said that where they worked earnestly, even in unlikely areas, they found a lot of employable handicapped persons who were just "sitting in back bedrooms," and found jobs they could do.

John J. Lee, chairman of the department of special education and vocational rehabilitation at Wayne University, Detroit, Mich., and chairman of the Michigan Governor's committee, said that false pride, intolerance and overemphasis on heredity were some of the problems facing rehabilitation workers.

"Too many people have a fear of the handicapped, and withdraw from them. * * * Too many have false pride, and are afraid they will be damaged by inferior associations. * * * Too many ascribe too many defects to damaged heredity," he said.

The task is to promote social maturity, and conquer the public's attitude of withdrawal, he added.

[From the Marquette Tribune of March 13, 1957]

HANDICAP WHAT YOU MAKE IT, SAYS QUADRUPLE AMPUTEE

(By William Carley)

The man got up from his chair, walked over to a table, picked up a cigarette, lit it, and walked back—with no arms or legs.

The man is Al Wenger, 37, a quadruple amputee who has mastered the use of prosthetic devices, or artificial limbs.

Wenger, a native of Wisconsin, is now presenting exhibits at the 3-day regional conference of the President's Committee on Employment of the Physically Handicapped. The conference, which will wind up today, is being held in the ballroom of the Marquette University Memorial Union.

"To me a handicap is only as much as you let it be," Wenger said. "With the right attitude and the right limb fit, you can practically overcome an amputee setback."

DRIVES, DANCES, SWIMS

In proof of his statement Al listed driving, dancing, swimming, and cooking fried chicken as his favorite pastimes.

"I go swimming practically every day," he said. "I can float all right, though I can't push myself forward too well, as my stumps slice through the water. But I think I can fix up some sort of paddles that will work, and I'm going to try."

Wenger was a high-school student at New Richmond, in northern Wisconsin, when he lost both arms and legs. He had gotten off the school bus after a basketball game and

[From the Washington Evening Star of March 26, 1957]

importance he became its editor in chief. In Washington he became widely respected for his keen knowledge of national and

I'm busted, flat, and feeling blue
(But I'm a pal of Timbuktu);
We're adding breadcrumbs to our hash

had a 2-mile walk to his rural home ahead of him.

"But a blizzard blew up and I never got there," he said. "I got lost, and it was 8 hours before I made it to a neighbor's house. The temperature was 25 below zero."

Frostbite set in and Wenger's limbs had to be amputated. But less than 9 months later he was back in high school with his artificial limbs.

"Now I can cook chicken or rabbit as well as any housewife," he said. "And I still love to swim and dance."

WORKS AS INSTRUCTOR

After finishing high school Wenger worked for 14 years in an artificial limb factory in Minneapolis, and then went to Oakland, Calif., as an instructor in the use of the limbs.

The devices can be designed for any kind of work from mining to clerical filing, Wenger said. "We try to fit the man for the kind of work he wants to do."

Fitting the limb is definitely an art, according to Wenger. Each limb must be individually fitted and adjusted for functional and cosmetic (attractive) features.

"With the right limb and the right attitude, you can lick almost anything. Just don't make a handicap out of the handicap and you'll be O. K.," he said, as he excused himself for an exhibit show.

And he got up and walked away.

Ira E. Bennett: Editor, Scholar, and Statesman

EXTENSION OF REMARKS
OF
HON. THOS. E. MARTIN
OF IOWA
IN THE SENATE OF THE UNITED STATES

Wednesday, April 10, 1957

Mr. MARTIN of Iowa. Mr. President, my home State of Iowa has supplied many leaders in the Capital of our Nation, but few have risen in their life's work to the stature of Ira E. Bennett, of Lyons, Iowa, whom it was my privilege to know.

Starting his career in journalism in Mexico and on the west coast of the United States, Mr. Bennett early proved his reportorial capacity, and in 1900, as a young man, he came to Washington. Here the combination of his abilities, relatively wide experience and industry, by 1908 won him the high position of editor in chief of the Washington Post. While on that assignment, Mr. Bennett came to know many of the great and near great, at home and abroad, and became a confidant of Presidents and statesmen. Notwithstanding that privilege, he never lost touch with those of lesser note, especially young people starting on writing careers who later became his disciples.

Despite an extraordinarily busy life, Mr. Bennett made it a point to study systematically and travel widely. A discerning student of history, he developed a rare insight into the meaning of the Constitution of the United States, not only for this Nation, but also for the world. An avid scholar in Shakespearean literature, he developed the capacity to express himself in words of power.

Mr. Bennett found time in which to prepare his monumental History of the Panama Canal—Builders' edition—published in 1915. This is certainly the most comprehensive and authoritative historical work produced by the construction era of the great waterway. One of its most important chapters was written by former Chief Engineer John F. Stevens of the Isthmian Canal Commission, known in history as the "basic architect of the Panama Canal." It is historically fitting here to record for the first time that it was Mr. Stevens, who, as head of the United States Railway Mission to Russia, 1917 to 1918, and later of the Inter-Allied Technical Board Supervising Siberian Railroads, 1919 to 1923, had observed at first hand the start and early years of the Communist revolution, first alerted Mr. Bennett, during his periodic visits to Washington, to the vast scope of that world conspiracy and its dangers to the United States. Mr. Bennett was thus enabled to be among the first leaders of this Nation in the study and exposure of international communism—an activity that he continued throughout his career with increasing effectiveness.

Resigning his position as editor in chief of the Washington Post in 1933, the year Soviet Russia was recognized, Mr. Bennett started what was in effect a second career. This period included his association with the United States Constitution Sesquicentennial Commission, 1935 to 1937, to which he contributed brilliantly in the preparation of The Story of the Constitution, published in 1937; his position as consultant to the House Committee on Foreign Affairs; and his last responsibility as managing editor of the National Republic.

In these capacities, Mr. Bennett's numerous scholarly articles, editorials and official reports form a vast fund of information and opinion based on a lifetime of study and observation. Written during tumultuous periods of our history by one of the greatest editors produced by our Nation, they will long stand as models for dedicated American youth.

During the final years of Mr. Bennett's life, those closely associated with him marveled at the keenness of his mind which remained clear to the end. His last editorial, written in bed, was published in the March issue of the National Republic, shortly before his death.

In order that the record of Mr. Bennett's life and accomplishments, as told in obituaries in some of the leading newspapers of the country and the National Republic, may be available to the people of Iowa and the Nation at large, especially future historians, I ask unanimous consent to have some press notices printed in the Appendix of the RECORD.

There being no objection, the editorials and articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of March 27, 1957]

IRA BENNETT EDITED POST 25 YEARS

Ira Elbert Bennett, 88, editor of the Washington Post from 1908 to 1933, died yesterday at his home, 1614 19th Street NW.

Although he had suffered from a heart ailment for many years, he was active until a month ago as managing editor of the National Republic, a patriotic magazine.

Mr. Bennett was largely self-educated. He was a student of Shakespeare and the Constitution and he traveled and read widely.

He was credited with having drafted the World War I Czechoslovakian declaration of independence.

Mr. Bennett was born in Lyons, Iowa. He came to Washington in 1900 as correspondent for the San Francisco Chronicle after a year on a newspaper in Mexico and 5 years as city editor of the San Diego Union.

He joined the Post in 1905 and became editor in chief 3 years later.

Mr. Bennett was the author of a book entitled "The History of the Panama Canal," a collection of editorials written during and after World War I, and numerous free-lance magazine articles.

A lifelong Republican, Mr. Bennett was friendly with Presidents Harding, Coolidge, and Hoover.

From 1934 to 1938 he was a special correspondent for the McClure Newspaper Syndicate. He was consultant for the House Foreign Affairs Committee from 1949 to 1951.

He and his wife, the former Mabel Dorman Fyler, observed their 61st wedding anniversary last month. She survives, along with a daughter, Amy Langlais, 3818 Davis Place NW., a granddaughter and two great-granddaughters.

Mr. Bennett was a cofounder of the National Press Club and former president of the Gridiron Club. Marquis Childs, Gridiron Club president, designated the entire membership as a committee to attend the funeral.

Services will be held at 11 a. m., Thursday at Hysong's funeral home, 1300 N Street NW. They will be conducted by the Reverend Dr. Bernard Braskamp, Chaplain of the House of Representatives. Burial will be in Glenwood Cemetery.

[From the New York Herald Tribune of March 28, 1957]

IRA E. BENNETT, FORMER EDITOR

WASHINGTON, March 26.—Ira Elbert Bennett, 88, writer and former editor-in-chief of the Washington Post, died at his home today after a long illness.

Mr. Bennett was editor of the Post, now the Washington Post and Times Herald, from 1908 until 1933. In 1949–51 he was a staff consultant of the House Foreign Affairs Committee and in recent years was managing editor of the National Republic magazine.

Mr. Bennett wrote a history of the Panama Canal, as well as many magazine articles. He was one of the founders of the National Press Club and a former president of the Gridiron Club.

Surviving are his wife, the former Miss Mabel Dorman Fyler; a daughter, Mrs. Claude Langlais, of Washington; a granddaughter and two great grandchildren.

[From the Washington Daily News of March 27, 1957]

IRA BENNETT, EX-POST EDITOR, DIES AT 88

Services for Ira Elbert Bennett, 88, editor of the Washington Post from 1908 to 1933, will be held at 11 a. m. tomorrow in Hyson's Funeral Home at 1300 N Street NW. Burial will be in Glenwood Cemetery.

Mr. Bennett died yesterday in his home at 1614 19th Street NW. Although he had had a heart ailment for many years, he served until a month ago as managing editor of the magazine, National Republic.

He came to Washington in 1900 as a correspondent for the San Francisco Chronicle and joined the Post in 1905. A lifelong Republican, he was a friend of Presidents Harding, Coolidge, and Hoover. He also served as special correspondent for the McClure Newspaper Syndicate and as consultant for the Senate Foreign Affairs Committee from 1949 to 1951.

He and his wife, who survives him, celebrated their 61st wedding anniversary last month.

peril of this unreality is believed to have been impressed upon Khrushchev and others in relation to the artificial rate of the Russian

[From the Washington Evening Star of March 26, 1957]

IRA E. BENNETT, EDITOR, AUTHOR

Ira Elbert Bennett, 88, editor in chief of the old Washington Post from 1908 until 1933, died today at his home, 1614 Nineteenth Street NW., after a long illness.

Mr. Bennett, a scholar, writer, and friend of Presidents, was active until some weeks ago as managing editor of the National Republic magazine. He was the author of a book entitled "The History of the Panama Canal," a compilation of editorials from the Post from 1917 to 1920, and of many magazine articles.

He was staff consultant of the House Foreign Affairs Committee from 1949 until 1951, and was a student of politics, the Constitution, and Shakespeare among other subjects. He was one of the founders of the National Press Club and former president of the Gridiron Club.

Surviving are his widow, the former Mabel Dorman Fyler; a daughter, Mrs. Claude Langlais, 3818 Davis Place NW.; a grandaughter; and two great grandchildren.

[From the New York Times of March 28, 1957]

IRA E. BENNETT, 88, A WRITER, EDITOR—FORMER CHIEF OF WASHINGTON POST IS DEAD—HAD BEEN ON HOUSE COMMITTEE STAFF

WASHINGTON, March 26.—Ira Elbert Bennett, writer and former editor in chief of the Washington Post, died at his home Tuesday after a long illness. He was 88 years old.

Mr. Bennett was editor of the Post, now the Washington Post and Times-Herald, from 1908 until 1933. In 1949–51, he was a staff consultant of the House Foreign Affairs Committee and in recent years he was managing editor of the National Republic magazine.

Mr. Bennett wrote a history of the Panama Canal as well as many magazine articles. He was a founder of the National Press Club and a former president of the Gridiron Club.

Surviving are his widow, the former Mabel Dorman Fyler; a daughter, Mrs. Claude Langlais of Washington; a grandaughter; and two great-grandchildren.

TEAPOT DOME WITNESS

Mr. Bennett was one of the important witness in the Senate investigation of the Teapot Dome oil scandal of 1924.

Mr. Bennett was born at Lyons, Iowa, and started his newspaper career in 1889 as editor of the Ensenada (Mexico) Lower Californian. Then he was city editor of the San Diego Union, 1892–97, and Washington correspondent of the San Francisco Chronicle, 1900–1905. He became an editorial writer for the Washington Post in 1905.

NATIONAL REPUBLIC AND THE NATIONAL REPUBLIC LETTERGRAM,
Washington, D. C., March 29, 1957.

The letter is given over to the passing this week of the managing editor of National Republic, Ira E. Bennett, a gentleman, scholar, Christian, and patriot, whose passing is felt by millions of men and women of all walks of life, throughout our own country and other nations of the world. Ira, as this writer so affectionately knew him, was a man of great talent, a renowned journalist and editor, a thinker, and a man of great patriotic conviction. Born in Iowa, he with a public-school education, took up the newspaper profession at an early age, his first post was that of editor of the Lower Californian, at Ensenada, Mexico, from where he quickly advanced taking over the editorship of the San Diego Union, and finally as Washington representative of the San Francisco Chronicle.

In Washington his fame grew rapidly, as he assumed the post of editorial writer for the morning newspaper, the Washington Post, and later as the newspaper grew to importance he became its editor in chief. In Washington he became widely respected for his keen knowledge of national and foreign affairs, and he counseled many Presidents, including Teddy Roosevelt, Warren Harding, Calvin Coolidge, and Herbert Hoover. He was a close friend of William Jennings Bryan, Champ Clark, and many other famed Democrats, although a Republican in politics. He knew Gen. John J. Pershing, John Philip Sousa, and other great notables. He was a friend of Sir Thomas Lipton, President Thomas Masaryk of Czechoslovakia, and helped that statesman write the original free government constitution of that land.

After leaving the Washington Post, shortly after it changed hands, he served as chief adviser to the House Committee on Foreign Affairs, following which he became managing editor of National Republic under this writer's management.

Mr. Bennett received many citations and at least one degree in literature, the latter from the Lincoln Memorial University. He was among the founders of the National Press Club in Washington, D. C., and among the early presidents of the famed Gridiron Club. He was a living encyclopedia on the historical and political events of the past two decades. Possibly one of the kindest things that can be said of any man is that he was admired by friend and foe, loved by all who knew him.

His last editorial and feature contributions appeared in the March edition of National Republic, and he had planned further contributions for the April edition, but slept into a lasting peace of mind this week. His remains were interred Thursday, March 28, at Glenwood Cemetery, Washington, D. C., following appropriate services conducted by the Chaplain of the House of Representatives, Rev. Dr. Bernard Braskamp. Readers of the National Republic will greatly miss his scholarly writings, and this writer a close friend, who now sleeps peacefully in the company of other great editors of National Republic, George B. Lockwood, Frank P. Litschert, and Herbert G. Moore.

WALTER S. STEELE.

America Speaks

EXTENSION OF REMARKS
OF

OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am inserting a commentary on foreign aid prepared by one H. I. Phillips. It perhaps is good for a chuckle:

AMERICA SPEAKS
(By H. I. Phillips)

To meet both ends I seldom can
(But I'm a help to Pakistan);
It's hard to keep my shirt and pants
(But after all, I'm fond of France);
I guess I'll have to break my lease
(I must cooperate with Greece);
Hedged in by debts quite vast I am
(But I must not neglect Siam).

The wolf from door I can't repel
(Still I must help keep Burma well);
By Tuesday I am out of dough
(Malaya's feeling better, though);
My dollar very little buys
(But Egypt's safer, I surmise);
My own financial outlook's murky
(But still my heart belongs to Turkey).
I'm busted, flat, and feeling blue
(But I'm a pal of Timbuktu);
We're adding breadcrumbs to our hash
(Who cares? Ain't Tito short of cash?);
The sheriff's knocking on my door
(However, England's asking more);
I'm in a hole, but feeling noble • • •
I wish things were not quite so global!

Internal Crisis Key to Soviet Reforms

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 10, 1957

Mr. JOHNSON of Texas. Mr. President, it is far too easy to fall into the trap of believing that the Soviet Union has created a vast, monolithic structure which is capable of solving any problem by the application of brutality. The reality is much more complicated.

In the past few years there have been increasing signs that the Soviet system has been severaly strained by its own internal contradictions. Brutality—no matter how severe—has its limits.

The distinguished commentator, Marquis Childs, addresses himself to one aspect of the problem in his column published this morning. I ask unanimous consent that the article—as carried in the Washington Post—be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTERNAL CRISIS KEY TO SOVIET REFORMS
[By Marquis Childs]

The experts here who have been poring over every word of Nikita Khrushchev's voluminous plan for reshaping the system of Soviet industry believe it has been forced by the severest internal crisis the Soviet Union has undergone since the land collectivization program of the early 1930s.

The Khrushchev proposal to decentralize control over industry comes out of the painful discovery that a system which embraces 250,000 to 300,000 enterprises cannot be run through the orders of government commissars in Moscow. Once production began to shift from heavy industry to consumer goods, even gradually and in a limited degree, the Soviet system of iron autnority over every phase of life began to creak and groan.

In the view of economic specialists, so long as the Soviet system was geared to the production of iron and steel and heavy machinery it worked after a fashion. But once the relaxation began, with the householder able to buy a few simple articles either never before available or only in such scarce supply as to be negligible, the trouble began.

While the little group of men in the Kremlin would naturally never admit it, what is missing is the mechanism of the market economy—the function of price as it governs supply and demand in the market place. Whether anything approaching a consumers' economy—Russia is a long way from such an economy—can operate without this mechanism is the question believed to be plaguing the Soviet masters.

The substitute would be a vast army of bureaucrats fixing prices through a system of government cost-accounting constantly threatening to break down of its own weight and by reason of its essential unreality. The

the so-called welfare state. Today, no longer ashamed of our lowered standards of independence, we "let the Government

Congratulations to Senator-Elect Ralph Yarborough From Texas

last year, would also seem to indicate that the more conservative segment of the Democratic Party is losing some of its grip on the public affairs of Texas. In addition, YAR-

peril of this unreality is believed to have been impressed upon Khrushchev and others in relation to the artificial rate of the Russian ruble as compared to other currencies of the world.

One of the most startling changes announced at the same time that Khrushchev's plan filled two-thirds of all leading newspapers was that rubles would be sold for foreign currencies at a premium. In 1950 the value of the ruble was artificially fixed at four to the dollar. At the new premium rate, an American will be able to buy 10 rubles for a dollar. Similar bonuses for other principal world currencies were announced.

In this way the Soviet bosses apparently hope to get a more realistic idea of the cost of the machinery and the commodities they import. Under the artificial rate for the ruble, they have been operating in the dark.

Those studying Khrushchev's proposed shift believe that the more relaxation occurs, the more trouble will accumulate for the little group undertaking to run a dictatorship without a dictator.

The specialists who hold this view do not expect that in the foreseeable future the cumulative trouble will produce anything like a revolution. If they are correct in their analysis, the Kremlin gang will be more and more harrassed by the need to adjust to inevitable alterations in the direction of further liberalization.

They thereby will be kept busy, but they will not be so hard pressed as to seek to distract their own people with the kind of foreign adventure which could lead to war with the West.

Admittedly, this is an optimistic view. It differs sharply from that of Soviet escapees and underground leaders such as Vladimir Poremsky, president of the National Alliance of Russian Solidarists, known by the initials NTS.

Poremsky, who claims to direct an extensive underground inside Russia, foresees a "major upheaval" that may come at any time. This could take the form of extensive rioting, with events coming to a climax in the refusal of Soviet troops to fire on the rioters. In Poremsky's view, that would signal the end of the regime.

But the experts agree on one thing: Not in the satellites, not even in Russia itself, has the Communist indoctrination transformed human beings into Communist robots. And that is, in itself, an enormously hopeful conclusion.

Case of the Postmaster General—Letter From Charles O. Porter, of Oregon, to Hon. John A. Blatnik, of Minnesota

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

APRIL 8, 1957.

The Honorable JOHN A. BLATNIK,
Chairman, Legal and Monetary Subcommittee, Government Operations Committee, House of Representatives, Washington, D. C.

DEAR JOHN: Because I am personally convinced that Postmaster General Summerfield has acted as a poor-business man and in bad faith in connection with his Department's $47 million deficiency appropriation request, I call for his immediate resignation and prosecution under the provisions of the Urgent Deficiencies Act, United States Code, title 31, section 665.

My judgment is based on my experience as a member of the Post Office and Civil Service Committee and upon reading the colloquy in the CONGRESSIONAL RECORD for April 5, beginning on page 4639.

In a matter of this importance and interest, however, and in the interests of fairness, I am now writing to you in your capacity as chairman of the Legal and Monetary Subcommittee of the Government Operations Committee to request that your subcommittee inquire, as soon as possible, into the circumstances and that Mr. Summerfield and Mr. Percival F. Brundage, Director of the Bureau of the Budget, be asked to explain their conduct.

The Postmaster General prides himself on being an efficient-business man, but the facts point in the other direction, to wit:

1. He asked for $3 billion in 1957 and received within about $16 million of that. Only $5 million was cut from what he asked for operations, with the operations total representing an increase of $74 million from 1956. Yet he comes to us now with a $47 million deficit, all the more amazing because so much of the expenditures are fixed costs.

2. His defense is that the volume of mail has increased beyond expectation. We all make miscalculations but this one is tremendous, particularly when you consider that in January of this year, at a time when he knew this $47 million deficiency existed, the Postmaster General estimated for fiscal 1957 that the Post Office would handle 58,024,000,000 pieces of mail, domestic and foreign, almost 300 million less than he had earlier estimated would be handled in 1957. In January, the volume of mail is decreasing—but in April it is the basis for the $47 million deficiency he knew about in January.

The law is very plain:

"(g) Administrative division of apportionment: Any appropriation which is apportioned or reapportioned pursuant to this section may be divided and subdivided administratively within the limits of such apportionments or reapportionments. The officer having administrative control of any such appropriation available to the legislative branch, the judiciary, or the District of Columbia, and the head of each agency, subject to the approval of the Director of the Bureau of the Budget, shall prescribe, by regulation, a system of administrative control (not inconsistent with any accounting procedures prescribed by or pursuant to law) which shall be designed to (A) restrict obligations or expenditures against each appropriation to the amount of apportionments or reapportionments made for each such appropriation, and (B) enable such officer or agency head to fix responsibility for the creation of any obligation or the making of any expenditure in excess of an apportionment or reapportionment.

"(h) Expenditures in excess of apportionment prohibited—penalties: No officer or employee of the United States shall authorize or create any obligation or make any expenditure (A) in excess of an apportionment or reapportionment, or (B) in excess of the amount permitted by regulations prescribed pursuant to subsection (g) of this section.

"(i) Administrative discipline; reports on violations: (1) In addition to any penalty or liability under other law, any officer or employee of the United States who shall violate subsections (a), (b), or (h) of this section shal lbe subjected to appropriate administrative discipline, including, when circumstances warrant, suspension from duty without pay or removal from office; and any officer or employee of the United States who shall knowingly and willfully violate subsections (a), (b), or (h) of this section shall, upon conviction, be fined not more than $5,000 or imprisoned for not more than 2 years, or both."

Responsible leaders in the House have expressed concern over the violations of this law. Our colleagues, Mr. TABER and Mr. GARY, agree that the law has been violated. Mr. GARY well states the issue: "Are we going to continue to appropriate for the departments of Government or are we going to abdicate in their favor?"

Our distinguished colleague, Mr. CANNON, the chairman of the Appropriations Committee, has spoken his mind with his usual clarity and force. All his remarks in the April 5 RECORD are worthy of attention by your committee, but these go to the nub:

"Every department observed and obeyed the law until this year. The Post Office Department is the first to break over. Postmaster General Summerfield tells the press he is heartsick. He would not be heartsick if he had obeyed the law. But he took funds out of the fourth quarter and spent them in the second quarter. And he took money out of the fourth quarter and spent it in the third quarter. It was done deliberately and on notice. He had notice when Congress passed and the President signed the bill. He had notice again when he first started using the money at the beginning of the first quarter in July 1956. He went before the Bureau of the Budget and asked for a supplementary estimate. The budget told him Congress had given him $2,184,000 for operations and he had to live within it. They refused to recommend a deficiency appropriation. Again the first of January he again went before the Budget Bureau and asked for a supplementary estimate. And again the Budget Bureau told him he would have to live within the amount Congress had appropriated for the purpose. He waited until the last minute and finally bludgeoned the Budget Bureau into giving him a supplementary estimate and then calls in the newspapermen and tells them unless Congress surrenders he will stop delivering the mail. He lays down an ultimatum to Congress and arrogantly gives them 3 days in which to come across. Regardless of what the Constitution says, the Department is writing its own ticket and naming its own appropriation, and the taxpayers of the Nation and the men they send to Washington to represent them can go jump in the sea."

Essential postal services should not be abridged abruptly. Too much important activity depends on them. Decreases in service for the sake of economy can no doubt be made, but they should come as the result of careful study, not because the Postmaster General invokes them as reprisals on Congress for an illegal situation his own ineptness created.

Sincerely,

CHARLES O. PORTER,
Member of Congress.

A Fool's Paradise

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Jeffersonian Democrat, of March 21, 1957:

A FOOL'S PARADISE

(By Dr. Alfred P. Haake, noted economist, public relations consultant, and lecturer)

"Let George do it" was one one of the early clichés in our evolution from self-reliance toward glorified parasitism that hides behind

Once enough stock has been quietly acquired, the ambitious one, usually with an attorney, calls on the management and

[From the New York Journal-American of March 24, 1957]

FAIRBANKS FIGHT WILL BRING SEC, EXCHANGE

the market and above prices actually paid by the sellers.

Fortunes have been and will be made by

the so-called welfare state. Today, no longer ashamed of our lowered standards of independence, we "let the Government do it," and smugly tell ourselves that we are getting something for nothing. We are entering into a fool's paradise labeled "social control."

It is a fool's paradise because we do not realize, or will not let ourselves believe that we are merely kidding ourselves into thinking that we get a bargain when we "let the Government do it" for us; or that we shall escape paying heavily, out of all proportion to the benefits presently received, in eventual even higher taxes, higher costs of living, and destruction of freedom.

In 1956 a report was submitted by the Education Committee of the President's Commission on Intergovernmental Relations, after an exhaustive survey of the school situation in the United States. Roger A. Freeman, who was appointed on two presidential commissions to study the fiscal capacity of the States to meet their school needs, in an address to the Civic Federation of Chicago on October 31, 1956, said:

"The public schools last year expended slightly over $10 billion. A Federal-aid program of from 250 to 400 million dollars might at best have boosted that total by 2½ percent to 4 percent, which is less than half the average annual increase from State and local funds in recent years."

It follows that there was no real need for the excitement over the failure of the school aid bill in 1956, for the Federal aid was only a small part of the total cost and less than what any one of the States could do for itself.

It should be apparent that the real purpose back of the Kelley bill (school aid) was not to give the States help they did not need, but rather to establish the principle of Federal responsibility for schools, and then, prove in later years that the amounts initially appropriated were too small and establish grants that would then really bring the schools under Federal domination and control. It is an exquisite irony that the Federal Government would buy that control with our own money.

We have done fairly well with our schools and do not really need Federal aid to do even better. If only 10 percent of Federal taxes were shifted from Federal to State and local governments, the income of the latter would be increased by more than 50 percent. The way for Washington to help is to reduce the wasteful spending of our money.

Mr. Freeman points out that from 1900 to 1955, the public school enrollment has doubled, but that school operating costs have multiplied 43 times!

In 1900 school funds equalled 1½ percent of our national income; in 1955 they equaled 4 percent of national income.

The number of teachers has increased from 1 teacher for every 37 pupils in 1900 to 1 for every 27 pupils in 1955.

We have been doing a rather neat job with school facilities, and now need to do a better job with what we teach, and the character we build.

But there is more involved. The Constitution and the freedom it was designed to preserve and protect, are in dire peril from the constant increase of Federal responsibility and power. The Federal Government has already gone beyond the provisions of the document, the intent of its framers and the wisdom which experience has taught us guided the framers.

With all-powerful Federal Government, unrestrained by popular will, thanks to bribing the people with illusory benefits like Federal aid to schools, we are headed in the same direction as other nations which have undermined their stamina and finally gone down to destruction at their own hands.

Insist with your representatives in Washington that they defeat the new school-aid bill to come before them soon.

Congratulations to Senator-Elect Ralph Yarborough From Texas

EXTENSION OF REMARKS
OF
HON. JACK BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. BROOKS of Texas. Mr. Speaker, one of the richest traditions in our democratic heritage is the ability and willingness of Americans to close ranks after a hard-fought election and work together for the continued progress of all the people.

We have a splendid example of this fine tradition in Texas. The Honorable RALPH YARBOROUGH has been elected to serve as our junior Senator after a strenuous campaign. The Beaumont Enterprise supported one of Judge YARBOROUGH's opponents, but I would call to the attention of our colleagues the post-election editorial in the Enterprise wishing our new Senator "every success in efforts to serve his State and his Nation."

This fine example by the Enterprise of fair play for the winning candidate—although the paper did not support him during the campaign—is one that I am sure every person who has served in public office can appreciate and I want to take this opportunity to make it possible for every Member of the House to read this editorial.

The editorial follows:

[From the Beaumont (Tex.) Enterprise of April 4, 1957]

OUR BEST TO THE NEW SENATOR

Persistence has paid off handsomely for RALPH YARBOROUGH, Texas' new United States Senator.

The Enterprise extends its warmest congratulations to the Austin attorney upon his impressive victory in the special election to name a successor to Price Daniel, who left the national lawmaking body to become governor of the Lone Star State. We wish him every success in efforts to serve his State and his Nation.

Judge YARBOROUGH is young and aggressive and will, we have reason to believe, assume the responsibilities of his new job with the same determination and desire of accomplishment that have marked earlier unsuccessful political battles.

He can take justifiable pride in the fact that his victory at the polls was by much more than a meager margin and that it was statewide in its scope. His strength even ate heavily into the east Texas home grounds of his most formidable opponent.

For a long time the citizens of this State will be analyzing the significance of the YARBOROUGH victory. There will not, of course, be agreement all the way around.

However, we feel that most everybody will recognize that State government scandals of the past few years have helped bring it about. The Austin attorney, a liberal, has hammered away at what he calls the "Machine" at every turn of the road—and it must be remembered that the "Machine" has been operated by the conservative wing of the Democratic Party. We are even of the opinion that the recent legislative scandals resulted in fresh public concern that helped the cause of Mr. YARBOROUGH on Tuesday.

The outstanding liberal's victory in the Senate race, coupled with the narrow margin with which Governor Daniel defeated him in a battle royal for the governorship last year, would also seem to indicate that the more conservative segment of the Democratic Party is losing some of its grip on the public affairs of Texas. In addition, YARBOROUGH has fought loud and long for strict party loyalty.

The vote for Thad Hutcheson, the Republican candidate, was substantial—substantial, that is, for a Republican in the Lone Star State. However, with all the smiles and charm GOP bigwigs, including President Eisenhower, could throw toward Texas, he was not able to make anyone believe that there is to be, any time soon, a wholesale forsaking of traditional party allegiances at the State level.

Mr. YARBOROUGH will be the junior Senator of all the people of Texas, and we trust that the heavy responsibility that has been placed upon his shoulders will make him immune to pressure from any and all groups seeking favors that, if granted, would not be in the best interest of the State as a whole.

He can make a good Senator if he so wills.

The Enterprise pledges its support for every step he takes in that direction.

How To Become a Big-Shot Industrialist—Via Take-Over Route

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. DORN of New York. Mr. Speaker, I should like to call the attention of my colleagues in the House to two columns written by Leslie Gould, financial editor of the New York Journal-American, which were published on March 20 and 24, 1957, respectively:

[From the New York Journal-American of Wednesday, March 20, 1957]

HOW TO BECOME A BIG SHOT INDUSTRIALIST—VIA TAKE-OVER ROUTE

(By Leslie Gould)

Want to be a big-shot industrialist? Anyone—well, almost anyone—can.

The old tried and true method was that of the Horatio Alger heroes.

Start as an office boy, or in the shop, and work up step by step. Many of today's industrial leaders—most of them—followed that route.

There was another once popular way. Marry the boss' daughter. Only the opportunities for this are limited today as more and more companies shift to public stock ownership.

Public ownership has opened the door to a newer and, in recent years, successful method. Surprisingly it doesn't take very much capital. It can be done with other people's money.

Here's the way it is done.

First find a broken down, or nearly so, Stock Exchange or American Stock Exchange-listed company where the management has little or no stock interest.

As the take over operation develops, influence peddling lawyers and a retinue of publicity men—with actual or claimed access to high places—even that big office on Pennsylvania Avenue in Washington—are taken on.

The next step is to acquire stock either alone, or with a syndicate, or the active help of ambitious customers' men in Exchange firms. The usual method is a combination of all three.

This can be done with as little capital as $70,000 to $150,000.

having received the unanimous vote of the Congress. At the same time, in 1947, a bill which had been passed by Con-

the Army are members of the Medical Service Corps. They belong to such outstanding organizations as the American Hospital Association, the American

and the number of general officers in each of the Corps.

Once enough stock has been quietly acquired, the ambitious one, usually with an attorney, calls on the management and breaks the sad news. It is out of a job. Also thousands of jobs are jeopardized.

The management has been asleep and never interested enough to have acquired an important position. The new group takes over, elects its own directors and officers, with the ambitious one assuming the top positions—president or chairman or both. The last makes for double paychecks and expense accounts.

TWO TYPES OF APPROACHES

The next move, once the new interests are in the saddle, is to increase the capital shares. Then, with the help of some sharp pencil boys, accountants, and lawyers, the search is begun for other takeover prospects. This time the hunt is for well-heeled companies, with the stock selling below the book value. Also, where the management has only a small stock position.

There are two approaches: A direct one for a merger through an exchange of stock, or a quiet accumulation of stock in the open market. If stock is bought, a friendly customers' man or two will put in some of his clients into the sought-after company on their promise of proxy support.

Sometimes a proxy fight can be avoided, particularly if enough shares in the sought-after company are acquired. Also if the management is willing to ride along on the promise of continued employment, usually as a consultant. Then, shares of the first company are exchanged for those of the second.

Since shares are given in exchange for stock of the acquired company, these need not be registered with the SEC. Then, the shares so exchanged may be sold on the open market. This has been done a lot in some of the cheap, speculative mining ventures.

HIDE BEHIND SWISS BANK

If the company to be taken over is a larger one and associates with capital of the raiding group wish to be anonymous, there are the Swiss banks. The Swiss banks never reveal their customers, who can be anyone.

The Swiss banks in addition to covering up identity of principals also extend extremely liberal credit margin as low as 10 percent against the American requirements of 70 percent for carrying securities. So a million dollars in American securities can be carried on an outlay of only $100,000, against $700,000 with American banks.

Stock Exchange firms are barred from arranging deals where less than the 70-percent margin is put up, but this can be gotten around by using a third party who makes the arrangements.

THIRD PARTY MYSTERY INDIVIDUALS

Another wrinkle is to contract with third parties—mystery individuals to buy stock on their own, using their credit, but guaranteeing them a price substantially above the market. This is being resorted to more and more. It amounts to a buying of proxies, for the delivery of and payment for, the shares is made after the stockholders meeting voting on the control.

Profits on these "above the market but delayed delivery of stock deals" can run into millions of dollars. Since the purchases call for delivery of stock 6 months or longer, the profits are taxable at the lower capital gains rates.

The laws bar buying of votes for dog catchers, but there apparently is nothing illegal in the buying of proxies for control of a company listed on the Stock Exchange or elsewhere.

[From the New York Journal-American of March 24, 1957]

FAIRBANKS FIGHT WILL BRING SEC, EXCHANGE LAWS REFORMS

(By Leslie Gould)

Out of the Fairbanks, Morse control fight—regardless of the rulings by the courts and the balloting at the stockholders' meeting—will come reforms in the securities laws and in stock exchange regulations.

These will cover:

1. Buying of stock and voting of proxies where the principals and the true beneficial owners are concealed, as by the Swiss banks.

2. Multimillion-dollar stock market commitments by officers and directors of a publicly owned corporation, the principal business of which is other than investment in securities, without specific stockholder approval.

3. Sale of major assets without stockholder approval.

4. Leases and other contracts committing a company to expenses running into the millions for a longer period of years, without stockholder approval.

5. An end to secret hearings by the SEC into matters vitally concerning the public owners of a business—the shareowners.

6. A crackdown by the SEC when officers, directors, and insiders and large shareowners fail to report promptly under the law transactions in the company's stock. These reports are supposed to be made by the 10th of each month, covering such dealings in the previous month.

FULL DISCLOSURE NEEDED

7. Promp and full disclosure of transactions with the corporation by any officer, director, insider, or large shareowner, or by any relative or close associate. The same where there are refunds of profits or commissions or fees by such individuals to the corporation, whether the repayments are voluntary or otherwise.

8. Real, instead of token enforcement by the stock exchange of its rule that its member firms and their customers' men must know their customers and, where there are agents or nominees, disclosure of the true principals.

9. Extension of SEC rules requiring disclosures by individuals holding 10 percent or more of a company's shares to groups acting in concert in the accumulation of such holdings. This should include customers' men in stock exchange and American stock exchange firms. They have "mastermind-ed" some of the recent takeover attempts.

10. Full disclosure of fees received by stock exchange firms from a corporation when these firms tip the corporation's securities in advertisements and in market letters and in other analytical literature.

11. Full disclosure of the names of and fees and expenses paid to lawyers and public relations advisers. Also any political contributions by the firm, or its officers and directors, or its lawyers and public relations advisers.

BOLDEST OPERATION

In one of the boldest and most daring financial operations in recent years, the Penn-Texas Corp. is seeking to grab control of the $135 million Fairbanks, Morse Co. There has never been an operation comparable to it.

Penn-Texas officers and directors, who have a relatively small personal stake in the stock, have committed the company to a $35 million investment in Fairbanks, Morse shares. Of this sum, $15 to $18 million is still owing and must be paid in the next 6 months.

Prices paid for the Fairbanks, Morse shares have in most cases been substantially above the market and above prices actually paid by the sellers.

Fortunes have been and will be made by the sellers of the shares to Penn-Texas, including undisclosed customers of Swiss banks, a couple of mystery men and a former Penn-Texas director who had other financial deals with the company.

To finance the Fairbanks, Morse shares Penn-Texas officers have used some of the funds received in a series of sale and lease-back deals for plants and property of its subsidiaries.

LEASE-BACK DEALS USED

Four plants were sold for a total of $22,700,000. In the lease-back contracts, the company is committed to pay over a long period of years more than $61 million in rents. On some of the rental contracts, the company pays all expenses of maintenance and taxes.

Only part of the sale price was in cash, the company in several of the deals taking back what it calls purchase money second mortgages.

These commitments are not peanuts, but the deals have been made without a specific stockholder vote on them.

The question is: How far can a management go in disposing of assets and in committing the business to millions of new expense without the approval of the real owners—the public shareholders?

Officer Grades, Army Medical Corps

EXTENSION OF REMARKS

OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1957

Mr. DURHAM. Mr. Speaker, I have today introduced a bill to authorize the grades of major general and brigadier general in the Medical Service Corps of the Regular Army, and for other purposes.

I would like to chronicle very briefly before this body the previously unheralded performance of a large group of between 4,000 and 5,000 active-duty Army officers who, under present law, are denied the opportunity of attaining general officer rank, no matter how outstanding may be the performance of any individual of the corps. I specifically refer to the Medical Service Corps of the Army, which represents the consolidation of the former Medical Administrative Corps, the Sanitary Corps, and the Pharmacy Corps. I supported the Surgeon General of the Army, Maj. Gen. Norman Kirk, in 1947, in his recommendation for the establishment of a single corps which would provide administrative, scientific, and technical support to the Surgeon General and his physicians of the Army Medical Service in their mission of caring for the sick, injured, and wounded, and in maintaining the health of the Army. I did this in spite of the fact that it would abolish the Pharmacy Corps, which was established by a bill which I introduced in Congress in 1942, and which was signed by the President into law in 1943, after

questionably the only solution to the imports problem.

yield powers invested in it by the Constitution.

companies from their impact upon do-

having received the unanimous vote of the Congress. At the same time, in 1947, a bill which had been passed by Congress establishing an Optometry Corps was vetoed by the President in order to incorporate this profession in the Medical Service Corps. The Medical Service Corps is a natural outgrowth of the Civil War Hospital and Ambulance Corps, which relieved the overburdened physician of much of the work of a nonprofessional nature; of the Sanitary Corps, whose establishment was recommended by General Gorgas, the Surgeon General in 1917, at a time when he faced the problem of not having enough medical officers to provide proper professional care to the large number of casualties that was anticipated; and of the Medical Administrative Corps, which was established by law in 1920 as the result of a recommendation by Surg. Gen. Merritt W. Ireland, who recommended at that early stage the establishment of a Medical Service Corps; and, finally, of the Pharmacy Corps, which gave recognition to highly trained and educated officers with backgrounds in practical sanitation, military medical supplies and equipment, and knowledge and experience in the chemical, bacteriological, serological, and X-ray fields. These latter three corps faced and met their responsibilities superbly during World War II in almost every type of duty except the actual practice of medicine, dentistry, and nursing.

The Medical Service Corps has increased tremendously in size, responsibilities, and areas of utilization in the past 10 years. It is composed of individuals who are dedicated to the highest principles of the Army Medical Service, the United States Army, and this great Nation of ours. The Medical Service Corps officer, in addition to being professionally qualified in his field, must be adept in the application and techniques of the combat arms as well. These officers served with honor during the Korean conflict when each infantry division was authorized 38 Medical Service Corps officers. As a matter of fact, next to the infantry and artillery, they outnumbered all other frontline corps, and their assignments ranged from that of the assistant battalion surgeon, who provided frontline emergency medical care, to that of the helicopter pilot, who flew the wounded back to the hospitals.

The Medical Service Corps consists of specialists in over 50 scientific, technical, and administrative specialties, including pharmacists, optometrists, sanitary engineers, podiatrists, clinical psychologists, bacteriologists, radiological laboratory officers, biochemists, physiologists, entomologists, social workers, immunologists, parasitologists, and in the broader fields, administrators, comptrollers, and executives trained in management, logistics, manpower, teaching, intelligence, staff and command, training, research and development, operations and planning, programing, financial management, industrial funding, and the biological and physical sciences. These officers serve also as consultants to physicians.

It is also interesting to note that almost 30 percent of all the Ph. D.'s in the Army are members of the Medical Service Corps. They belong to such outstanding organizations as the American Hospital Association, the American Pharmaceutical Association, the American Optometric Association, the American Association for the Advancement of Science, the American Chemical Society, the American Management Association, the Society of American Bacteriologists, the American Psychological Association, the American Public Health Association, the American Sociological Society, the National Association of Social Workers, the American Industrial Hygiene Association, the American Association of Clinical Pathologists, the American Entomological Society, the American Society of Immunologists, the New York Academy of Sciences, the Society of Experimental Biology and Medicine, the American Society of Experimental Pathology, the American Society of Tropical Medicine and Hygiene, the American Society of Parasitology, the American Mosquito Control Association, the Radiaiton Research Society, and the American Society of Hospital Pharmacists.

In any major conflict in the future, the services of physicians will be in an acutely short supply. The existence of the Medical Service Corps negates the universal complaint of our World War II Reserve physicians, who charged that their professional services were needlessly expended in nonprofessional duties. The corps distinguished itself in Korea as a member of that great Army medical team, which assured our Army of the lowest sickness and disease rate, and the best chance of survival after being wounded, of any army in history. The Medical Service Corps has now reached full maturity, and new opportunities have been opened up in the whole area of service support in such new fields as medical intelligence, military missions, and particularly in the logistics officer program. In mobilization these officers would be required to serve in 1 or 2 grades higher than now serving, and the responsibilities would even be greater than in World War II. However, in this era of unprecedented opportunities for college graduates in civilian pursuits, a military career is not going to be attractive to the highest type of personnel desired, when it is realized that in the Medical Service Corps our present laws preclude equality of opportunity to aspire to the higher ranks available in the military service. At the present time, the Medical Service Corps is the only male corps which has no general officers, and which does not and never has had the opportunity of competing for these higher positions in the Military Establishment. Other corps of the Army, much smaller in size than the Medical Service Corps, have several general officers. Equality of opportunity should not be denied to the Medical Service Corps, and if some of the gross inequities cannot be rectified under present legislation, I propose that legislation be enacted that would correct these injustices. To illustrate the inequality that exists I should like to enter on the record a listing of all the male corps of the Army establishment with their approximate present strength of officers, and the number of general officers in each of the Corps.

Corps	Approximate strengths	Number of general officers
Armor	6,000	61
Artillery	20,200	121
Infantry	24,000	154
Adjutant General	5,300	6
Chemical	1,500	4
Chaplain	1,100	2
Engineer	9,400	29
Military Police	2,400	4
Finance	1,500	4
Judge Advocate General	1,100	3
Medical Service:		
Dental Corps	2,600	3
Medical Corps	4,300	17
Medical Services Corps	4,500	None
Veterinary Corps	475	1
Ordnance	7,100	23
Quartermaster	6,300	19
Signal	7,400	19
Transportation	6,400	14

The above data speak for themselves. I hold that any Corps of this size, which is composed of so many highly regarded professional personnel, and which has distinguished itself so admirably in combat, richly deserves the equality of opportunity afforded other male corps of the Army.

Unrestricted Importation of Residual Oil and Cheaply Manufactured Foreign Goods Is a Menace to American Industry

SPEECH
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. VAN ZANDT. Mr. Speaker, each year since residual oil imports began to get out of hand following World War II, there have been efforts in Congress to bring about restrictive measures, either by legislation or by directive to the executive department.

International oil companies have long protested that no laws are needed to prevent harmful practices on their part.

They insist that a voluntary program will take care of everything.

There has been a variety of approaches to the problem of excessive imports.

Several years ago we proposed an omnibus foreign trade measure that would have placed a 5 percent limitation on residual oil imports and at the same time would have offered various degrees of protection for other affected industries.

In the last Congress, I offered a bill to restrict residual oil imports to 10 percent of domestic demand.

What was hoped would be an acceptable substitute was the adoption by both Houses, with White House endorsement, of the recommendations of the Cabinet Committee on Energy Supplies and Resources Policy.

Now, after 2 years, we find that it is unworkable and that legislation is un-

ing in this country at the present time. I fully realize that the congressional

S. 1451, which recently passed the Senate, I believe that the following letter

present population of 39,000 people, military and civilian. During World War

questionably the only solution to the imports problem.

In the interim, it has been established that any attempt to persuade the international oil group to conform voluntarily to suggested import levels is futile.

Our crusade in behalf of American industry and labor has been waged under great difficulties.

Attempting to set up tariff dikes as safeguards against mounting waves of foreign products devastating the United States economy would seem to be an impossible job as we must contend with the determined opposition of wealthy international trading companies.

Throughout the time that this pitched battle has been taking place, we have also been forced to carry out a vigorous campaign to prevent new breakdowns in the fortifications set up in the field of foreign commerce by our Founding Fathers more than a century and a half ago.

Despite the unfair competition for American producers and workers that has come out of the strange diplomatic maneuvering since Congress first relinquished some of its authority to the State Department, there are still persistent efforts in that Department to usurp additional congressional power for the purpose of broadening our concessions in foreign commerce.

Thus far I have mentioned only the coal industry as a victim of an unwise foreign policy.

In the same category are the textile and leather goods industries, glass, pottery, ceramics, machine tools, electrical equipment, and dozens of other manufacturers whose talents have helped to bring America the world's highest standard of living.

I might also point out that under one plan which the State Department is pushing very vigorously, the American farmer would also stand to lose big shares of domestic markets to foreign producers.

That particular plan would take the United States of America into the Organization for Trade Cooperation, thus throwing our tariff-making power into an office composed predominantly of foreigners.

Today, I am introducing a bill to impose a tariff quota on imports that threaten the welfare and security of this country.

My bill offers a plan to which no one should object.

It is a plan that American industry and labor have every right to demand; it gives foreign producers who look to the United States for markets a fair share of our business and an opportunity to plan output in conformity with prearranged schedules.

Mr. Speaker, I have met with other Members of the House who are introducing similar legislative proposals, and we have come to the conclusion that my bill is one which should have a wide appeal in all sections of our country.

In the first place, it proposes to reassert congressional authority in the field of international trade.

It puts the State Department on notice that the 85th Congress will no longer yield powers invested in it by the Constitution.

Actually, we could not take leave of a binding law even if this legislative body had a mind to do so.

Congress has always been responsible for policies dealing with international commerce, and these powers cannot be ceded without constitutional amendment.

The State Department has arrogated tariff-making functions over the past two decades or so.

During this period it has shown conclusively that it is incapable of conducting these affairs in a manner that would provide equitable treatment for the people of the United States.

No doubt foreign nations enjoy negotiating with a diplomat who is willing to surrender his country's markets to the rest of the world.

Does the State Department consider it protocol for our own working people to sit down to an empty table in order to satisfy demands of exporting nations?

Thousands of residents of the congressional district which I represent have experienced unemployment as a consequence of unwise tariff policies.

Our coal miners and railroad workers have been particularly hard hit through loss of coal markets to foreign residual oil.

The textile, glass, and pottery industries in our part of the country have felt the impact of foreign competition, and they stand to be hurt even more when the St. Lawrence seaway is opened unless the bill which I am introducing is written into law.

The danger confronting textile workers who lack inadequate tariff protection is universally recognized.

I might add that, while the cigarmaking industry in my part of the country would not be considered a big employer on a comparative scale, nevertheless there is no reason for it to be sacrificed to the competition of products made by poorly paid workers in lands abroad.

The bill which I am introducing today is designed to protect these and other groups who comprise the working segment of our population.

In addition to the foregoing bill to set up a tariff quota, I am also at this time introducing a bill to provide for a 10-percent quota limitation on residual oil imports.

It is identical to the bill which, as I mentioned previously, I introduced in the 84th Congress.

It was my original intention to incorporate this provision into my tariff quota bill, following discussions with colleagues equally concerned about excessive imports.

However, I have decided to offer the bills separately and hope that the Ways and Means Committee will see fit to include this provision into whatever tariff proposal is finally sent to the floor.

By way of explanation I should like to cite the reason why a specific quota limitation on oil imports is necessary.

We have learned from past experience that a tariff of even a dollar per barrel on residual oil imports is not an assured method of deterring international oil companies from their impact upon domestic oil markets.

Another reason why an absolute quota is necessary in this case is that the coal industry could not expect the Tariff Commission to place what would be considered a prohibitive tariff on residual oil imports due to the fact that the Commission decides its cases on a product-by-product basis.

Thus two different forms of fuel are not necessarily considered competitive by the Commission even though they may be used precisely for the same purposes by identical consumers.

Mr. Speaker, to emphasize the necessity for quick action on the bills which I now offer, let me point out that there is a movement afoot by the international trade groups to put across some form of the OTC during this session of Congress.

I believe that our tariff quota bill would be the best answer to these ambitions.

I also feel that our domestic fuels industries are at this time in perhaps the gravest danger since foreign oil began to deluge American markets not long after the conclusion of World War II.

There are literally swarms of tankers now engaged in carrying oil to Europe that are going to be free for other shipping activity once Suez traffic is returned to normal.

Despite a recent statement by an executive of one of the large international companies to the effect that shipping bottoms will not be in excess for at least a year, there is no question but that more tanker facilities are going to be available for stepping up the transportation of alien oil to the United States.

I recognize that the Office of Defense Mobilization is making every effort to prevent the devastating repercussions that lie ahead for the coal and railroad industries if the world oil group is permitted to impose its will in this manner.

Speaking for the thousands of workers in affected industries, as well as for the management which is charged with responsibility of keeping these industries in a healthy condition, I ask members of the House Ways and Means Committee to act quickly upon my recommendations so that we can bring the matter to the floor for a vote in the immediate future.

Southern Congressional Leaders Form South's Last Defense Line

---

EXTENSION OF REMARKS
OF

HON. JOHN L. McMILLAN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1957

Mr. McMILLAN. Mr. Speaker, I am inserting the enclosed article which appeared in the April 4 issue of the Florence (S. C.) Morning News, which is one of the leading daily papers in my State.

I believe that the editor of this paper has truly expressed the conditions exist-

ing in this country at the present time. I fully realize that the congressional delegations from below the Mason-Dixon line are not the only good statesmen or the only good legislators in the Congress. I sincerely believe, however, that the Members of Congress from below the Mason-Dixon line have a much greater respect for the Constitution and hold it in higher esteem than the average person in the United States.

I realize that the Members of Congress from the southern States are greatly outnumbered and sooner or later our opponents will overpower us and pass a civil rights, or more popularly called a civil wrongs bill, which will deny a jury trial and permit numerous other invasions of the private individual's rights equalled only by the Kremlin in Russia.

I hope that every Member of the House will have an opportunity to read the article I am inserting in the RECORD today:

SOUTHERN CONGRESSIONAL LEADERS FORM SOUTH'S LAST DEFENSE LINE

The importance of the position occupied by southern Congressmen in the fight against the President's civil-rights bill is illustrated in the case of trial by jury. The civil-rights proposal is a frontal attack within the area of civil rights on the time-honored and constitutionally provided right of trial by jury.

The bill now before Congress would have the effect of denying persons accused of violating the civil rights of others of being tried before a jury of persons from their State and district. If the bill is enacted, the Government would be empowered to bring civil charges against an individual accused of violating the civil rights of another. He would be prosecuted by a Government attorney before a Federal judge, who would pass on the facts as well as the law. He would also pass sentence.

Also, the bill would establish a new division of the Department of Justice with lawyers employed for the specific purpose of investigating and bringing civil suits. The division would bring suit in behalf of a plaintiff even though the plaintiff had made no complaint. If the person named in the complaint did complain, the Government would bear the cost of the suit. On the other hand, the defendant would be required to pay the cost of defense.

Another phase of the proposed legislation would create a commission to investigate alleged discrimination. Persons accused of discrimination could be ordered to Washington and subjected to an investigation that would make the necessity of legal counsel just as real as if he were being criminally accused.

Against this invasion of civil rights in the name of "civil rights," southern Senators and Congressmen form our last line of defense. Their fight is a fight for trial by jury, for the defense of the civil rights of those whose civil rights would be taken from them by the President's civil-rights bill.

Financial Institutions Act of 1957, S. 1451

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. MULTER. Mr. Speaker, since the House may shortly concern itself with S. 1451, which recently passed the Senate, I believe that the following letter which I received, dated April 5, 1957, from Maurice S. Brody, an investment economist of Denver, Colo., will be of interest to our colleagues:

APRIL 5, 1957.

Hon. ABRAHAM J. MULTER,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN MULTER: The passage of S. 1451, known as the Financial Institutions Act of 1957, by the United States Senate clearly points up the fact that the Republican administration is hell bent on sharply revising the basic underlying philosophy of our National Banking Act.

The elimination of mandatory cumulative voting, the regularization of stock financing by national banks through the issuance of preferred stock, and the granting of permission to extend stock options to top management (all strongly opposed by the Federal Reserve Board) puts depositors and stockholders on notice that the basic safeguards which have maintained our national banking system at its present full strength is now to be discarded once and for all.

I naturally am concerned with the attitude of the House Banking and Currency Committee toward discarding these fundamental basic safeguards.

It clearly appears that the contemplated legislative investigation into the country's credit and financial policies should include an investigation into the effects which these drastic changes are likely to have on our national banking structure.

I, therefore, would respectfully suggest that you entertain the thought of having the House Banking and Currency Committee shelve this bill until the presently contemplated legislative investigation is completed. This makes commonsense as the reversal in basic philosophy in S. 1451 reaches right down to the fundamental concentration of financial power occurring in this country, and therefore certainly is tied in with any investigation of our financial and credit policies.

I will be pleased to hear from you concerning this thought.

With my kind personal regards and best wishes, I remain,

Respectfully yours,

MAURICE S. BRODY.

Outstanding Infantry Training at Fort Benning

EXTENSION OF REMARKS
OF
HON. JAMES A. BYRNE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. BYRNE of Pennsylvania. Mr. Speaker, I request that the RECORD show the exemplary job being done in training ground forces at Fort Benning, Ga. Recently a group of Members of the House and the Senate had an opportunity to see this training at firsthand. It was a very fine thing to see not only the different types of training but also the imagination and spirit with which the Infantry goes about their tasks. All credit must be given to Maj. Gen. Herbert B. Powell and his fine staff who operate this gigantic Army Infantry center and school.

I say gigantic because this great Army post covers 284 square miles and has a present population of 39,000 people, military and civilian. During World War II, close to 100,000 persons was the average population. Today the Infantry center and school prepares Infantry officers and enlisted men for ground combat and as rangers and airborne troops. In addition, Fort Benning supports the Army Reserve and National Guard with active-duty training opportunities and with correspondence courses. It was a wonderful opportunity for me and my colleagues to see these young soldiers and officers go about their training in weapons, communications, counterfire operations, transportation, airborne work, ranger tactics, and developing new concepts using modern weapons, aircraft, and helicopters in an amazingly bold and effective style.

I might also note that Fort Benning lends great support to the training of our allied personnel. As Sir William Slim, who rose from lance corporal to become a field marshal and chief of the Imperial General Staff, once said, "There is only one thing worse than to have allies, and that's not to have any at all." Thus, it speaks well for the Army and for Fort Benning to be assisting in this program upon which I would like to elaborate.

This important aspect of the mutual defense assistance program of the United States Government, the training of military representatives from participating countries in American service schools, is designed to unify the defense of the free world and to teach the employment and maintenance of American military equipment furnished these countries under the program. Those receiving the training in the United States generally return home as instructors to pass on to others the knowledge which they have acquired here.

The United States Army Infantry school plays a major role in this effort, receiving and training approximately 700 to 800 allied students per year from about 35 different nations. Roughly 40 percent of these students are officers of the Republic of Korea and Republic of Vietnam Armies who attend special, separate, translated classes. The remainder of the students are in regularly scheduled classes with American students. In a year's time from 45 to 50 different classes have allied students enrolled. The courses represented vary in length from 4 weeks to 9 months and begin and end throughout the year.

Once again, my appreciation to Secretary Brucker and to the Infantry center and school for a most informative visit.

Department of Commerce and Related Agencies Appropriation Bill, 1958

SPEECH
OF
HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6700) making appropriations for the Department of Com-

the provision that, in the makeup of the ... and in this way be better equipped to further

merce and related agencies for the fiscal year ending June 30, 1958, and for other purposes.

Mr. MOSS. Mr. Chairman, I wish to give the strongest possible support to the action by the Committee on Appropriations cutting out funds for the Office of Strategic Information in the Department of Commerce. I wish, particularly, to congratulate the Appropriations Subcommittee under the chairmanship of the Honorable PRINCE PRESTON, of Georgia.

The Appropriations Subcommittee looked very carefully into the workings of the Office of Strategic Information. They questioned the Secretary of Commerce, the Assistant Secretary for Administration and the Director of the Office of Strategic Information. It is apparent from the printed testimony of these witnesses and from the resulting Appropriations Committee report that the Appropriations Subcommittee arrived at the same conclusion as the Government Operations Subcommittee of which I am chairman—that the OSI has no clear idea of what it is supposed to do, how it is to go about doing it, and, most important, why.

In the 25th intermediate report of the Government Operations Committee during the 84th Congress, it was recommended that the Office of Strategic Information should be abolished. This recommendation was based on many hours of testimony from OSI and Commerce Department witnesses before the Government Information Subcommittee.

The subcommittee was looking into serious charges that the OSI was operating as a censorship agency—that it was clamping down on information which had absolutely nothing to do with the Nation's military security. The OSI witnesses admitted that they were not security experts, but they were unable to disprove charges that OSI was using the excuse of security to blanket information which the American people have a right to know. These charges came not only from the press and from industry but also from military and intelligence experts within the Government.

I want to emphasize that the studies of complaints about OSI by two House subcommittees shows that nothing the OSI has done in the past, is doing now, or is planning to do in the future would restrict information affecting the Nation's security. Rather, the agency uses the excuse of strategic value to impose restrictions on information which does not fall in the military security category.

To cite but one example, the OSI tried to prevent the publication of a series of aerial photographs which were planned by the Department of Defense and the State Department to help explain the President's "open skies" program. The Government's military and diplomatic experts felt the "open skies" program for aerial photographic inspection of atomic-weapons plants could be explained by showing the type of aerial pictures which could be taken. As a part of a display for the United Nations Building, the experts planned to use aerial photos of United States cities which had already been made public.

But here the OSI stepped in, assuming an attitude of cloak-and-dagger self-importance. OSI officials tried to block the plan to use photographs in the United Nations display, claiming a secret directive establishing the OSI gave them the authority to set policies covering information which might be of some possible strategic value to some potential enemy.

Not only were the OSI officials wrong from both the military intelligence and diplomatic viewpoints, but they were even wrong in claiming authority to set restrictive information policies. After a series of letters and public hearings, the secret stamp was removed from the directive setting up the OSI. When this declassified directive was compared to the version OSI had been using, it was discovered that the Commerce Department, itself, had added the claim that its Office of Strategic Information could establish information policies affecting other Government agencies.

The OSI has neither the authority nor the ability to censor information from other Government agencies. If documents have to be restricted from the military security standpoint, that decision should be made by experts. Neither is there a need for the OSI in the field of international exchange of information. This is a job which the Library of Congress has been coordinating since the Brussels Convention of 1886. In fact, OSI witnesses testified that the Library of Congress has been doing such a good job they merely transferred Commerce Department funds to continue the Library's work.

Cutting out all funds for the Office of Strategic Information will add to the efficiency and economy of the Federal Government, for testimony before two subcommittees of the House of Representatives has shown that the Office of Strategic Information is nothing more than an unnecessary exercise in ineptitude.

More important, however, is the fact that abolishing this censorship will help reestablish the people's right to know about their Federal Government.

Essay on the Constitution

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1957

Mr. EDMONDSON. Mr. Speaker, under leave to extend my remarks, I am pleased to place in the RECORD a prize-winning essay on the subject of the Constitution, by a young Oklahoman who has made an outstanding record in the high school at Grove, Okla.

The young essayist is Miss Linda Crawford, a 17-year-old daughter of Mr. and Mrs. Thomas Crawford, and granddaughter of two Grove pioneers, Mr. and Mrs. W. D. Gibson.

The essay, which won top honors in the DAR district contest, follows:

THE CONSTITUTION OF THE UNITED STATES OF AMERICA

1. My knowledge of its content and meaning; and my understanding of its protection of individual freedoms, and of the safety of the Nation itself.

The Constitution of the United States of America is my personal guaranty of freedom. It assures me that my freedom will not be jeopardized by the whim of a monarch nor the will of a dictator. It provides me with the security of a system of government by the people, administered by elective and appointive officials who depend solely upon me and my fellow citizens for their authority to govern.

The Founding Fathers established, by this great document, the most perfect system of government the world has known. The three branches of government thus established—legislative, executive, and judicial—each has separate duties, responsibilities, and obligations to the people; yet each is dependent upon the other for the proper functioning of the overall system of American government. The Constitution provides that the legislative body shall make the laws, but they must be signed by the chief of the executive branch. This means to me that the executive branch, by this right of veto, can prevent the legislative from becoming too powerful. Conversely, the right given to Congress to override the executive veto by a two-thirds vote means to me that the legislative can prevent the executive from becoming all powerful. Also, the power given to the judicial branch to interpret the laws and actions of the Congress and the executive branch creates another check against one branch usurping the functions of another.

The system of checks and balances provided by the Constitution is, I believe, a method to prevent the liberties of the people and their right to govern themselves from being placed in jeopardy by persons whose desire for power blinds them to the best interests of the people and the Nation.

The Constitution specifies the duties and powers of each of the three branches of government. It does not give a free hand to any branch, but carefully regulates the function of each. To me, this means a further guaranty against possible despotism from any direction, and warrants that the government will not exceed the authority granted it by the citizens of the United States. This regulation of power assures that the government will remain in the hands of the people, for only they can authorize a change in the constitutional powers vested in those in office.

The Constitution provides that all sections of the United States and all citizens of the United States shall be properly represented in the Government. This is, I believe, a measure the founders intended as a safeguard against such practices as taxation without representation, which was so repugnant to them, as it is to us today, and will be to future generations of freedom-loving Americans.

The Constitution spells out the method of selection of those who will represent the citizenry in the Government. This constitutes our guaranty of free election, and indicates, to me, the wishes of the Founding Fathers to pass on to future generations the right to elect those who will govern. At the same time, it provides, through granting of the power of impeachment, a system for disposing of public officials prior to the expiration of their elected terms. This power of impeachment means to me a further protection from corruption, and strengthens the system of checks and balances.

Another protection of the Constitution which further strengthens our Government

is the provision that, in the makeup of the Congress, each State, regardless of population, shall have two Senators; while Members of the House of Representatives shall be selected on a population basis. I interpret this to be a check to keep any one State, or small group of States, from gaining complete control of the Congress, and that it assures all States of representation, regardless of population shifts.

The Constitution protects my individual freedoms primarily through the 10 original amendments (the Bill of Rights). The Bill of Rights guarantees me the right to speak freely without fear. It guarantees me the right to worship God in the way I feel is best for me, without fear of interruption by the State. It allows me to read opinions and to write my own without fear of censorship. It guarantees me fair and speedy justice in all matters. It gives me the right to assemble in peaceable meeting with my fellow citizens. It assures me that the Government cannot take any of my possessions without compensating me for them; cannot enter my home without just cause; and cannot force me to give up my home to military persons except in dire emergency.

Also, the Constitution further protects my individual freedom through its guranty that I will have the same rights in other States as I have in my home State; that I cannot be forced into slavery; that I shall have the right to vote upon reaching proper age; and that I cannot be held without charge.

The protection of my individual freedom provided by the Constitution is one of the greatest gifts of my American heritage, and is the key to my personal freedom as a citizen.

The safety of the Nation itself is carefully provided for in the Constitution. It gives the Congress the power to maintain an army and a navy, to provide for a militia, and to declare war. It provides that the Presidents shall be Commander in Chief of the military forces. It spells out the power of making treaties with other countries, the appointment of ambassadors and envoys to foreign countries. It assures internal security.

The safety of the Nation is further safeguarded by those passages of the Constitution which prohibit any State in the Union from entering into agreements with foreign powers, keeping troops or naval forces, or engaging in wars of their own.

This means to me that our Nation, under the Constitution, has ample power to protect itself from its enemies; it gives me a feeling of security and helps me to realize how wonderful it is to be able to enjoy my freedoms and still be able to know that my fellow citizens and I will be provided by the Constitution with the means to fight for these freedoms if necessary.

2. My personal efforts to preserve, protect, and perpetuate it; and to further the understanding of it.

There are many ways, of course, to preserve, protect, and perpetuate the Constitution. Men have fought and died for it. American statesmen and jurists have devoted their lives to it. In comparison with these patriots and with others who have risen to eloquent heights in its defense and in its perpetuation my own contribution in behalf of the Constitution is not on the same plane. Nevertheless, I feel that the Constitution is for all American citizens and I believe that each should contribute in his own way to its preservation just as I try to do so—because it is in the millions of individual citizens, and their individual efforts, that this Nation, under its Constitution finds its strength.

As for my own effort, I try always to be a good citizen; to obey the laws of my country; to take an interest in public affairs; and to further my education in order that I may better understand the Constitution myself, and in this way be better equipped to further the understanding of it among others with whom I may come in contact.

I feel that my personal effort to be a good citizen is a direct contribution to the preservation and protection of the Constitution. I think that a part of being a good citizen is my appreciation and realization of the freedoms I enjoy under the Constitution. I also try not to abuse my privileges as a citizen; for example, although I have free speech, I do not interpret this to mean that I may speak harshly or in an ill-mannered way. Also, although the Constitution guarantees me right of assembly, I do not interpret this to mean that I should feel free to participate in unruly crowd actions or riots. I believe that freedom brings responsibility; and that by tempering my freedoms with a sense of responsibility and judgment, I am making a personal effort to preserve, protect, and perpetuate the Constitution.

By obeying the laws of my country, whether Federal, State, or local, I believe that I am making a personal contribution toward preserving and protecting the Constitution, because it is from the power granted by the Constitution to the Congress and to the several States that the laws are enacted. Also, from the Constitution comes the authority of the judicial branch of our Government to interpret these laws, and from the Constitution comes the power in the hands of the State and local governments as well as the Federal Government to enforce the laws. Therefore, I believe that if I do not respect the law, then I do not respect the Constitution, and by my disrespect I would undermine it. But because I do respect and obey the law, I feel that I am helping to preserve the Constitution.

I take a great interest in public affairs, and through this interest I feel I make a contribution to the Constitution's perpetuation and preservation, I think that if I do not take interest, then I do nothing to encourage those responsible persons in our Government to give of their best in the management of public affairs. I also believe that lack of interest in Government or a lackadaisical attitude toward Government on the part of the people is a dangerous thing, and can lead to control of the Nation by a few, which could mean an eventual loss of our rights and privileges under the Constitution and the destruction of our guaranty by the Constitution of a system of government by the people.

I feel that by furthering my education, I am making a direct contribution to the Constitution, because in my opinion, the more knowledge I have, the better I will be able to interpret and understand the Constitution and its relationship to all the many phases of my life it influences. I believe that education will help me to appreciate more fully and with greater understanding the freedoms and rights granted me by the Constitution, and give me more insight into the workings of and the meanings of this great document. Education is vital in a democracy, and I feel that through my efforts to gain an education, I make a contribution to the success of our democratic Government and its principal document, the Constitution.

One of my personal efforts to further the understanding of the Constitution also springs, I believe, from my effort to educate myself. If I, myself, am well equipped in my own understanding, I will be more able to further the understanding of the Constitution among others. Along this same line, I attempt to encourage free and open discussion in all the groups and organizations I belong to. I think this helps my friends and schoolmates to realize the privilege of freedom of expression, and I think that it may help them to understand and appreciate their rights under the Constitution.

The School Issue

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. BOW. Mr. Speaker, the Evening Independent, of Massillon, Ohio, has taken a strong stand editorially against Federal aid to education, citing the fact that the citizens of Massillon have been willing and able to take care of their own school needs. Under leave to extend my remarks, I include the Independent editorial on the school issue:

THE SCHOOL ISSUE

Back in January, President Eisenhower asked Congress to put its okay on a school building program which the Chief Executive estimated would cost the Federal Government $1.3 billion over a 4-year period.

The President said the money would be parceled out on the basis of comparative financial needs of the States. He also declared that many States were unable to provide needed classrooms for school children without financial assistance from the Federal Government.

Since then a number of interesting things have developed.

There is a great deal of sentiment both in and out of Congress against the use of Federal money to build classrooms. Opponents of the Federal aid school program declare that once the Federal Government foots the bill for school construction, it will not be long before the Federal Government moves in and takes over control of our public school educational system.

This is something no right-thinking American wants to see take place, particularly after the manner in which Washington bureaucrats have messed up things in other areas of activity where Uncle Sam, first, has handed out the money and then, second, taken over the operation.

There is equally strong sentiment both in and out of Congress for the Federal aid school program. Proponents of Eisenhower's proposed program declare public education facilities are entirely inadequate in some States and will remain so until the Government hands out the money to build the needed school buildings. They scoff at the claim that once Uncle Sam forks over the money for the public schools he will step in and take over direction of the educational system. These people should take a hard look at the facts before expressing such views.

Some prominent school authorities have said that such proposed Federal grants should be made but with the clear and distinct understanding control of schools will remain in the hands of the States or the various constituted authorities now entrusted with handling public school programs.

These authorities are trusting souls who should know better. By now they should know that it is a very simple matter for some pressure group to come up with a plan to slip into pending legislation some innocent looking gimmick that when thoroughly analyzed, once the legislation is passed, extends the power of Federal bureaucracy to the areas where it is desired—in this case, control of public school education.

Since Eisenhower presented his request for $1.3 billion, a lot of investigating of school needs has been done. The most striking information has been to the effect that not one State actually needs Federal aid to take care of its school needs. All the States can provide the schools they need with their own resources.

Even the President's Conference on Education which recommended Federal aid also admitted that no State was without means to finance its school needs if it wanted to do so.

Now the Chamber of Commerce of the United States makes public another interesting fact about the school situation.

It quotes Representative R. W. GWINN, New York Republican, a member of the House Education Subcommittee, who declares the United States Office of Education in Washington used coercive tactics against State officials who displayed only casual interest in the proposed Federal-aid program.

Representative GWINN said that the Office of Education, building up support for its estimate that there is a nationwide shortage of 159,000 schoolrooms, sent questionnaires to the States.

Following are some of Representative GWINN's comments, taken from the CONGRESSIONAL RECORD:

"If it (the Federal agency) did not like the answer that came back from the person who filled the questionnaire in * * * it would return it to the State for revision. The United States Office of Education complained to one State about its failure to answer the questionnaire to the satisfaction of the Department of Health, Education, and Welfare. It threatened the State official by saying 'the United States Office of Education does not want to make an official complaint regarding the inadequacy of data supplied by your State. * * *'

"In several instances the figures were very considerably raised. Old estimates were stricken out and new estimates put in as a result of the United States Office of Education telephoning or writing a State. After that, increases were written in. That made up a substantial part of the 159,000 schoolroom needs."

Representative GWINN's statements are a pretty strong indictment of the strong-arm tactics being used by Government bureaucrats in their mad scramble to keep on spending billions of taxpayers' dollars unnecessarily.

It was not too long ago that Massillon solved its public-school needs when voters approved a $4,125,000 bond issue. It took several years to get the measure through but Massillon did not run to the great White Father in Washington for financial help. It solved its own school problems and the new school buildings either have been built or are in the process of construction.

What Massillon has done, other cities and States also can do. The surest way to put Uncle Sam's spendthrift bureaucrats in the driver's seat is to accept Washington financial handouts.

We hope Congress possesses the intestinal fortitude to pigeonhole the Eisenhower school financing program.

Introduction of Bill To Prohibit the Discrimination in Employment on Account of Age

EXTENSION OF REMARKS
OF
HON. VINCENT J. DELLAY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. DELLAY. Mr. Speaker, today I am introducing a bill, the purpose of which is to remove age as a barrier to employment of individuals who are well qualified, physically sound, mentally alert, and possessed of years of experience. Thousands of position seekers who are walking the streets in search for employment become frustrated and discouraged at the repeated rebuffs handed them for only one reason, namely, they are over 45 years of age. Unfortunately it is one of such cases that everyone knows, but no one can prove. However, peruse if you will, the great metropolitan newspapers advertising columns of "help wanted," inserted by employers, directly or through the medium of employment agencies, and you will find an astounding number of employment opportunities limiting applicants as to age. In many cases calling for an individual of 30 to 40 years of age having a background and experience only 50 to 60 year old applicants could possess.

The condition sought to be remedied does not greatly affect the so-called hourly rated workers, production workers, and manual laborers who are protected by seniority rights under union contracts. However, the condition is acute in the management field, such as executives, administrators, professional personnel, personnel directors, industrial and public relations men and so forth. In other words, unorganized white-collar workers, often referred to as our "middle-class citizens."

One may ask: "Why are such good men out of positions? Are they unemployed because of inefficiency or other causes of their own making?" Of course, there will always be some within such category. But, the great majority are on the streets by reason of mergers or company sales. The present trend of selling businesses is greatest in the area of small manufacturing plants who employ between 200 to 1,000 workers. Too many of such enterprises are being swallowed by so-called syndicates, often referred to as associates or some other such fancy name, whom I prefer to call industrial scavengers looking for a tax deal or a fast dollar. Upon such sale, acquisition or steal of such a business the syndicate or purchasers' administrative staff takes over and the executives and other key personnel in the sellers' employ are let out pronto, without regard to length of service, efficiency, capacity, loyalty, or industry. To my mind, Mr. Speaker, to permit such condition to exist and adding insult to injury by foreclosing such injured parties from obtaining other means of a livelihood solely because of age, tends to create a malignant cancer in our economic system which may soon plague us. Let's cure it, if possible, before it is too late. Strangely enough, the age limit of 45 is usually fixed by top management, the head of which is, by most cases, over 45 years of age himself, thereby labeling himself too old for the position he holds. We constantly hear that the supply of future executives is far short of the demand. Competition for the best of the college recruits is becoming sharper all the time. Recruiters detailed to college campuses are falling far below their requisitions and in some cases are offering students in their junior year funds for tuition and other types of inducements if such students sign up for service in their organization upon graduation. Yet, qualified executives or other administrative personnel are unwanted if over 45 years of age. A horrible waste of manpower warranting consideration on the national level. Congress, in its wisdom, expressed itself in regard to age limitation in Federal Government employment thus:

No part of any appropriation hereafter contained in this or any other act shall be used to pay the compensation of any officers or employees who establish a requirement of maximum age for entrance into positions in the competitive civil service. (Independent Offices Appropriation Act, 1957, Public Law 854, 84th Cong., 70 Stat. 757.)

While limitation as to age is interdicted by the appropriation act, 1957, and while the President has expressed his concern in regard to the same subject matter, when he in his acceptance speech at San Francisco on August 23, 1956, said:

Now, in all existing kinds of discrimination there is much to do. We must assure a fair chance to such people as mature workers who have trouble getting jobs.

I respectfully submit, Mr. Speaker, that when age becomes a major consideration in hiring an employee well qualified in all other respects, a "fair chance" no longer exists.

Mr. Speaker, I have said before that this unwholesome condition in private industry will soon plague us and agree with the statement made by Mr. Lyndall F. Urwick in his article entitled "Management Education in American Business," published by the American Management Association, 1954, on page 108, as follows:

If what has been lacking in private enterprise is a sufficiently inspiring, a sufficiently human leadership, if the citizen, regarded as a producer, is not convinced that his daily job is worthwhile both morally and from a narrower standpoint of self-interest, he will seek an alternative system. That alternative may well be frustrating and disastrous; it may lead to communism or to some other form of autarchy in a belated effort to clear up the mess. Should this happen, it will be little comfort to those who believe in freedom—if any survive—to be able to say "I told you so."

Britain's Version of Dulles Role in Aswan

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. MULTER. Mr. Speaker, Americans can now choose between Britain's version of the Aswan incident and Mr. Dulles' version. Why hasn't our Secretary of State given the American people a lucid account of this incident before this? Why does he permit contrary statements to gain wide circulation before he deigns to give us his?

The news story by Don Cook, as it appeared in the New York Herald Tribune of April 4, 1957, is as follows:

BRITAIN GIVES ITS VERSION OF DULLES' ROLE IN ASWAN

(By Don Cook)

LONDON, April 3.—British Government sources today refuted the theory advanced

in a newly published biography of Secretary of State John Foster Dulles that Mr. Dulles canceled American aid plans for the Egyptian Aswan High Dam as a move to force a showdown with the Soviet Union in the Middle East. The sources substantiated, in part, Mr. Dulles' explanation of his actions at a press conference in Washington Tuesday.

[In answer to a question concerning the book, Mr. Dulles told the press conference there were three reasons for dropping the Aswan Dam plans: The Senate had turned thumbs down on funds for the dam; the financial burden which would be imposed on the Egyptian people to meet their share of the project might develop antagonism to "foreign lenders," and Egypt "had been developing ever closer relations with the Soviet-bloc countries" and had recognized Communist China.]

COMMENT ON BOOK

Lengthy extracts from the biography written by John Robinson Beal, a Time magazine writer, have been carried in the British press and have caused considerable comment in official circles here.

Here is the British version of what happened—as this correspondent has been told by three different British Government sources independently:

An agreement was reached with the United States in the spring of 1956 that the offer to finance the Aswan Dam should be quietly withdrawn and forgotten. It was agreed, the British say, that the process of denying the aid should be spun out across as long a period as possible for technical or other reasons, as a means of maintaining indirect pressure on Egypt in the belief that the Soviet Union was not prepared to come through with a substitute financing proposal.

SURPRISED BY DULLES

Secretary Dulles' action in abruptly calling off any deal—"a calculated risk on a grand scale," as his biographer calls it—took the Foreign Office completely by surprise. He informed the Foreign Office by cable that at that moment there was an amendment to the foreign-aid appropriations bill pending in the Senate Appropriations Committee which would deny use of any funds for the Aswan High Dam.

He said he could not have the executive branch of the Government be put in the position of Congress running foreign policy and, therefore, in view of the earlier agreement with the British to cancel Aswan funds, he intended to move immediately and tell the Egyptian Finance Minister there would be no American aid for the project.

Modernizing Mail Laws

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. AYRES. Mr. Speaker, under leave to extend my remarks, I include the following article from the March 25 issue of the Cargoite by Owen R. Orr, president:

MODERNIZING MAIL LAWS, GREATER TRUCK USE COULD HELP CUT POSTAL DEFICIT

(By Owen O. Orr)

Right now the deficit of the United States Post Office Department is running about $650 million annually.

How much money is that?

Well, in order to pay the interest on this loss—not the loss itself, just the interest—for only 1 year, a man who earns $5,000 a year would have had to work steadily, and give up his entire salary every year since 475 B. C.

That would cover only the approximately $17,160,000 in interest that taxpayers must annually pay on this single year's loss—not the actual deficit itself.

What's more, the situation is worsening. Post Office experts estimate that if present trends are allowed to continue, the Post Office Department will soon be losing a billion dollars every year.

Now, obviously, our mail system is in serious financial trouble. Today I want to talk about this predicament, how it came about, and advance some suggestions that will help mightily in remedying it.

The Government has never made money on the mails. From 1900 to 1910, however, postal losses averaged only $33 million a year. Today, however, first-class letter rates are the same as they were in 1932, there has been only a 3-percent increase in the cost of second-class mail, and an increase of only 38 percent in third-class mail rates.

Meanwhile, everything the postal department uses has more than doubled in cost. Losses since 1945 are more than $5 billion, and cost taxpayers over $100 million per year in interest alone.

Now, legislation has been introduced in Congress for postal-rate increases that would yield about $467 million in the 1958 fiscal year. Most of this—$366 million—will be acquired through a 1-cent increase on all first-class and airmail letters, leaving a $96 million increase on all other classes except parcel post. The latter service is not presently losing money.

At 4 cents, or even 5 cents, the first-class letter postage cost would still be the world's greatest bargain, whether used for a single letter or for a large mailing business. Actually three-fourths of all first-class letters are sent by business. Were the cost of a stamp for a first-class letter raised to 4 cents, the additional cost to the average family would be only 15 cents per month. The postal increases would be spread over so many millions of families that the few cents expended would hardly be missed.

But is this the answer to more efficient mail service?

To use a far-fetched example, suppose a housewife were asked to shop for mail service, the same as she would for bargains at a supermarket. She would go, let's say, to the Cleveland post office to send a letter to Miami, Fla. Just suppose the clerk told her that the letter traveling by mail train would cost 3 cents, and the approximate time in transit would be 36 hours.

By mailplane the cost would be 6 cents, the travel time 8 hours, and by fast nonstop mailplane the time would be 5 hours, and the cost 8 cents.

There is no doubt in my mind that she would purchase the 8-cent stamp.

I was told by a postal clerk that many people sending letters long distances will place a 3-cent stamp on a letter, and with it a special-delivery stamp (which costs 20 cents) rather than a 6-cent air-mail stamp, when the latter would assure much faster service.

So, in this fast-moving world of ours, a little thing like mailing a letter actually requires an educational program.

For many years the Post Office Department has maintained a breaking point in mail hauls. Anything under 300 miles is considered short haul. Anything over 300 miles is long haul. This, I'm told, was orginally determined on a time basis. It makes one wonder what they would call the coast-to-coast mail shipment that was flown in 3 hours and 48 minutes were the same decisions to be made today.

Considerable progress has been made by the rails in mail handling since the days when the postmaster's daughter used to hold the mail bag up for the mail clerk to grab as the train passed through the small station. If he missed, it was all right. He would grab it the next day.

Now the trains have highly efficient mail cars, where the clerks sort and route the mail as the train travels from station to station.

But what's happening to these passenger trains that carry the mail?

Airlines are taking more and more passengers from the trains. A survey made by the Post Office Department 6 months ago showed that rail passenger service had dropped to only 2,661 trains daily, and that applications were on file to take off another 700 trains throughout the United States.

That was 6 months ago. What must it be now, with some of the large eastern roads asking for a 45-percent increase in first-class passenger fares? Apparently these roads want to get out of the passenger business, where they suffer huge losses each year.

The long-haul mail service is no problem. Inevitably it will go to the airlines. It rightfully should, in light of the superior service that they give.

But what about the short haul mail? What will happen to it if these passenger runs are taken off?

Highway post offices can be placed in service between the largest cities, and made just as efficient as the railroad mail cars, because they can pull right into post offices all over the country. This fact is emphasized by the $40 billion highway program that will provide 4-lane limited access highways between these big cities.

So, this leaves the short-haul mail between the other cities and towns, which constitutes a greater volume by far than the long-haul mail.

This should rightfully go to the common carrier trucks.

Common carriers—both truck and rail—are the very backbone of the transportation industry. They stand as a great protective bulwark for the Nation in case of emergency and they have the vital know-how to deliver the goods.

Trucks can go from post office to post office with bulk drops of mail at the complete convenience of the Postal Department. The postal people can set all schedules and not have to wait until infrequent passenger trains arrive at widely separated times, after which the mail must be transported from the station to the post office.

Common carriers should be allowed to carry both mail and freight on some runs, for economy reasons, so long as the mail is carried on a "last on, first off" basis.

Our company would like nothing better than to carry bulk mail between our terminal cities. However, it is quite unlikely that we will be able to do so until several important changes are effected in legislation pertinent to the awarding of mail contracts.

At present, all mail runs are awarded on the basis of bid. The Post Office Department is obligated by law to award the contract to the lowest responsible bidder. Now, let's see what circumstances this law can be conducive to.

I have on my desk, for example, an invitation to bid on a mail haul from Little Rock to El Dorado, Ark., a distance of 120 miles. The run must be made 5 times a week, every day except Saturday and Sunday. It is to leave Little Rock at 11 p. m., arrive in El Dorado at 3 a. m. The contract is for 2 years. A bond of $900 is required with the bid.

Now suppose there is a man working in a factory in Little Rock. He is getting up in years, his health isn't too good. He has his home paid for, so he can put up the $900 bond. His doctor has told him to get out in the air.

So, he leaves his job, buys a used truck that the speedometer has been turned back

on, and he starts out—without any knowledge of what his costs will be. His health fails because driving a truck is not like the passenger car he has been used to. He can't afford to hire a driver and pay union wages, so he gives up and forfeits his bond.

The Post Office Department has announced that for every $2 of mail hauled by truck, they have saved $1 over what they were paying.

The trouble with this is that too often by saving a full dollar they are sacrificing efficiency and reliability. In my opinion, the post office people should be willing to save 50 cents or 75 cents on every $2 dollars, and get the reliability of service by common carrier trucks—people who know their costs, and can handle the mail shipments efficiently.

Certainly in the long run they would thus save more money, too.

Furthermore, instead of requiring all mail contracts to be awarded by bid, common carriers should be allowed to publish mail tariffs, just as they publish tariffs on other freight, and the Post Office Department should be permitted to award mail contracts on the basis of a cost-efficiency ratio instead of solely on the basis of cost, often at the expense of competence and service.

There are other ways to help relieve the postal deficit. All first-class mail could be required to carry a 5-cent stamp, with the understanding that the post office would route the letter by the fastest available transportation, be it by air or surface medium.

The post office could provide a discount to purchasers of bulk mail, as a method of encouraging greater usage of the mail system at profit-making rates.

But basically, the biggest single postal economy factor on the horizon is, in my opinion, the efficient usage of truck transportation on a broad scale in transporting the mails.

This can be done as soon as obsolete postal laws are modernized to keep pace with the facts of life in 1957.

Foreign Aid: Just End It

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial appearing in the Richmond News Leader of Tuesday, April 9, 1957.

Mr. James Jackson Kilpatrick, the editor of the Richmond News Leader, is a distinguished and accomplished writer. His views on the subject of foreign aid, as expressed in this editorial, are worthy of consideration.

The editorial is as follows:

FOREIGN AID: JUST END IT

It was almost 4 years ago that the late Walter F. George, respected chairman of the Senate Foreign Relations Committee, offered a terse comment on American spending abroad. "As far as I am concerned," he remarked to the press on July 1, 1953, "Mutual Security is going into its last fiscal year this morning."

As the Federal budget for 1957–58 comes under congressional study, it is apparent that "mutual security" is still with us, and not merely mutual security in terms of actual military spending, but mutual security in the continuing pattern of global giveaways. In the phrase now popular in Washington, we are still "buying love" all over the world. We are buying love and losing our shirts. The policy is a failure. It cannot be made to succeed.

The time has come to put an end to it. Not "taper off," or "cut foreign aid by a billion or so." The time has come to abandon the whole wasteful, fruitless, arrogant scheme of atempting to rebuild the world in America's godlike image.

Where have these billions of dollars been going? Some of the money doubtless has been put to a useful purpose. Considering the fabulous sums expended, it would be incredible if some tangible gains, at least, could not be pointed out. But over and over, the pattern of foreign aid falls into the same shape.

In Iran, for example, our spendthrift Government has squandered upward of $300 million, equal to the Federal income taxes paid by 721,000 families with earnings of $5,000 a year. Much of this sum was expended at the direction of one William E. Warne, a professional bureaucrat with a particular love for socialized public power. As a recent article in the Reader's Digest disclosed, Mr. Warne insisted upon massive American tax investments in hydroelectric power in Iran, though the city of Tehran obviously had available—immediately at hand—great resources of cheap fuel oil. It was Mr. Warne who insisted upon building one beet-sugar refinery in Iran, and though it proved far from successful, buying and storing the machinery for a second.

In Afghanistan, as Congressman GEORGE MEADER recently observed, the first need of a primitive people is for rudimentary education, for elementary tools. What was he told of the aims of the International Cooperation Administration in Afghanistan? "We'll give the Afghans an airline and an agency like our CAA to regulate air traffic.

In India, Mr. MEADER disclosed, American tax funds purchased $1,539,000 worth of prefabricated steel for 52 easy-to-erect grain silos. But in June of 1954, with the fiscal year fast running out and some funds still unexpended, foreign aid officials purchased 600 more such facilities. Two years later, the bulk of these still were languishing in Calcutta, untouched by anyone.

In the Philippines, tax funds went to purchase electron microscopes—in an area without electric power to use them.

In Jordan, which at the last count listed only 9,000 autos, a large sum was expended on new highway construction. Another asphalt highway was constructed, at fantastic cost, through the jungles of Thailand. And in Portugal, American taxpayers were billed for a 15-mile 6-lane expressway connecting Lisbon with the gambling resort of Estoril.

In Mr. Meader's description, it is a "bureaucratic nightmare." Granted that many of the more than 9,000 employees in the ICA are devoted people, doing a competent job of what they are ordered to do, the widespread criticism is that the whole inflated program is kept expanding by the assidous labors of bureaucrats anxious to keep the level of spending permanently high.

Well, we are fed up. We are fed up with foreign economic aid, first of all, as a gross perversion of the spirit of the Constitution. Nowhere is the power delegated to Congress to undertake these outlays for building up the economies of foreign nations. We are fed up with the program, secondly, on the mouselike results that have stemmed from a mountain of money. In terms of the self-interest of the United States of America, which ought to be the sole criteria for an expenditure of public funds, not one thing has been accomplished which could not have been better accomplished by private venture capital and by the industry and resourcefulness of people themselves.

Let us stop this idiot's delight. The world will not come to an end. Neither will the invidious Russians conquer the earth, nor will the United States lose friends worth having. On the contrary, the United States can do more by minding our own business than by sticking a gratuitous nose in everybody else's business.

This is your money, fellow taxpayer, that is being wasted on fountains for Lebanese villages, flour mills for wheatless Korea, unused farm implements in India. And your voice alone can put an end to it.

Where Do We Stand on Polio?

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. PERKINS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Ashland Daily Independent of April 5, 1957:

WHERE DO WE STAND ON POLIO?

People in Boyd County are being shortchanged on free Government polio vaccine.

The percentage of eligible Boyd residents who have received the free vaccine is less than half that in other comparable counties in the State.

The reason for this situation is that some members of the Boyd County Medical Society are haunted. Their ghost is a terrifying, shadowy specter that lurks in dark corners and scares them nearly to death. His name is socialized medicine.

The doctors have a perfect right to their ghost. Most everyone has one. But when they start letting the ghost addle their thinking, it's time to turn on the lights.

We feel sure this spook is not bothering the majority of Boyd County's doctors. Probably just a few are overboard on the subject, but it looks as if they are the ones who are forming policy.

When the medical society as a whole follows a policy that considers socialized medicine more of an enemy than disease, it's time its members did a little soul-searching and a little house-cleaning.

The society is pursuing a short-sighted, reactionary policy on polio immunizations. It has decided that the only people who should get free polio shots from the Ashland-Boyd County Health Department are those who can't afford to get them from a private doctor and pay his fee. These people are termed "medically indigent."

This restriction is not enforced. No one checks up on a patient's ability to pay when he appears at the health center's Friday afternoon clinic to get a shot, and no one is refused a shot. But if anyone calls up to inquire about them, he is told the clinic is for the medically indigent. It is a policy of discouragement in the case of those unindigent famalies who inquire about free Government vaccine for their children.

That policy, dictated by the medical society, is the one the health department has been carrying out. It says, in effect: "Those who can afford to buy shots should do it. Those who can't will be taken care of free. Anyone who is left without a shot and gets polio has only himself to blame. Start giving people what they can buy for themselves, and you have socialism."

There might have been a time when you could get people in this country to stand up

and cheer at a statement like that. But those days, we hope, are gone forever.

This point of view is wrong in principle and we want to point out why it is wrong. But it is more than wrong—it is ill-becoming to anyone in the medical profession. For example, what about a youngster whose family is too indifferent to take him to the family doctor for a polio shot (which means making an appointment and maybe sitting in the waiting room), and is unwilling to go to the health center for a free shot because that is supposed to be for the medically indigent? Now is that innocent child supposed to have to take his chances with polio because he was unlucky enough to have negligent parents?

How much better would this child's chances of getting inoculated have been if there had been a free clinic for him to attend, along with all the other children in his grade at school?

That's why the medical society's policy is harmful to the community.

In the second place their policy is an attempt to turn the clock back to another generation as far as public health is concerned. One of the basic concepts in public health (and one that is accepted throughout the civilized world in spite of what we see in Boyd County) is that government—Federal, State, and local—has the right and the duty to protect the public from communicable disease, just as much as it has the right to protect it from fire and crime. The government has a right to provide free mass inoculations against contagious disease, not because they are concerned about the fate of any one individual, but because they are concerned about what he might do to the rest of the population in the way of spreading an epidemic.

Curative medicine is strictly up to the private physician. But preventive medicine is a public matter. There is a big difference, and some of the doctors can't see it, just as they can't see the difference between social progress and socialism.

Here is the present situation: The Federal Government, through the State health department, has made available free vaccine to the local health department. Word has been given out by the local health department (acting on the medical society's orders) that this free vaccine should only be obtained from the health department by the medically indigent. That leaves one other place to get vaccine—from a private physician. Doctors can get their vaccine free from the health department, then charge for giving it if they want to. Or else they can buy it commercially at a dollar a shot.

The State health department keeps a record of every shot of Federal vaccine that is given, either at the local health department or by doctors who have obtained it free from the health department.

According to these records, the list below shows how Bord compares with some other large counties in the State as to the percentage of eligible people who have received at least one shot of the free vaccine. These percentages, which include all those children that received free vaccine under the National Polio Foundation program 2 years ago, were obtained this week from the State health department and are effective as of the end of February:

County:	*Percentage*
Franklin (Frankfort)	94
Jefferson (Louisville)	88
Fayette (Lexington)	81
McCracken (Paducah)	72.3
Daviess (Owensboro)	66.7
Warren (Bowling Green)	57
Boyd (Ashland)	29.6

Why is it that in Frankfort 94 percent of the people under 19 and pregnant women have been able to get free vaccine, while only 29.6 percent of this county's citizens could get it? We pay Federal taxes just as they do. Why don't we have the same right? It is because our medical society decided that we don't, and they just don't have the right to make that decision.

Some doctors will be prompt to point out that they have given lots of commercially purchased shots that aren't included in the percentage. This is true, but how many have they given? How high would it raise our percentage? Nobody knows how well protected we are against polio, including the doctors. Meanwhile, we have been paying from $2 to $6 for the privilege of getting a commercial shot from a private physician.

The State Health Department says that only about 10 percent of the State's 120 counties agree with Boyd County that the free shots ought to be limited to the indigent. And none of the metropolitan areas listed above are included in that 10 percent, except Ashland.

Carter County has just concluded a series of free polio clinics to which the county doctors contributed their services without charge, and to which children were transported in county school buses. A similar program is now underway in Elliott and Morgan Counties. We have no figures for our neighboring communities in Ohio and West Virginia, but the clinics are free and open to all—not just to paupers.

Time is running out. The free Government vaccine will only be available until June 30, and then the program is being discontinued.

The Ashland PTA Council has sent out copies of a resolution which they passed urging mass inoculations. The resolution has been sent to all civic, social and fraternal organizations in the city. We have a strong feeling that these people and many others will be glad to cooperate in getting children to a clinic and providing whatever other assistance is needed to make a mass inoculation plan successful.

All we need now is a little help from the doctors.

Foreign Aid in Disguise

EXTENSION OF REMARKS

OF

HON. HENDERSON LANHAM

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1957

Mr. LANHAM. Mr. Speaker, with leave to extend my own remarks in the RECORD, I am including an editorial clipped from the Wall Street Journal for Wednesday, April 10, 1957, entitled "Foreign Aid in Disguise."

While not agreeing with everything said by the Wall Street Journal editorial writer, I do think it is a mistake to put into the military budget the military items for foreign aid.

Moreover, the proposal will, no doubt, soon be made—has already been made by the committee headed by Mr. Benjamin Fairless to study and report on our foreign-aid program—that the economic aid be put in the budget submitted by the Department of State.

Obviously this is an effort on the part of the present administration to hide foreign aid and make it more difficult for the people and Congress to know just what is being done in the field of foreign aid. We had better keep it out in the open where the "watchdog committee," better known as the Subcommittee on Foreign Operations of the Appropriations Committee, headed by the distinguished gentleman from Louisiana [Mr. PASSMAN] can keep its eagle eyes upon the appropriation and hold it to the very minimum consistent with America's security.

The editorial follows:

FOREIGN AID IN DISGUISE

The handling of foreign aid has been rejuggled time and again, usually with a rechristening of the responsible agency. The administration's latest proposed revamping has some particularly disturbing features.

One big objective of the new proposal is pretty plainly to make foreign aid more palatable to Congress, which has been prepared to cut the fiscal 1958 program substantially. That in itself is a dubious approach; either the program stands on its merits or not at all.

As outlined by Secretary of State Dulles, the rearrangement would put military aid and so-called defense support aid under the Defense Department budget. In addition, a continuing economic development fund would be established to make loans which might soon total $750 million a year.

Now if there is to be foreign economic aid, it is certainly better that it be on a loan basis instead of a grant basis, and in proposing the loan fund the administration was presumably aware that many in Congress share that opinion. But it should be noted that this loan fund would not supplant either direct grants of economic aid or the technical assistance program; but would go on largely as they are.

So all this could easily mean simply the addition of hundreds of millions a year in loans to the $4 billion-plus a year currently being spent for military and economic aid.

Moreover, the loan fund idea would cement into the Federal budgets, perhaps ineradicably, the principle of foreign aid; Mr. Dulles said the fund "would need continuing authority and a capital authorization sufficient for several years, to be renewed when needed." Once Congress bought this plan, it would be extremely difficult and maybe impossible for Congress ever to call a halt to heavy foreign aid spending.

At the same time, the proposal would remove foreign aid further from the control of Congress. The administration already has such funds for use at its own discretion. Under the new plan the administration would have greater leeway to embark on big long-range projects; as Mr. Dulles put it, the administration wants to break away from the cycle of annual authorizations and appropriations by Congress.

Even with the present degree of congressional control the spending of foreign aid money has been notoriously sloppy or worse in some instances. What it would be with the watchdog thus chained is not pleasant to contemplate.

The argument for putting military aid in the Defense Department budget is equally unsound. To do so would make it that much harder to tell just how much we are pouring out to arm our allies. Also, it is designed to persuade the American people that military aid is just as integral and permanent a part of American defense as are the dollars spent to maintain the United States Armed Forces—a proposition never proved and which many might feel misgivings about putting to a test.

The fact is that indefinitely continued military aid is, like economic aid, a questionable activity. Mr. Dulles argued its necessity because "many nations cannot support the military establishments which, in the common interest, should be on their soil." The answer is that if they cannot support them they will not in the long run keep them, as the big new British military retrenchment amply attests.

Mr. Dulles' presentation of the new plan is reported to have been well received in

Congress. Before the lawmakers get too enthusiastic, however, they ought to recall that it was never the intent of Congress to make either military or economic aid a permanent drain on the taxpayer. And they ought to take a good look at their own diminished role under the administration proposal.

The American people, from all the evidence, want changes in foreign aid, but not changes which tend to entrench and disguise it. They want changes that will lower the cost of the program and, in a reasonably near future, rejuggle it right out of existence.

Secretary Humphrey's Private Fortune and the Public Interest

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1957

Mr. ROOSEVELT. Mr. Speaker, I have been concerned for some time about the possible conflict of interest between the official activities of Secretary of the Treasury Humphrey and his interest in the M. A. Hanna Co. and Consolidated Steel Co. In addition, the legal firm which represents these interests has had a number of its former employees in high positions in the Department of the Treasury.

My concern has become more acute since the Suez oil crisis, at a time when Secretary Humphrey was active in giving advice to the President while at the same time the M. A. Hanna Co. owned stock in major oil companies value at almost $35 million.

In order to bring to the attention of my colleagues some of the grounds for my concern I include, under leave to extend my remarks, the following article from the newspaper Labor of Saturday, April 13, 1957:

CHARGE TREASURY HEAD PUTS PRIVATE FORTUNE OVER PUBLIC INTEREST

(By Michael Marsh)

Moves were afoot on Capitol Hill this week toward a congressional look at an alleged huge "conflict of interest" between the official activities of Treasury Secretary George M. Humphrey and his multi-million-dollar investments.

By law, the Secretary of the Treasury is forbidden from being interested in any private business. Yet Humphrey, when he was confirmed in January 1953, was allowed to keep his large stockholdings in three giant corporations.

In contrast, Defense Secretary Charles E. Wilson was obliged to sell his stockholdings in General Motors when he took office, even though no such stringent law against private interests applies to Wilson's post.

Current concern about Humphrey's situation was roused by a letter sent to Senators from financier Cyrus Eaton, charging that Humphrey "constantly uses his official position to further his private business fortunes."

CHARGES BY EATON

Eaton, like Humphrey, is a top leader in the Cleveland business world and is also board chairman of the Chesapeake & Ohio Railroad. In his letter—first publicized by columnist Drew Pearson—Eaton said that companies in the Humphrey orbit, through interlocking officers and directors, have the "incredible total of $60.7 billion (in) combined assets."

Pearson quoted Eaton as saying further that "foreign business firms had in some cases purchased coal from Humphrey's Pittsburgh Consolidated Coal Co., largest coal company in the world, because their countries had to do important business with the Secretary of the Treasury. Humphrey is a member of the board which controls the Export-Import Bank from which many countries have to borrow money."

Figures were also cited showing that the stock market value of the companies Humphrey is most interested in has soared over $800 million between January 1953, when Humphrey took office, and March 1957.

Specifically the market value of Pittsburgh Consolidated Coal has jumped $242 million, the value of M. A. Hanna Co. has jumped $119 million, the value of National Steel Corp., has jumped $110 million and the value of the Iron Ore Company of Canada—in which M. A. Hanna and National Steel own a substantial interest—has jumped $394 million.

Humphrey is a former top officer of all four companies and a large stockholder in the first three of them.

Eaton's charges, as carried by Pearson, produced a quick reaction on the Senate floor. Senator ESTES KEFAUVER (Democrat of Tennessee) called for an investigation by the appropriate Senate committee, pointing out that Secretary Humphrey's "imprint, for better or worse, is indelible in all Government policy today."

Senator WAYNE MORSE (Democrat of Oregon) seconded the idea, suggesting that "a thorough investigation of Mr. Humphrey's activities will show he is so involved in a conflict of interests that he is disqualified to serve further as Secretary of the Treasury."

MORSE further noted Humphrey's "terrific influence on both the President and the Secretary of State in the field of foreign policy." Humphrey is a member of the National Security Council, the Nation's top strategy board.

Meanwhile Senator MATTHEW M. NEELY, Democrat, of West Virginia, has also been actively investigating the subject. Early in March, NEELY revealed the fact that Humphrey's M. A. Hanna Co. owns over $24 million worth of stock in the Standard Oil Company of New Jersey, which has big oil interests in Saudi Arabia and other foreign lands. In addition, NEELY showed, M. A. Hanna owns over $10 million worth of stock in Seaboard Oil Corp., which is active in Venezuelan oil.

Since then Neely has pushed his investigations further and is now considering asking the Senate Judiciary Committee, of which he is a member, to probe the question of how well the "conflict of interest" laws are being enforced. This would include a look at Secretary Humphrey's situation.

The Senate Finance Committee under rightwing Senator HARRY F. BYRD, Democrat, of Virginia, normally has jurisdiction over the Treasury Department but has shown no interest so far in probing Humphrey.

Some of the questions being raised on Capitol Hill, in view of the Humphrey companies' interests in Middle East oil and Canadian iron ore as well as their domestic holdings, include the following:

What role will Secretary Humphrey play if Communists threaten United States oil interests in the Middle East and a "command decision" has to be made under the new Eisenhower "doctrine" about sending in United States troops?

What part did Secretary Humphrey have in the Administration's decision not to protest the billion-dollar price increase imposed by the oil companies last January?

Why is it, as Senator PAUL DOUGLAS, Democrat, of Illinois, recently noted, that under Secretary Humphrey the Treasury has been endlessly "studying" the huge "depletion allowance" tax loophole enjoyed by the oil companies without ever making any recommendation about it?

INCOME TAX ISSUE

Have any of the Humphrey companies had income tax troubles, and if so how were they settled?

Another background factor is that Cyrus Eaton, like Humphrey, is interested in Canadian iron ore. Eaton's company, Consolidated Premium Iron Ores, Ltd., is currently being sued by the Treasury for several million dollars in United States income taxes, even though it's a Canadian company. Humphrey's firm, Iron Ore Co. of Canada, isn't being sued.

However, the Treasury's General Counsel, Fred C. Scribner, Jr., told Labor the claim against the Eaton firm is that it did business in the United States and owes United States taxes on the profits of that business. Scribner said he didn't know if Iron Ore Company of Canada is in a similar situation.

Another Treasury spokesman, asked about the Eaton charges, told Labor there'd be no comment expect for Secretary Humphrey's statements during Senate hearings on his confirmation back in January 1953.

WORTH $120 MILLION

At those hearings, Humphrey said he would not sell his stock in M. A. Hanna, Pittsburgh Consolidation Coal, and National Steel. These holdings, together with those of his immediate family, amounted to less than 10 percent of these corporations total stock, Humphrey insisted. However even 10 percent, at current market values, would make the Humphrey family holdings worth over $120 million.

Humphrey did resign all his chairmanships and directorships and also promised the Senators that, as treasury-secretary, he would not participate in any case involving any of his companies.

ACCOUNTING KEPT SECRET

Humphrey promised to send the Senate Finance Committee an exact accounting of his stockholdings. A committee source told Labor this week that Humphrey did so and that former Senator Eugene Millikin, Republican, of Colorado, then chairman of the committee, looked over the statement, found it satisfactory and then put it in his personal files, not into the committee files. Thus Humphrey's statement of his exact holdings is available neither to the public nor to present Senators.

Humphrey also told the Senators at the 1953 hearings that, in his lawyer's opinion, the law banning business interests by the Secretary of the Treasury did not apply to his own stockholdings.

The law, passed by the First Congress in 1789, says: "No person appointed to the office of Secretary of the Treasury, or Treasurer, shall directly or indirectly be concerned or interested in carrying on the business of trade or commerce * * *." Breaking this law is a high misdemeanor, a criminal offense.

MELLON PARALLEL RECALLED

Significantly, this same law was used years ago by a young Texas Congressman to launch impeachment proceedings against another Secretary of the Treasury. The date was January 6, 1932. The Congressman was WRIGHT PATMAN, today a leading figure in the House. The target was Andrew W. Mellon, like Humphrey a big businessman and the darling of Wall Street and the financial world. The charge was essentially the same: Mellon's huge personal stockholdings. Less than a month after PATMAN launched his impeachment charge, President Hoover plucked Mellon out of his Treasury post and sent him off to England as United States Ambassador.

Today PATMAN still retains his opinion that the law bans any Treasury Secretary from keeping large personal stock interests.

"The law is very plain," he told labor. "You don't need any interpretation to understand what it says."

There's also a possibility that the House Small Business Subcommittee under Congressman JAMES ROOSEVELT, Democrat of California, will probe Eaton's charge about official favoritism for Humphrey's coal company.

However, few observers are willing to predict that Secretary Humphrey's alleged conflicts of interest will really be aired in Congress. The conservative forces that control both Chambers have shown no desire for it.

The Postal Crisis

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. CANFIELD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Newark Evening News, of April 9, 1957:

THE POSTAL CRISIS

Forbidden by law to spend more than Congress has appropriated, Postmaster General Summerfield plans to curtail postal service next Saturday unless he gets $47 million which he says he needs to come out even at the end of the fiscal year on June 30.

The House Appropriations Committee so far has not been willing to go above $17 millions, an amount which Mr. Summerfield says would only meet salary adjustments authorized after the regular appropriations bill went through.

Confronted by a similar situation 7 years ago, President Truman's postmaster general, Jesse M. Donaldson, cut home deliveries from two a day to one. Twice-a-day deliveries were never restored. If the committee remains obdurate, some of the cuts contemplated by Mr. Summerfield would certainly become permanent, too.

The Post Office is a horrible example of Government in business—a deficit operation offering persistently deteriorating service. The notion that the Post Office "is a public service, not a business," expressed anew last week by the Liberal Party of New York, is no longer true, if it ever was. The Post Office is an adjunct of business, as shown, among other things, by the volume of third-class mail it handles—apparently at a loss.

There is no more reason why the taxpayers should subsidize users of the Post Office than that they should subsidize the telephone and telegraph systems, both of which under private ownership are able to furnish satisfactory and reasonably priced service at a profit.

Mr. Summerfield attributes his budget difficulties to increased use of the mails and extension of routes required by population and economic growth. Under the archaic "public service, not a business" doctrine, increased postal volume merely increases postal deficits.

Unless it can back up the claims of some of its members, who insist without proof that Mr. Summerfield's projected economies are unnecessary, Congress has no alternative to giving him what he says he needs. After that has been attended to, Congress ought to consider putting the Post Office on a self-sustaining basis. The public would not object to higher rates—if they were accompanied by better service.

Post Office Department Appropriation

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I would like to include a bulletin from the United National Association of Post Office Craftsmen, Mr. Joseph F. Thomas, president, and Mr. Joseph V. Silvestri, secretary.

You will note that this association recognizes the need for the reinstatement of the cut in the Post Office Department that was put into effect by a few members of the Appropriations Committee. I am inserting this, Mr. Speaker, in order to show the unanimity of those who are familiar with the subject and a desire to reinstate the $47 million and continue the efficient and capable service of the Post Office Department.

INDEPENDENT ASSOCIATIONS CONFER WITH WHITE HOUSE

Unaffiliated unions: Due to the proposed curtailment made necessary by the failure of the House Appropriations Committee to provide sufficient funds for the continued operation of the Post Office Department, most of the independent postal unions of the United States, representing over 200,000 postal employees, banded together and requested a meeting with President Eisenhower to discuss this vital problem.

Meet with top aid: Although prior commitment prevented the President from meeting with the unaffiliated groups, he did designate his executive assistant, Jack Anderson, a former Member of Congress, to meet with us and we did meet at the White House at 2:30 p. m., on Monday, April 8, 1957.

Problems discussed: At the meeting, which promises to be a most productive one, we urged Mr. Anderson to request President Eisenhower to personally use his prestige with the Congress to insure proper operation of the Post Office Department, so that no employee would suffer financially, or otherwise.

POSTAL PAY RAISE DISCUSSED

Organizations Present Views: The organization leaders present explained to the president's assistant the great difficulty in obtaining competent help at today's postal salaries and asked that a reasonable increase be considered at once. We compared postal salaries with those of other groups and presented various other facts in support of a salary increase. In addition, a typewritten résumé of our discussion was left with Mr. Anderson, who stated that he would see to it that President Eisenhower was familiarized with its contents.

Some Hope: The President's aide did say that our chances for a pay raise would be greatly increased by the settlement of the appropriation question and by the passage of a postage rate bill.

The following were in attendance at the White House meeting: James B. Cobb, president, National Alliance of Postal Employees; C. B. Gravitt, Jr., secretary, National League of Postmasters; Edward L. Baker, vice president, National Association, Postmasters of the United States; John D. Swygert, secretary, National Association, Postal Supervisors; Ray L. Hulick, president, National Rural Letter Carriers Association; Ross A. Messer, legislative representative, National Association, Post Office and General Services Maintenance Employees; and Joseph F. Thomas, president, United National Association, Post Office Craftsmen.

Other meetings: The independent groups are in the process of arranging further meetings with key persons in the Congress to further our salary aims.

Extending the Power of Prayer to Those in Need

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. PORTER. Mr. Speaker, too often modern inventions seem to lead us away from God. The following article explains how telephones may be used to help invoke God's powers for men and women in desperate need. I strongly commend this arrangement for Washington, D. C., and every city in this and other countries:

Wherever the Reverend Dr. John Sutherland Bonnell moves these days, he jots little notes. He writes on envelopes, on invitations, on cards. He writes in subways, on buses, on his walks.

His jottings are messages of hopes for men and women crushed by despair. He couples the messages with brief prayers and they go, fresh each night, on the Dial-a-Prayer telephones set up under Fifth Avenue Presbyterian Church, where he is pastor.

The telephones carry the messages and prayers, all on Circle 6-4200. They are in use around the clock. If you stand by them in the sealed rock chamber under the church, you hear the relays' metallic click as they pass each call.

The system has brought floods of mail to the minister's desk in the 2 years since the installation was set up in the basement. And it has brought him some weird experiences.

Most of the letters just pour out thanks for a message that lifted an overburdened heart, but sometimes prayer listeners ask for spiritual aid beyond the dialed prayer.

Some weeks ago, a deep voice called the minister's study. Dr. Bonnell answered. The voice told of having heard the prayer for that day: "We thank Thee, O Lord, that there are no hopeless cases in Thy clinic. Grant to every seeking soul now Thy healing and salvation."

The voice said, "Do you really believe, Dr. Bonnell, what you said about no case being hopeless to God?" The minister said he did, with all his heart.

The man begged for audience, but not at the church. Dr. Bonnell sensed that the man was desperate; the voice was not an old voice, but it broke and quavered. He agreed to meet the man in Central Park, near General Sherman's statue.

The man would wear a carnation. The minister was to carry a paper-wrapped book. They met, and the man opened his heart in full flood. His home was shattered; his wife and children were apart from him; he could not concentrate on his office work and his career faced disaster.

Dr. Bonnell knew that the prayer had unlocked the troubled soul; that this talk in the park—it lasted more than an hour—had provided outlet for something black and bitter that had found no previous gap.

The man told the minister, "I had meant to die today because there was no door out. If you will let me keep in touch, I know I

can fight through." He begged Dr. Bennell to take a small phial, filled with clear liquid, that he took from a coat pocket.

Dr. Bonnell forgot about the little bottle until his hand fell upon it in his overcoat, days later, as he passed a Madison Avenue drugstore. He went into the shop and asked the apothecary if he could identify the phial's contents.

The man lifted the cork and sniffed at it. He said, "Potassium cyanide. Enough to kill five men." The minister asked him to keep the poison, but to let him have the bottle, which he did.

The man who had turned over the phial has his feet back on firm ground again. So have other folk who have lifted a telephone in the dead of night to listen to the dialed messages and prayers.

There is a letter from a nurse in one of the large East Side hospitals—"* * * terribly discouraged and homestick; afraid of the future"—who found new faith in a prayer. One from a daughter who knew agony as she watched a mother die in the low hours when the indifferent city slept. One from a Wall Street man, hard-driven, who responded to, "Eternal God, help us to know that amid all life's busyness, in a moment of prayer we may drink at the deep wells of Thy peace."

Dr. Bonnell's congregation passes Dial-a-Prayer cards to friends and to coworkers and the cards spread. Mail shows that men and women even call from other States for a voice to sustain them over bitter hours. One letter said of the telephone prayer service: "I believe this is the greatest ministry that our church has ever exercised."

It is one of the miracles of a great city that the disembodied voice of a clergyman, rising from a Fifth Avenue church basement, can reach so many, to lead them out of depression's darkness.

Paying Retired Presidents

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Gaffney (S. C.) Ledger of April 9, 1957:

PAYING RETIRED PRESIDENTS

Congress is considering a proposal to pay past Presidents of the United States $25,000 a year. Although there are only two living past Presidents, one of them in advanced age, the proposal is a highly important one, as we view it.

No citizen would like to see a past President find himself financially embarrassed and forced to curtail his activities to such an extent that his life would not be a pleasant one.

Fortunately, neither of the two living ex-Presidents are in any financial difficulty and we do not think either of them would suffer if the proposal is not adopted. However, we think a past President is entiled to some consideration, and when one looks at the huge sums of money being spent, the small item of $25,000 fades into significance.

The United States is currently the greatest nation on earth, and the President of this Nation has the most important job in the world. A top executive would be retired on a fairly liberal pension, and we think the President of the United States should be retired in such manners, and $25,000 or a similar amount, would be an appropriate reward.

Thomas Harris MacDonald

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 19, 1957

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include an article appearing in the Monday, April 8 issue of the Washington Evening Star on Thomas Harris MacDonald, former Commissioner of Public Roads.

Mr. MacDonald during his tenure in Washington was one of the most respected individuals I have ever known and was carried in high esteem by all Members of this legislative body. He, more than any other man, made a greater contribution to the highways and road network of this great country.

Upon his retirement, his great work did not cease, but rather he carried on as a research engineer with the A. and M. College of Texas on highway problems, where he continued to make important contributions in the advancement and development of our highway programs.

It was my honor to be counted as one of Mr. MacDonald's many friends and to have him reside in my congressional district upon his retirement from Federal service:

THOMAS HARRIS MACDONALD, FORMER HEAD OF ROADS BUREAU

Thomas Harris MacDonald, a pioneer in road development in the automobile era who played a major role in the development of the Nation's modern highway system, died last night on the campus of Texas A. and M. College, the Associated Press reported. He was 76.

He apparently suffered a heart attack while attending a play on the college campus with his wife.

Mr. MacDonald retired in 1953 after 34 years as chief of the United States Bureau of Public Roads and Commissioner of Public Roads. Since then, he had held the title of Distinguished Research Engineer at Texas A. and M., and was instrumental in organizing the Texas Transportation Institute, official research branch for the Texas State Highway Commission.

WROTE THESIS ON ROADS

Born in a log cabin near Leadville, Iowa, in 1881, he once told an interviewer he became interested in good roads at an early age because there were none out there. He wrote a thesis at Iowa State College in 1904 on the need of better roads for farmers, and in 1907 was named State highway engineer of Iowa.

When Mr. MacDonald came to Washington in 1919 to take charge of the national highway program he was 38.

He recognized early the transformation the automobile would bring in the American way of life.

"The American people are trying a great experiment," he told an interviewer in 1924. "It is the greatest theory of transportation ever offered. No other people could ever have tried it at any other time in the world's history, because the conditions were not present. This is it:

"'The people have provided themselves with 15 million pieces of rolling stock and have asked the Government to supply the roadbed.

"'Think of our good roads not as separated pieces of good road, but as a system of good roads on which you can go anywhere with certainty. It is like a railroad system, except that each runs his own train of cars independently of every other train of cars. The one thing in common is the right-of-way.

In 1946, President Truman honored Mr. MacDonald with the Medal of Merit in recognition of outstanding public service during World War II.

The citation accompanying the award stated that he "had envisioned, even before the war, the importance of highways to military operations, and under his energetic leadership 78,800 miles of strategic highways were created and maintained."

FRENCH AND NORWEGIAN HONORS

He also held the Cross of the Legion of Honor of France, and was a knight of the first class in the Order of St. Olav of Norway.

He served on the executive committee of the American Association of State Highway Officials, and was the author of papers on highway engineering, administration, and finance. He belonged to the Cosmos Club here.

Mr. MacDonald is survived by his widow, Caroline; a daughter, Mrs. Charles Weidinger of Staunton, Va.; and a son, Thomas H. MacDonald, Jr., of Washington.

The body will be brought here Wednesday for graveside services at 11 a. m. in Cedar Hill Cemetery.

The Post Office

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 8, 1957

Mr. MULTER. Mr. Speaker, I am pleased to direct to the attention of our colleagues the following letter dated April 4, 1957, which I received from Mrs. W. E. Jenkins, of Jacksonville, Fla.:

JACKSONVILLE, FLA., *April 4, 1957.*

Hon. ABRAHAM J. MULTER,
House of Representatives,
Washington, D. C.

DEAR SIR: In looking over the CONGRESSIONAL RECORD of April 2, I find your objections to increasing the postal rates. Congratulations. I am delighted to find a Congressman who has some consideration for the American citizen. The Postmaster General has been bleating about losing money in the Department ever since he took over the management of it. He is apparently of the opinion that the post office is in operation solely for the business of making money. He should take himself back into private enterprise.

Our local mail delivery service has continuously deteriorated since Mr. Summerfield took over. In our particular section of the city we get 1 delivery which usually arrives about 4 or 5 o'clock in the evening. A letter mailed from downtown Jacksonville will reach us in about 3 days.

It could well be that if Mr. Summerfield would apply a little efficiency in management, the operation of the Post Office Department would not be so expensive.

Thank you for your attention and your good work.

Respectfully,

Mrs. W. E. JENKINS.

A Clever Deception

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 8, 1957

Mr. JOHNSON. Mr. Speaker, the unrelenting attack upon cooperatives continues unabated. Magazine advertisements sponsored by big business and utility interests cry out against the idea of American citizens banding together to secure goods and services for themselves and try to brand that simple democratic action as something foreign or alien. Implied in much of this attack is the suggestion that the co-op idea is about to uproot established commerce. Another frequently featured point is the false suggestion that co-ops bask in the light of tax advantages not enjoyed by private business. A letter I have received from the Cooperative League of the United States of America helps put this insidious campaign in its place by pointing out that co-ops themselves are really small business and all of them together do only about 2 to 3 percent of the Nation's business. Under leave to extend my remarks, I submit the entire letter:

THE COOPERATIVE LEAGUE OF THE
UNITED STATES OF AMERICA,
Washington, D. C., April 8, 1957.

Hon. LESTER R. JOHNSON,
House Office Building,
Washington, D. C.

DEAR MR. JOHNSON: There are usually two sides to every question. Sometimes one side gets 'way out of hand, especially when it has unlimited amounts of money to spend.

That's what has happened in the current campaign against cooperatives. A bakers' association in Wisconsin claims that 50 percent of the independent bakers have gone out of business because of the "unfair tax advantage" of coops. Actually none has disappeared because of coop competition. There is only one cooperative bakery in the State.

It is, of course, perfectly true that small businesses are having a hard time, and that many of them have been either merged or forced out of business in recent years. But it is obvious, even upon superficial observation, that it is the corporate giants with control over 85 percent of the Nation's business which are the cause of this. And it is ridiculous—but, nonetheless, a very clever deception—to blame it on cooperatives, which are themselves small business, and which altogether do only about 2 to 3 percent of the Nation's business. What is happening is that a flood of big business money is being used to try to make small business afraid of cooperatives rather than the real dangers which it faces.

The cry that coops have an unfair tax advantage is as phony as a $3 bill. Revenue Act amendments passed in 1951 finished the job of putting coops and profit corporations on essentially the same tax basis. The point these letters to Congress attacking cooperatives don't make is that coops return to customers according to their purchases what the corporations can accumulate as profits. Federal income tax is not paid on these customer rebates either by cooperatives or profit corporations. The law applies to both equally.

Now comes the American Press with its poll of editors asking a "when are you going to stop beating your wife?" question. "Question 9: Bills have been introduced in Congress requiring that cooperative corporations and savings and loan associations be subject to Federal income taxation in the same manner as other business corporations. Would you favor such legislation?" Naturally, 86 percent of the editors replied "yes." But 12 percent knew what the tax law presently provides. As one editor said, "cooperatives are taxed like other corporations now. This is a question widely debated and much misunderstood by lay people and warped out of shape."

By some strange coincidence, the so-called National Tax Equality Association, which has spearheaded the drive to befuddle and confuse small business and the public, takes a double-page advertisement in the same issue of the same paper to boast of its handiwork in confusing editors, as well.

Maybe you have some questions to ask us. If so, feel free to do so. We will gladly give you all the facts in as much detail as you desire about the tax status of cooperative business.

Sincerely yours,

JERRY VOORHIS,
Executive Director.

Allowance for Career Diplomats

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1957

Mr. PORTER. Mr. Speaker, this matter of insufficient allowances for career diplomats continues to be of concern to many. I respectfully call to the attention of my colleagues an editorial appearing in the April 7, 1957, edition of the New York Times:

AMBASSADORS AND POLITICS

The venerable Senator THEODORE FRANCIS GREEN, Democrat of Rhode Island, chairman of the Foreign Relations Committee, speaking in a "closed" meeting, expressed some doubt as to the administration's recent ambassadorial appointments. His colleagues, including the Republican members, backed him up in a letter on this subject sent to Secretary Dulles.

The letter made familiar points. It conceded that all Presidents bestowed diplomatic appointments on generous contributors to party funds. The committee was worried, however, about some so-called political appointments. Senator HUMPHREY of Minnesota made the consoling remark that "there is no objection whatever to wealth as such," but Senator FULBRIGHT of Arkansas, is believed to have said that it would be a good thing if ambassadors possessed some familiarity with the language and tradition of the countriess to which they were posted.

Senator GREEN can of course, look back to days when diplomatic appointments were far more political than they are today. For more than a decade, under the Foreign Service Act, career Foreign Service officers have been increasing in numbers and in prestige. We are not represented in many important posts by political hacks. It remains true, however, that some posts, such as those at London, Paris, and Rome, require the American Ambassador to spend far more on entertainment than he receives in salary and allowances from his Government. This doesn't mean that we must have weak, inefficient or ignorant men in those posts. We have, in fact, been lucky. But when one of the requirements for a certain job is that the applicant shall be wealthy in his own right we limit the field of selection just as we would if we required him to have red hair or an interest in astronomy.

What is needed, one would think, is a more generous scale of allowances. This wouldn't shut out successful men of affairs who are willing to serve their country abroad, but it would admit others equally willing whose talents—and certainly we would hope for talents—have not endowed them overgenerously with the world's goods.

USIA Is Too Big

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1957

Mr. REES of Kansas. Mr. Speaker, I am including herewith an interesting editorial that appeared in today's issue of the Washington Daily News.

I believe the views expressed in this editorial—as well as the information included therewith are of interest to the Members as well as the general public. This, especially, for the reason this proposed legislation will be considered in the House within the next few days.

The editorial follows:

USIA Is Too Big

Americans always have been dubious about foreign propaganda, including their own. Budget hearing testimony just made public by a House subcommittee will strengthen that attitude.

The United States Information Agency (USIA) is a postwar organization set up to tell the world about our democracy and offset anti-Americanism. It spent $87 million in 1956, will spend $113 million this year and wants $140 million for 1958. The number of employees on its payroll has been increasing about 1,000 a year.

It has sent abroad swarms of ex-newspaper workers and others who must be falling over their own feet in their struggle to distribute Government handouts.

It employs, for instance, 17 Americans and 116 natives in tiny Cambodia, a country half the size of California and with one-third that State's population. It employs 489 in Japan, 222 in Korea. To tell its story it wants to spend $2,692,304 next year in France, $1,700,778 in Britain.

Most of these countries are already supplied with all the American news they can absorb, by the same worldwide press associations which serve American newspapers, and by magazines, American films, etc.

These private mediums have established a solid reputation for telling the truth about America and the rest of the world because—almost uniquely in the world—they operate without Government subsidy or political control.

USIA operation in this field is, at best, interference and duplication. At worst it

raises suspicion as to the disinterested reliability of all American news.

There is need for an American information service which functions modestly and intelligently. It should supplement rather than compete with other agencies. Its projects should be specific and limited, rather than splattered all over the lot.

The best things USIA does are usually those which employ the fewest people and cost least money. Most USIA libraries and reading rooms are crowded and highly productive of good will. The exchange program brings civic and youth leaders, labor unionists, and other influential men and women to this country to see for themselves. They usually return home enthusiastic about this country, anxious to combat anti-Americanism in their own lands.

But overall the USIA has far too many employees, trying to do far to many things. It wants to spend 24 percent more next year than this. It could spend 24 percent less and get more done.

Statehood for Hawaii and Alaska

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 3, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter from the Brewery Workers Local Union No. 21, Belleville, Ill., stating their position in favor of granting statehood to Hawaii and Alaska. The letter I received, signed by Eugene E. Meder, secretary-treasurer of local 21, follows:

BREWERY WORKERS LOCAL UNION No. 21,
Belleville, Ill., April 8, 1957.

Hon. MELVIN PRICE,
House of Representatives,
Washington, D. C.

DEAR SIR: It is with concern that I write to you of this matter. Local No. 21 and I personally am of the opinion that Hawaii should be admitted to the Union. Judging from the past record of Hawaii, they (the people) have been of great help to our Nation in time of war and peace. As a far western outpost, they have benefited us as a bastion against the isms of the world of today. Financially and economically they are tied to us through industry, agriculture, and labor. It would be in our estimation a benefit to both sides to have them as a direct member of our great union.

Therefore we urge you to vote in the affirmative on admission of Hawaii as a State. The foregoing conclusion would also directly apply to Alaska as a State, and once again we urge an affirmative vote on admission of Hawaii and Alaska as States to our great Union.

We of the United States have a direct responsibility to the peoples of the world, to show that we are not interested in colonizations, or any of its various types, and these two Territories have shown their ability as well as their willingness to be a part of us.

Local No. 21 would also like to bring to your attention the desirability of voting in the affirmative on the Morse-Kelly bills S. 1267 and H. R. 4575, providing for extension of coverage of the Fair Labor Standards Act to 9.6 millions of low-paid workers now denied its protection. We think these bills would fully cover our objectives on minimum wage legislation.

Sincerely yours:

EUGENE E. MEDER,
Secretary-Treasurer.

Cutting the Budget

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. ANFUSO. Mr. Speaker, the House of Representatives yesterday approved cutting some $218 million from the Commerce Department appropriation. Previously, nearly $800 million dollars were cut from other appropriations. Thus, Congress already reduced the Eisenhower budget, which is the largest ever submitted in the country's peacetime history, by over $1 billion.

The Democratic-controlled Congress is determined to economize and is making sincere attempts to reduce the inflated budget for the coming fiscal year. From the current sentiment in Congress, it can be expected that further cuts will be made amounting to possibly three or four billion dollars.

If this is achieved, then Congress should follow it up with a reduction in income tax for all taxpayers.

I believe that considerable budget reduction is possible by efficient administration and the elimination of waste, duplication and extravagance. I further believe that such economy can be effected without jeopardizing the welfare of the American people, especially the aged people, the war veterans, small business, and certainly the health needs of the Nation.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Address by P. Dale Soriano

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 29, 1957

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD a very interesting address by my good friend, P. Dale Soriano, executive director of the National Council of Civic Associations, Inc., which he delivered on March 25, 1957, before the Four Chaplains Memorial Chapter of the Disabled American Veterans at their State armory in Brooklyn.

Mr. Soriano's address contains a strong and moving appeal for enactment of H. R. 51, a bill to increase the compensation to disabled veterans. I wholeheartedly support the views expressed in this address and commend it to the attention of all my colleagues in both Houses of Congress.

The text of Mr. Soriano's address is as follows:

THE NEW COMPENSATION BILL

Dear veterans, March is a month in which we all have to face the income tax problem, and from there most of us go on to worry a little about our income-tax dollar and whether it is being spent the way it should be, and whether our national expenses could not be reduced somehow. Taking all this into consideration, I suppose it is a little bit bold of me to pick this particular time to talk to you about a bill now before our National House of Representatives in Washington which calls for an increase, although a small one, in compensation for disabled veterans.

With your permission, however, I'd like to tell you a little about this bill and why we of the Disabled American Veterans feel that if all our tax money were spent as wisely as it would be to effect this increase, we'd have nothing whatever to worry about, so far as how our tax dollar is spent. In fact, the DAV has given the passage of this bill top priority on our list of objectives for the coming year, because we know that it is absolutely necessary for even the basic needs of our Nation's disabled veterans, and because we know that it is good for the country as a whole.

At the present time, a veteran who has been totally disabled as a result of his wartime service to his country is awarded compensation of $181 a month, if he presents his claim and proves to the Veterans' Administration that he is entitled to a 100 percent disability rating. It doesn't take much figuring to see that this amount won't go very far toward providing even a basic standard of living for the man whose abilities to earn for himself have been so sharply curtailed.

The present bill before the House of Representatives, which is known as H. R. 51, would provide for increasing this compensation to $250 per month, not a tremendous increase, to be sure, but one that would mean a great deal to the totally disabled veteran. And when you consider that he didn't stop to ask whether or not he might be injured so that he couldn't earn his own living, before he went into the action that cost him his health and well-being, I don't see how we can fail to grant him that consideration now.

However, Veterans' Administration statistics show that only 1 in 20 disabled veterans has this total disability rating of 100 percent, and disability compensation is scaled down in proportion to the percentage of disability. Only 5.3 percent of all veterans drawing compensation have handicaps rated between 60 and 90 percent. Those with lesser disabilities make up the greater number of veterans who receive compensation, and their compensation is, of course, a good deal less.

There seems to have arisen an unfortunate feeling that because a veteran is less than 50 percent disabled, he really doesn't need any help from his Government, even though he has earned it. Nothing could be further from the truth. Let's look at a typical example, whom we'll call Joe Brown. Joe served in the Korean conflict, and as you probably know, the climate wasn't exactly ideal, let alone the severe military action in which we were involved. To put it flippantly, the foxholes were neither steam heated nor air conditioned. Joe's feet were badly frostbitten, not quite badly enough to require amputation of the toes, thank goodness, but very painfully.

After Joe was discharged from the armed services, he wasn't able to handle his old job in the factory because it meant standing on his feet, so he got an office job. He couldn't make as much money as before, because his talents didn't really lie in that direction, but with the compensation he received because of his disability, in addition to his decreased earning power he could just scrape by, with no possibility, of course, of laying anything at all aside for a rainy day. And incidentally, he didn't come by his compensation check automatically. He had to file a claim with the Veterans' Administration, and with the help of the DAV national service office he presented his claim before a VA rating board and was awarded a 40-percent rate of disability.

The only hitch in this plan whereby Joe was managing just to get by was that prices seemed to be constantly increasing, and as the months and years went on, his compensation plus his salary just didn't buy as much as they did when he came out of service.

Then one day when Joe tried to get out of bed in the morning to go to work, he just couldn't make it. His feet felt like they were literally on fire. He couldn't get his shoes on, and couldn't even put his feet to the floor. Naturally, he couldn't go to the office. He had to have immediate medical treatment in a VA hospital. This trouble, he finds, recurs every so often, and when it does, it means no work, and that of course means nothing coming in but his compensation. You all know what happens then, with no reserves to draw on.

I think you can easily see why in the case of Joe or any other similar disabled veteran with a 40 percent or 30 percent or 20 percent or even 10 percent disability, the DAV feels that a cost-of-living increase in compensation is absolutely necessary, just as much as it is for the 100 percent disabled man. The increase in dollars and cents to a lesser disabled man is of course smaller, in proportion to his smaller compensation, but when he needs it, he needs it just as badly as the 100 percent disabled man, because at that time of emergency he is 100 percent disabled, and he has fixed no income at all outside of his small compensation.

The Joe Browns—the veterans who weren't totally disabled, but just disabled enough to throw their whole economic picture in the future out of kilter—they are in the majority. They don't need complete financial aid, and they don't want the Government to support them the rest of their lives, because they are able to work part of the time. But they do need a boost, to keep them going when they're unable to work, when their disability recurs and they have to be hospitalized, and above all, to keep pace to some degree with the rising cost of living. Our Joe Brown, rated at 40 percent disability by the Veterans' Administration, would receive a monthly compensation of $80 per month, if H. R. 51 is passed, instead of the $66 he receives now—and believe me, that will barely begin to take up the slack between his reduced earning powers plus his compensation, and the cost of living at a decent minimum today.

Most of us realize, I think, something of the cost of war in lives lost and families broken up by the loss of those loved ones, and hearts broken because of the terrible hurt to their husbands and fathers who come home disabled. We as a nation and as individuals deplore their loss. But there is one thing we hate to face up to, and that is that war costs money, and that that cost doesn't stop when the shooting stops. It goes on as long as the brave men live who fought that war, because we must not—we cannot—allow those who didn't count the cost of their own well-being when their services were needed to suffer needlessly for the rest of their lives after the danger is past.

We Americans in the past few years have come to accept the realization that we must give of our bounty to help other nations not so fortunate, and, indeed, billions have been spent both in war and peace time in this manner. I have no wish to praise or censure the amount of money which we have spent and are spending as a nation in this endeavor to maintain our friendly relations with the rest of the world, and to help prevent the spread of communistic tendencies in other countries. Indeed, it is one of the basic principles of the DAV that we take no stand on world affairs or politics, either internal or international, as an organization.

I would like to point out, however, that just as we seem to feel that it is good business for us to help those nations who have been allied with us in time of war, and who, we hope, will continue to stand shoulder to shoulder with our country—so it is good business for us to give a helping hand to those brave men in our own country who have borne the brunt of wartime suffering, and whose children will make up our future manpower.

We have heard it said that charity begins at home. But disabled veterans don't care much for that word "charity," when applied to the disabled veteran. We of the DAV feel that the compensation awarded to the disabled veteran is not in any sense charity—it is payment for services rendered, and rendered well, and just as wages for any employment must rise to some extent with a rising economy, so must these payments rise at least in some small measure to help meet the increased cost of living. So let us say,

rather, that good business relations begin at home. We can never be strong as a nation while a handicap is placed upon serving our country. Our young men who have protected us and could conceivably be called upon to do so in the future must have the assurance that their country is with them all the way and will not stop to count pennies when the debt is so great and the reimbursement asked for is so small.

Thanks you for listening.

Economy Drive Lags

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. JOHANSEN. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following congressional bulletin sent out by my colleague from Michigan, ALVIN M. BENTLEY, to his constituents:

The week before last, the House completed action on the 1958 appropriations for the Departments of Health, Education, and Welfare, and Labor. The Appropriations Committee had already cut $118 million out of the budget request of nearly $3 billion. During debate on the bill, further cuts of some $68 million were approved.

But when the time came for recorded rollcall voting, the Congressmen were only willing to approve $15 million of the $68 million cuts. In other words, they put $53 million back into the bill. Specifically, increases were voted for the Bureau of Veterans' Reemployment Rights, the Women's Bureau, the Food and Drug Administration, the Office of Education and grants for waste treatment works construction.

Out of 14 rollcall votes on April 4, I voted for a cut in every single case as I had previously promised to do. I did this in spite of the fact I had received telegrams from several organizations in Michigan asking me to vote for the higher figures. I should point out that in every single case the cut was merely to restore the amount spent in the present fiscal year. Nowhere did we try to cut below 1957 appropriations.

What all this means is that in spite of the high-sounding promises about economy in government and about budget-cutting, the House failed to practice real economy in this opportunity. The combined budgets for these two departments is only $34 million less than they got a year ago and most of the various offices, agencies, bureaus, etc. were increased. It means that it is one thing to talk economy and another thing to practice it. It means that the people who want real economy in government and real tax relief are going to have to create pressure on Congress that will outweigh the pressure from organizations which have a natural desire to protect their own projects from any cuts at all.

It is interesting to know that, of the 14 rollcall votes, 6 Michigan Republican Congressmen had a solid vote for cuts on all rollcalls. In addition to myself, these were Congressman MEADER, Congressman JOHANSEN, Congressman HOFFMAN, Congressman CHAMBERLAIN, and Congressman CEDERBERG. It is also interesting to know that, among Michigan's 6 Democratic Congressmen, 1 of them voted for a cut—on 1 vote only.

The Michigan Office of Civil Defense has released a report showing funds made available to all Michigan counties from 1950 through 1956 for the purchase of equipment and supplies for civil defense. Clinton County put up $2,280.93 and received a matching Federal share for a total of $4,561.87. Gratiot County put up $1,174.40, got $274.90 from the State and $1,449.30 from the Federal Government for a total of $2,898.60. Ionia County put up $2,532.18 and that was matched by the Federal Government for a total of $5,064.36. Montcalm County's $1,765.38 was also federally matched for a total of $3,530.76. Saginaw County put up $3,599.94, got $3,081.94 from the State and $5,793.04 from the Federal Government for a total of $12,474.92. Shiawassee County put up $2,821.25 and that was matched by the Federal Government for a total of $5,642.50. We see, therefore, that during those 6 years the 6 counties of the eighth district only received a total of $16,642.08 for civil defense from Federal sources. Compare this with $2 million plus which was spent by Washington in the State of Michigan as a whole. However, certain municipalities, such as Ionia, Belding, Portland, Alma, St. Johns, and others received matching grants which are not included in the above figures.

On March 28 the Rural Electrification Administration approved a loan of more than $3 million to the Wolverine Electric Cooperative of Big Rapids which involves the possible use of nuclear energy for the generation of power. Wolverine's three member cooperatives, located at Portland, Newaygo, and Hart, serve more than 20,000 farmers and other rural consumers in west central Michigan.

A House subcommittee has just approved a 5-year, $2 billion school-construction program. This bill calls for maximum Federal spending of $400 million annually for the next 5 years as well as a $750 million program to let the Government purchase school-district bonds. There is also a $150 million authorization for the Government to service and guarantee State school-bond issues.

Budget Cuts

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mrs. GREEN of Oregon. Mr. Speaker, the American Association of University Women, an organization composed of outstanding educators throughout the country and one which needs no introduction to this body, is gravely concerned over the indiscriminate cutting of the budget and the ruthless slashing of appropriations without regard to actual need of the services involved. In a letter to me under date of April 4 they set forth their views on various phases of the legislation now before us, which merit serious consideration by the Members of the House. I ask unanimous consent for this letter to be printed in the CONGRESSIONAL RECORD.

The letter follows:

AMERICAN ASSOCIATION OF UNIVERSITY WOMEN,
Washington, D. C., April 4, 1957.

Hon. EDITH GREEN,
United States House of Representatives, Washington, D. C.

DEAR MRS. GREEN: By convention directives, the American Association of University Women supports economy in Government. But we believe the appropriations seriously and conscientiously recommended in the President's budget to be in line with the promises made to the American people by the administration and with those promises incorporated in the platform of the Democratic Party.

We also believe any major cutting of the administration budget is false economy which will leave current problems unresolved and which will inevitably result in multiplication of future expenditures.

We support the President in his belief that the $4,400,000,000 asked for the mutual security program is the minimum for the next fiscal year in terms of the safety of the world and as cheap insurance for our own safety.

Our studies have convinced us that the Office of Education cannot effectively serve the American people without the sums requested.

We believe the appropriation of Federal funds to assist the States in school construction is essential.

We regard the full sums requested by the Women's Bureau and such agencies as the Food and Drug Administration to be warranted, as greatly increasing demands for services from such agencies require increased budgets.

Sincerely,
Dr. KATE HEVNER MUELLER,
Chairman, Education Committee.
Dr. MERIBETH CAMERON,
Chairman, International Relations Committee.
Mrs. GERTRUDE HOUK FARISS,
Chairman, Status of Women Committee.
Dr. JANET MACDONALD,
Chairman, Social Studies Committee.
ISABEL H. KIDENEY,
Chairman, Legislative Program Committee.

What's Become of Our Champion?

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. BAILEY. Mr. Speaker, on April 3, 1957, an editorial was printed in the Kennebec Daily Journal, Augusta, Maine, emphasizing the necessity of immediate action to prevent the further loss of jobs caused by the serious damage to the textile industry by the loss of American business. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

The editorial follows:

WHAT'S BECOME OF OUR CHAMPION?

As much as we admire him, we get the impression President Eisenhower is playing his foreign aid fiddle while Rome burns.

Foreign aid was sold to the American public with double talk of such high caliber that it was palatable. We recognized the need for keeping depressed nations out of the Soviet sphere of influence by various financial and technological programs to raise their living standards. As a byproduct we were to enjoy more trade with them from their stimulated economy. It all made sense.

But, we were assured that areas and industries here in America that suffered from this program would be given prompt and effective relief. A child could see the folly of throwing big segments of our economy into a depression in an effort to stimulate the backward nations of the world.

What has been done to keep this promise?

What could be more distressing than seeing the final, valiant holdouts against the

retreat of New England's textile industry sacrificed to an oriental ideological experiment? Who won the war, the boys from the mill cities of New England, or the honorable suicide squads from the rice paddies?

While sleek new industries rise abroad, they're falling here with deadly regularity—Sanford, Brunswick, Skowhegan, Waterville, Madison, Lewiston, Saco—with Augusta's biggest mill described this week as "shaky." They staggered before the artificially created differentials of the mid-South TVA area; they toppled before United States subsidized foreign competition.

Where is the administration, champion of business and free enterprise, that we installed with such high hopes? Can it be that our desperate plight is too trivial for congressional and Presidential concern? Are we expendable in the grand scheme?

If so, let's find out where we stand and talk about it. Let it echo through our empty factories. Let's make up our minds if we have had almost enough, enough, or more than enough.

Let's find voices that mean what they say when they declare the Nation's proud heritage should be preserved. Time is running out here in New England for those we thought were our champions. If they can't get the Government out of the business that is ruining us, let us, including our own loyal congressional delegation, turn our support to those who will.

A Tribute to Edgar J. Armstrong, an Outstanding American

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. DEROUNIAN. I ask unanimous consent to have printed in the RECORD a resolution commemorating Edgar J. Armstrong's more than 50 years of devoted and loyal service to the First Presbyterian Church of Mineola, N. Y.

Born September 10, 1870, Edgar J. Armstrong symbolizes our finest and proudest traditions. A product of the most sublime era in American history, a man of strong character and great dignity, resourcefulness and imagination, generous of his time, his energy, and his knowledge, he has given strength and support to all who have had the good fortune to know and to work with him.

The resolution is as follows:

Whereas the board of trustees of the First Presbyterian Church of Mineola desires to recognize the lifelong service and devotion of Edgar J. Armstrong; and

Whereas Edgar J. Armstrong has been a member of the board of trustees for over half a century; and

Whereas throughout that time he has been an invaluable aid to said board of trustees because of his sound business acumen and his unflagging energy; and

Whereas the successful business administration of the church has been in no small measure due to his sagacity and zeal; and

Whereas he has been a source of inspiration and a stimulating influence to those who have been privileged to be associated with him in the work of the church: Now, therefore, be it

Resolved, That the board of trustees of the First Presbyterian Church of Mineola do extend to Edgar J. Armstrong, their heartfelt thanks for the uncounted hours of service in behalf of the church and extend their unanimous hope for continued good health and happiness; and be it further

Resolved, That a copy of this resolution be spread in full upon the minutes of the board of trustees of the First Presbyterian Church of Mineola.

As visible evidence of their expressions, the present board of trustees, together with former trustees, present at a special meeting called for this purpose, have inscribed their names to this testimonial of their esteem and affection.

Given at Mineola, N. Y., this 5th day of April 1957.

Joseph A. Bub, President; Garret E. O'Dell, Vice President; Paul W. Weber, Secretary; Frank J. Fuhrer, Treasurer; Carl L. Robinson, Financial Secretary; Rev. Kermit J. Nord; Steven B. Derounian; Donald Harrison; John A. Moore; John F. Buhler; Prescott Albee; William B. Etheridge; Arthur L. Guldi; Lowell H. Frye; George C. Rose; George J. Schatz; Archibald N. Young; Alexander Kennel; Richard A. Newhouse; George F. May; Henry W. Cronn.

Neutralism—A Growing Force in the World's Affairs

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the subject of neutralism in world affairs must be of great interest to the people and especially to the architects of our foreign policy. Under leave to extend my remarks, I am including a challenging article by Mr. Fred Theroux which appeared in the Sunday Star of April 7. The writer calls attention to the responsibility of Congress as it attempts to write foreign policy, and he points out that there are challenging political possibilities in the idea of neutralist nations. I commend it to the attention of the House:

NEUTRALISM—A GROWING FORCE IN THE WORLD'S AFFAIRS

(By Fred Theroux)

Neutralism, a concept comparatively new to international politics, is today a major factor in the East-West cold war. The nations espousing it are finding that together they can wield an important influence in world affairs. And as that influence expands the pressure on them from the two great rival blocs increases.

A term devoid of precise or legal meaning, neutralism means, in effect, nonalinement. It is not neutrality, in the traditional sense, but, rather, an abstaining, a refusal to choose sides in the global rivalry of the Communist bloc and the nations of the so-called free world.

Not unnaturally, the neutralist nations have become the target of much bitter criticism from the committed antagonists in the cold war. On the theory, so bluntly stated in an American labor controversy of the 19th century, that "them that ain't with us is against us," the neutralist bloc has been attacked as essentially pro-Communist by Western critics. From the Communist side, outright attacks have been few, but every trick and trade known to the Kremlin's policymakers has been used to lure the neutralists toward the Red orbit.

THE SURVIVAL INSTINCT

But neutralism, as a national policy, is probably safe from the charge that it favors, with any consistency, one side or the other in the cold war. Whatever a carefully analyzed balance sheet might show, the fact remains that it is much more the product of the instinct for survival than a moral position or even a device of strategy.

For neutralism is clearly associated with vulnerability. It is practiced formally by new nations, most of them only yesterday released from the bonds of colonial status, and eager to build up a national identity without becoming the tail to another great power kite. There have been exceptions, of course, to this general rule—the Philippines, South Korea, and Vietnam, for example. But in each of these nations, lately arrived at independence, special considerations have worked to offset neutralist tendencies.

The roster of the neutralist nations tells its own story. Led by India, where Prime Minister Jawaharlal Nehru's nonalinement path has brought him blame and suspicion, the major neutralist nations include: Burma, strategically shadowed by the vast bulk of Communist China; Laos, and Cambodia, neutral even from the neutrals according to Cambodian delegate to the United Nations Gen. Nhiek Tioulong; Ceylon, whose Prime Minister of leftist persuasion, S. W. R. D. Bandaranaike, said last year "we would like to be the Switzerland of Asia * * *" Afghanistan, wooed assiduously by both East and West but officially nonalined except for official approval of the new Eisenhower doctrine for the Middle East last week; Indonesia, torn by serious internal revolt, accepting limited economic aid from both the United States and the Soviet Union, opposed to all military alliances and, in the words of President Sukarno, eager to see the world free of capitalism and imperialism.

Then there are the Arab States: Egypt, whose dictator President, Gamal Abdel Nasser, dreams openly of Egyptian leadership of a pan-Arab empire; Saudi Arabia, feudal desert monarchy rich in oil but closely tied by the same token to western economic influences; Yemen, isolated, medieval autocracy; Syria, leaning strongly toward Soviet tutelage but seething with internal political turmoil; Lebanon, a Christian-Arab nation of cosmopolitan tendencies unlike those of many of its close neighbors; Jordan, an artificially created kingdom whose political future is extremely dubious; Iraq, the only Arab State identified with the West's Baghdad Pact, which is fervently opposed by the rest of the Arab bloc; the Sudan, where strong pro-Soviet influences have been evident but whose present government is officially neutralist; Tunisia, probably the most prowestern of all the Arab States and certainly the most cosmopolitan, but nevertheless determinedly neutralist, and Morocco, like Tunisia, a recent addition to the ranks of independent nations.

HAD COLONIAL BEGINNINGS

All but two of these neutralists were until recently colonial dependencies of the old great powers—Britain, France, Italy, the Netherlands. Their neutralism serves not only their immediate national interests, but also their fierce determination to assert their hard-won independence.

In Europe, besides the traditional neutrality (not neutralism) of Switzerland and Sweden, and the enforced neutrality of Finland and Austria, there is the questionable status of Marshal Tito's Yugoslavia. In the strictest sense, Yugoslavia is not really neutralist. It is not even nonalined, since the Communist regime there has certain ties with both sides in the cold war. In many aspects of foreign policy, Marshal Tito has

sided with the West. In others he has either sided with the Red bloc in the U. N. or carefully abstained from commitments. Neither a neutralist nor a satellite, the closest description of the Tito regime today would perhaps be that of a bridge, a buffer between the Communist bloc and the free world.

Nonalinement, in the case of the neutralist states, has definitely not implied isolation. While these nations carefully avoid identification with either of the two rival camps of the world, they nonetheless take an active part in world affairs. India, in particular, has been extremely active on the world stage, and the neutralist nations in the U. N., often with Indian leadership, have proved their ability to exercise a balance-of-power influence which has been at times decisive.

It would be too much to say, as of the moment, that the neutralist nations are of more comfort to the Communist bloc than they have been to the West. Despite individual actions seemingly attesting to the contrary, their nonalinement has been successful and effective.

But their almost belligerent insistence on their nonalinement, plus their determined assertion of their emancipation from colonial or semicolonial status, makes them inevitably major problems for western diplomacy. And Moscow, fully aware of the possibilities involved, has left no stone unturned to remind these nations of their late colonialism and of the identity of the former masters.

WAR WOULD CHANGE STATUS

Neutralism in the cold war, in the opinion of most close observers, does not by any means presuppose neutrality in a hot war. If the bombs began dropping, these nations would be forced, almost inevitably, to take sides. But until then, most of them probably will continue to find their immediate interests best served by nonalinement.

Pessimists on the subject of neutralism foresee the dropping of the neutralists, like overripe fruit, into the lap of the Kremlin. Optimists, on the other hand, look to the neutralists to restore sanity to a divided world by virtue of their effective balance-of-power role in critical situations.

Whichever might be the more accurate prognosis, the fact is undeniable that the existence of the neutralists does operate, clearly and effectively, to prevent the world from congealing into two hopelessly hostile and murderous camps. Remaining uncommitted, they might conceivably muster enough collective strength eventually to make impossible a global, nuclear showdown.

THE POLITICAL ASPECTS

To Congress, of course, the question of neutralism poses any number of challenging political possibilities. Our lawmakers are also the protectors of the taxpayers' pocketbooks; few indeed are the Representatives and Senators who are willing to face their constituents with a defense of American aid to nations publicly unwilling to espouse the West's cause in the cold war.

Already this year, in the congressional drive to find places in the President's budget where major slashes can be made with minimum conflict, the field of foreign aid looks most attractive. A sizable campaign is underway—Senator BYRD, Democrat of Virginia, has said it will aim for a $2 billion cut—to reduce American economic and military aid to foreign nations. Significantly, the opening attack has been aimed at the neutralists.

But the economy-minded effort to cut off all aid to India, Indonesia, and Yugoslavia, on the ground that these nations refuse to associate themselves with the West in the cold war, faces the determined opposition of the State Department and the White House.

H. R. 5101

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. AVERY. Mr. Speaker, I have introduced H. R. 5101 which would amend the Internal Revenue Code to exempt from the manufacturers' excise tax certain automobiles furnished without charge to schools for use in driver-training programs.

This bill has the full endorsement of the National Automobile Dealers Association.

The following is a letter I received concerning this measure. The author of the letter is former State Senator Burton L. Lohmuller, Centralia, Kans. Senator Lohmuller represented the 17th District in the Kansas State Legislature. Senator Lohmuller's letter and the excerpts of his statement made before the educational committee of the legislative council of Kansas, which I included herewith, clearly indicate some of the many reasons why H. R. 5101 should be enacted into law. Senator Lohmuller's background and experience qualify him to speak with intelligence on this subject. His comments merit the attention of all Members of Congress:

THE FIRST NATIONAL
BANK OF CENTRALIA,
Centralia, Kans., February 25, 1957.

Hon. WM. H. AVERY,
House of Representatives, Congress of the United States, Washington, D. C.

DEAR BILL: I was glad to read the article in the Topeka papers yesterday regarding your bill which would have the effect of exempting manufacturer's excise taxes on automobiles donated to schools for driver education.

Providing this bill can be passed, I am sure it will be a boon for driver education in the schools of the United States.

I am very much interested in driver education in the schools of Kansas and had a proposal before the legislative council 2 years ago that is still being studied, which would require Kansas high school students to take driver education before graduating from high school. I am enclosing a copy of my statements made before the educational committee of the legislative council of Kansas last year.

Very truly yours,
BURTON L. LOHMULLER,
President.

Mr. Speaker, the following are excerpts from the statement of Senator Lohmuller before the education committee of the legislative council of Kansas to establish a curriculum covering both the formal and practical education of our children as one of our greatest responsibilities:

Since the automobile has such an important place in the lives of all citizens, a knowledge of its mechanics, rules of conduct, traffic laws, adequate insurance, courteous driving, and of our own limitations, are imperative in modern driving to help insure the driver's safety and that of the general public.

To me, the inclusion of driver's training in our educational system is more than adding a new subject. It is adding an opportunity to include knowledge which can and will be used, and a practical plan to give the student an opportunity to practice courteous and proper social behavior in a real life situation.

I feel all the schools in Kansas should endeavor to work the course in auto driver education into their curriculum.

There is urgent need for teaching health and safety to our youth.

According to a chart, published for the schools by the Kansas State Board of Health, one can note that the period in one's life where most accidents occur is in the age group from 5 to 24. The increase in accidental deaths begins in the age group from 5 to 14 years. In this same group, 40 percent of the total deaths are caused by accidents. In the next age group from 15 to 24, being children of high school and college age, and the ages at which young people are driving more automobiles, 60 percent of the total deaths in this group are caused by accidents.

There is no organization, other than our school system, to teach safe driving in our cities and towns and on our highways. Through such a system, our future generations will be better and more careful drivers and thereby save many lives.

Prayer at Jefferson-Jackson Day Dinner at York, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following prayer delivered by Rabbi Nathan Levinson, of the Ohev Sholom Synagogue, of York, Pa., at the Jefferson-Jackson Day dinner held in York on Saturday evening, April 6, 1957, at which I was the principal speaker:

O God, be graciously pleased to take us under Thy fatherly care. Imprint upon our hearts such a grateful sense of Thy goodness as to make us ashamed to offend Thee. Dispose us to dedicate our souls, our minds, our hearts, and interests to Thee in a righteous and useful life. Keep us temperate in our desires, and diligent in our duties. Incline us to be just and upright in all our dealings, full of compassion, and ready to do good to all. Make our thoughts and our deeds testify to Thy everlasting rule over us. May the peace and well-being of our fellow men lie nearest to our hearts.

Almighty God, eternal ruler of the universe, Thou art revealed in the harmony and beauty of nature. Thou art also manifest in the lives of good men and women and in the righteousness of nations. Keep our Nation forever righteous and just. Bless our country and all mankind with the light of Thy presence. May all the people who make up this great Commonwealth of Pennsylvania consecrate their efforts under Thy guidance to the cause of liberty, equality, and justice. May we remain united in purpose, respecting each other's rights, and striving together with resolute hearts and willing hands for the welfare of all the inhabitants of the land.

Our Father in heaven, we are gathered here tonight to honor the memory of two outstanding statesmen and devoted Americans, Thomas Jefferson and Andrew Jackson, to whom the welfare of the common man stood supreme as the purpose of organized governing bodies. Humbly aware of our purpose, we thank Thee, Almighty God, for the opportunities afforded us for unselfish activity in behalf of our country and community. Vouchsafe unto us the wisdom to understand and the will to carry out the lofty designs that our democratic system is designed to generate.

Bless the leaders of the Democratic Party who have been placed in authority to direct its activities both locally and on the national scene. May our guest speaker, the Honorable DANIEL FLOOD, be blessed with success in behalf of his endeavors for the people of this great State and country. O God, grant good health and long life to all who are present here tonight. May they continue to serve Thee in pursuit of righteousness in a world blessed with peace and prosperity. Amen.

Congressman Al Ullman, of Oregon

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mrs. GREEN of Oregon. Mr. Speaker, even before his election to this body, my distinguished colleague, AL ULLMAN, played a major role in the drive for the fullest development, in the public interest, of the natural resources of the great Northwest and particularly of Hells Canyon. Although he has been a Member of this body only a relatively short time, he has already assumed a position of leadership in this fight for a high Hells Canyon Dam. To that end, he has worked tirelessly and ably. It is therefore entirely fitting that his work should win him the recognition of the Idaho-Oregon-Washington Hells Canyon Association which, at its meeting on March 30, adopted a resolution commending him for his efforts. In asking unanimous consent that this resolution be printed in the CONGRESSIONAL RECORD, I join wholeheartedly in seconding the sentiments expressed in that resolution:

RESOLUTION COMPLIMENTING CONGRESSMAN AL ULLMAN

This association compliments Congressman AL ULLMAN, of the Second District, Oregon, for bringing to the Congress of the United States the details of the Hells Canyon issue, and more particularly we commend him for challenging the Idaho Power Co. for failure to truthfully present its Brownlee Dam progress to the Congress during February.

We commend Congressman ULLMAN for speaking on the floor of the House on March 5 in challenging President T. E. Roach, of Idaho Power Co., for Roach's failure on February 26 in letters and literature distributed to the Members of the Congress to include therein the fact that cofferdams at the Brownlee project became ineffective against the flood of February 25 and that work upon the Brownlee Dam core and foundation area had been delayed until the spring runoff has passed.

We further commend Congressman ULLMAN for his thorough statement to the Congress on March 20 calling further attention to the discrepancies between the power company statement and the record.

IDAHO-OREGON-WASHINGTON
HELLS CANYON ASSOCIATION.

Grassroots Concern Over Government Spending

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. COLMER. Mr. Speaker, the people of this country are now in process of filing and paying their 1956 income tax. They have also been reading about the all-time high peacetime budget of the administration of $71.8 billion for fiscal year 1958. They appear to be more conscious than they have been for the past 2 decades of where this unbridled governmental spending is leading. This grassroots realization of the gravity of our fiscal policies is indeed most encouraging to those of us who having been raising the storm signals for many years. It is also encouraging to note that the concern of the citizens of the country about the dangers of unbridled spending, high taxes, and the resulting destructive inflation is being reflected in the Congress.

Recently a delegation of Illinois businessmen spent several days in Washington doing a little casual investigating of their own. I was honored by having one of them, a Mr. George M. Pendell, executive secretary of the Mattoon Association of Commerce, to call on me for a visit and discussion of the seriousness of the situation. After returning to Illinois, Mr. Pendell reported to the people of his area in the form of a guest editorial in the Daily Journal-Gazette.

With the thought that the Members of the Congress should have the benefit of the reaction of this unbiased source, I submit the editorial:

As a member of a 52-man delegation of Illinois businessmen that spent last week in Washington, D. C., visiting Senators and Congressmen, to try and impress on them the need to reduce Government spending, I returned with the feeling that our Government has grown too big and is reverting to a liberal and sometimes unsound spending of public funds. Our confidence in both the executive and legislative branches at Washington would be greater if ideas of thrift and economy, as outlined in the Hoover Commission reports, were getting more attention than they are now given.

It is not necessary to be a student of politics, or an experienced economist, to understand that the Federal Government is doing spending which could be done more economically at State and local levels. The ever-increasing and widespread extension by the Federal Government of its activities into business, personal, and local affairs is going to jeopardize the economy of our Nation. The yearly increases proposed in the budget serve no other purpose than promoting inflation and breaking down the spirit of our people.

President Eisenhower commented in a news conference that it was a great satisfaction to him that so many economy-minded people were in Washington now, but they are economy conscious without realizing what they are talking about. Our group, however, gathered facts and figures from authentic sources in Washington to get the true story of the $71.8 billion budget, so that we knew what we were talking about. We were briefed by men like Senator HARRY F. BYRD, Democrat, of Virginia, and others relative to items in the budget that could be reduced; such as, the item of Federal aid to schools, the new and added foreign aid program that calls for $4.1 billion, even though they still have $6 billion unspent. We learned how $1½ billion could be cut from defense appropriation requests by consolidation of the buying in the armed services without hurting the defense program. We saw how the domestic-civilian program could be be cut $3 billion. We learned how the civilian employee payroll, now at a billion dollars a month peak, could be reduced. Agencies are now requesting more employees for 1957 and 1958, even though they could not find enough qualified people to meet the amounts they asked for in 1956.

No one could explain why they are building a new $60 million House Building; they now have 2. There still are only 435 Congressmen in Washington; no one knows why the third is being built. Items like $33.7 million to add on to the Smithsonian Institution, $42.6 million to repair and dress up Government buildings in Washington for 1957, and $85.5 million more in 1958, are unanswered. The Federal housing authorities want $93 million for 1957 and $99 million for 1958, but want $3 million more to administer the additional $6 million in 1958.

I purchased a copy of the 1957–58 budget, not to try and analyze it, but to use as a guide to impress people with its size, 6¼ pounds, 1,100 pages of figures, charts, statistics, unspent balances, commitments, proposals, and needs. It contains 600 big appropriations and 6,000 small items. The 6,000 small will soon grow into the big size class unless the people at the grassroots level start letting the spenders in Washington know that they are concerned about the ever-growing costs. Federal Government spending will never be reduced as long as the people back home continue sending delegations to Washington asking for Federal aid to do projects that local and State authorities should finance. You cannot ask for a reduction in taxes and still expect the Government to foot the bill for hospitals, schools, sewers, and housing projects. Mattoon's record is clean; let's keep it that way.

We cannot feed the world, supply it with oil, machines, chemicals, and all the other giveaway programs now in force, and at the same time tax the American people to the extent that no money is left to place back into building plants and buying machinery to keep our plants producing. Without new plants and equipment, we cannot help the world and still stay strong here at home.

By stopping new programs for 1957 and 1958, by holding to the 1956 spending level, which we were promised, a reduction in taxes and debt can be made.

Labor-Management Legislation for Federal Employees Needed Now

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, I am sure that many of my col-

leagues have been shocked, as I have been, at the implications of a legal brief filed today by the Department of Justice. This brief, is in answer to a test suit filed by a group of postal workers in the United States Court of Claims, seeking overtime payments for work which they are required to perform at home, after completion of their normal working day.

The Justice Department brief, apparently setting forth the administration position, makes the bold assertion that Federal workers are not entitled to the benefits of workers in private industry because of "economy and Government efficiency considerations." The brief states that "many advances made by the labor movement are not, as a general matter, incorported into laws affecting Federal personnel." This, Mr. Speaker, is the precise reason why legislation is needed to provide modern machinery to govern labor-management relations in the Federal Government.

My bill, H. R. 6, of the 85th Congress, cosponsored by a number of Members of the House and Senate would modernize archaic labor-management concepts of Federal agencies and departments, so obviously stated in the brief to which I refer. A similar bill was favorably reported in the 84th Congress by the Senate Post Office and Civil Service Committee.

Indications of the awareness of the need for this type of legislation have come from recommendations of the first Hoover Commission, the Committee on Labor Relations of Governmental Employees of the American Bar Association, and most recently from the National Civil Service League, supported mainly by top industrialists and businessmen who have had first hand experience in labor-management relations. In its monthly publication the League declared:

> Union recognition is an area in which there has been practically no leadership from the executive branch of Government.
>
> All groups interested in public administration, including the unions themselves, recognize that public employment is different from private employment, and that all aspects of collective bargaining cannot be utilized in Government. However, a full examination of employee representation and communication policies and techniques is long overdue.
>
> A constructive program would not only provide democratic assistance to the employee, but would also develop a means for management responsibility which industry has long since learned to utilize but which Government still lacks.

Mr. Speaker, it is true that in recent years the great advancements of the working men and women of America in bettering their economic position, their hours, and working conditions have not been shared by those Americans working for the Federal Government. But this was not always the case. The Federal Government was once the leader in establishing labor reforms for its employees, setting the example for private industry to follow.

For example, President Van Buren by Executive Order issued March 31, 1840, established a 10-hour day for Federal employees on public works projects, without any reduction in pay. In 1868 Congress passed legislation to establish an 8-hour day for laborers, workmen, and mechanics employed by or on behalf of the Federal Government. The Lloyd-LaFollette Act of 1912 granted basic rights to employees of the Federal Government was many years ahead of Federal labor-management laws affecting private industry.

It gave recognition to the rights of Federal employees in three major areas. First, it provided that no person in the classified civil service could be removed except for cause, providing further that all notices of charges must be in writing, with a reasonable time for the employee to answer the charges. Secondly, it authorized employees of the Federal Government to organize to improve their conditions of employment, their wages, and hours of work; the right to strike was specifically prohibited. Workers in private industry did not receive legislative sanction for purposes of organization until more than 20 years later. Finally, the right of Federal employees to petition Congress, or any Members of Congress was guaranteed; the right to furnish information to either House of Congress, or a congressional committee or member thereof was also guaranteed.

Now, 45 years later, this is still the basic law affecting labor-management relations in the Federal service. In this interim period, significant advancements have been made in Federal laws affecting labor-management relations in private industry. These laws are well known—the Railway Labor Act, the Norris-LaGuardia Act, the Davis-Bacon Act, the Wagner Labor Relations Act, amended by the Taft-Hartley Act, the Walsh-Healey Act, and the Fair Labor Standards Act.

Mr. Speaker, the Federal Government has lagged far behind in the establishment of sound modern labor-management principles and policies. The provisions of H. R. 6, amending the Lloyd-LaFollette Act of 1912, provide the basis for a uniform system of handling grievances, with fairness and dispatch, utilizing the services of the responsible employee unions in representing their members in such matters. This legislation is urgently needed to bring governmental policies in the labor-management area up to a level consistent with the proven practices of modern labor-management relations now generally in effect in private industry.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Mr. Joseph Young, in the Washington Evening Star of Wednesday, April 10, 1957:

JUSTICE BRIEF PUTS ECONOMY ABOVE BENEFITS—SAVINGS GET PRIORITY OVER GOVERNMENT WORK CONDITIONS

(By Joseph Young)

A Justice Department brief contends that benefits for Federal workers such as overtime, better pay, and improved working conditions "must either bow to or be balanced with considerations of economy and efficiency in Government."

For example, the brief said, Congress, in the interests of Government economy, would be justified in setting a 10-hour workday for Federal employees.

The Department's brief was filed in answer to a test suit by a group of postal workers in the United States Court of Claims seeking overtime payments for extra time involved in studying postal sorting schemes.

The Department's brief, which presumably represents the administration's view, did not state that the administration feels that the Government's 8-hour day should be increased to 10 hours at this time. But it emphasized that such an increase in working hours would be justified in the name of economy if it should become necessary.

LIKE BENEFITS CHALLENGED

The brief emphasized the view that Federal workers, because of economy and Government efficiency considerations, are not entitled to the benefits of workers in private industry.

Federal employee leaders have denounced the Justice Department's views as a throwback to the horse-and-buggy days.

The horse-and-buggy comment was made by Thomas G. Walters, operations director of the AFL–CIO Government Employees Council.

"This attitude is a striking example of the archaic labor policy that the Government adopts for its own employees," Mr. Walters declared. "It emphasizes the need for a management-labor relations law in Government."

Roy Hallbeck, legislative representative of the National Federation of Post Office Clerks, said "the Justice Department's view is the 19th-century version of employee rights." James A. Campbell, president of the American Federation of Government Employees, said "the Government's position is the most discouraging development to Federal employees in a long, long time; but it emphasizes the necessity of getting Congress to approve legislation officially recognizing the rights of Federal employees to better their working conditions."

HOME STUDY INVOLVED

The test case, which is being handled by the law firm here of Herbert S. Thatcher, involves postal workers who must study at home to memorize the routing of mail. The postal workers contend that industry in portal-to-portal agreements with labor unions now pays overtime for time spent by employees in preparation for their on-the-job duties or in traveling from one site to another in connection with a job.

The Justice Department's answer, in part, to these claims declares:

"Plaintiffs' [the postal clerks] complaint is that they are not, but should be, paid for the time they spend within the confines of their own homes learning and keeping up with their jobs. As they read the statutes designed to ameliorate working conditions and the case law growing out of those statutes, they should be compensated for what they term 'physical and mental exertion.' Such compensation, they argue, would be entirely in accord with the philosophy of present-day labor law. The philosophy, if such it can be called, may conceivably control in dealings between union and management.

"However, as between Federal employees and their employer, the United States, this philosophy must either bow to or be balanced with considerations of economy and efficiency in Government. The basic rights of labor—the right to strike and the right to bargain collectively—cannot be afforded Federal employees consistently with the Federal obligation to the taxpayer to operate the Federal administration economically and efficiently. [Government employee unions have never sought the right to strike and specifically forbid such strikes by its members in their constitutions.]

"As stated, Congress, alone charged with the function and duty of establishing the rates of pay and the criteria of payment for Government employees, has always been aware of the necessity of economy in Government and where it has acted to ameliorate the working conditions of Federal employees,

it has always acted cautiously and in conformity with its desire for Government economy.

"For example, while the 8-hour day was assured for labor by the Fair Labor Standards Act of 1938, the Federal employee first obtained the right to work only an 8-hour day in 1945 and then only by implication. * * * True time and one-half for overtime has been standard for labor for many years. And yet, true time and one-half for overtime is still not available to the bulk of Federal employees. * * *"

DENIED OTHER GAINS

"These few examples illustrate that the many advances made by the labor movement are not, as a general matter, incorporated into the laws affecting Federal personnel. Clearly, the economical administration of Government precludes the immediate and total adoption by Congress of schemes such as automatic cost of living increases based on the consumer price index.

"If Congress desires that, insofar as it is possible, all workers in this country work only 8 hours a day, nevertheless, Congress could, in its concern for Federal expenditures, require, and validly provide, that Federal employees work 10 hours a day.

"That Congress has chosen to limit the working day of most Federal employees to 8 hours a day, 7 years after it chose to limit the working day for most workers in this country, is no indication that Congress has also chosen to pay its employees industry or private management wages or, in this case, overtime compensation, sometimes described as 'penalty pay,' for study over which Government has no control and on which it cannot check.

"For the fact of the matter is, as we have shown, that Congress has not always accepted for Federal employees the theories or rights of the labor movement in their entirety."

Gross Revenue of Central Valley Project Jumps 33½ Percent

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. MOSS. Mr. Speaker, under leave to extend my remarks, I include a significant news story from the columns of the Sacramento (Calif.) Bee of April 2, 1957, relating to the gross revenue last year of $15,861,116 received from the operation in my State of the great Central Valley project.

California's Central Valley Basin, with 6½ million acres of irrigable land, only one-half of which is now being irrigated, presents a truly tremendous development potential. Regrettably, a great deal of completely biased information, half truths and out-and-out lies have been circulated about this project by various public utilities and power companies.

I am, therefore, particularly pleased to call attention to the fact that not only has the feasibility of the project been demonstrated beyond question by its financial stability, but also by the fact that the CVP has made available vast quantities of water to parched agricultural lands of the Central Valley of California.

The news story follows:

GROSS REVENUE OF CENTRAL VALLEY PROJECT JUMPS 33½ PERCENT

The Federal Bureau of Reclamation has reported a gross revenue of $15,861,116 from the operation of the Central Valley project during 1956.

In its annual report on the CVP operation, the Bureau noted an increase of 33.5 percent in the revenue compared to the gross in 1955. A good water year and the first full year's operation of the Folsom and Nimbus powerplants, the Bureau said, contributed to the increase.

Revenue from irrigation water deliveries also increased over the revenue last year. A total of 1,701,040 acre-feet of irrigation water was sold for a total of $4,121,939. In addition 1,015,513 acre-feet were delivered on the exchange contract and for water rights for which no revenue is received.

Municipal and industrial water revenue totaled $375,054 with 37,190 feet delivered by the project in 1956.

Project operation and maintenance for 1956, according to the Bureau's report, cost $5,209,130. An increase in operating costs over that of 1955 was attributed by the Bureau to extraordinary maintenance in connection with flood damage and the operation of Folsom and Nimbus Dams.

Accumulated net revenue during the 12 years of operation of the CVP was set at $66,067,035 after deductions for operation and maintenance and provisions for replacement and interest.

Clyde H. Spencer, regional director for the Bureau in Sacramento, stated: "The feasibility of the project has been demonstrated not only by its financial stability but in making vast amounts of water available to agriculture lands of the valleys and by producing low-cost power for public agencies and others throughout the area."

The Nice Guy Club

EXTENSION OF REMARKS
OF
HON. LEO W. O'BRIEN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. O'BRIEN of New York. Mr. Speaker, recently I attended a dinner in my district which could well serve as a pattern for other parts of the Nation. It was in honor of a group of considerate people or what might be described in the vernacular as "nice guys."

Thirteen years ago, an Albany attorney, Mr. Hyman Rosenblum, looked about him and noted that at every school graduation prizes are handed out to the learned among the young graduates. While applauding such awards, he thought it would be a good idea to have a prize for the young man or woman who was most considerate of the feelings and property of others. He has given such an award annually, to young people in the graduating classes of three area schools.

Mr. Rosenblum does more than that. He gives an annual dinner, to be continued after his death under terms of his will, at which tribute is made to each of the past winners of the "nice guy" awards.

There were many distinguished persons at the recent dinner, including the State commissioner of education. It was a heartwarming experience to learn that sheer goodness is sometimes applauded in this era of conflict and tensions.

I believe we should do more than pay isolated honor to the nice people among us. I think we should make greater use of their warmth and talents in such important spheres as our foreign service and government generally.

Mr. Rosenblum deserves great credit for what he has undertaken, but I am sure he would be more than rewarded if his worthy idea was followed throughout the Nation.

H. R. 1

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mrs. GREEN of Oregon. Mr. Speaker, I have received a joint letter from a number of outstanding national organizations who are vitally interested in a bill now before the full Committee on Education and Labor, H. R. 1, which has been reported out by the Subcommittee on Special Education. They urge that this bill be reported out of the full committee before the Easter recess, in view of the urgent need for prompt and favorable action on the spiraling problems with which we are confronted concerning school construction. I am in entire agreement with them on the need for the Members of this body to discuss this bill with their constituents while they are back in their home States during the coming recess. Under unanimous consent, I include the letter in the CONGRESSIONAL RECORD:

WASHINGTON, *April 10, 1957.*

The Honorable EDITH GREEN,
United States House of Representatives,
Washington, D. C.

DEAR CONGRESSWOMAN GREEN: We, the undersigned organizations, are taking this means of communicating with you and other members of the Committee on Education and Labor about the school-construction measure, H. R. 1, reported out by the Subcommittee on Education.

We strongly urge that the bill be reported out of the full committee before the Easter recess. There is need in our view for positive and prompt action to keep alive the support generated by the hearings of the subcommittee, President Eisenhower, Secretary Folsom, and national organizations such as the undersigned. Equally, if not more important, we think that individual Members of Congress would like to be in a position to discuss the measure, as approved by the full committee, with their constituents during their Easter recess stay in their districts. We are certain that the constituents of each Member of Congress would welcome such an opportunity.

We feel that the increase in school population necessitates, and the increases in the gross national product and in national income fully justify, prompt favorable action by the full committee and by the Congress.

With respect to action of the subcommittee in reporting out the school-construction bill we commend the statesmanlike deliber-

ations which resulted in a measure endorsed and supported by representatives of both parties. We wish to commend the subcommittee for its diligence, fairness, and promptness in reporting out an excellent bipartisan bill. We feel that this attitude of bipartisanship should be maintained in the future consideration of the bill through floor action.

We respectfully ask your earnest consideration of our request that the bill be approved by the full committee before the Easter recess.

Sincerely,

American Association of University Women, 1634 I Street NW., Washington, D. C.; American Home Economics Association, 1600 20th Street NW., Washington, D. C.; American Library Association, 300 New Jersey Avenue SE., Washington, D. C.; American Parents Committee, 132 Third Street SE., Washington, D. C.; American Veterans of World War II and Korea, 1710 Rhode Island Avenue NW., Washington, D. C.; American Veterans Committee, 1830 Jefferson Place NW., Washington, D. C.; Association for Childhood Education, International, 1200 15th Street NW., Washington, D. C.; Cooperative League of United States of America, 1025 Vermont Avenue NW., Washington, D. MSTS Chief Cites Unit's Role

EXTENSION OF REMARKS

OF

HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1957

Mr. DORN of New York. Mr. Speaker, I believe the following article from the Journal of Commerce by Vice Adm. John M. Will, United States Navy, commander Military Sea Transportation Service, is worthy of note by all my colleagues:

MSTS CHIEF CITES UNIT'S ROLE

(By Vice Adm. John M. Will, U. S. Navy, commander, Military Sea Transportation Service)

In the more than 7 years since the establishment of the Military Sea Transportation Service, the American maritime industry has undergone a remarkable transition.

In October 1949, when MSTS was organized, shipping was in the doldrums.

Many ships were in layup or in the process of inactivation because of lack of cargoes and maritime employment was at a low ebb. New ship construction was at a virtual standstill and the outlook for the shipyards was bleak, indeed.

SITUATION CHANGED IN 1950

With the outbreak of the Korean emergency in late June 1950, conditions in the shipping industry changed radically and it responded in full measure to the heavy demands placed upon it for the movement of military material.

It was during this period that the development of relationships between MSTS and the maritime industry was initiated. In the course of this development, as might have been anticipated, mistakes were made and misunderstandings encountered.

By profiting from the lessons learned in these shortcomings, however, a fairly sound and comprehensive working basis has been established along mutually advantageous lines. For their part, it is believed the shipping industry much prefers dealing with a single agency in matters concerning ocean transportation than with the several individual services as formerly.

The benefits derived from dealing with a single source are not confined simply to the booking of cargo or to the negotiation of charters and shipping contracts. They extend to the more expeditious settlement of invoices, the processing of claims, and the many other administrative details with which transportation procedures are surrounded. From the standpoint of the Department of Defense, the centralization of its ocean transportation needs under a single head has proved to be most effective.

The welfare of the American maritime industry is a matter of direct and continuing interest to the MSTS. Considering the fact that MSTS depends upon privately operated shipping to transport approximately 70 percent of the military dry-cargo movement, the reason for this interest is not difficult to understand.

The more favorable general business conditions are for the established American-flag berth lines, the more assurance MSTS has of the necessary dependability and frequency of sailings to provide capability for the military life. More and more, also, MSTS is availing itself of a share of the passenger space provided by the additional ships being placed in service on those routes on which military personnel regularly move.

Practically 100 percent of MSTS ship repairs and overhauls are performed by private yards. A healthy ship-repair industry, therefore, is of benefit to MSTS. This not only affords a wider range of competition for bidding purposes, but provides a broader base for expansion under conditions of mobilization.

In connection with the operations of MSTS, the principal target of criticism by industry, labor, and congressional groups has been the so-called nucleus fleet. Much of this criticism stems from a misunderstanding of the composition of this fleet and the purposes for which it is maintained. Many critics mistakenly assume the total number of units to represent so many ocean-going ships. Actually, of the total of 214 units, now in active operations, 71 of these are small coastal craft or naval auxiliary types which have no counterpart in merchant service.

They are employed for short-haul lifts in the Far East or on special missions in remote area. Among the remainder, 84 are tankers. Through activations from the reserve fleets, the number of these has been increased from 34 within the past 9 months because of the critical worldwide shortage of tanker tonnage made even more serious by the closing of the Suez Canal.

Even with these activations, MSTS is only now working out from a tremendous backlog of Department of Defense petroleum shipping requirements built up because of the unavailability of commercial tankers at any price. At no other time, since the establishment of MSTS, has the value and purpose of the nucleus fleet been demonstrated more completely than in connection with the recent and continuing tanker crisis.

UNITS ARE TALLIED

Of the remaining 59 units, 34 are troop and dependent transports. Industry concedes its inability to provide accommodations for mass troop movements. On the routes where military dependents are moving, privately operated passenger liners are participating in the lift in excess of the capability of the MSTS dependent transports.

The balance of 25 units comprises 2 C-4 cargo ships converted as heavy-lift carriers with 150-ton boom capacity, 4 utility aircraft carriers, 3 C-2 refrigerated ships and 16 Victory-type cargo ships. Since there are no American-flag ships of adequate heavy-lift capacity, the only alternative would be for foreign-flag charters.

The carriers are necessary for lifting aircraft of which many of the present-day types cannot be accommodated on the decks of conventional cargo ships. Refrigerated ship capacity is in short supply at best as evidenced by the necessity for the bareboat charter of five Government-owned refrigerated ships to a commercial operation for the express purpose of moving military refrigerated requirements in the Pacific.

The Victory ships are assigned to a variety of missions. Principal among these is the annual Arctic resupply operation each summer, while some participate in the Antarctic explorations. During the past several months, a number of these ships have been used on lifts for which privately owned tramps would ordinarily be chartered. However, because of prevailing high market rates for other business, tramp owners have not been disposed to make their ships available to MSTS at rates determined by the Maritime Administration to be fair and reasonable. Recently, also, on certain of the berth line routes, because of the generally good commercial market space offerings to MSTS have been insufficient to meet military shipping requirements.

ROLE IS EXTENDED

It should be emphasized that the overall mission of MSTS extends beyond its role as the coordinator of ocean transportation for the Department of Defense. In addition, it is responsible for providing immediate lift capability in an emergency and to provide an adequate base for necessary expansion to meet emergency or mobilization requirements. With consideration for these responsibilities, it should be recognized that the nucleus fleet which has been described represents the bare minimum essential for the implementation of the MSTS mission.

That this recognition is now generally accorded by the private shipping industry, has been demonstrated in many ways. It is believed, too, the industry has every confidence that in the event of any differences developing in its relationships with MSTS, the means are always readily available for a full and complete hearing.

I Am Grateful for My Second Chance

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article appearing in the April 5, 1957, edition of the Congregational Christian Journal of Advance, regarding the Honorable Charles H. Davis, justice of the Illinois Supreme Court:

I AM GRATEFUL FOR MY SECOND CHANCE

On February 28, 1955, Charles H. Davis, then aged 49, was elected a justice of the Illinois Supreme Court by a majority of more than 3 to 1. Six months later he was stricken with a serious heart attack.

The tension between so impressive a professional achievement and so calamitous a personal disaster lends poignancy to a life history which might otherwise appear to be but a typical example of uninterrupted success.

EXTENSIVE PRACTICE

Justice Davis graduated from the University of Illinois with the class of 1928 and from the University of Chicago College of Law with the degree of doctor of jurisprudence in 1931. Thereafter he carried on an increasingly extensive practice in northern Illinois, handling many cases before trial and appellate courts, both State and Federal.

Justice Davis is a valued member and officer of the Second Congregational Church in Rockford, Ill. He is a member of the American, Illinois, and Winnebago County Bar Associations and, at the time of his elevation to the supreme court bench, held an AV rating in the Martindale-Hubbell legal directory—the highest to be conferred by the company.

In announcing his candidacy for the judical office, Justice Davis made the following public statement as an expression of his philosophy and faith:

"I believe men will be free as long as law is just and courts are free; that courts will be free as long as judges are just, possessed of minds that seek knowledge, of hearts that seek understanding, and are humble before God and upright before men. In the spirit of that belief, I pledge to you my unswerving devotion to the duties of the high office I seek."

Since assuming the office to which he was so overwhelmingly elected, Justice Davis has proven the authenticity and sincerity of his statement.

The Davis' home life is what may well be called maturely Christian. They have 7 children, among whom are 2 pairs of twins.

VALUED LAYMAN

"Mrs. Davis," testifies her minister, Dr. Joseph C. Cleveland, "has devoted her life to the rearing of her family and takes deep pleasure in working with the children, integrating the routine and common tasks of the household into rewarding family experiences." The family appears regularly at worship and church school on Sunday morning while each member participates usefully in the church's life and work.

"Justice Davis," Dr. Cleveland continues, "is one of those rare and valued laymen who would be the delight of a minister in any parish. He has held nearly all the positions of lay leadership, from that of a high-school boys' class teacher to chairman of the board of trustees and the office of assistant church treasurer."

CREATIVE LIFE

He offers excellent advice respecting the church's financial investments, is not tardy in suggesting to certain of his clients the propriety of remembering their church when drawing up their wills, and is ready always to be of help to his church in dealing with legal matters of any sort.

Let us turn now to the other side of our picture, permitting Justice Davis to tell us in his own words what the experience of being cut down in the midst of a creative life—with the possibility of becoming a chronic invalid—meant to him.

"When in August 1955 I experienced a series of heart attacks which proved to be more serious than I at first realized, I hardly knew what to think of it. I remember well the feeling of utter despair and dejection that came with knowledge of the cause of the pains that pierced my back and chest.

"The initial realization of what had happened to me was more upsetting than the attendant pain. Both physically and emotionally my world was in chaos. Confused thoughts of family, work, permanent incapacity, and the forfeiture of the ambitions of a lifetime raced through my mind. Slowly I began to realize that all hopes, dreams, and ambitions—yes, even life—depended on what would happen in the next few days.

"There was so much that I wanted to see through to completion. What could I do to help? I didn't know. I asked God to take my life in his hands. I told him of my hopes and aspirations and that I wanted to live; that I had failed in keeping my health and that I now came to him trusting that whatever he did would be right."

HEALING POWER

"Peace came to me at length. Hours, days, and nights went by. Now I had no fears, no worries. I had faith in my doctors and nurses, faith in myself, and faith in God. Slowly the weeks passed and I was learning that with good medical care and faith there is a healing power marvelous beyond comprehension.

"Nature does most things well. As I lay quietly gazing at the ceiling and waiting for the capillaries to take over the job of the arteries which were blocked by the thrombosis, I contemplated values. I found that though I had recognized most of life's real values my classifications had been faulty. With the quiet of this illness, I found a new perspective. Perhaps I shall never arrive at a true analysis of the worthwhile things that make up life, but my relative grouping of values today is certainly more accurate than before my illness.

"I found encouragement in the fact that many of my friends had made remarkable recoveries. Some had returned to health and then gone on to their greatest accomplishments. I began to understand what Theodore Granik meant when he said: 'When flat on my back, I found wisdom in the doctor's bromide that a coronary is the greatest lifesaver of middle-aged men. I've learned to conserve energy and make it produce more than ever.'

"However, I found that winning a recovery is much like preserving your liberty. It requires eternal vigilance. Frequently new pains, probably psychogenic rather than organic, would place me in fear of relapse. My sedative for recurring doubts and fears was and is a prayer that my doubts and anxieties be removed, my faith strengthened, my resolves firmed and that I may have that peace which passes understanding."

EMOTIONAL CONTROL

"For a while after I was up and around again, crowds of people, even friends, overawed me. But with the return of strength and vigor, these difficulties gradually receded.

"I found new interest in the world of books, which became my constant source of companionship—surpassed in constancy, understanding and devotion only by my wife who, in brighter days, had taken me to be her husband in sickness and in health.

"Experience has taught me some simple rules which I repeat to myself very often. Seek peace and serenity. Control your emotions. Live each day unto itself; don't worry about tomorrow. Spend time each day in silence.

"I have now resumed my work—but I keep from getting tired. There is rhythm in constructive effort and I am learning to conform with its beat. So, 'easy does it,' I tell myself and the world grows brighter all the while. The smile of a friend seems more genuine and life's meaning and purpose grow clearer every day. I am very grateful for my second chance."

COMRADELY STORY

This impressive account of a Christain's courage and faith may well cause each and every one who reads it to take heart. Those especially who have come through or who find themselves in the same deep waters must respond with more than gratitude to Justice Davis' comradely and candid story of his own experience.

What is perhaps of even greater consequence respecting all of us is that law and order—upon which our American democracy depends—are resting in the hands of men of Justice Davis' type and caliber.

The Teacher's Lot

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mrs. GREEN of Oregon. Mr. Speaker, in the New York Times of April 7, there appeared an excellent editorial commenting upon the recent survey conducted by Dr. Hazel Davis for the National Education Association. In our concern today about the educational standards which must be maintained if our children are to be given the opportunity of taking full advantage of their innate capabilities, we must not overlook the vital role played by the American schoolteacher. To the extent that we can strengthen that role, to that extent will there be a commensurate strengthening of our entire educational system. Under unanimous consent, I include this editorial in the CONGRESSIONAL RECORD:

THE TEACHER'S LOT

A distressing picture of the life of American public schoolteachers is etched by the statistics in a recent National Educational Association survey conducted by Dr. Hazel Davis. The main trouble seems to be that "people who would like to give their time to teaching have to give it to something else." For example, salaries are so low that about three-quarters of the men teachers and 17 percent of the women have had to take on other jobs to make both ends meet. They double as clerks, salespeople, bill collectors, tutors, camp counselors, even farmhands. One man reported he had been a spare-time dishwasher, ditchdigger, and truckdriver.

The average teaching salaries were $3,932 ($76 a week) for women and $4,374 ($84 a week) for men. About one-third of the 6,000 teachers covered receive less than $3,500 ($67

a week). In contrast, workers in manufacturing average $82 a week, while those in the printing trades receive $93, and in construction $98.

Then, too, the teachers reported that they are called on to do a lot of other things than teach as part of their regular work—10 hours a week on the average. Such chores were listed as planning, supervising, club activities, hall monitoring, collecting money for festivals, and the like. And a constant complaint was the too heavy pupil load they had to carry.

But Dr. Davis reports an encouraging theme which runs most strongly through the questionnaire replies: In spite of the drawbacks teachers love their work. Evidence of this is the fact that their job is not the stopgap kind that it is commonly supposed to be. The median length of service of those covered by the survey was 13 years. Then, too, those who reported belied the schoolteacher stereotype. Most of them are married, live in their own homes, and support dependents. And their civic and social interests are wide. At least one-third belong to four or more community organizations. All in all, public schoolteachers seem to lead lives that interest and satisfy them, in spite of their many professional troubles. But they surely deserve much better than they get.

Economic Aid for Poland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter written to the editor of the Wilkes-Barre Times-Leader Evening News of April 8, 1957, by Mr. Joseph F. Lester, a well-known businessman of Kingston, Pa., in which Mr. Lester recommends that this country extend economic and technical aid to Poland:

EDITOR, TIMES-LEADER NEWS:

There has been a lot of controversy on extending loans to Poland for purchasing surplus foods for its starving people and machinery for devastated industry.

It was not Poland's fault to find itself in the hottest postwar situation. As our faithful ally, the one our wartime President spoke of, she was the world's inspiration of freedom and a gallant fighter on all fronts.

For a reward, the same President sold Poland down the river at Yalta and Teheran. She received the worst share of the conflict. Because of the postwar political bunglings, Poland was not able to participate in the Marshall plan or other direct and indirect assistance. Even individual packages, sent by friends and relatives from this country to Poland, were subject to almost triple rates compared with other European countries, some of them our enemies.

We spent billions to build economies of our former enemies that are now the richest countries in Europe. On the other hand, we spent millions for the Voice of America and Radio Free Europe, telling Poland how much we value our freedom, but this does not help the people of Poland to feed or clothe themselves.

Hundreds of thousands of the former war patriots weer sent to the slave-labor camps in far-off Russia. Now these hundreds of thousands of repatriates released from the Russian slave-labor camps started to return to poverty stricken Poland.

The climax came last June during the uprising of Poznan; then came the October revolution and the breaking off from Communist Russia. We applaud them, but that's where we stop.

Breaking away from the Kremlin, Poland turned to the West and to the United States for assistance. A commission arrived in Washington, but the negotiations bogged down as to the definite opinion of the lawmakers, who, during their political campaigns, stressed the invaluable services rendered by Kosciuszko, Pulaski and thousands of other Polish patriots during our struggle for freedom.

Someone may claim that Poland is in the influence of the Communists but not of her own free will. In comparison, there is more communism in the so-called free and independent countries who are getting our heavy financial support. Isn't this the honest truth, lawmakers? Shall we keep pushing Poland in the orbits of Russia and then tell her we love her people?

Now is the time to put our words into deeds. Instead of exploring the Far East, the Northeast, and the Near East, we should help Poland, our old friend.

The time for action is now.

JOSEPH F. LESTER,
Kingston.

Leadership Under Truman and Ike

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. SILER. Mr. Speaker, we have noticed in recent press reports statements of former President Harry S. Truman that forces of communism have been advancing in the Middle East and Far East and that free nations have been beset by differences and doubts. Then he went on to place the blame for this so-called advancing communism and alleged doubt among free nations on what he termed a "lack of leadership in the State Department and the White House." He further stated that our Government had lost both confidence and respect among the people of the world.

Now, Mr. Truman did not back up his bold and baseless assertions with any facts and figures, so far as I know. He merely told the Kansas Democratic Club, which, of course, wanted to hear such nonsense, that here are some of my partisan conclusions and you may start your Fair Deal applause when you get all set and ready to begin.

But there are some real honest-to-goodness facts, as recorded in history, for us to examine and then remember after all the tumult and the shouting has faded out and left only the everlasting truth to be our shield and buckler.

ROOSEVELT-ACHESON-TRUMAN REGIME

In this late lamented regime, communism did its great and notorious advancing both at home and abroad. In every conference that was held it seems that we got a piece of paper and the Communists got a piece of territory. The Yalta Conference, for instance, was a catastrophe for our country and the free world. Alger Hiss, the convicted Communist who was upheld by Secretary Acheson, even as the dark shadows of guilt overwhelmed his integrity and patriotism, had access to the secret briefing papers used by our side during that conference. The decisions at Yalta paved the way for communizing Poland and for the Communist conquest of China. The Yalta deal contributed in two ways to the Communist victory in China, for it turned over to the Russians the all-important Manchurian Railway and the warm-water ports and recognized Outer Mongolia as a satellite state. And so, Communist China emerged and Nationalist China and Chiang Kai-shek became only symbols of a free China after the Yalta Conference.

It should also be remembered that the Harry Dexter White incident emerged out of publication of those Yalta papers. He, you recall, wanted our country to loan Russia four billions more than even Stalin himself wanted and this same White wanted the interest rate to be only 2 percent, although Russia had offered to pay 2¼ percent, and the same White wanted the loan to run 35 years, although Russia only wanted 30 years for repayment.

What a leadership, Mr. Truman, under Harry Dexter White and Alger Hiss.

What a communistic bonanza, Mr. Truman, with assists for communism in Poland and China and that extra $4 billion offered Russia but not even asked by Stalin himself during the Roosevelt-Acheson-Truman regime.

EISENHOWER-DULLES REGIME

Now in this present Eisenhower-Dulles regime, we have clearly seen a termination of communism's advance in Korea and in other places of the Far East. And we have seen a positive deterioration of Russian influence in Poland, Hungary, and the Middle East, the free people of the world having had our continual and effective encouragement every single day of the present administration.

Over 2,000 people with bad-risk files against them have been turned out of Government jobs and stopped from receiving tax-paid salaries during this present regime.

Vice President NIXON, before ascending to that office, conducted the investigation on Alger Hiss and he went to jail.

And so, for more than 4 years we have been running along pretty smoothly sans Hiss, sans White, sans 2,000 security risks, and the forces of communism have been stopped or deterred on every front and all along the line throughout the earth.

The truth shall be our shield and buckler.

Mr. Truman, what do you say about the facts? How about the Roosevelt-Acheson-Truman leadership against the communistic forces you mentioned? And how about the Eisenhower-Dulles leadership against the same evil?

The truth shall be our shield and buckler.

Annual Convention of the National Society, Daughters of the Union

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. FORRESTER. Mr. Speaker, this past weekend, the National Society, Daughters of the Union, held its annual convention in Fitzgerald, Ga., a wonderful little city in the district which I have the honor to represent. This is the first time that the society has held a meeting in the Deep South, and there is much significance in the fact that they chose Fitzgerald, Ga., as the location.

Fitzgerald is unique in its history, and a living memorial to the brave men of both Blue and Gray who engaged in the terrible War Between the States. Nowhere in our Nation is there a better example of the brotherhood and love that came to exist between the people of the North and South in that era, and I think my colleagues might be interested in hearing a little about Fitzgerald.

Both Unionists and Confederates founded and settled in Fitzgerald, on about a 50–50 basis. The names "Blue-Gray Park," "Lee-Grant Hotel," "Sherman Street," and "Lee Street," sound a bit incongruous, but they were chosen with care by people of the North and South who built this city of unity, as a tribute to one another and the brave leaders of both sides.

Fitzgerald is built in a square extending 1¼ miles from the center in each direction. All streets east of the main thoroughfare are named after northern generals such as Grant and Sherman, while streets lying to the west bear the names of southern generals—Lee, Gordon, Jackson, and so forth. There are four drives around the city and two of them are named for northern ships, two after ships which sailed for the South. Many people in Fitzgerald find that their ancestors were among those who first settled the town, and many find that their southern grandmothers or grandfathers married northerners, and lived the balance of their lives in peace and harmony, together and amongst their northern and southern neighbors.

We can learn a great lesson from the city of Fitzgerald, Ga. If good people of both sides could get together at that time, when bitterness and animosity were at their peak, and settle a town together, intermarry, and live side by side with love and respect for each other, then certainly now, in 1957, there is no basis for any ill feeling between our different sections of the country. Yankees and southerners learned to like each other then, and they like each other now.

The American flag was prominent in the ceremonies conducted at the convention of the National Society, Daughters of the Union. A miniature flag was placed on each and every grave in the famous Evergreen Cemetery, where hundreds of veterans, both Union and Confederate, of the War Between the States are buried. To all of the people of Fitzgerald and our section, that flag is not a northern flag or a southern flag. It is the flag of a united country and people. No wonder our people in Fitzgerald and our district love that flag, and have no patience with any group or individual who would change our way of life.

Fort Benning, Ga.

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. MILLER of California. Mr. Speaker, it was my good fortune, and that of many of my colleagues in the House and the Senate, to be guests of the Army at Fort Benning, Ga., on April 5 and 6. I wish to express my appreciation for the invitation to the Honorable Wilber Brucker, able Secretary of the Army, and to his legislative liaison chief, Maj. Gen. J. H. Michaelis.

I would also acknowledge the commendable leadership displayed at this vast infantry center and school which the Army has entrusted to the command of Maj. Gen. Herbert B. Powell, the commandant, and his assistants, Brig. Gen. R. L. Cook and Brig. Gen. J. V. Thompson. It is noteworthy that the inspiring example set by these senior officers has obviously made its mark on the junior officers and noncommissioned officers of the Infantry at Fort Benning.

As many of us know, the Infantry's traditional motto is "Follow me," that is to say, follow the leader up front. This one thought, development of leaders whom men will follow in ground and airborne combat, is the constant overriding theme of every action at Fort Benning. You see it everywhere you turn. Emblazoned on insignia, signs, literature is the call to "Follow me." In a world of shifting standards, the Infantry tells the world that it has this one unvarying rule today as it has had from time immemorial.

The weapons and machines of modern warfare, although wondrous to see, are as nothing compared to the display of leadership at all levels of Infantry organization. The Infantry leaders realize all too well the sacrifices that the Queen of Battles makes upon our youth in ground combat. There is no other time when personal courage, example, and determination are at the premium required in an infantry attack, or if necessary, to stand and fight in the defense. Our young soldiers and paratroopers constantly look to their leaders, along side them in battle and sharing it all, and the old cry comes back clear and strong, "Follow me."

We Members of Congress saw leadership again at its best at Fort Benning last week. For those of us who may have forgotten, we were reminded of this indispensable quality. Let none tamper with it. For it is the infantryman with his bayonet who is given the task of making the final decisive blow, the defeat of the enemy in battle. The infantryman pays the greatest price in casualties and fights under the most incredibly severe conditions of weather and emotional strain. The infantryman has the place of honor. The infantryman leads while he others follow. He deserves to be well led.

As General Powell so well told us there at the old home of all Infantry everywhere:

> It is this man, the infantryman, and this man alone, as a most important member of our military team, who ultimately determines the final outcome of war. Upon his courage, determination, leadership, and training rests the future of the United States. In the age of the airplane and atomic weapons, the infantryman has countered every development by devising new tactics and techniques to meet the changing methods of warfare. The infantryman has maintained his decisive position in war by creative and progressive thinking, and this has never been more true than it is today.

The Virgin Islands

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter published in the Christian Science Monitor of April 2, 1957:

THE READER WRITES—THE VIRGIN ISLANDS

To the CHRISTIAN SCIENCE MONITOR:

Your recent page, "The Reader Asks," contained an inquiry as to whether America has any colonies. Your reply declined to employ that charged word. I wonder, however, what general term would describe the situation in the Virgin Islands. The harmful myth that all is paradise there is exploded by even a casual study of the islands' problems.

Miserable living standards are apparent to the most inattentive tourists. Annual per capita income is under $400. Poor health and sanitation conditions, an ugly racial situation, and excessively high living costs combine to belie the stereotype of insular felicity.

Perhaps fundamental to these problems is the political status which, under the Revised Organic Act of 1954, makes the Governor and Secretary of the Interior all-powerful. This act provided for more stringent Federal controls, particularly in financial and administrative affairs. Dominant authority is exercised by officials unfamiliar with the islands and not responsible to the people. Other than the virtually hamstrung unicameral legislature, no officials are elected by the natives. Capricious actions by the governors have flouted the principle of separation of powers and have made a mockery out of the limited democracy allegedly existing.

A bill passed over a Governor's veto is sent to the President for resolution which actually is turned over to the Department of the Interior. The latter uniformly recommends upholding the Governor. This practice has made the veto power absolute, often characterized by its irresponsible use

to promote a flagrant abuse of executive authority. The last two governors have vetoed three-quarters of the legislature's acts.

In the past few years the situation has worsened. For example, mainland jobseekers with political pull have replaced many islanders in even lesser administrative positions.

Consider the political frustration of the people. They have no way to publicize their cause, lacking the minimum right to have a nonvoting resident commissioner in Congress such as other United States Territories have. Petitions and appeals to Washington officials are either ignored or turned down in favor of continued support of the Governor who is their representative on the islands.

Virgin Islanders have long realized that no one is going to bother about or deal with their problems except themselves. Consequently, they want to elect their own Governor, have a nonvoting delegate in the House of Representatives, have the same financial relationship with the United States as that held by Puerto Rico and be represented by a legislature possessing its legitimate share of power.

Very soon now, the Virgin Islands will be the last area in the Caribbean without home rule. The islands' political status fares badly in comparison with British, French, and Dutch territories. Whether the Virgin Islanders will be allowed their modest objectives will depend on whether Congress can still effectively deal with problems which, although posing no threat to our security, still merit prompt application of our democratic principles.

RALPH NADER.

CAMBRIDGE, MASS.

[MOTTOR'S NOTE.—The letter writer makes some telling points and many of them are justified. The Virgin Islands are admittedly not the best United States examples of territorial administration and doubtless it is fair to call them colonies. However, Mr. Nader does leave out some brighter sides to the picture—economic investment in sugar and other industries that over the long pull are intended to raise living standards in the islands, increase schooling and health facilities. While it is true that the islanders' freely voted actions have been vetoed in large numbers, some of the vetoes can be explained not only on the basis of arbitrary upholding of the Governor by Federal authorities but by immaturity of the legislators themselves in passing inadequately considered legislation.]

The Court and the Bar: Their Relation and Obligations

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. ALLEN of Illinois. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an article appearing in a recent issue of the Illinois Bar Journal by the Honorable Charles H. Davis, of the Illinois Supreme Court—an outstanding lawyer and judge, well qualified to fill the next vacancy on the United States Supreme Court:

THE COURT AND THE BAR: THEIR RELATION AND OBLIGATIONS

(By Justice Charles H. Davis)

Members of the bar are licensed to practice by the Supreme Court and are officers of the Court. They may be censored, or their license to practice may be suspended or revoked for conduct which tends to defeat the administration of justice or to bring the courts and the legal profession into disrepute.

In summing up the lawyers' obligation Justice Cardozo stated: "Membership in the bar is a privilege burdened with conditions. A fair private and professional character is one of them. * * * Whenever the condition is broken, the privilege is lost." [1]

Historically and in fact, there is ample power in the court to supervise the conduct of the members of the bar; [2] its success or failure in this respect is dependent upon the courage and attitudes of the bar and the court. There lies the responsibility. In the interest of the health and honor of the profession and for the protection of the public, I find wisdom in the pronouncement of the Court of Appeals of New York, "If the house is to be cleaned, it is for those who occupy and govern it, rather than for strangers, to do the noisome work."

The lawyer has been portrayed by Thackeray as bending all the powers of a great mind to a mean profession. He has been the brunt of many jokes, which are generally uncomplimentary. However, the bar, even though the most maligned of all secular professions, has the highest standards. The practice of law is more than a way of earning a livelihood; it is a profession that senses intimately the frailties of life—its passions, battles, victories, and defeats; it is a profession of service to mankind.

The intellect of a great lawyer demands more from life and work than substantial income; it yearns for the joy of achievement and the compensation of being part of a dynamic profession that is shaping the law and life of our land.

The law is truly made by the bar, even though proclaimed by the courts. It is the courageous thinking of the members of the bar; their willingness to stand alone and to chart their course by faith in the right; it is this that has broken the barrier of outworn precedent with the enlightenment of sound policy.

In practice the court and bar are mutually dependent. A good judge is the product of a good bar. Both the bench and the bar are faced with the task of providing for the people of our State and Nation a legal system that will give every person a remedy in the laws for all injuries and wrongs which he may receive in his person, property, or reputation; a system which will provide justice freely and without delay. [4]

Through our own efforts and through sponsored legislation, we must meet these and other requirements of the day, otherwise our system, like others of bygone days, will melt in the fire of public indignation and yield place to some adequate procedure for public protection and public convenience.

With the bench and the bar rests the fate of the legal profession; it may continue to represent a larger and more varied social will by a broader and more comprehensive interpretation of the law, or it may shrink until the lawyer and judge become, in the words of Learned Hand, "hardly more important than a minor administrator, confined to a monotonous round of record and routine, without dignity, inspiration, or respect." [5]

The bar is called upon to litigate and the bench to adjudicate lawsuits over principles which have evolved beyond the concept of origin. A good bar and bench can shape these latent precepts of the average law suit to meet the needs of our expanding society, if they possess the vision to see what is within, and in so doing, they may add to the growth of our ever-developing field of law.

Our profession may make its contribution, nobly to preserve and to expand the field of the law, or it may meanly lose to posterity its opportunities of service. The challenge is ours. If these be ideals, then in the words of our late Justice Holmes, "Ideals furnish us our perspectives, and open glimpses of the infinite."

Family Farms and Agriculture

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include a resolution passed by the State legislature, State of Minnesota, relating to family farms and agriculture.

The resolution follows:

SENATE RESOLUTION RELATING TO FAMILY FARMS AND AGRICULTURE

Whereas it is recognized by all that the time proven family farm unit must continue as the basic social and economic unit of agriculture and that accordingly, farm policy must assist such farms in achieving standards of farm living equal to those enjoyed by other Americans; and

Whereas agricultural policy in this country has sought to foster family-sized, owner-operated farms, which has proved to be a sound and wise policy, since it has developed an efficient agriculture unparalleled in the entire world; and

Whereas present farm price levels are inadequate because they tend to increase the disparity between farm income and farm operating costs; and

Whereas this disparity in farm purchasing power if permitted to continue, reflects itself not only in economic distress for farmers, but in reduced retail sales, employment, and industrial activity; and

Whereas the present unfavorable economic conditions in agriculture make it extremely difficult for young people to establish themselves in farming as their life's work: Now, therefore, be it

Resolved by the Senate of the State of Minnesota, That we favor legislation to accomplish the following purposes:

1. Providing supports to assure favorable prices and income to producers of major farm commodities, using whatever methods may be most practical, such as loan and purchase programs, incentive payments, surplus removal measures, promotion of exports, or a combination of these measures. As far as possible, farm support programs should be placed on a self-regulating and self-financing basis.

2. Continuing, expanding, and improving the soil-bank program as a soil conservation measure and as a supplement to price programs, by including the feed grains and other major field crops in the acreage reserve; by requiring soil conservation practices upon acres placed into the acreage reserve; and by requiring participation in the soil bank as a condition to eligibility for price support.

3. Establishing a specific national policy regarding the size of food reserves which

should be maintained in the national interest.

4. Providing for greatly expanded research programs to study agricultural marketing and price problems and to develop new uses and new markets for farm products.

5. Providing price protection on the perishable farm products such a milk, meat, butter, poultry, and eggs, which are so important in our diversified farming economy, wherever purchase and storage measures are effective as a support measure.

6. Providing the initiative, both with leadership and funds, in carrying on effective farm credit, soil conservation, crop insurance, REA programs, and programs to promote the consumption of a proper diet among our aged, our schoolchildren, our low-income groups, and those in institutions; and be it further

Resolved, That the administration of farm programs at the county and community level be fostered in every way by legislative and administrative policy, specifically, safeguarding the right of farmers to elect their own committees, and to operate the county offices and programs in a manner consistent with law and regulations; and be it further

Resolved, That the Congress of the United States give the farmers some relief from the high cost of operation by repealing the 3-percent excise transportation tax immediately; and be it further

Resolved, That the secretary of the senate be directed to forward a copy of this resolution to the chief officer of the House of Representatives and the Senate of the United States Congress; and be it further

Resolved, That the secretary of state be instructed to transmit copies of this resolution to the President of the United States, the Secretary of Agriculture, and to each Member of Congress from the State of Minnesota.

Adopted by the Senate of the State of Minnesota April 8, 1957.

H. Y. TORREY,
Secretary of the Senate.

United States-Canadian Relations and the Death of E. Herbert Norman

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. ROOSEVELT. Mr. Speaker, I have been concerned these past few days at the state of the United States-Canadian relations resulting from the tragic death of Canadian Ambassador E. Herbert Norman.

I had fully expected the President to assume leadership and to take forceful steps to restore the traditionally fine relations between our two countries. I had hoped that the President would have voiced the distress which most Americans feel at the unfortunate tactics of the congressional committee which resulted in the publication of long discredited charges dealing with Ambassador Norman's early life.

My disappointment in the lack of forceful action by the President and the Secretary of State is keen. The Washington Post and Times Herald of April 11, 1957, has taken an editorial stand in line with my position, and under leave to extend my remarks, I include it in the RECORD, in the hope that it will be of interest to my colleagues.

PUT OUT THE FIRE

The flames of indignation that have swept Canada over the tragedy of E. Herbert Norman threaten to char the century-old friendship with the United States. It must be the task of responsible officials and good citizens on both sides of the border to prevent a compounding of the tragedy with words and actions that could cause lasting damage and bitterness.

Yesterday's strong formal protest from Canada was explicit in condemning the procedures by which the Senate Internal Security Subcommittee publicized long since discredited charges linking Ambassador Norman to communism—a piece of sheer hounding that seemingly was instrumental in Mr. Norman's suicide last week in Cairo. The Canadian Government demands that in the future any names of Canadian officials which come before congressional committees be sent to Ottawa in confidence for investigation. It further warns that unless the administration can guarantee not to pass on security information received from Canada without Canada's express consent, the exchange of such information may be suspended. That would be highly unfortunate, but the Canadian position is thoroughly justified. Canada's security is her own business, and she has managed it very competently.

Unhappily, the State Department's response was considerably less than forthright. The Department disclaimed any responsibility for the publicizing of the charges, although the subcommittee says that a State Department official cleared the release of the transcript. The note also deplores "any development from any source either American or Canadian which might adversely affect" friendship between the two countries. This seems calculated further to ire Canadians, inasmuch as it was a subcommittee of the United States Senate which started the whole business.

President Eisenhower attempted to soothe matters at his news conference yesterday by extolling the firm ties with Canada and by explaining again the tripartite character of the American Government. Informed Canadians will understand that the Executive Department cannot take direct responsibility for the actions of Congress. Nevertheless, the President pulled his punches by passing over the State Department's own blunder and by speaking of inadvertence on the part of the Senate subcommittee. The subcommittee may not have intended to light a conflagration, but there was no inadvertence about its mischief. It would be refreshing sometime to have the Chief Executive depart from his noncritical position and speak out candidly in the name of decency when such affronts arise.

It behooves responsible Canadians to realize that Americans as a people have no more sympathy than they do with the obscene procedures of the Jenner subcommittee and its insatiable counsel, Robert Morris. Americans, for their part, would do well also to realize that Canada is on the eve of an election. In a very real sense it is up to Members of the Senate to redeem this country's good name by apologizing and setting up checks to insure that such abuses will not crop out again whenever the subcommittee feels an urge for headlines. Even if the Senate evades this challenge, however, the good sense of Canadians ought to persuade them that it would be calamitous to burn down the bridge between Ottawa and Washington merely because a few beavers have gnawed at the timbers.

Planning for Expansion—The Hawaiian Economy and the Territorial Bonded Debt

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. BURNS of Hawaii. Mr. Speaker, the overall effects of Hawaii-Alaska statehood, with particular emphasis on the peace and prosperity of the people of the United States in the future, makes the issue the single, most important one before this 85th Congress.

It is most important, therefore, that the Members of Congress see the total picture objectively. I include in the RECORD an article from the authority on municipal bonds, the Daily Bond Buyer, which presents Hawaii from an interesting and important viewpoint.

Those who have millions to invest are understandably anxious to make sure their investments are sound. They would never invest or recommend investing millions of dollars in the Hawaiian economy without first being absolutely sure that both in fact and in prospect there is no stranglehold on this economy from any untoward source.

[From The Daily Bond Buyer of March 12, 1957]

PLANNING FOR EXPANSION—THE HAWAIIAN ECONOMY AND THE TERRITORIAL BONDED DEBT

(By George Wanders)

HONOLULU.—Hawaii is an exciting adventure, a state of mind and a chain of enchantingly lovely islands. It is our primary defense outpost in the Pacific and the crossroads of that vast ocean. And it is an economic unit of bubbling vitality and rapid growth.

Hawaii is a paradise and also a paradox, if paradise be taken in the usual sense as an abode of the indolent. For in these islands only some of the visitors are idle. The more than half a million of residents are cheerfully busy providing goods and services for the Armed Forces and the tourists, and the whole range of local, mainland and export markets.

The Hawaiian economy is bursting at the seams and the expansion is at a rate that far exceeds the capacity of the capital resources of the islands. Mainland funds are needed in substantial amounts, and are being supplied in part by corporations and individual investors in the many Hawaiian opportunities. The Territorial government and its agencies and creatures also are large actual and potential borrowers. Their tax exempt bonds are destined to become better known and appreciated in the various financial centers of the United States.

THE ANNEXATION

Hawaii became a part of the United States by virtue of annexation in 1900, when Congress acted on the petition of the fledgling republic, which was formed largely in response to Washington's requirements and stipulations. The war with Spain and the need for servicing Admiral Dewey's fleet in the far Pacific suddenly made the strategic importance of the islands startlingly evident. The coming struggle for supremacy in the Pacific cast its shadow before, and Congress

finally accepted the Hawaiian request for a Territorial status.

The island government made acceptance conditional upon admittance to the Union as a State, equal to all other States. Governor Samuel Wilder King ticks off point by point the occurrences which led to the request for annexation. His own and his family connections with the islands go deep into the last century and his memory is sharp. The French flirted with the native kings for a time, the British made overtures, and Russia attempted a small but unsuccessful show of force. Toward the turn of the century Japan began to show interest and our Congress at long last was prompted to action.

The Organic Act of 1900 laid down the rules of procedure and provided for typical American institutions. American currency was already the principal circulating medium and acknowledgment of the United States dollar as the legal hand-to-hand unit was easy. Our postal system was extended to Hawaii. Popular elections already provided for a local senate and house of representatives, and they were continued. All Federal taxation was made applicable. But the Governor and much of the judiciary were to be and still are appointed by the President of the United States. The growing clamor for full statehood is readily understandable in these circumstances.

AN AMICABLE PEOPLE

The Hawaiian population is a mixture so colorful and varied that it is difficult to call any one group preponderant. Caucasian, Japanese, Chinese, and Polynesian native stock are the main elements, and there are scattering elements which originated in the Philippines and elsewhere. All are amicable and an increasingly intense loyalty to the United States is regarded as a matter of course. When formation of a brigade of 1,000 Japanese descendents was suggested for service in the Korean war, 10,000 presented themselves as volunteers. English is the universal language, larded with picturesque native words.

Much of the population is concentrated on Oahu, which is one of the smaller main islands. It embraces the county and city of Honolulu, and the city proper holds some 275,000 people. Honolulu is the center of trade, finance, and tourism, and almost all the Armed Forces are on Oahu.

The city of Honolulu is the Territorial capital and a port of world renown. It is fortunate in its pleasant location and also in other ways. The harbor and Waikiki Beach need no extolling here. Honolulu has a magnificent water supply in a huge "lens" of water-soaked volcanic rock located in its mountainous rim. Engineers estimate the fresh-water supply as adequate for five times the present population. Sewage disposal is a simple matter of taking advantage of certain strong offshore ocean currents.

SOME ECONOMIC FACTORS

Economically the islands are aided enormously by Armed Forces outlays which have been soaring in recent years and which now run to $300 million annually. There appears to be little likelihood of a downturn in such expenditures. The military security of the United States is involved and it admits of no parsimony. As Adam Smith observed long ago: Defense comes before opulence.

Sugar is next in importance and the annual production of over 1 million tons currently means an income of about $140 million. The pineapple income is about $110 million a year. Livestock is a growing item and some truck farming is done. Industry advances year by year and is becoming steadily more diversified. Promising bauxite deposits and a few other minerals begin to stir thoughts of mining ventures. Shipping is in a healthy state and airplane traffic is bounding upward, not only with the mainland, but also internationally and among the various islands.

Automobiles are beginning to supply the same problems that they occasion almost everywhere on the mainland. The ratio of cars to population on Oahu is exceptionally high, and a vast sales and service organization is being built up. Banking and insurance are thriving, and new homes are being constructed on a substantial scale. Business trends, wealth, and income per capita are comparable with mainland averages.

A TOURIST MECCA

Tourism deserves special emphasis in these islands of fabulous climatic endowment. Hawaii has become a mecca for many people in the Western States and Canadian Provinces seeking relief from more rigorous winters. The tourists come from the Eastern States, too, and from Japan and elsewhere. Military personnel have helped to make known the appeal of the islands.

The wave of tourists began to roll upward right after the Second World War ended and there has been hardly a perceptible halt in the flow to ever higher peaks. There were 15,000 tourists in 1946 and 128,000 in 1956. They spent in Hawaii some $6,300,000 in 1946, and about $65 million in 1956. The economic stimulus they afford is broad and pervasive.

New hotels are being built as rapidly as materials, labor and financing will permit, to satisfy a demand that now is met inadequately. Restaurants, some of them world famous, are continually crowded in the season. Gift shops are multiplying at Waikiki. The big island of Hawaii, with its rumbling volcanoes, is a focal point. All signs point to further growth of tourism, especially as facilities are completed to take care of the influx.

CAPITAL IMPROVEMENTS

Taken all in all, the expansion on the Hawaiian Islands calls for a sharp increase of governmental activities and services. New roads and schools must be provided, hospital facilities expanded and airports enlarged. Water mains must be extended to fresh developments. An enlargement of port facilities is projected and more automobile parking spaces are needed. The requirements are strictly comparable to those of countless mainland areas.

To meet them the Territorial government plans continued borrowing in mainland markets from time to time. Kam Tai Lee, Territorial treasurer, points out that the Territory has borrowed in behalf of the four counties of the islands to some extent and has loaned them in this way not only sizable sums but also its own excellent credit rating. The Territory thus has only a modest bonded indebtedness applicable to its own account. The counties are strictly accountable to the Territory for repayment of the sums advanced. They are to be asked, however, to do more direct borrowing on their own accounts in the future, and their respective treasurers already are taking a keen interest in the New York capital market.

The aggregate of general obligation bonds of all issuers now outstanding is slightly in excess of $100 million. There has never been a default and any such event is almost unthinkable. General obligation debt incurrence is limited under the Organic Act, for Uncle Sam insists that his Territorial wards deport themselves with the utmost financial decorum. He is more circumspect about Territorial soundness in financial matters than he is about his own.

REVENUE BONDS

Revenue bonds have been issued in small amounts in the past by Hawaiian governmental entities, and they are to be utilized more heavily in coming months and years. To aid in meeting the highway program the Territorial department of public works has been granted authority to issue up to $50 million bonds secured by highway revenues. A first series of $12,500,000 was sold last year and additional series are to follow.

The board of harbor commissioners of the Territory is expected to offer modest-sized revenue-bond issues on occasion. The Honolulu City Board of Water Supply has projected two series of $2 million revenue bonds each in the period to 1960. A possibility exists that an aeronautics commission will be given power to issue revenue bonds for airport development. All revenue bond issuers, actual and potential, have a high pride in their facilities and the financial background is carefully assured in every instance.

To the informed investor all Hawaiian governmental issues are exceptionally attractive. They are interest-exempt from all Federal income taxes and from State income levies wherever imposed. They are the stuff that investment soundness and safety is made of.

Backbreaking Tax Load

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very enlightening article on the Backbreaking Tax Load which appeared in the Boston Sunday Advertiser of April 7, 1957:

BACKBREAKING TAX LOAD

Do you realize—

That the taxes you pay—Federal, State, and local—have been multiplying like rabbits for decades?

That today, in peacetime, taxes are higher than they ever climbed in our costliest war year?

That exorbitant taxes are more than just a burden—they are a threat to your job or business?

That taxes allowed to run wild can wreck our productive economy—the greatest the world has even seen?

That taxes snowball because the costs of political waste and borrowing are added to legitimate government spending?

That the Federal, State, and local lawmakers you elect decide your taxes, and that only you, whose vote calls the shots at the polls, can influence them to cut down?

WASTEFUL SPENDING IS THE VILLAIN OF INFLATION—IT EATS AWAY YOUR DOLLAR'S BUYING POWER

1902 total taxes	
Federal	$517,000,000
State and local	860,000,000
Total	1,377,000,000
1922 total taxes	
Federal	$3,656,000,000
State and local	4,016,000,000
Total	7,672,000,000
1942 total taxes	
Federal	$13,382,000,000
State and local	9,612,000,000
Total	22,994,000,000
1952 total taxes	
Federal	$63,909,000,000
State and local	20,760,000,000
Total	84,669,000,000

1956 total taxes

Federal	$75,112,649,000
State and local	27,644,000,000
Total	102,756,649,000

Old Atlas is a has-been. You, John Q. Taxpayer, are the champion burden bearer of all time.

The growing load has recently brought warnings that straw piled on straw can eventually break even the strongest back.

As long as Government spending goes up, so do taxes. So do prices.

You're never going to get relief from exorbitant taxes, and you're never going to have prices that are reasonable, until cost of Government is brought down to necessary levels.

That goes for all Government—Federal, State, and local.

That's why those lawmakers who understand economics are calling for slashes in Government budgets.

STRAINS ON PROSPERITY

The overpowering decibels of our great industrial capacity and the sweet siren song of inflation make it hard to hear groans that mean real stresses and strains.

But unless such strains are eased, they can have a nasty result—they can cause a smashup.

If such a disaster is allowed to happen, you and your 170 million neighbors in these United States could kiss today's prosperity goodby.

Every family would feel the grinding agony of a crash. Even now virtually every family is feeling these warning stresses:

1. Constantly increasing prices of the necessaries of life. That's due mostly to too much money in circulation. The recent arbitrary tightening of bank money was a move to counter inflation.

2. Less purchasing power as each new tax rise bites deeper into the family purse. Experts estimate next fiscal year's total tax collections at all levels as about $119 billion. That would be nearly $1 in every $3 of the national income.

Actually both the price zoom and the tax bite are only the painful symptoms, not the disease itself.

The virus that's doing the job is wasteful, unnecessary Government spending, which not only hikes prices and eats your pay check but even brings on the long-range cripplier—public debt.

Only you, by the power of your vote, can bring about economy.

Later articles in this series will show some areas where savings can be made.

Not many people understand the causes of inflation, the sneaky way it happens. (An ABC explanation appears at the lower right of this page.)

But everybody knows the effect of inflation—prices that don't bear even a distant-cousin relationship to normality.

And while you recognize the undisguised taxes—like income tax, retail excise tax, sales tax—you'd be stumped if a TV quizmaster asked you to list all your hidden taxes. The figures of the year-by-year rise in total taxes tell the big story.

UP GO TAXES—DOWN GOES THE TAXPAYER

Like a runaway, unguided missile, your taxes are going up all the time. The driving fuel is the unnecessary part of Government spending.

Accurate records for United States tax collections start right after the Civil War with an 1866 total of $310,120,448. It meant $8.67 a person.

World War I cost a lot of money and we were still paying for it in 1920 with United States taxes of $5,407,580,251. That meant $50.81 a person.

World War II peak was in 1945, with Federal tax collections of $43,675,865,945. That made it $312.86 a person.

Then Washington threw historical precedent out of the window. Instead of peace bringing Federal expenditures down (and bringing taxes with them) they went up—hand in hand in a dizzy dance. The piper hasn't stopped playing and the dance is costing you more every year.

In 1952, the last Truman budget year and during the Korean fighting, the Federal bite was $65,009,585,559, or $414.03 a person.

In fiscal 1956, you and your neighbors chipped in $10 billion more to the Federal kitty, $75,112,649,000 or $446.85 per person.

Now let's see how State and local taxes get in on the act.

The Tax Foundation, of New York, has compiled the figures. They show that non-Federal taxes zoomed from $860 million in 1902 to $9,612,000,000 in 1942, up to $20,760,000,000 in 1952, and in 1956 got way up there in the clouds with $27,644,000,000.

That hiked total taxes from $17.75 a person in 1902 to $607.43 in 1956. It's the unnecessary part of that bite that stings.

TAX HISTORY OF 90 YEARS

The Federal Government only last December issued a report on its own tax collections in the last 90 years. Population growth swells the total figure, so the best picture is the per capita figure.

In 1866, the United States tax intake was slightly less than $8.67 per person—man, woman, or child.

In 1956, the United States tax intake was $446.85 per person. And that person means you and every members of your family.

That's just Federal tax—not including State or local bites.

When you add those, your tax outgo was $607.43 per person.

It takes a lot of spending—and a lot of it unnecessary—to pile up a load like that.

Inflation simply is an obnormal increase in the supply of money.

Sounds attractive, doesn't it? That's why it has lured many a nation onto the economic rocks.

The fact is that more money floating around doesn't mean more buying power—it means less buying power. That is because prices, which reflect the value of goods in relation to money, go up when the supply of money goes up—and faster.

Inflation is the twin sister of excessive taxation. And together they feed the other member of their family, public debt.

SHORT-WEIGHT COIN

Spendthrift kings in ages past financed their wastrel regimes by inflation. It was once called "clipping the coins," because that is the way they did it.

Nowadays the methods have changed, but the aim is the same. So is the effect.

The purpose is to make up a deficit, brought on when a government spends more than its income. Since taxes are a government's income, governments have resorted to inflation only after unreasonably high taxes have the people fed up to the ears.

The effect is to shrink the value of each money unit (for you that means the dollar) so that it buys less. It does this in disguise by giving you more dollars. They still buy less.

HOOVER SHOWED HOW

Just like you, the Federal, State, and local governments can't live without income. Defense is only one of the necessaries of life to Government. All the essential services by which we live, from the Federal operation of an efficient postal system to your local fire department, need money to run.

So we'll always have taxes. But the Hoover Commission reports have shown that a big chunk of the money spent by Government is due to inefficient and often duplicated operations.

That's not healthy muscle. That's fat.

It's the slimming down of Government overweight that can save you taxes. It can also take the Government off the inflation cycle of cheaper and cheaper dollars.

Most people know of the horrible example of inflation that hit Germany after the First World War. Before that war, the German mark was worth about an American quarter. But in the inflation period, an American dollar could buy millions of German paper marks. A wheelbarrow load of marks was worth hardly the price of the wheelbarrow.

What happened then? Hitler happened.

Let's look at our own inflationary course.

It really began in the first administration of Franklin D. Roosevelt. The President, not an economist himself, bought the idea that a nation stricken by depression could spend its way out.

The idea was that it could then create its own credit and live off it by manipulation of currency.

That couldn't be done while the United States was under the gold standard. Only the Federal Government may issue money, whether currency or available bank credit. So under the gold standard the supply of money was automatically determined by the gold reserve.

That limited Federal spending to: (1) The number of gold dollars the Government could collect in taxes, and (2) the number of gold dollars that the Government could borrow, which it must repay in gold.

The first step was to throw away the ceiling by abolishing the gold standard. From then on, the Government could print all the paper dollars it wished and call them money without having to redeem them. There's a name for that—it's "flat money"—and the more of it that's issued, the less each dollar is worth.

MORE, CHEAPER DOLLARS

Let's see how that has raised the number of dollars in circulation—currency outside the banks: 1932, $4,669,000,000; 1957, $30,502,000,000.

That's one aspect. Now a look at the effect on bank credit. No more gold standard, so debtors no longer had to pay in gold. As a debtor, the Government used its legislative power to make its own creditors accept paper dollars.

By thus turning its debts into paper assets, the Government fed the inflationary fires.

With many more times as many dollars available, today's dollar buys only one-fourth as much as the 1932 gold dollar.

So your family's standard of living has been hurt both by taking your dollars in taxes and shrinking what you have left by inflation.

THE PAY-PRICE CYCLE

The spiral shape of inflation is one of its worst features. When prices soar, everything any government buys, from an aircraft carrier to a bottle of ink, costs more. That means more taxes and borrowing. It puts all levels of government deeper in hock, and they must pay more interest on debts.

All public debt, Federal, State, and local—grew from $3,333,000,000 in 1902 to $92,158,000,000 in 1942, and by 1956 reached the stratosphere of an estimated $321,600,000,000. That means the interest item on budgets has rocketed too.

Higher costs of living bring successful demands for pay raises. These are passed on to you in higher prices, a tail-chasing that never makes ends meet.

Nobody ever gets the brass ring on the tax merry-go-round.

FAMILY TAX LOAD

The Tax Foundation estimates this is the way taxes burden the average family.

$3,500 income

All United States taxes	$689
State and local	370
Total	1,059

$4,500 income	
All United States taxes	$920
State and local	473
Total	1,393
$8,000 income	
All United States taxes	$1,967
State and local	759
Total	2,726

Congressional Subcommittee Denounces Bureaucratic Secrecy

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 11, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid and informative article "Congressional Subcommittee Denounces Bureaucratic Secrecy," written by our distinguished colleague from California, Mr. JOHN E. MOSS, chairman of the Subcommittee on Government Information of the House Committee on Government Operations, and appearing in the Harvard Law Record of March 7, 1957.

There is no one more competent to discuss the subject matter of the within article than the gentleman from California [Mr. Moss]. In connection with the subject matter of this article, the gentleman from California [Mr. Moss], and the members of his subcommittee, have done outstanding work. The character of the work done by the subcommittee of which the gentleman from California [Mr. Moss] is chairman is not only painstaking, but penetrating and objective, and the results that will flow from it will be in the best interests of our country.

The article follows:

CONGRESSIONAL SUBCOMMITTEE DENOUNCES BUREAUCRATIC SECRECY

(By Hon. JOHN E. MOSS, of California, chairman, House Government Information Subcommittee)

A massive accumulation of restrictive regulation challenges the people's basic right to oversee the workings of their Federal Government.

The pattern of restriction is documented in the 25th intermediate report of the House Committee on Government Operations, and in the volumes of hearings that lie behind this report. Case after case is described in which Congressmen and citizens were denied information without good cause. The effect, in every instance, has been harmful to our country's political traditions.

The report summarizes the first year's work of the Special Subcommittee on Government Information, chartered in June 1955, by Congressman WILLIAM L. DAWSON, of Illinois, chairman of the Government Operations Committee.

The subcommittee, exploring present law, already has documented the need for new legislation broadening public access to official records. It is equally concerned, however, with the deeper problem of the administrators' attitudes toward present law. Many Federal agencies apparently have twisted grievously their delegations of authority in an attempt to find justification for their restrictions on information.

As in any area of law, two necessities compete. No official denies, in principle, the public's right to inspect Government actions and policies. Neither does anyone—least of all the members of the subcommittee—question the need to keep secret such classes of information as military security data.

It is the subcommittee's purpose, nonetheless, to see that the indispensable security systems protect only that information for which the need for secrecy has been demonstrated.

THE BURDEN OF PROOF

The public and Congress now bear the burden of proving their right to look at papers held by Federal agencies. Instead, it should be up to the agency to demonstrate—to the satisfaction of Congress, the courts and the public—the overriding necessity to withhold information.

Congress often has stated explicity that certain specific records shall be restricted to agency use. Such clauses stand in more than 50 statutes, their subjects ranging from military codes to postal savings deposits. In a much smaller number of statutes, the agency is ordered to make public other specific records.

These orders from Congress to the agencies may deserve review later, but the subcommittee has begun its study with an exploration of the far wider area where no statute specifically commands either publication or restriction of information. Because a free flow of information about this vast Government and its works is essential to the survival of democracy itself, the study is of great importance to the Nation. This responsibility made it necessary to reject the advice, tendered from the sidelines to every new inquiry, to start work with a flare of sensation.

There is sound reason to avoid building issues out of personalities or specific instances of restriction. The subcommitee wishes to convey the point that the restrictions which it is studying concern all the Government as an institution, and a whole body of administrative law.

A legislative inquiry has three interests. It must examine the delegation of authority by Congress or the President to an agency. It then must look at the manner in which the agency uses that delegated authority. Finally, the inquiry must find a way to measure the effect—or lack of effect—that the agency's operations have upon our national life. The ultimate reality of law and politics clearly lies here.

GETTING THE FACTS

The first step in the subcommittee's study was to circulate a questionnaire to the 63 departments and agencies of the Federal Government. They were asked to describe in detail their information policies, defining specifically the types of data not available to the public and the Congress. They were asked to cite the legal authorities upon which they based these policies.

The answers to this questionnaire now provide a solid background against which a balanced inquiry can proceed—an anvil against which the subcommittee can hammer out individual cases of unwarranted restriction. The questionnaire performed a useful service, incidentally, in forcing many an agency to go through a tangle of unrelated rules and begin to develop, for the first time, a coherent and consistent policy on the availability of information.

The agencies' answers show exactly what delegations of authority are claimed in Government information restrictions. It appears there are 4 of prime importance: 2 statutes, a Presidential letter and an Executive order.

AUTHORIZED SECRECY

Executive Order 10-501 establishes the Nation's security system for protecting information affecting the national defense. The order represents an entirely suitable exercise of the President's power.

The President's letter of May 17, 1954, on the other hand, appears to represent the agencies' tendency to assume authority where the delegation is unclear. The letter authorized the Secretary of Defense to deny a single congressional investigating group specific information during the Army-McCarthy controversy. No fewer than 18 other departments and agencies are now citing this letter as grounds for denying data generally to congressional committees. The subcommittee believes this to be totally unwarranted, and draws support from an explanatory letter written by the President's special counsel declaring that the President was exercising a right which is his, and his alone.

The 2 statutes are title 5, United States Code, section 22, and title 5, United States Code, section 1002. The first, with a history going back to 1789, is the most widely used of all the authorities. Designed as a housekeeping statute, it gives department heads the power to write regulations providing for the custody, use, and preservation of their records. This innocuous language has given rise to a jungle of rules restricting congressional and public access to a vast variety of papers.

In drafting the second statute, title 5, United States Code, section 1002, its authors ordered the agencies to inform the public of their doings, but they created broadly phrased categories of exceptions to the rule. These exceptions have been expanded by usage to cover nearly any piece of paper an administrator might wish to shield from public view.

The subcommittee consequently concludes that delegations of authority to the agencies have been widely misused and inflated.

To carry its point further, the subcommittee asked the counsels of many departments and agencies to define the powers delegated by the four authorities. The appalling variety of the answers demonstrated the subcommittee's contention that the agencies were, in effect, making up their own law individually as they needed it.

The subcommittee has used two other devices to follow the legal arguments down to final reality—the law's effect on our national life.

Panels of specialists have been enlisted from the fields most immediately affected by Federal information restrictions. Groups of newspapermen and scientists have testified, and interested businessmen may be asked to do so shortly. A somewhat different panel was recruited among lawyers experienced in the field of Government information. Their opinions have added great weight to the subcommittee's legal findings.

These specialists are kept informed of the subcommittee's progress, and are regularly asked for further advice and opinion. They are able to show where inequitable information rules work their worst damage, and what implications lie in proposed changes. In this fashion, these expert advisers bring into perspective the concrete cases of unwarranted information restriction.

About 300 cases have been reported so far to the subcommittee by Congressmen and congressional committees, newspapermen, trade associations and even the agencies themselves. In each of these cases, someone has felt himself unjustly barred from information.

THE CASE METHOD

Generally they are referred to the agency involved, with requests for verification of the facts and for the legal justification. When the answering letter appears incomplete, or where the matter is too complicated to be covered by mail, hearings are called. The agency is asked to reconcile the concrete case of information suppression with its policy as stated in answer to the questionnaire.

It very often happens that this request results in the rewriting of agency rules. This happy solution is not always accomplished, however, and the subcommittee feels that changes must be made in the language of some of the original congressional delegations of power to the agencies, to clarify their proper purpose.

An amendment designed to return title 5, United States Code, section 22 to its original housekeeping role has been submitted to Congress. Proposals to improve title 5, United States Code, section 1002 are being contemplated, and freedom of information clauses are beginning to appear in other bills.

Amendments will be useful, but the real source of the problem lies deeper. It concerns the spirit with which the agencies read the statutes, and the attitude taken by administrators toward the public's right to supervise the Federal Government.

Ceylon Navy Veteran Helps to Save the Old "Big E"

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. O'HARA of Minnesota. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Ceylon Herald, Ceylon, Minn., dated April 4, 1957, entitled "Ceylon Navy Veteran Helps to Save the Old 'Big E' ":

CEYLON NAVY VETERAN HELPS TO SAVE THE OLD "BIG E"

Donations pouring into San Diego, Calif., from all over the Nation to save the World War II aircraft carrier *Enterprise* from the scrap heap and salvage her for a war memorial and museum are getting special attention in Ceylon. At least one local World War II veteran served aboard the *Enterprise* during most of her major battles in the Pacific theater of operations. He is Alfred "Bill" Beseman, today partially disabled from injuries suffered in combat aboard the "Big E." He was assigned to the ship shortly after the Pearl Harbor attack.

Efforts to save the great fighting ship were kicked off early last month by the colorful naval commander, Adm. William F. "Bull" Halsey, now retired, who used the Big E as his flagship for a considerable length of time. Halsey, in a television appearance on the "I've Got a Secret" program, keynoted the drive for $250,000 needed to pay for towing the ship from its present berth at Bayonne, N. J., to a permanent mooring near the Institute of Aeronautical Sciences building on Harbor Drive in San Diego. The *Enterprise* is the only pre-World War II carrier left.

In the ship's war diary, Then There Was One, Author Eugene Burns writes of the *Enterprise* as one of the Navy's greatest fighting ships, the first carrier to receive the rarely awarded Presidential citation. Of the seven first-line United States carriers when war began, four were sunk in the first year of the war, another saw action in non-Pacific waters during the period involved, and another was out of action at the decisive moment. The *Enterprise*, virtually alone, held the long thin Pacific line against overwhelming odds. The ship destroyed 911 enemy planes and 71 enemy ships and survived 19 engagements in the Pacific.

The book and all that has been written about the big carrier is sadly lacking in photographic records of battles and hardships, Bill Beseman says, because the carrier was never able to keep a photographer aboard for any length of time. With history-making action on all sides most of the time, eager photographers were exposed to the worst sort of peril and several lost their lives before even tripping their camera shutters. In many cases films were either destroyed or damaged.

Bill has responded to Admiral Halsey's appeal which includes a request for a flood of letters to President Eisenhower, the Vice President, and Congressman JOSEPH P. O'HARA.

Do It as Lawrence Has Done

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. LANE. Mr. Speaker, another tribute to the local initiative of Greater Lawrence, Mass.

This time from an editorial titled "Climate of Prosperity" that appeared in the Boston Herald on April 9, 1957.

To every community that may be marking time, or coasting upon its past achievements in this changing world, I recommend the Greater Lawrence Story, which is the basis of the Herald's comment.

Lawrence was a one-industry community.

When its textile mills closed down, or moved away, the need for providing a new and diversified industrial base, became critical.

How Lawrence met and conquered this challenge is a guide that should provide insurance for every community that may be similarly affected.

Find out how Greater Lawrence did it. Chambers of commerce, labor unions, and citizens committees for industrial development: Learn the lessons of Lawrence's economic recovery.

Under permission to extend my remarks, I insert in the CONGRESSIONAL RECORD the Boston Herald's editorial advice: "And if we are to succeed, we must do it as Lawrence has done."

CLIMATE OF PROSPERITY

At the advertising club dinner honoring Greater Lawrence's spectacular economic recovery A. I. M. President Kurtz Hanson described the great cooperative effort which Lawrence's own citizens made to attract replacement industries to its empty textile mills.

"Industries like people," he said, "want to be with a winner. We needed that first important breakthrough to convince prospects of the advantages we knew we had."

The breakthrough came when Western Electric decided to locate a big new plant in the area. Other industries followed, and Greater Lawrence, which 7 years ago was deep in the doldrums, is now well on the way to recovery.

But Western Electric's move wasn't just chance. The company was sold on the area by the community's energetic Citizens' Committee for Industrial Development. A climate of community responsibility was created. Lawrence's potential as an industrial site was analyzed and built up. The breakthrough was carefully engineered.

Surely there is a moral here for Massachusetts. The State as a whole has been through no such crisis as Greater Lawrence, which saw its principal industry suddenly shut down and put 20,000 people out of work. But the out migration of certain industries from the area has created a problem with which we all must wrestle. The Commonwealth is teetering between a decline and a new surge of growth. It, too, needs a breakthrough. It needs to convince industry that it is a winner.

And if we are to succeed, we must do it as Lawrence has done, not by bribes and cajolery, but by making an honest case for ourselves, by proving that we have something substantial to offer over the long term.

A major test will come when and if the Governor's new tax program takes effect. The additional revenues can be used to meet essential services and relieve the killing pressure which now bears on our property taxpayers. Or they can be frittered away without improving in any way the basic financial situation of the localities.

The way our communities choose may decide whether Massachusetts as a whole is classified in the winner or loser category seven or twice-seven years hence. It may decide whether our future climate is to be one of prosperity or failure.

The Lawrence story should be studied with the greatest care by every municipality in the Commonwealth.

The Forgotten Soldier

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

Mr. HENDERSON. Mr. Speaker, the following is a letter which I received recently from Mr. Frank J. Shurtz of Zanesville, Ohio in my congressional district, Mr. Shurtz' letter represents the thoughtful approach of an officer of a veterans' organization dedicated to the veterans of World War I, regarding legislation which this Congress will be considering:

WORLD WAR I BARRACKS 454,
Zanesville, Ohio, April 6, 1957.

The Honorable JOHN E. HENDERSON.

DEAR SIR: Time has faded many memories of the boys of 1917 who answered the call, amid the excitement and the fever of the day, to do their duty as they saw it.

Yes, the forgotten soldier, the boy of the First World War who marched away in 1917, with a prayer in his heart and a song on his lips that he would not come back till its over, over there.

Yes, he marched away to fight and die for a cause he though was right. Some never returned, but sleep eternally in Flanders Field.

It is now nearly 40 years since this same boy marched away. He was paid a dollar a day for his service. No; he didn't complain.

Now he is asking for an adequate pension to help sustain him in the remaining twilight years of his life.

Never before has Congress waited so long to take care of the soldier of previous wars—he has become the forgotten soldier.

The veterans of more recent wars have received much under the GI Bill and its related benefits. The years have taken their toll

of many First World War veterans, so it is only right and fitting for those remaining that they should receive a pension after waiting for so many years. Many are now disabled and cannot work.

We do ask that you as a Member of the 85th Congress give this your most sincere thought and careful consideration, so that the Doughboy of 1917 need wait no longer for the pension which he needs so badly.

Let us remember the soldier of 1917, who fought to make this Nation safe so that we now enjoy the peace and prosperity of 1957.

We know you will be proud to have been a Member of this 85th Congress, one that sees that the veteran of World War I is no longer forgotten.

We will greatly appreciate an early answer to this letter.

Yours very truly,

FRANK J. SHURTZ,
Vice Commander.

Amendment of Anglo-American Financial Agreement

SPEECH
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 10, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the joint resolution (H. J. Res. 72) to implement further the act of July 15, 1946, by approving the signature by the Secretary of the Treasury of an agreement amending the Anglo-American Financial Agreement of December 6, 1945.

The CHAIRMAN. The Chair recognizes the gentleman from Pennsylvania [Mr. FULTON].

Mr. FULTON. There is one thing we should recognize about this loan. It has been a pretty good business deal for the United States so far because in September of 1949, the British devalued the pound sterling by 30 percent, devaluing the pound from $4.03 to $2.80. That meant that this loan went up in value in British pounds and that we can call on the British taxpayers to produce from the original $3,750,000,000 translated into pounds, the larger amount of $4,875,000,000 worth of pounds, as this United States loan increased in value in pounds sterling by 30 percent or $1,125,000,000 worth of pounds sterling. As a matter fo fact, when Britain devalued the pound sterling in 1949, she did get some concession because on debts owing to other foreign nations in pounds that amount of $12 billion loans was reduced by 30 percent in value. And on this $12 billion original amount of British foreign loans there was actually a $3 billion credit. But, the United States came up with a gain on this loan of $1,125,000,000 added value in pounds just through that action of Britain in devaluation of the pound in 1949.

The statement is made that Britain is paying less taxes. In 1956, the United Kingdom was paying 29.7 percent of her gross national product in taxes at all levels of government against the United States paying 26.1 percent of its gross national product. Likewise, you hear that gasoline taxes are being reduced in Britain. For example, that Britian's Chancellor of the Exchequer just took off the 28 cents per imperial gallon gasoline tax put on in December 1956, because of the Suez situation, but it was not stated that this action still leaves 35 cents a gallon tax on gasoline. Would you like to be paying high taxes like that as Federal taxes on gasoline in the United States? Of course not. So the citizens of Britain are still paying higher taxes than we are in the United States.

Britain certainly should not be criticized when their representative government plans to come up with a budgetary surplus reducing many necessary governmental services, because that is what many of us Republicans believe is good for our own country as well as Britain. That is what Secretary George Humphrey believes will continue in the future to make Britain a good credit risk.

Mr. RIVERS. Mr. Chairman, will the gentleman yield?

Mr. FULTON. I yield.

Mr. RIVERS. I have heard it said that they were the highest taxed people in the free world. Is that true?

Mr. FULTON. They are among the highest taxed people in the free world, but of course get many services in return that in other countries, are paid for by individuals personally. So that factor must be taken into account in each country when speaking of the tax level. As to taxes, we in this country are going to reduce taxes and Government expenditures, I hope. We in this House have already voted almost a billion dollars' worth of budget cuts to date in the 85th Congress. Possibly we in Congress can come up with a United States tax cut and it will help the whole free world and make our economy better. Rather than criticizing Britain for her tax cuts and balancing her budget and coming up with a surplus, I think she is to be congratulated. We in Congress should follow the same course of sound governmental fiscal policy.

H. R. 6575: A Bill To Repeal the Colorado River Storage Project

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 26, 1957

Mr. DIXON. Mr. Speaker, a bill to repeal the Colorado River storage project, H. R. 6575, has been introduced into the House of Representatives. The author of the bill quoted Raymond Moley as saying that increased costs "obviously would now knock the roof off any past estimate."

This argument was utterly demolished by the opening of bids on construction of the giant Glen Canyon Dam. The lowest bid was not $25 million to $50 million higher than the Bureau of Reclamation estimate, as was predicted by those opposing the project. The winning bid of Merritt, Chapman & Scott was an astonishing $107,955,000, compared with the Bureau of Reclamation estimate of $135 million. This saving of more than $27 million is 25 percent of the cost of the dam.

In conclusion, I stress that construction of the Colorado storage project is proving itself more economic than ever, and I urge Congress to give full support for its rapid completion by appropriating at least the amount recommended in the President's budget.

Portrait of a Congressman

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article entitled "A Congressman's Day," by William Henry Chamberlin, which appeared in the April 5 issue of the Wall Street Journal.

This article concerns my friend and colleague, the Honorable CHESTER MERROW, of New Hampshire, who, in my mind, typifies all that is good in the body of men delegated to concern themselves with the weighty problems of the Nation and the world.

The article follows:

A CONGRESSMAN'S DAY—TYPICAL LAWMAKER PUTS IN LONG HOURS, INCLUDING STUDY OF LETTERS PROTESTING HIGH GOVERNMENT SPENDING

(By William Henry Chamberlin)

WASHINGTON.—What is a Congressman's day like?

It is an around-the-clock affair, if one may judge from the schedule of Representative CHESTER MERROW, serving his eighth term as one of the two Republican Members of the House from New Hampshire. A phone call to Representative MERROW's apartment shortly after 8 a. m. proved to be too late; he had already gone to his Capitol office.

From 8 until 10:30 there is mail (delivered four times a day) to go through; there are transcripts of testimony and committee reports to study. Representative MERROW is a member of the House Foreign Affairs Committee, and belongs to a subcommittee which deals with international organizations, such as the United Nations and its specialized agencies.

What seems to be most on the minds of Mr. MERROW's constituents? Many of his letters are of what might be called the bread-and-butter type—inquiries about veterans' compensation and housing loan conditions, requests for agricultural bulletins (the free seeds which Congressmen formerly sent to farmers have long been out), applications for employment in the Navy shipyard at Portsmouth, and the like.

"One of the most important parts of a Congressman's job," say Mr. MERROW, "is to be a liaison man between his constituents and the various agencies of the Federal Government."

VISITORS FROM HOME

There is also a good deal of calling by folks from his home district. These visits range in time and substance from that of the indi-

vidual who wants to shake hands with his Congressman and perhaps exchange a few ideas on public affairs to that of the group or delegation with an interest in favoring or blocking some piece of legislation. All receive as much attention as a busy working schedule permits; some are entertained at lunch in the House restaurant.

Public as well as private affairs figure in the mail which comes to the Congressman's desk. Like other Representatives and Senators, Mr. MERROW reports a considerable number of communications to the effect that taxes are too high, that the budget is too high, and that both should be cut.

"But people aren't always consistent," he adds. "In many cases, if you would ask the same man whether he wants Government spending cut and whether he wants an improvement, paid for out of Federal funds, for his hometown, the answer will be 'Yes' in both cases."

Committee sessions usually begin at 10:30 and the House is called to order about noon and sits, with some intermissions, until 4 or 5. If Congress does not always come up with the right answers, it is not for lack of intensive briefing.

Apart from the more spectacular committee sittings that make the headlines—such as the investigation of labor unions or the recent debate which preceded the acceptance of the Eisenhower doctrine, or, in the past, the televised McCarthy-Army hearings—a very large amount of information from Government officials is obtained for the work of the more important committees.

For instance, one high-ranking State Department official has been on the Hill for days on end giving a chronological record of the developments which led up to the current phase of what has been a chronic crisis in the Middle East.

EUROPEAN BRIEFING

Mr. C. Douglas Dillon, who recently took over as Deputy Under Secretary for Economic Affairs in the State Department after serving for several years as Ambassador to France, has been spending some time giving House Members a briefing on economic conditions and prospects in Europe. Indeed, what the average Congressman might complain of is not any dearth of information to guide his voting decisions, but the difficulty of digesting and mastering the bulky materials which are available.

The work of Congressman MERROW and his colleagues does not end when the House adjourns for the day. Apart from the extra hours that may be put in on committee hearings, there are frequently invitations by groups and organizations to dinners which serve as small forums where the Congressman may express his views.

A voluntary task which Congressman MERROW has assumed is the dispatch to a number of New Hampshire newspapers of a weekly report on his activities; he calls it Washington Summary. Here the New Hampshire voters get an account, boiled down to manageable size, of what the House Foreign Affairs Committee is doing. One of its most recent resolutions was in favor of the early admission of Spain to membership in the North Atlantic Treaty Organization and other European defense and economic organizations.

In the near future the Committee on Foreign Affairs will hold hearings on some questions of foreign policy in the town of Laconia, N. H., and Congressman MERROW hopes this will heighten awareness of the subject and popular interest. His mail contains a fair proportion of letters on foreign relations, although he does not report any overwhelming trend of approval or protest in regard to administration policies.

FOREIGN-AID FOES

Most of the mail he received on Tito's proposed visit to the United States and on the suggestion that sanctions might be applied against Israel was negative. He also gets a fair number of letters recommending cuts in foreign aid. Himself an Eisenhower Republican, as are most Members of Congress from New England, Mr. MERROW believes the case for foreign aid has not been adequately put to the people.

To cope with his mountainous mail and with the many chores of getting in contact with Government agencies on behalf of constituents, Mr. MERROW, whose salary is $22,500 a year following a recent raise, receives the standard allowance of $17,500 for secretarial assistance. A visit to his office during a typical working day gives the impression that both he and his assistants are kept pretty fully occupied.

Speech of Hon. Hugh Scott, of Pennsylvania, at 19th Annual Midwest Convention of the American Jewish Congress, April 7, 1957

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. SCOTT of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I am inserting excerpts from a speech made at the 19th Annual Midwest Convention of the American Jewish Congress in Chicago on April 7, 1957:

The compliance of Israel and the noncompliance of Egypt with resolutions of the United Nations stand in stark contrast.

Peace in the Middle East can never be achieved by appeasement of defiant dictators.

The refusal of Egypt to permit passage of Israeli ships through the Suez Canal and Egyptian threats to deny the right of innocent passage through the Straits of Tiran are in direct contravention of the established United Nations position. United States policy affirmatively supports the right of Israeli shipping to use both waterways.

This is clearly stated in the letter to me of March 27, 1957, from Under Secretary of State Herter:

"We believe that Israel-bound shipping should enjoy the right of free and innocent passage through the Straits of Tiran. We also believe that Israel shipping should enjoy the right of passage through the Suez Canal. We have made our position on these points clear, both in public and in our relationships with the States concerned."

It is my opinion that the United Nations General Assembly should be convened to consider the implementation of the rights of all nations to waterways that are legally free under international law. Nasser's defiance of the United Nations ought to be disposed of now by that body. The United Nations should be no less prompt to act now to preserve the peace than it was last November.

If the United Nations will not act, by appropriate resolutions, to be followed (in the event of Egyptian defiance) by resort to United Nations forces or by sanctions against Egypt, then those nations which sincerely desire to avoid war in the area must consider what they will do to bring Nasser to his senses. This includes the United States.

Timely concert of action by the Western nations is much to be preferred to the alternative that Israel, in desperation, may resort to the international law doctrine of self-help.

To begin with, Nasser's bluff can and should be called. He has already played roulette with Russian chips and Marshal Zhukov has seen them disastrously expended across Sinai. It is unlikely that the Soviet will repeat such a bad gamble as to provide so bad a risk with a new stack of costly blue chips.

Moreover, Nasser cannot be sure of his other former friends. His only sure ally is Communist-infiltrated Syria. His reach for dominance of the Arab world has lost millions in oil revenues to his increasingly skeptical Arab neighbors.

Nasser's terms for one-man rule of the Suez Canal are those of a blackmailer and extortioner. His proposals would leave the area in a situation worse than the conditions prevailing prior to the intervention of the United Nations. But the United States is committed to the position stated by Ambassador Lodge that a return to the status quo would be most unsatisfactory to the United States.

Therefore, in default of effective United Nations action, the United States should adopt measures of economic pressure against a dictator who will not listen to reason, but who might be compelled to react to strong economic pressures, resolutely applied.

Therefore, all United States aid in any form whatsoever should continue to be denied to Egypt. At the same time, loans and technical assistance should be made immediately available to Israel. This includes restoration of the grant to Israel proposed October 2, 1956, of $25 million of MSA funds and it includes necessity for early departure of the United States mission to confer on the need for a $75 million United States Export-Import Bank loan.

The surplus food distribution program to Israel should be resumed, and there is good reason to believe that this will shortly take place. Israel will accept approximately 100,000 refugees this year from Hungary, Egypt, and other Iron Curtain type countries. This food program is therefore critical.

There are other economic pressures available against Nasser. There is the right to bypass American shipping (as well as British and French shipping) until the loss of canal revenues squeezes the Egyptian Government into economic grief.

There is the increasing likelihood of the use of larger and faster tankers some of which are now being constructed and others are in the planning stage.

Offering prospects of quicker relief from oil shortages are new pipelines bypassing the Canal, and wherever feasible, bypassing certain of the more volatile Arab States.

Some of these measures are expensive, but it is questionable whether the pursuit of means to make the Western World free of Nasser's dangerous tactics could possibly be as expensive as would be a surrender to the tyranny of a tinpot dictator, acting from a heart regardless of international consequences and evilly bent on mischief.

However costly the application of courageous tactics now may prove to be, they are certainly infinitely less costly to the United States than for us to be pitched into a war involvement through failure to act promptly and wisely to avert the consequences of the scheming folly of a power-crazed and irresponsible Arab dictator with a powder keg in one hand and a match in the other.

Forced Relocation Compensated

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. SANTANGELO. Mr. Speaker, I have this day introduced a bill to provide that business concerns which are dis-

placed by low-rent housing projects shall be compensated for the cost of relocation, together with a percentage of the loss of good will caused by their forced relocation.

It has been brought to my attention that many small businesses have been completely destroyed and uprooted by the construction of public housing projects. Inadequate provision had been made for their relocation in the area and no provision has been made for the loss of businesses which have endured for many years. Communities have been changed and people thrown to the winds.

Recent editorials have demonstrated the impact of housing projects on small-business concerns and the hardships which small owners have been compelled to undergo because of forced evictions. Urban relocation programs provide for compensation to these small-business men who have been displaced involuntarily. A decent respect for the problems of the small-business man reimbursement in part to these people who through no desire or voluntary conduct on their part have been uprooted and cast aside.

My bill provides that in addition to the direct property losses sustained by small-business men that these uprooted businesses shall be compensated for their moving expenses and 1 percent of the average of the past 2 years' gross business. In this wise, the hardships will be softened and justice will be done.

Minnesota State Legislature Again Speaks on Behalf of the Family Farm

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mrs. KNUTSON. Mr. Speaker, again the Minnesota Legislature speaks out on behalf of the family-farm unit. In its resolution of April 8, the Minnesota Senate says:

It is recognized by all that the time-proven family-farm unit must continue as the basic social and economic unit of agriculture and that, accordingly, farm policy must assist such farms in achieving standards of farm living equal to those enjoyed by other Americans.

To those of us from America's farm areas, this is so obvious that it continues to startle—not to say, shock—us to find that others, notably the administration's farm program administrators, are not aware of this single truth.

Under leave to extend my remarks I ask permission to insert this fine resolution of the Minnesota State Senate of April 8 relating to family farms and agriculture:

Resolution relating to family farms and agriculture

Whereas it is recognized by all that the time-proven family farm unit must continue as the basic social and economic unit of agriculture and that accordingly, farm policy must assist such farms in achieving standards of farm living equal to those enjoyed by other Americans; and

Whereas agricultural policy in this country has sought to foster family sized, owner-operated farms, which has proved to be a sound and wise policy, since it has developed an efficient agriculture unparalleled in the entire world; and

Whereas present farm price levels are inadequate because they tend to increase the disparity between farm income and farm operating costs; and

Whereas this disparity in farm purchasing power if permitted to continue, reflects itself not only in economic distress for farmers, but in reduced retail sales, employment, and industrial activity; and

Whereas the present unfavorable economic conditions in agriculture make it extremely difficult for young people to establish themselves in farming as their life's work: Now, therefore, be it

Resolved by the Senate of the State of Minnesota that we favor legislation to accomplish the following purposes:

1. Providing supports to assure favorable prices and income to producers of major farm commodities, using whatever methods may be most practical, such as loan and purchase programs, incentive payments, surplus removal measures, promotion of exports, or a combination of these measures. As far as possible, farm support programs should be placed on a self-regulating and self-financing basis.

2. Continuing, expanding and improving the soil-bank program as a soil conservation measure and as a supplement to price programs, by including the feed grains and other major field crops in the acreage reserves; by requiring soil conservation practices upon acres placed into the acreage reserve; and by requiring participation in the soil bank as a condition to eligibility for price support.

3. Establishing a specific national policy regarding the size of food reserves which should be maintained in the national interest.

4. Providing for greatly expanded research programs to study agricultural marketing and price problems and to develop new uses and new markets for farm products.

5. Providing price protection on the perishable farm products such as milk, meat, butter, poultry, and eggs, which are so important in our diversified farming economy, wherever purchase and storage measures are effective as a support measure.

6. Providing the initiative, both with leadership and funds, in carrying on effective farm credit, soil conservation, crop insurance, REA programs, and programs to promote the consumption of a proper diet among our aged, our schoolchildren, our low income groups and those in institutions; and be it further

Resolved, That the administration of farm programs at the county and community level be fostered in every way by legislative and administrative policy, specifically, safeguarding the right of farmers to elect their own committees, and to operate the county offices and programs in a manner consistent with law and regulations; and be it further

Resolved, That the Congress of the United States give the farmers some relief from the high cost of operation by repealing the 3 percent excise transportation tax immediately; and be it further

Resolved, That the secretary of the senate be directed to forward a copy of this resolution to the chief officer of the House of Representatives and the Senate of the United States Congress; be it further

Resolved, That the secretary of state be instructed to transmit copies of this resolution to the President of the United States, the Secretary of Agriculture, and to each Member of Congress from the State of Minnesota.

Adopted by the Senate, State of Minnesota, April 8, 1957.

H. Y. TORRET,
Secretary of the Senate.

Interview Between Congressman Farbstein and Robert Spevak, New York Post, for Broadcast Over WMCA, New York, April 7, 1957

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 21, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following interview which took place between Mr. Robert Spevak, of the New York Post, and myself on April 7, 1957:

Mr. SPEVAK. Reporters, I know, are supposed to be hard boiled men and indifferent to peoples feelings; but I can tell you from my own experience that it is never pleasant to report from the Capitol of the United States about duplicity and double standards of political morality where they involve Government officials. We all know that it exists to some extent but this past week we've been treated to such a large dose of it from persons in high office that it just can't go by unnoticed.

Secretary of State Dulles was asked to explain comments by a friendly biographer that he deliberately provoked the Aswan Dam crisis in order to call Russia's bluff on economic aid to Egypt. Dulles said in reply, "I think that question could be answered in the negative," but he did not answer it in the negative. In his own fashion Secretary Dulles left the story substantially unchallenged. At his weekly press conference the President was twice asked what this country plans to do about Dictator Nasser's continual flouting of the U. N., and failure to permit Israel to pass through the Suez Canal. The President gave what I consider a disjointed answer which added up to exactly nothing.

David Ben-Gurion, it seems, never informed the President in their correspondence that Suez was in any way involved. So it seems we are not prepared to do anything about Nasser on this score either. I have asked Congressman LEONARD FARBSTEIN, of Manhattan, here today to discuss another example of high moral pronouncements by United States officials and the failure of this Government to do anything about them, namely the forced exodus of thousands of Jews from Egypt.

Congressman FARBSTEIN. I understand you have a bill in on this subject. Just what are you proposing?

Mr. FARBSTEIN. Well, Mr. Spevak, I might say that it is singularly appropriate that this question is raised now, just prior to the beginning of the Passover period commemorating the exodus of the Jews from Egypt thousands of years ago. I introduced in the Congress a resolution to the effect that it is the sense of the Congress that the treatment of the Jews in Egypt recently, constitutes persecution because of race, religious beliefs, or political opinion. Further, it violates the human-rights sections of the United Nations Charter. I feel that this resolution should be passed by the Congress; and I feel that the United States should publicly do what it can toward ameliorating this situation. I feel further that the

United Nations should pass a resolution calling upon Egypt and Nasser to discontinue their acts.

Mr. SPEVAK. Well, Congressman FARBSTEIN, in discussing this matter I think probably both of us would agree that it is important to keep several facts in mind, sort of background matter.

No. 1 of these facts is that the Israeli Army entered the Sinai Peninsula on October 29, 1956.

No. 2 is this. On November 1, 1956, 72 hours later, the Egyptian Government promulgated a series of decrees and among them were the denationalization of certain Egyptian citizens, mostly Jews.

No. 3. Within 5 days the U. N. cease-fire was accepted by the belligerent parties.

No. 4, and what I think is most important, Egypt kept these decrees in effect and in fact I believe has them in effect right up to the present time. Yet by the middle of last November it was already evident that Egypt intended to exploit the brief hostilities to despoil and ultimately destroy its Jewish community.

Now Congressman FARBSTEIN, you're a member of the House Foreign Affairs Committee a great distinction, I might add, for a freshman Member of Congress.

Mr. FARBSTEIN. Thank you.

Mr. SPEVAK. Now can you tell us, Congressman Farbstein, how you feel about this question? Some people think that the Jews brought this matter all on themselves.

Mr. FARBSTEIN. Well, frankly Bob, I can't understand how anyone with any degree of intelligence could possibly say any such thing because anyone who is knowledgeable in the least would know that Nasser has constantly been declaring the fact that he is at war with Israel. He has been actively blockading Israel both in the Suez and the Gulf of Aqaba. Now, a blockade itself is an act of war, and preventing Israel from using the Gulf of Aqaba for innocent passage of ships was such an act of war. Proclaiming its rights of belligerency and preventing Israel's use of the Suez, these are all acts of war. How could Israel, therefore, justifiably be called an aggressor? Must a man wait until he and his family are annihilated by gangsters who have continually threatened his life and that of his family and are purchasing weapons to carry out their threats in full view of his proposed victim? Or should he do what any prudent man would do?—Move against his adversary before he is destroyed? That is all Israel did. Israel moved before Nasser had an opportunity to build up enough hardware to annihilate her people and to drive them into the sea as he and the other Arab people had been saying.

Mr. SPEVAK. Well, Congressman FARBSTEIN, you use the word gangsters. Now do you think that there are any parallels, or do you find any parallels, between the techniques used by Hitler against the Jews. You remember his so-called aryanzation program and what Nasser calls his Egyptianization program.

Mr. FARBSTEIN. It's very obvious that Nasser learned from Hitler. He has gone even further than Hitler went. Hitler started this thing anew. It is my belief that Nasser with the benefit of people in his employ, who are former Nazis like Otto Remer, and Vonleers, had this thing prepared long, long before the adventure into the Sinai. As a matter of fact these decrees, as you suggested earlier, were promulgated within 2 or 3 days after Israel, to protect itself, ventured into the Sinai.

Mr. SPEVAK. Do you think they expected this?

Mr. FARBSTEIN. Well, of course, they were only looking for some means whereby they could oust the Jews out of Egypt just the same way they had prepared for the nationalization of the Suez.

Mr. SPEVAK. You don't think the invasion took them by surprise?

Mr. FARBSTEIN. Of course it did, yet this was all planned. They were only looking for a pretext, as you just mentioned, to come in and start acting against the Jews to drive them out, to pauperize them, to denationalize them, and the various other things that were done against the Jews and are still being done.

Mr. SPEVAK. Now as you noted a moment ago, it is very close to the Passover season. Ironically we find a new exodus from Egypt thousands of years after the original exodus. But I just wonder if there isn't 1 difference here or at least 1 similarity with nazism. I've seen reports that Nasser has seized Jewish hostages from many of the families that he has ordered deported. In other words he is holding some back, I presume, for blackmail purposes or in order that people who leave the country don't talk too much about what is going on in there. Now does that jibe with the information that you have?

Mr. FARBSTEIN. Oh, yes; there is no question about it, as a matter of fact, not only information that has come to me but which has appeared in the public press. One of the reporters who works for your own newspaper wrote quite an article on that. It appeared in the Times. I believe it is common knowledge, not only the knowledge that I may have personally.

Mr. SPEVAK. Now I want to ask you one thing, getting back to this matter of whether Israeli Jews are responsible for the plight of Egyptian Jews. Have Egypt's Jews been active in Zionist causes?

Mr. FARBSTEIN. Why that's ridiculous, Families that are being persecuted by Nasser today are amongst families that have lived in Egypt for almost 2,000 years. These families that have lived there for generations are being persecuted just the same as stateless Jews. All this is a pretext. As a matter of fact the Jews that were in Egypt were particularly careful to see to it that they in no way could be connected with Israel or with Zionism because they knew that the only method that they could have of retaining their livelihoods and their very lives was by keeping away and steering clear of any semblance of friendship for Israel or for Zionism.

Mr. SPEVAK. Well, that jives with information that we have too. Of course, you probably run into this, that Nasser claims he is not against Jews but acting only against Zionists. I've run into that with other Arab spokesmen too. Now there are some people who regard this as a not too clever semantic maneuver. But from what all we have been able to gather is that the 50,000 Egyptian Jews were not active in the Zionist cause although they were very close to Israel in the physical sense. I noticed in a little booklet put out by the American Jewish Congress called The Black Record: Nasser's Persecution of the Egyptian Jewry, that this point is stressed quite emphatically. Now what other ways do you know of that the Egyptian Government is persecuting Jews—I mean that have come to your attention?

Mr. FARBSTEIN. Well, of course, what they are doing is they are depriving those who are remaining in Egypt of their livelihood. They are telling firms that if they retain Jewish employees they won't allow them any export or import licenses. They are denationalizing the firms that are doing business in Israel, making it impossible for the survival of the people who live there. As a matter of fact what they are doing is they are expelling people who live in Egypt making use of hostages so that others, as you suggested, of their families won't advise the world of what's going on. The things that they are doing are very similar, as a matter of fact, even worse, as I said before, than those things that were done by Hitler. And I think it is an outrage.

Mr. SPEVAK. Now Congressman FARBSTEIN, its always very nice for Congress to pass resolutions expressing sympathy with the Egyptian Jews or with any other persecuted people. But what else do you think might be done for them and also what do you think are the, in general at least, needs to be done so far as future relations with Israel are concerned?

Mr. FARBSTEIN. Aside from the fact that there should be a public expression by the President and also a resolution passed by the United Nations calling upon Mr. Nasser to discontinue his depredations, I feel that in a broader sense what this country should do is in its mutual security law make a token grant-in-aid toward the building of a 16-inch pipeline from Elath to the Mediterranean. That will make evident that this country doesn't intend to remain at the mercy of Nasser insofar as the use of the Suez Canal is concerned, so that oil transshipment will not again be interfered with—to show this country intends to stand by its moral commitment to Israel. And also so that the countries in the area whose leaders fear the street mobs under Nasser's influence may clearly understand that it is our desire, our sincere desire, for them to make peace with Israel. And when these street mobs and the people who control the various other governments that surround the Arab Governments that surround Israel realize that this country is truly behind Israel, I think that a better attitude will be taken by them and that there will be a greater opportunity for peace.

Mr. SPEVAK. Well, if I may then summarize what we have heard from Congressman FARBSTEIN is this: The physical survival of one of the oldest and most peaceful religious communities of the world is at stake. But strangely the Eisenhower doctrine doesn't seem to cover the subject. The President said at his Wednesday press conference that he will not speculate upon the character and reliability of Dictator Nasser.

So the question I guess remains what it has been here in recent weeks, where to drift from this point on? It's not a very pretty picture it seems to me that we painted here but it's one that does command immediate attention.

This is Bob Spevak in Washington returning you to our studios.

Reuther's Boycott of the Kohler Co.

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 9, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the Reverend Edward A. Keller, professor of economics, University of Notre Dame, has written a most interesting article for Human Events magazine.

Under leave to extend my remarks, I am including the article at this point so that the people of the United States may know the facts on the Kohler boycott as revealed by Reverend Keller.

Notwithstanding Reuther's violent methods, the Kohler Co. continues as one of the leading industrial organizations in this country.

The article follows:

[From Human Events of February 23, 1957]

CAN REUTHER'S BOYCOTT BRING KOHLER TO ITS KNEES?

(By Rev. Edward A. Keller, C. S. C.)

"It seems to me that it is almost sinful to have any labor dispute degenerate to the

point this one has—where we actually have to wreck the company. That's what we're doing, wrecking the company."

So spoke Don Rand, international representative of Walter Reuther's UAW, to a reporter of the Wall Street Journal (August 9, 1956). Rand was referring to the UAW national boycott of the Kohler Co., the second largest manufacturer of plumbing ware in the United States.

Fifteen regions across the country are said to have full-time special representatives seeking support for the boycott. In addition, 65 strikers are employed in Sheboygan, Wis., to prepare and disseminate boycott leaflets and pamphlets. The UAW is attempting to enlist the support of other unions, employers, contractors, and architects in its boycott effort. UAW representatives also seek to persuade city councils, county boards, and some State legislatures to adopt resolutions directing their purchasing agents not to buy Kohler products, and not to contract with builders who submit bids based on use of Kohler products. The boycott resolutions vary in certain particulars, but usually they mention Kohler products; they also urge boycotting of employers found guilty of unfair labor practices by the National Labor Relations Board. In some instances the reslution urges a boycott of any employer against whom charges have been preferred by the union, and against whom the NLRB General Counsel has issued a complaint.

The following language from a resolution introduced in the Minneapolis City Council is an example of such a broad resolution:

"No bids for materials, supplies or merchandise of any kind of nature for any department under the jurisdiction or supervision of the city council shall be accepted unless such bids contain the following provision: That any labor troubles or disputes, actual or threatened from whatever cause arising, and whether or not the demands of the employees involved are reasonable and within the power of any party to bid or contract to concede * * * shall excuse the city, at its option, from the performances of any unexecuted contract or bid or any unexecuted portion of such contract or bid, and the city shall not be liable in damages because of its action taken pursuant to the terms of this ordinance."

Nine Government bodies have adopted boycott resolutions.[1] The legality of such ordinances is highly questionable because most States require awarding of a contract to the lowest bidder. Even if legal, such a broad and loosely worded resolution as that quoted above should be opposed because it would force every contractor to grant any union demand, no matter how unreasonable if he hopes to obtain a contract from the city.

The UAW boycott of Kohler products is a significant modern development in the American labor movement. Union boycotts have generally been a weak weapon in the union's arsenal, but since the merger of the AFL and CIO the boycott may prove to be a potent weapon in forcing an employer to grant the demands of a union when strike and picket lines have failed. Boycott director Rand admitted as much when he stated that "this is the most comprehensive boycott ever organized by labor because we now have the full weight of the combined AFL-CIO with us."

The open declaration of intention by the UAW-CIO "to wreck the [Kohler] company"—which employs some 3,000 workers, supplies products of which customers highly approve, and furnishes the Nation with vitally needed defense products—poses the question of why a union feels it has the right to wreck a company which it has been unable to force to accept its demand by a strike. Only one answer, apparently, is indicated: The UAW is making the Kohler boycott a test case to prove its power of compelling obedience by a threat of destruction.

If the UAW boycott against Kohler is successful, no employer, no matter how big or strong, would dare resist the demands of any union, with the threat of destruction hanging over him at the bargaining table. The destruction of the Kohler Co. by boycott would demonstrate the complete monopoly power of the UAW-CIO. This is why the entire Nation has a vital interest in this long drawn-out, complicated labor dispute.

A short chronology will sketch the background of the boycott. In the fall of 1933 the Kohler Co. was organized by an independent union, the Kohler Workers' Association. The AFL attempted to organize the company in 1934. Despite a strike, accompanied by mass picketing and violence, which resulted in 2 deaths and injury to over 40 persons, the AFL lost. From 1933 to 1952 the Kohler workers were represented by the independent union. In 1951 the UAW-CIO made its first attempt to secure representation status, but lost the NLRB election to the independent union. The UAW made a second try in 1952, winning the election with less than a 4-percent margin of votes.

On February 23, 1953, the first contract with the UAW was signed by the Kohler Co. Its expiration date was March 1, 1954. Three months before the contract ran out both the union and the company gave notice of termination of contract at the date of expiration. Negotiations on a new contract were begun.

The union operated for a month without a contract. The strike was called on April 5, 1954. The number on strike has been reported to be, at its highest, around 2,500. On the day the strike began a reported 2,500 pickets massed in front of the plant gates. Production was halted for 54 days. Village police appeared to be unable, and county police appeared to be unwilling, to deal with the mass picketing and the attending violence.

The company refused to carry on negotiations as long as mass picketing and violence continued, holding that coercion of this kind prevents genuine collective bargaining. The company asked the Wisconsin Employment Relations Board, the State counterpart of the National Labor Relations Board, to order the union to cease and desist. Wisconsin's so-called right-to-work statute states:

"Any person who by threats, intimidations, force, or coercion of any kind shall hinder or prevent any other person from engaging in or continuing in any lawful work or employment, either for himself or as a wage-worker, or who shall attempt to so hinder or prevent shall be punished by fine not exceeding $100 or by imprisonment in the county jail for not more than 6 months or by both fine and imprisonment in the discretion of the court." (Section 343.683.)

The WEBR found the union guilty of illegal picketing and ordered it to cease and desist. Despite the WEBR order, the union continued its illegal activities, and on May 24, 1954, a riot occurred in which violence against both nonstrikers and policemen took place. When the WEBR asked a circuit court to enforce its order against the union, the union stated it would henceforth comply.

The UAW appealed the WEBR order on the grounds of pre-emption by the Taft-Hartley Act, since the Kohler Co. operates an interstate business, and also applied to a Federal court for an injunction to prevent the WEBR from proceeding. The Federal court found against the union, as did the Wisconsin supreme court, whose decision was appealed by the UAW to the United States Supreme Court. On June 4, 1956, by a 6 to 3 decision, the United States Supreme Court upheld the Wisconsin supreme court.

In the decision, the majority of the Supreme Court justices declared that the dominant interest of the State government in the presence of violence and property damage cannot be questioned, and that the State should be able to take action to stop violence, even though the union commits a Federal unfair labor practice which would normally come under the jurisdiction of the NLRB. The Court declared that the States "are the natural guardians of the public against violence."

When mass picketing ceased a sufficient number of workers crossed the reduced picket lines so that production could be resumed. Last spring, after being out on strike for 2 years, the UAW practically admitted the strike was lost when it told the strikers to look for other jobs. At the same time strike benefits were stopped except for the strike leaders and emergency cases. Spasmodic token picketing still continues. With the cessation of violence on the picket line, vandalism at the homes of some nonstriking workers increased. The number of such acts is reported to have been between 700 and 800. The UAW disavows agency in these home demonstrations.

The importance of victory to the UAW in this dispute is indicated by Emil Mazey, secretary-treasurer of the UAW-CIO, who in December 1956, at a meeting of civic clubs in Detroit, stated that the Kohler strike, now in its 34th month, had cost the UAW $10 million; he further stated: "If the more than 2,000 Kohler strikers paid dues to UAW for 250 years it would not make up for the amount the union has spent at Kohler."

Meanwhile, the UAW has conducted a legal counterattack against Kohler. On July 12, 1954, the union filed charges before the NLRB, accusing the company of a variety of unfair labor practices. The NLRB hearings, which opened on February 8, 1955, have not been terminated because they wait upon the testimony of a witness (John Gunaca) who fled to Michigan to avoid standing trial in Wisconsin on a charge of felonious assault. Michigan's Governor Williams has refused to extradite this witness to Wisconsin to stand trial. The NLRB subpenaed Gunaca to testify in the Kohler case about a year after he went to Michigan and now agrees to take his testimony somewhere in Michigan.

In October 1956 the NLRB's trial examiner, George A. Downing, dismissed the alleged charges of unfair labor practices on the technicality that the UAW trustees had failed to file non-Communist affidavits required of them as officers of the union under the Taft-Hartley Act. The NLRB had refused to drop charges on similar grounds previously. It ruled that Robert Burkhart, a UAW international representative who was in charge of both the bargaining and the strike, was not an officer of the UAW because the UAW's constitution does not designate international representatives as officers. The UAW appealed Downing's decision to the NLRB. On February 8, 1957, the Board overruled Downing, stating that "it is not for the Board to determine who should be the union's officers on the basis of the precise duties they perform." The case has been remanded to the trial examiner, to be heard on its merits.

---

[1] Lincoln Park, Mich.; River Rouge, Mich.; Bristol, Conn.; New Britain, Conn.; Massachusetts House of Representatives; Boston, Mass.; Lynn, Mass.; Worcester, Mass.; Los Angeles County, Calif.

Resolutions were proposed but not adopted in the following 14 cities: New Haven, Conn.; Norwalk, Conn.; New Bedford, Mass.; Eau Claire, Wis.; Fond du Lac, Wis.; Green Bay, Wis.; Jonesville, Wis.; Jefferson, Wis.; Salem, Wis.; Sheboygan, Wis.; Stevens Point, Wis.; Wawatosa, Wis.; Virginia, Minn.; Pueblo, Colo.

In two cities, Milwaukee and Minneapolis, resolutions have been proposed but not acted on. Significantly, three cities—Waterbury, Conn.; Menasha, Wis.; Ansonia, Conn.—have rescinded resolutions which had been previously adopted.

As this complex legal maneuvering goes on, the workers at Kohler are denied their right either to decertify the UAW or to be represented by another union. A representation election cannot be held by the NLRB until final decision is rendered on the charges of unfair labor practices.

Because of the far-reaching nature of the UAW-Kohler dispute, the main issues involved need some explanation. The following comments are a personal evaluation of the issue as they have been publicized by both sides.

1. The main issue at present is the rehiring of the strikers, especially the 90 whom the company discharged for alleged violence on the picket line. These include many of the union officials and all of the executive committee. The union contends they were discharged for union activity. The NLRB General Counsel's office has dropped the cases of 18 of the 90 and is now proceeding on 72. The union also insists that the remaining strikers—somewhere between 1,600 and 2,500—be rehired. This obviously would require the Kohler Co. to discharge the employees hired to replace the strikers. The company refuses, contending that the workers were not hired as strikebreakers but as permanent employees who voluntarily sought employment at Kohler. The solution to this problem will depend upon the determination by the NLRB of whether the dominent strike issue was economic or unfair labor practices. Under the Taft-Hartley Act, the employer is not obligated to rehire "economic strikers" who have been replaced. If, however, the cause of the strike is unfair labor practices, even when it is not the sole cause, the NLRB could order the company to rehire the strikers with full seniority and at the expense of those who displaced them. This would be true, also, if the strike were begun for economic reasons and then turned into an unfair-labor-practice strike by the employer's conduct. However, any employee loses his right to reinstatement if he engages in violence in a labor dispute.

The UAW accuses the Kohler Co. of refusing to bargain, an unfair labor practice, and blames the breakdown in collective bargaining on an alleged adamant antiunion stand taken by the Kohler Co. The NLRB will have to decide whether the Kohler Co. refused to bargain in good faith or merely engaged in hard bargaining. It would seem that the willingness of the Kohler Co. to renew the old contract without change for 1 year, and their offer of 4 drafts of a new contract do not indicate either a refusal to bargain or a dominating passion to bust the union.

2. Among the main original demands of the UAW in negotiations was compulsory unionism, in the form of the union shop and maintenance of membership. The Kholer Co. refused to grant either a union shop or maintenance of membership, taking the stand that while they acknowledged the right of their workers to belong to a union and bargain collectively, they felt they had no right to force their employees, by a union-shop contract, to join a union. Although compulsory unionism was originally a main issue, the UAW has dropped the union shop, while continuing its maintenance of membership demand.

3. Arbitration has been another hotly contested and highly publicized issue. Outsiders offered the suggestion that the issues in dispute be arbitrated. The company refused to arbitrate the writing of the contract, rightly contending that this would amount to a delegation of management to a third party, who had not the necessary knowledge to rule intelligently on the issues. Most management in the country would stand side by side with the Kohler Co. on this issue.

An arbitration clause had been incorporated in the first contract signed by UAW with the Kohler Co. However, the company insisted that arbitration be limited to interpretation and application of the contract. The union contended this was not enough and demanded that grievances, especially grievance discharges, be submitted to arbitration. The union could point to many companies who do arbitrate disputed discharges; in fact, it has become standard procedure in most contracts.

4. Another issue arose in this same area. The union demanded comanagement in the form of veto power over or a sharing in the decisions of management, even going so far as to demand the right to veto the subcontractors employed by the Kohler Co. Mr. Herbert Kohler correctly contended this could destroy competition and lead ultimately in this country to a European type of cartel arrangement.

5. Seniority was still another basic issue. The union demanded straight seniority on layoffs, rehiring, promotions and discharges with superseniority for union officials. Strict seniority is very debatable. The CIO is dedicated to it, and therefore opposed to incentive systems and merit increases. The Taft-Hartley Act forbids an employer to grant merit raises to a worker (even to a nonunion worker in an open shop), without the permission of the union where it has won bargaining rights. The purported purpose of this requirement is to prevent an employer from weakening the union by favoritism; the real effect is to destroy worker incentive and to bolster the union's contention that all employers exploit their workers and that only through the union can the workers obtain anything from their employer. This does not work to the interest of the worker but serves to make real the fiction of Marxian class struggle.

The Kohler Co., however, can be accused of being too rigid in its attitude toward seniority. Some companies permit a modified seniority but do not allow plantwide seniority, thereby preventing the evils of plantwide bumping. In defense of the Kohler Co., it should be pointed out that the company has not laid off a permanent employee in 20 years. Not hampered by rigid seniority, the company was able to move workers about the plant to jobs where the men could best be utilized, instead of laying them off as straight seniority might require.

It is interesting to note that the above issues were in the noneconomic area and that the two main economic issues, wages and pensions, were pushed to the background. In this significant fact, a key to the stalemate can possibly be found and a glimpse into the future of labor-management relations obtained.

Unions increasingly emphasize noneconomic issues because they cannot seriously contend, except for propaganda purposes, that the American worker receives subnormal wages. The constant expansion of the scope of collective bargaining beyond the bread-and-butter issues of traditional American unionism is indication of a strong union drive toward comanagement.

The economic issues can be played down because even the union admitted that wages were not a serious issue in the dispute. Moreover, it is a fact that the Kohler Co. installed a pension system before the UAW came into being and that its present pension system, while voluntary and a jointly contributory system, is in many respects more generous in its provisions than the standard UAW–CIO pension plan the union wishes to substitute for it.

The UAW-Kohler dispute indicates the need for amending the Taft-Hartley Act:

1. The secondary boycott provisions of the act should be strengthened to make illegal any secondary boycott—whether directed at employees, employers, or Government bodies. This is needed because of the potential monopoly power inherent in the merger of the AFL and the CIO.

2. Secondary picketing—that is, picketing at any site other than that of the original dispute—should also be made illegal. Secondary picketing is a most effective means to enforce a secondary boycott. Also, picketing should be limited to employees of the company with whom the union has a dispute. This would prevent much violence on the picket line by eliminating the trained "educator squads," who too often are the instigators of violence in a labor dispute.

3. The act should clarify the officer issue. Congress, if it intended to prevent Communist influence from dominating unions, must have intended that those who function as officials by leading negotiations, strikes, etc., should file anti-Communist affidavits. The constitutional test adopted by the Board seriously weakens this section of the act.

Appropriate or Else

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. SANTANGELO. Mr. Speaker, as a person who recognizes that the post-office system is vital to our economy as well as a wonderful method of communication, I am deeply disturbed by the threat to curtail these essential services of the post office.

I deplore the inability of the administrator to conduct a department within the appropriations fixed by the Congress.

Services must not and will not be curtailed.

I believe the following editorial will make interesting reading and will eliminate the confusion which attended the threats by the Postmaster General and the congressional statements refusing to be blackjacked into giving a deficiency appropriation of $47 million:

FIRST-CLASS FIX

Postmaster General Arthur E. Summerfield is in a terrible fix. He is running out of money and insists he will have to reduce mail service in 7 different ways unless Congress gives him $47 million more to add to the $3 billion he has already been granted. Last week he served Congress with a 48-hour ultimatum to cough up the extra money or he would do a lot of things to inconvenience 170 million Americans.

Whether or not the boss of the post office carries out his threat of reduced service effective Saturday, his actions smack of a grandstand play. The fact is he overspent the funds granted him by Congress, then insisted the legislators give him more money, and practically overnight.

The Constitution leaves to Congress control over the purse strings. Even the President has to depend on congressional appropriations to run his office. Perhaps Mr. Summerfield should be reminded that while the bureaucrats can propose, it is the Congress which disposes. The legislators are properly jealous of this prerogative. Small wonder, then, that a House Appropriations Subcommittee did not take kindly to Mr. Summerfield's gun-to-the-head approach.

Congress didn't knuckle under, ignored Mr. Summerfield's deadline, and the committee concerned told the Postmaster General he could expect $17 million out of the demanded $47 million, but he would have to wait a week to see about the other $30

million. So Mr. Summerfield found reasons for postponing his service cutback for a week. The new deadline is next Saturday.

Mr. Summerfield concedes that he has $632 million left to run the post office until the end of the fiscal year June 30. The additional $30 million he regards as so vital is less than 5 percent of the funds already available. Other Federal agencies have been forced to economize beyond the 5 percent without taking reprisals that hurt so many people. Are no savings at all possible in the post office without restricting service?

Our Liberties We Prize and Our Rights We Will Maintain

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Iowa State Senate Journal of March 19, 1957:

OUR LIBERTIES WE PRIZE AND OUR RIGHTS WE WILL MAINTAIN

A committee from the house appeared and announced that, in accordance with Senate Concurrent Resolution 17 duly adopted, the house was ready to receive the senate in joint convention.

The senate proceeded to the house under the direction of the sergeant at arms.

JOINT CONVENTION

In accordance with law and concurrent resolution duly adopted, the joint convention was called to order, President Nicholas presiding.

President Nicholas announced a quorum present and the joint convention duly organized.

President Nicholas extended his personal welcome to the Pioneer Lawmakers and offered the following remarks:

"Members of the joint convention, members of the Pioneer Lawmakers Association, ladies, and gentlemen, it is with great pleasure as a presiding officer of this joint convention to assist in the welcoming of the former lawmakers of Iowa, who together with the present lawmakers have established in Iowa a State and local system of government which, in the very nature of things, has its faults, but which I would not exchange for that of any State of the Union. Iowa has good government, and the laws we pass help to keep it so.

"We have set up a judiciary under which the protection of our laws is guaranteed to all, and whose integrity has never been questioned; we have established protection for our poor, our widows, and our orphans. We have safe working conditions for the employees in our industries; we have shown due regard for our problems of sanitation and public health.

"It is through the efforts of the Pioneer Lawmakers of this State that we have established a system of government which was formed on a sound foundation, and it is you here today that I can congratulate upon being a part of this great establishment for a great State.

"It is nice that you could come to renew acquaintances with old friends and new. I am happy to welcome you, and it is a pleasure to introduce the former senator who will have charge of this meeting from now on.

"It is my great pleasure to present to you the Honorable De Vere Watson, who is going to substitute for Senator Arch W. McFarlane on this occasion today."

The Honorable De Vere Watson, former senator from Pottwattamie, presented to the joint convention Senator George E. O'Malley, of Polk, who welcomed the pioneer lawmakers on behalf of the Senate and offered the following remarks:

"Mr. President, Mr. Speaker, Pioneer Lawmakers, members of the joint session, ladies and gentlemen, this is an honor to have the opportunity to welcome the Pioneer Lawmakers of Iowa on this occasion.

"We of the 57th general assembly are happy to see you back to view our legislative endeavors and again breathe in the atmosphere of Iowa's most exclusive society, the general assembly.

"I am likewise happy that the now-famous quote, 'Old soldiers never die; they just fade away,' does not apply to your honored group, as evidenced by your substantial numbers here today.

"As you well know, several members of the Pioneer Lawmakers are still carrying on and are active in the making of laws of our State. I assure you it has been enjoyable to work with Hon. Frank C. Byers, senator from Linn; Hon. Arch W. McFarlane, senator from Black Hawk; Hon. J. T. Dykhouse, senator from Lyon; Hon. George L. Scott, senator from Fayette; Hon. Dewey E. Goode, representative from Davis; Hon. A. C. Hanson, representative from Lyon; Hon. W. J. Johannes, representative from Osceola; and Hon. Stanley Watts, representative from Clarke—present assembly members tht you have on your membership.

"You Pioneer Lawmakers in your time of service reflected the hopes and ideals of your constituents. The laws you passed met the needs of those days.

"As our predecessors in molding Iowa's statutes, you set the pattern and led the way for generations to follow.

"We hope that our current deliberations meet with your approval.

"On behalf of the members of the senate, it is a real pleasure to welcome you here today and sincerely hope that your meeting will be one of inspiration and that you will all enjoy yourselves by renewing acquaintances with the older members and friends and becoming acquainted with the new members who are carrying on in an effort to effectively solve the legislative problems of the day."

Senator Watson presented to the joint convention Representative Robert B. Carson, of Buchanan, who welcomed the Pioneer Lawmakers on behalf of the house and offered the following remarks:

"Mr. President, Mr. Speaker, members of the joint convention, and friends: Today we pause in our ponderance of the many problems which are before us in this 1957 legislature. We pause and do honor to the lawmakers who have pondered many similar problems in legislative sessions which are now a part of the history of the Hawkeye State. On behalf of the members of the house of representatives in the 57th general assembly I extend our most hearty and sincere welcome to you, the Pioneer Lawmakers of Iowa.

"Through those perilous decades immediately after the founding of the Territory, the pioneers of Iowa selected sound, intelligent, and God-fearing individuals to make their laws. The result has been a sound-thinking, highly literate, and God-fearing people who have flourished on this rich land. These good people, and this good land, are the abundant resources which will furnish a solid normal growth in the years which lie ahead.

"The lawmaker of today, like his predecessor, must constantly study the future needs of the citizen. He must examine and reexamine these needs and determine which ones should be provided by government. He must determine whether they come within the proper province of government, the priority to be given each of these needs, based on their urgency and the availability of public funds if the needs are material in nature. The lawmaker must further be governed by the fact that the State has nothing in its own right with which to provide for any need. The State can only provide what it must first levy from the citizen. May divine providence give us the wisdom and the strength, as you have had the wisdom and strength, to protect the solvency of the citizen while providing for his future needs at the same time.

"We, the lawmakers of today, commend you, the lawmakers of yesterday, for the forthright and steadfast manner in which you came to grip with the problems which faced you in the assemblies in which you served. We are delighted to have you return to these halls today. May God bless you every one."

Senator Watson then presented to the joint convention the Honorable Harold E. Davidson, president of the Pioneer Lawmakers Association, who addressed the joint convention as follows:

"Mr. President, Mr. Speaker, members of the 57th general assembly, ladies, and gentlemen, I appear before you today to honor the members of this assembly on behalf of those who served at least 20 years ago. The purpose is not only briefly to live again legislative problems of former years, but also to reassure you and each of you members not only of the importance of your task to the problems of this biennium but to the future development of our State in all the aspects of future good living.

"At the outset, I should like to make a general observation about the function of law and lawmaking.

"Dean Roscoe Pound pointed out many years ago that law is social engineering. Neither common law rules nor statutes are ends in themselves. They are always means to the end of securing the best possible social adjustment of conflicting interests. It is the best interests of society which should constantly be uppermost in your minds in the promulgation of and the enactment of a statute. The law should be a means to eliminate or reduce social friction. It is inevitable that when a statute is enacted it is designated to meet the then current needs of the community caused by actual conditions.

"It is a truism, that changes in community conditions come about more rapidly than changes in our laws. This is only natural and, certainly, no one can be criticized therefor.

"However, in some cases the continued application of an old law in a community which has undergone extensive economic, industrial and social changes increases the very social friction which the law originally was designed to reduce or prevent.

"Our fathers toiled in greater hardship than do we, and lived more frugally—far less indulgently. The ways of our age are swifter and more superficial. Many of our generation have recently waxed wealthy, inheriting real and personal property that in many instances quadrupled in value. All this seemed a happy exception to the toilsome course of ordinary life of the days gone by; but it has dangers and disquieting tendencies, illustrated by present trends and indulgences. This includes, among other things, greed, commercialism and inordinate lust for power and money, and all too often without regard as to the ethical and moral means of such acquisition. Consequently regulatory statutes are necessary now that were not needed years ago. Regulation, of course, does not mean that government should be in competition with private business and not at all, except and only to the extent that neither the people nor private

enterprise can supply such types of service. Regulation means the adoption of such rules as are reasonably necessary to prevent abuses or exploitation of the public or segments of it, by means of advantages acquired by natural or created situation.

"CENTRALIZATION OF POWER

"There is a strong trend to centralize power in the Federal Government in Washington. This centralized power, as a general rule, is inconsistent with individual liberty, individual responsibility, and human freedom itself. This trend, if continued, will also reduce this State as well as the other 47 to mere satellites. The result will be the loss of State control of matters of local concern, the destruction of our dual system of government. Also, if this process is not checked, the time must certainly come when the sovereign States will be nothing more than mere municipal corporations with only such powers left them as the Federal Government may choose to allow.

"The 10th amendment to the Constitution of the United States in substance provides that the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or to the people.

"The State governments were, are, and should continue to be governments whose sovereign powers are inherent and not delegated powers as is the Federal Government.

"It is the opinion of many leading lawyers that this 10th amendment is being ignored and nullified by judicial decisions of the Supreme Court of the United States in many of its decisions.

"For an example: The vesting of power to regulate the insurance business by Congress, and the consequent loss of regulation by the States, if and when Congress should exercise such power, was effected by a decision in the case of *United States* v. *Southeastern Underwriters Association* (322 U. S. 533), decided in 1944. Fortunately for the States the good judgment of Congress came to the rescue and in March 1955, passed the McCarran Act providing in part that the business of insurance and every person engaged therein shall be subject to the laws of the States. However, it must be apparent to you, and the fact remains, that under this decision the Congress still has the power to repeal this statute and the Federal Government take over at any time and eliminate State regulation.

"In this connection, it is interesting as well as discouraging to note that there is now pending litigation in the Circuit Court of Appeals at Cincinnati, Ohio, to judicially determine whether or not the Federal Trade Commission has the power to regulate the insurance business and this claim of the Federal Trade Commission is being made regardless of the 1955 congressional enactment. How are we to curb this unconstitutional usurpation of the States' powers? This should be the concern of all our citizens as well as legislators; but it is difficult properly to educate the rank and file of our citizens because it is being done a little at a time and each instance affects only a small segment of our people or, possibly offers temporarily what appears to be benefits although in the long run disaster may result.

"You are all familiar with the famous Nelson case. Nelson was convicted for subversion under the laws of the State of Pennsylvania. The United States Supreme Court reversed this conviction on the theory that, by the passing of the Smith Act, Congress intended to preempt the field and only the Federal courts could prosecute for subversion.

"There is not the slightest doubt that Congress never intended the State laws to be thus nullified. The author, Congressman SMITH, last year asked Congress to specially clarify its intention for the purpose of preventing the future nullification of such State laws.

"You may ask why is he telling us these things. The answer is simply to inform any of you who may not be too familiar with these matters and to again remind those of you who are, the importance of not voluntarily permitting the Federal Government to preempt these or any other fields that are primarily and fundamentally the States' prerogative and constitutional duty to exercise.

"Again in this same connection we are just now fully realizing how thoroughly federalized our National Guard has become and have seen the Pentagon dictate a requirement for all National Guard personnel to have 6 months' intensive training in an Army camp. The National Guard was essentially a State militia for use in maintaining law and order if and when violence should break out and probably more often needed where and when disaster strikes. This has been true except in time of war. The cold war and the extensive preparedness for war emergencies will some time pass, but the guard, through Federal subsidy and gradually imposed controls, has become a Federal rather than a State force and a part of the standing Army of the United States.

"It must be readily apparent to all of us that if the Federal Government has the power to preempt any and all fields, the result could and eventually would be detrimental to our freedom and liberty. We may for the moment think we, as certain individuals or our various groups, could gain some temporary benefits or advantage by such preemption. However, it should be clear that once the sovereign powers of the States are lost they could never be regained. Also we as citizens of this great and still sovereign State, to a large degree, can better know and understand the needs and desires of our people for orderly government than Washington, D. C. Further, if there are inequities or wrongs to be righted, certainly the legislature is more apprehensive of such conditions and needs than are people in faraway States which may not have similar existing conditions.

"There is now strong sentiment in some quarters in favor of Federal aid to education. In fact, many in high Federal Government positions are advocating appropriations for what is now said to be used only for the construction of a public school building program. Of course, it should be obvious to all of us that this is only the first step toward Federal control of our entire public school system. The next step will be to subsidize teaching salaries, perhaps only particularly in the beginning. Then comes the dictation of the textbooks to be used and who may or may not teach in our schools. We are then at the complete mercy of some school administrator or bureaucrat in Washington with whom we may, but probably would not, agree as to what is best for our State public school system.

"If this situation should exist, the economic and financial dependence would make impossible the operation of our schools without such Federal subsidy. The Federal Government would necessarily exact from us more tax money than would be thus returned, plus all the costs occasioned thereby, which would be substantial. Certainly we can and should build our own schools.

"We may not build them as elaborately; they may not conform to some national architectural plan; less redtape and less cost will certainly result, and in the long run our children will be able to receive as good an education, probably better than as, if, and when what is taught and who may teach is dictated from Washington.

"The future stability of our Federal Government depends on less Federal spending, not more.

"You all remember the old adage: 'He who pays the piper calls the tune.' This truth is as real as life itself.

"It is not our purpose and it is definitely not intended to try to dictate to this assembly any specific legislation, but rather to assure the members of this assembly that the people of this great State realize the magnitude of your duties and trust you to engineer the best possible social adjustment for the future and for all the people of our State.

"Having also had some experience in the judicial branch of government, it should be clear from what has been said that this branch should never, under any guise of expediency or otherwise, usurp your branch which is the legislative. The judicial approach must always strive to interpret legislative enactments to give force and application to the true intent of the legislature, except in the very rare instances where a statutory law is unconstitutional.

"May I say to you distinguished legislators that I thoroughly believe that the judges of both the district courts and the superme court of this State adhere strictly to this most important principle of our system of free government of checks and balances. The written opinions of our State supreme court sustain this observation.

"One of the Justices of the Supreme Court of the United States in an opinion written by him some time ago said that 'because the words of a statute are plain that their meaning is also plain is merely pernicious oversimplification.' I leave this for your own appraisal.

"Time will not permit here to discuss the farfetched interpretation applied to the interstate commerce clause of the United States Constitution, but suffice for the present to say, that it is hard to imagine a business or enterprise that could be considered purely intrastate even though its product or service has never been and probably never will become interstate commerce or cross any State line. The interpretation generally is to the effect that there is such possibility and if not directly, by some indirect method. Such interpretation was never intended and amounts simply to usurpation of power. Your attention is invited to investigate some of the many Federal decisions on this subject and the effect it has on the several States and their government.

"In conclusion, may I say I consider it a high honor to have had the privilege of appearing before you and if anything has been said to assist in stimulating your thinking, I shall feel most amply rewarded.

" 'Our liberties we prize and our rights we will maintain.' This is our motto and is inscribed on our State flag. If this motto is to survive until the next century, our dual system of government must also survive and ways must be found to educate and alert our people effectively to resist and prevent the Federal Government from preempting the powers and duties of State governments.

"I know you will not shirk your responsibility as public servants but will help solve not only the problems of our State but those of ours and other States in their relation to the Federal Government. Let us all dedicate ourselves to helping preserve the sovereign powers of our great and beloved State.

"We must all have faith. Someone has said that faith is louder than noise. This is true, for if we have faith a cannon could be shot off beside us and our faith still remain. We must all have faith in God, faith in the people of our State and country and last, but not least, faith in ourselves.

"Remember our motto: 'Our liberties we prize and our rights we will maintain.'

"Thank you."

Time for Congress To Step In

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. GROSS. Mr. Speaker, I desire to submit for printing in the RECORD the following editorial from the April 10, 1957, issue of the Chicago Daily Drovers Journal:

TIME FOR CONGRESS TO STEP IN

Postmaster General Summerfield's threat to discontinue rural free delivery mail service on Saturday and eliminate a number of other postal services should serve as an urgent call to arms for Congress.

For if, in order to enforce his will on Congress, it is legal for the Postmaster General to eliminate farm mail delivery and soon thereafter to eliminate third-class mail entirely (as counsel is said to have advised him to do), it is high time laws be enacted, in the public interest, which would make such deeds illegal and punishable.

To discontinue rural mail delivery on Saturday would be to deprive people living on rural routes of service which was provided by congressional enactment many years ago. Included in Saturday rural delivery are services for which many farmers have paid with the understanding there would be Saturday mail delivery. It is also true that the suppliers of services to the farmer dependent on mail service would be immeasurably damaged and, in some instances, destroyed.

In the case of third-class mail elimination, thousands of small businesses of incalculable importance to the national welfare and prosperity would be wiped out in a single stroke.

In this situation, which is untenable, Congress can supply a remedy through legislation designed to prevent destructive action and, by so doing, to eliminate the possibility of future coercive threats.

The question also reaches deep into the moral fiber of the Commonwealth. It is our thought that the approach to this problem should be thoroughly saturated with Americanism.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Strengthening of Principle of Sanctity of Contracts

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. WILEY. Mr. President, the other night I had the privilege of addressing one of the great business organizations of my State.

In Racine, I spoke before the S. C. Johnson Co.—famous for its product, Johnson wax. The company had brought in 65 of its representatives from 30 countries all over the world.

I spoke on a theme basic to this shrunken globe of ours.

I spoke on fair treatment of business at home and abroad—fair and equal treatment under the law.

I presented what I called an economic bill of rights for the protection of foreign capital against confiscation, for example.

I ask unanimous consent that the address delivered by me before the S. C. Johnson Co. banquet be printed in the Appendix of the CONGRESSIONAL RECORD.

I ask that it be preceded by two items: First, the text of an amplifying statement which I have prepared on the subject. In it, I have referred to a related issue, namely, the principle of arbitration and conciliation in the instance of economic and other disputes; and second, I ask that an article by Bernardo Estes, editor of Sindicato de Prensa Latino Americano, describing the S. C. Johnson conference be likewise printed. The company has done a great job in Latin America, and our good neighbors to the south have likewise been friendly hosts and customers to this great company.

There being no objection, the address, statement, and article were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

Soon, Congress will be taking up the 1958 mutual security bill.

Every study—the Fairless Commission, the Eric Johnston report—which has been made in advance of this bill—emphasize this fact:

"The world needs more investment of private—I emphasize private—capital. Private enterprise should do the job of building up underdeveloped economies especially, rather than expecting simply government-to-government aid."

SENATOR WILEY'S EFFORTS TO PROMOTE FAVORABLE ECONOMIC CLIMATE

And so, I have sought throughout the postwar era to encourage private enterprise to do this investment job.

I have sought to help contribute to a favorable economic climate throughout the world—favorable to private enterprises' operation.

DANGER IN EGYPTIAN NATIONALIZATION

We cannot have such a climate if let us say, a government arbitrarily confiscates private property—foreign or domestic.

Recent Egyptian nationalization of British and French and other property is a case in point—an illustration of harmful tendencies at work—harmful to investors' confidence throughout the world.

A FINDING IN 35 YEARS OF LAW EXPERIENCE

Mr. President, having been a practicing attorney for more than 35 years before coming to the Senate, I have stressed throughout a lifetime this fact: The strength of America is the rule of law.

Yes, the strength of America is its respect of the sanctity of a private contract, the sanctity of private property. And that, of course, includes the sanctity of the right of appeal against alleged unfair treatment.

Unfortunately, too many countries, these days, have the notion that a contract can be broken by one side—completely arbitrarily.

But the great Anglo-Saxon tradition holds that a man's word must be as good as his bond, and his written contract, particularly, must be faithfully kept—in letter and in spirit.

LET WORLD SEE WISDOM OF ANGLO-SAXON CONCEPT

And so, I told the representatives of the S. C. Johnson Co., that I hope that the various foreign countries in which they are established, will come to recognize the wisdom of this Anglo-Saxon concept.

Too many countries are toying with confiscation of private property. Too many countries have gotten the concept that men should rule, rather than the law.

LEADING FRENCH PAPER CRITICIZED UNITED STATES

What brought this situation to mind especially was this fact:

The New York Times of Monday, April 8, carried a significant report from the French press about one particular case in which is charged that it is the United States which is at fault in possibly undermining sound economic relations among the nations.

This Times report relates two widely separated problems:

(a) The long-litigated and complex dispute as regards the title to shares of the General Aniline & Film Corp. (the Interhandel case), and

(b) Trying to resolve the problem of Egyptian nationalization.

These cases—Interhandel and Egypt—obviously differ from one another tremendously.

SHOULD DISPUTES LIKE THIS BE ARBITRATED?

But there is at least one common thread between them, as noted by some French and United States observers. It is the common thread:

"Should not governments adjudicate disputes of this nature, if necessary before an international tribunal?"

Thus, the Times referred to a widely reported article entitled "A Regrettable Refusal of International Arbitration." It was printed in the leading journal of finance in Paris, L' Information. The New York Times write-up states the author criticized "the American interpretation of the Washington accord." The author is quoted as declaring that at stake in the Interhandel dispute "was the question of good faith among the nations. By refusing to arbitrate as requested by the Swiss Government, the United States makes itself the sole judge of right and wrong."

Earlier, the Times article, by George H. Morison, reported:

"Owing to the confiscation on a vast scale of French private property in Egypt the Interhandel case had become a subject of fierce controversy in the Paris press."

I AM NOT PASSING JUDGMENT ON CASES, ONLY POINTING OUT SIDE EFFECTS

Now, let me state that:

1. I am not in the slightest passing judgment on the Interhandel case itself. The case is too involved; besides, it has been handled, and is being handled basically by the executive and judicial branches.

2. I am simply pointing out how a side effect of one case may significantly involve very different cases, e. g., Egyptian nationalization. The side effect is possible discouragement of many future arbitration efforts.

3. I personally have a dual responsibility. In the first place, I am senior Republican on the Judiciary Committee which is handling the complex question of alien property.

In the second place, I am Senior Republican on the Senate Foreign Relations Committee which concerns itself with mutual security, worldwide economic relations, friendship among the nations, etc. It is our Foreign Relations Committee which reviews all treaties. It is our committee which approved the treaty of February 16, 1931, under which every dispute arising between the contracting parties shall, when ordinary diplomatic proceedings have failed, be submitted to arbitration or conciliation, as the contracting parties may, at the time decide.

ARE 31 UNITED STATES ARBITRATION TREATIES TO BE DEAD LETTERS?

I ask now: "Is the 1931 Arbitration Treaty to be relegated to a dead letter?"

I point out that, all too regrettably, the historical facts are these: a recent column on the editorial page of the New York Times factually pointed out that, unfortunately, dozens of arbitration and conciliation treaties, solemnly signed by the United States have likewise not been utilized in the slightest.

Is this unwholesome trend of ignoring 31 or more treaties to be continued now? Do not I, as former Chairman of the Foreign Relations Committee, have the responsibility to raise this issue now so that it is carefully considered in all its implications?

I believe I do have this responsibility.

I HAVE COME TO NO DECISION YET ON ANY PROPERTY RETURN

Let this further fact be understood very clearly: I am not commenting now at all on the issue of any possible return of alien property. That is a vast, complex issue in itself. I am commenting today and simply raising questions about the general need for arbitration in today's world where business confidence has far too often been shattered.

So far as any possible alien property return is concerned, I feel that I am still in a quasi-judicial position on the Senate Judiciary Committee. I am now studying the record of the hearings.

I have been asked repeatedly by newspaper reporters about my position on this or that alien property bill. I have told them the facts: I have not made and would not consider making any commitment whatsoever, as regards the various forms of the pending legislation.

I AM CONCERNED SOLELY WITH PUBLIC INTEREST

I have stated that I want to study the record—and only thereafter will I come to a decision for or against this or that bill.

Obviously, on the alien property return issue, a great many private interests are at work—in competition with one another.

I am not concerned with these private interests in any way, shape, or form, neither German nor Swiss nor American private interests.

I am concerned with but one interest—one interest above all, and that is, the interest of the United States Government—the interest of 170 million Americans.

I am concerned with the respect in which we are held by the peoples of the world. We are the beacon. We are the lighthouse, and we must remain so. Fair play must still be our creed and our deed if the world is to continue to respect us.

MY QUESTION TO THE EXECUTIVE BRANCH

And so, I should like to state one simple proposition: I state it, however, respectfully in the form of an open question to our Secretary of State and to our Attorney General.

I ask: "Would not the United States Government be on firmer overall grounds—in terms of restoring the vitality of arbitration treaties—if it were to agree to arbitration and conciliation of this Interhandel dispute?"

The Swiss Government has asked for arbitration. The State Department, for what it deems good and proper legal reasons, has turned the Swiss Government down.

This case has, of course, been fought up and down through the United States courts.

So far as I am concerned, the United States courts may be completely right in what they have repeatedly held. I do not dispute their decisions in the slightest. I have the highest regard for our judicial branch.

SHOULD WE NOT ADVANCE WORLD RELATIONS BY ARBITRATION?

But I ask this question: Would it not be a sound contribution to international relations if the United States Government were graciously to say, in effect, "Gentlemen of Switzerland, we Americans may believe our courts have held 100 percent soundly. But we believe so much in the rule of law; we believe so much in the principle of adjudication of disputes between nations, that we are willing to see the process of conciliation and arbitration followed."

In my judgment, if the United States were to do so, and to do so expeditiously (because I certainly do not want unreasonable delay), then America might make a most significant contribution to international law.

I am commenting in this manner because I feel that the principle of arbitration can and should be applied in a great many pending disputes throughout the world.

HOW TO DEFINE "DOMESTIC JURISDICTION"

Of course, as the State Department has noted, we rightly exclude from our arbitration treaties any obligation to conciliate or arbitrate a matter within "domestic jurisdiction."

But obviously, if "domestic jurisdiction" is interpreted very broadly by ourselves and other powers, then probably no dispute whatsoever will ever be arbitrated. Why? Because everything might be regarded as "domestic."

THE BIG ISSUE: AMERICA'S INTEREST

Here I leave the case except for one additional point:

Some individuals may argue that "to arbitrate this Interhandel dispute would help Private Interest A, or harm Interest B, or help Interest C."

But that is not the question.

I am urging a principle, not any private interest.

I represent no interest. I speak for no interest. I am interested in no interest except—if you can call it that—the interest of the American Government and the American people—leaders of the world in this atomic age.

I say, let my Government weigh this Interhandel question carefully once again in the light of the Egyptian and other dangerous situations.

Let our Government decide not simply on the legal technicalities, as important as they obviously are, but on the many possible side effects and on the psychological impact throughout the world—the impact of whatever we may finally decide.

EACH SOVEREIGN BRANCH MUST CAREFULLY DECIDE

I do not in any way tell another sovereign branch of Government what to do. But I do urge the State Department to think this question through once again—with the broadest public interest in mind—not any private interest—but solely this public interest—a sounder, more stable world—a world in which private enterprise will be protected through due process of law.

There follows now the text of my address as it was prepared for delivery in Racine.

SENATOR WILEY SAYS ECONOMIC BILL OF RIGHTS SHOULD BE PROCLAIMED AND OBSERVED BY FOREIGN LANDS SO AS TO ATTRACT UNITED STATES CAPITAL AND IMPROVE STANDARDS OF LIVING

(Address by Hon. ALEXANDER WILEY, Republican, of Wisconsin, senior Republican, Foreign Relations Committee, at S. C. Johnson Co. banquet, Racine, Wis., April 4, 1957)

I am delighted to join in this the first international conference sponsored by your outstanding company.

I can well appreciate the tremendous amount of arranging and preparation that went into this event.

I know that I speak for representatives of your overseas subsidiaries and distributors, as well as for our attending State and Foreign dignitaries, in thanking you for bringing this conference to its rightful home—Racine. This is but another indication of your forward-moving and civic-minded spirit.

As alert businessmen seeking expanded sales abroad of top products, you are understandably concerned over what lies ahead for international business?

May I say, at the outset, that in my judgment, you look out on a mighty bright horizon.

Let's take a look at the evidence—abundant evidence—for optimism.

AMERICA'S TOP GOALS

But let's first ask, as we go into the midway mark of 1957, what aims are we working for? What does our businessman look for? What is our administration working toward? In essence, the goals are the same:

1. First of all, we want peace and prosperity for America.

2. Secondly, we want peace and prosperity for our fellow men everywhere.

These are fundamental aims, and seemingly simple. However, when we take a real look at world events today, we see it's a long, hard road to peace and prosperity. And it is composed of many avenues.

FOUR AVENUES TO A BRIGHTER TOMORROW

In the course of these remarks, tonight I shall mention but one such avenue in detail:

That of sound international investment.

But there are other avenues—all of which converge on the highroad to peace and prosperity.

Here they are:

1. First of all, invincible American strength—diplomatic, military, economic, spiritual strength—for we are the guardians, the trustees of the greatest values of the human race.

PERILS OF THE AIR-ATOMIC AGE

And we dare not be anything but invincible in this air-atomic age. I mean this age of the shrunken globe; this age of promise and yet of peril, fantastic peaceful developments, and almost equally fantastic developments in nuclear warfare, in jet propulsion, in chemical and biological warfare; this age of danger of a Pearl Harbor-like blitz attack.

2. Secondly, we need to continue to use the avenue of a strong system of alliances. Our purpose is to further the unity and well-being of the free world. Your United States is now the moving force in a sound interlocking system of pacts and agreements with 45 other nations. I refer to the Rio Pact, Anzus Pact, NATO Pact, SEATO Pact, United States-Nationalist China Pact, United States-Korean Treaty, and so forth.

3. Expansion of the free world's scientific and technical horizons.

By this avenue, I mean more sound technical aid, making available the peaceful fruits of atomic energy, more experiments in harnessing the energy of the sun, and other scientific advances.

4. Expansion of the free world's business and commercial horizons.

That means more trade, beneficial, on a two-way street; no dumping, but sound, mutually helpful trade.

And I mean investment. It means more pouring forth of American capital, risk capital, into foreign manufacturing, foreign distribution outlets, foreign advertising (to help increase consumption and increase familiarity with quality-name brands), foreign mineral development, sound foreign equities—stocks and bonds.

I emphasize risk capital—investors' capital willing to take chances in return for the possibility of a fair return on its investment.

S. C. JOHNSON CO. DEMONSTRATES SOUND BUILDING OF MARKETS

And I emphasize the concept "sound." Why? Because an unsound approach to foreign investment can be proven utterly self-defeating.

I'm delighted to say that the S. C. Johnson Co. is one of our most inspiring examples of sound, step-by-step building of foreign markets.

I congratulate you gentlemen on your many achievements to date.

In serving your own well-being, in serving the private good, you have simultaneously served the public good.

Your efforts have well supplemented the economic efforts of your United States Government: efforts to further world prosperity and higher standards of living.

UNITED STATES HAS THREE INTERESTS IN TRADE EXPANSION

Of course, some people may ask: What does the United States get out of trade expansion? She gets, as you well know, three major benefits:

First of all, increased trade is steadily giving us access to raw materials and the other products that we need.

And who would dispute our growing needs for raw materials as our industrial activity reaches capacity limits—

A gross national product of $430 billion.

Personal income over $330 billion.

Employment up to 66 million people.

These facts show higher industrialization levels. And this in turn means greater imports of primary goods. What would we do without outside sources of iron-ore concentrates, nonferrous metals, uranium, and many other items?

Secondly, increased trade means new markets for our own finished goods. New foreign demands are created for American-produced products from our farms, mines, and factories. Again, our workers are further assured of full employment.

Our export activity over the past year is an indicator for the future: 1956 merchandise

exports totaled almost $3 billion greater than in 1955. Machinery exports rose about 24 percent, with iron and steel products and chemicals making up about one-third of the $3 billion increase.

But these figures are only a drop in the bucket compared to what the free world really needs from us.

It will bring infinitely vaster quantities, provided it can generate enough of its own purchasing power. That means, of course, through the sale of its own goods to others and to ourselves.

Thirdly, increased world trade helps to make foreign lands far less vulnerable, than they might otherwise be, to Communist penetration.

Yes, prosperous foreign economics mean more stability, less unrest, less yearning among underprivileged masses for a radical change. I mean a change such as the Reds offer—with their phony cure-alls for economic ills—cure-alls which are far worse than the economic illness, itself.

THIRTY BILLIONS OVERSEAS CAN BE INCREASED

The other day, I commented on the Senate floor regarding the very considerable amount of American investment already overseas.

All told, around $30 billion of American money is now invested throughout the world—in plants and refineries and mines and stores, and yes, in stock and bond portfolios.

In 1956 $3 billion more were added.

That is a huge sum. But I say that it could have been larger still, if more American investors were satisfied that the fruits of foreign investment compensate for the considerable risks of foreign investment.

OBSTACLES TO FOREIGN INVESTMENT

I need not tell you in detail, my friends, who work abroad, that in many lands, private enterprise does not exist, as we know it. There are a variety of historical, cultural, economic and political facts which account for that condition, but it is a plain fact.

I need not tell you that even where private enterprise is nominally free, there tend to be all sorts of governmental restrictions on foreign investment.

I need not remind you that widespread inflation of currencies is one of the most serious problems faced, in this respect. An American may trade his goods, expecting to get a rate of, say, 20 units of a foreign currency to the dollar. The American may find, however, that by the time, the transaction is completed, he is indeed getting 20 units for the dollar, but the currency has so seriously lost its purchasing power, that the real value of the currency is now only 50 to the dollar.

Such inflation most often is not planned that way; it just happens as a consequence of a variety of regrettable conditions.

In any event, foreign governments have a right, within limits, to do as they please within their own borders. We Americans do not propose to try to dictate to anybody how they should proceed.

OUR FRANK ADVICE TO FOREIGN FRIENDS

But we do say, in friendship and in frankness to our friendly neighborlands, "if you will provide a favorable climate for American investment, for American manufacturing and distribution and advertising and sales, we believe that you will profit handsomely. We believe that if you will give us anything like a fair opportunity to earn reasonably on our money, that it is you who will benefit even more than we.

"Because, after all, the greatest market in the world is back home, in America itself. There are almost unlimited opportunities for investment in the United States. It may not pay us to go abroad, therefore, unless we are assured a fair break."

You and I know that, very frankly, in many foreign lands the peoples do not enjoy the same sort of political freedoms that we do.

But again, we definitely do not propose to dictate to any foreign land what it should do inside its own territory. We are good neighbors, not meddlers, not "know-it-alls."

ECONOMIC BILL OF RIGHTS FOR FOREIGNERS

If, however, a foreign government may not believe in a political bill of rights for its people, then at least we ask, let there be an economic bill of rights for foreign investment. And let that economic bill of rights be observed in letter and spirit.

What does that mean? It means—

(a) A generally fair break for the foreigner under the law, and in the law courts of the foreign lands.

(b) It means a strong effort to maintain the purchasing value of a sound currency, rather than to indulge in loose fiscal practices.

(c) It means a minimum of exchange restrictions (to the extent that fiscal conditions will permit).

(d) It means no expropriation of foreign private property. (Or, if the very worst comes to the worst, fair and prompt compensation for such expropriation.)

(e) It means freedom from excessive taxation, from harassing Government restrictions and Government interference.

(f) It means minimal limitations as regards reasonable return of foreign earnings to the United States, return of interest and dividends. (And, in stages, return of at least part of the principal of the original investment.)

These, then, are a few points in a foreign economic bill of rights.

Now, my friends, let me say this—in all fairness: I am fully aware that many foreign economies are in comparatively weak condition.

I am fully aware that many foreign lands may not be able to permit the remittance of as much foreign earnings as we would like, or of the original principal as fast as we might desire for investment. And so, I think that reasonable compromises can and should be worked out.

WE MUST NOT BE OVERCRITICAL

We Americans are blessed. We have such great wealth, that it is often hard for some of us who have not been outside our borders to realize how meager are the financial resources of many foreign lands, especially one-crop lands or one-mineral lands. Most of such countries are trying to diversify, but it is not a quick or easy task.

I want us to be sympathetic, therefore. I want us to be understanding. I definitely don't want us to be overcritical of any foreign government or economy. I want us to put ourselves in the other person's shoes.

ACCOMMODATION NECESSARY, ADAPTATION HELPFUL

The S. C. Johnson Co. has shown how it can accommodate to many different conditions in many foreign lands.

It has proven its ability to adapt, to work out reasonable formulas, so that both the company can prosper, and the foreign government and people will rightly feel that they, too, are benefiting.

This is the sort of action which we need in this world.

We can't and won't and don't believe in making over the world in America's own image.

Each people is entitled to its own destiny, its own self-chosen way of life.

We like ours, but we won't try to force it on others. Soviet Russia's way—dictation—is not our way.

THREE STEPS TO ADAPT TO THORNY TARIFF PROBLEM

Instead, we are doing our part to accommodate and adapt, as a nation, to meet foreign needs and our own.

Nowhere is that better illustrated than in the tariff question. This problem is invariably one of the thorniest, most controversial, which we of the Congress face.

In the few moments remaining to me, I won't attempt to get into it in detail.

I will only say this:

While reserving the right to stand up for the livelihood of a hard-hit American industry on a tariff issue, the United States has wisely initiated positive measures to improve its economic ties with other nations.

Let's note three means:

The Trade Agreements Extension Act of 1955 instituted a "staged reduction" of tariffs in accord with other nations. And subsequently in 1956, we concluded reciprocal-trade agreements with 21 other countries designed to bring us economically closer to nations of the free world.

Secondly, the Customs Simplification Act of 1956 was enacted to help reduce inexcusable delays and inefficiency in handling imports.

On a third front, we are participating in several major institutions designed to augment trade, promote the sound economic development of member nations, and stimulate private investment.

Most of you are familiar with the activities of the Export-Import Bank, International Bank for Reconstruction and Development, International Monetary Fund, International Finance Corporation.

I shall not go into further detail on the major problems of our foreign-trade system. I am sure that Herb Prochnow, as a banker and as former Deputy Under Secretary for Economic Affairs, can do a much better job in analyzing the ins and outs of tariffs, quotas, and other restrictions which you no doubt face in your own operations.

CONCLUSION

In conclusion, may I say, my friends, that the future of mankind does depend on the answer to this question.

"Will we effectively fulfill the responsibilities for preserving world peace and prosperity that our strength and position have delegated to us"

The answer must be "Yes." I have faith it will be "Yes."

America can look toward new international horizons, horizons signaling greater economic benefits for our own children and those of our foreign brethren. And only then will international peace and security become, as they must, a lasting reality.

FOLLOWING THE GOLDEN RULE

Then follows the text of the Latin American press writeup to which I have earlier referred.

This article makes the good point that American businesses should act in Latin America on the same high level that we would expect a foreign business to operate in the United States.

The point is well taken.

So, too, however, I say, in all friendship to our good neighbors, this fact: Our Latin American neighbor lands should seek to follow the same high law standards in their countries that they would want us to follow toward their operations in the United States. Let them treat our capital fairly. Let us treat their capital, or any other foreign capital, fairly.

Let each nation's laws be respected.

Let each nation seek to elevate its laws to the highest possible level, including faithful observance and enforcement of those laws.

Let us, in effect, follow the golden rule—to do unto others as we would ask them to do unto us.

JOHNSON WAX CO. IS ANOTHER EXAMPLE OF UNITED STATES BUSINESS MAKING FRIENDS AND CUSTOMERS IN LATIN AMERICA

(By Bernardo Estes, editor, Dindicato de Prensa Latinoamericano)

RACINE, WIS., April 12.—It is significant that the S. C. Johnson & Son Co., of this city, should end the second week of their first in-

ternational conference during the same time that Pan American Week is being celebrated in the Americas. For this company, which is best known for its wax products in Latin America, has done much to make friends for itself and United States businessmen, in general, in the countries where they maintain operations.

While the Ambassadors of 19 Latin American countries were touring the State of California under the auspices of the Organization of American States, here in the State of Wisconsin the Johnson people were holding their first international conference.

At this conference were some 65 of the company's representatives from the 30 countries of the world where Johnson operates. Of importance to this writer was the fact that the company is represented in Argentina, Cuba, Ecuador, Mexico, Panama, Peru, Puerto Rico, and in Venezuela.

In talking with the men who run the Johnson operations in each of these Latin American countries it was a delight to hear that here was another big United States business that was conducting itself and its business in the republics south of the United States border in the same manner that the people of the United States would expect the Latin American businesses and businessmen to conduct themselves in the United States.

It was wonderful to hear that already the company was doing as much of its business buying and manufacturing in the Latin American countries as they found their markets increasing. A plant has been in operation in Mexico for some time now, another plant is being built in Venezuela. While he is waiting for his own plant in Venezuela to be completed, the manager of the Venezuela branch told me that he is buying his products for sale in Venezuela from the company's branch in Mexico.

When questioned separately, the managers in each country revealed that they employed only local help, bought everything they could locally such as cartons, labels, other packaging and operative requirements. They used the local newspapers, plus radio and television where it was available and were doing everything possible to become a part of the community and country in which they operated.

The Johnson Co. has found that their good conduct and manners in the countries where they manufactured, packaged, and sold their products has paid off in good business for their enterprise. This is a lesson that a few other United States businesses in Latin America could do well to learn and practice.

For over 10 years now, this writer has been commenting on the fact that if United States businessmen and tourists would practice the same good manners in Latin American countries as they do in their own communities the reactions they receive would be surprisingly different in warmth and reception. What most fail to realize is that in the names of North America, Central America, and South America there always appears the one big important word—America. The peoples of Latin America think of themselves as Americans too.

When a company like Johnson & Son make it a policy to operate on this understanding their conduct just does not benefit their own business interests or the interests of the local people who participate in their activity—they are rendering a great service to countries in which they operate and the United States by cementing the friendship and goodwill of all the great peoples in all the Americas.

The Honorable Alexander Wiley, Senator in Washington representing the State of Wisconsin and ranking member of the Foreign Relations Committee of the United States Senate was the speaker of the evening during the banquet that highlighted the Johnson conference said in part of his speech, "I am delighted to say that S. C. Johnson Co. is one of our most inspiring examples of sound, step-by-step building of foreign markets. In serving your own well-being, in serving your private good, you have also served the public good."

These few words from this important speech shows how clear thinking and farsighted United States statesmen feel about the proper conduct of United States business interests in countries outside the United States. It is hoped that the people of Latin America understand that a herd of goats should not be judged by the few animals who do not measure up to standards.

"Maryland University Spends Far More Time and Energy Finding a Good Backfield Coach Than the Administration Devotes in Recruiting Many Ambassadors" James Reston, of New York Times, Declares

---

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, I include here a brilliant article by James Reston of the New York Times entitled "The Problem of Envoys." Mr. Reston is impartiality personified in his analysis, but he pays special and deserved tribute to Senator MICHAEL J. MANSFIELD, Democrat, Montana, for the leadership he is giving to finding a solution to the problem of appointing able ambassadors.

Nothing helps the American cause abroad more than brilliant American ambassadors, and appointments should be on the basis of the best men in the United States for these key posts, and not on the present basis of who can afford to serve overseas.

Mr. Reston's article follows:

THE PROBLEM OF ENVOYS—AN EVALUATION OF PRESIDENT'S POLICY OF LEAVING SELECTION TASK TO OTHERS

(By James Reston)

WASHINGTON, April 11.—The problem of picking Presidential ambassadors overseas, now under discussion in the Capital, has been blurred as usual by issues of personality and politics.

The central issue is not whether career officers should be picked over noncareer political appointees; or whether President Eisenhower has been more political in his selection than President Roosevelt (he hasn't); or whether John Hay Whitney in London and Scott McLeod in Dublin are good or bad.

The main point is whether the appointments meet the requirements of today, and whether they are the best men available to the President, all things considered, including political obligation.

On most of the side issues in the debate the facts are fairly clear. Even the most loyal members of the United States career Foreign Service do not assert that their organization is studded with geniuses who would make better ambassadors in London, Paris, Rome, and Bonn than are available in private life.

Similarly, a study of the Eisenhower appointments and of the Roosevelt appointments to the embassies merely proves that roughly the same political system is being carried on—if anything with more competent people now than a generation ago.

The point is, however, that what may have been good enough in the thirties, when the United States was still an isolated country, is no longer good enough in the fifties, when the responsibilities of the United States overseas are greater than anything ever carried by any sovereign state in the history of diplomacy.

THE PRESIDENT EXPLAINS

In discussing why he was running into criticism on his budget and his foreign aid and other policy proposals, President Eisenhower told newsmen yesterday that he thought he was being criticized because he was having to go against the traditions and habits of the past.

"Now, I happen to believe," he said, "that in this day we cannot * * * limit ourselves to the governmental processes that were applicable in 1890."

In ambassadorial appointments, however, the criticism is mounting, not because he is trying to change the habits of the past, but because he is not trying to change them as much as he could, and because he is acquiescing in appointments that make little sense even under the present system.

For example, the political pressure on the President to appoint certain of his personal friends to top embassies is not nearly so great as might be imagined. Amory Houghton, on leave of absence as chairman of the board of the Corning Glass Works, did not press for the appointment to Paris despite his large contributions to the Republican Party in 1956.

He was pressured into taking it. He had considerable knowledge of Germany, where he had lived when his father served as Ambassador, and he preferred to go there. He was sent instead to France, though he does not speak French.

Meanwhile, David K. E. Bruce, who speaks French like a Parisian and knows the French problem well, was sent to Germany over his personal protest that he could not speak German.

Similarly, William Lacey, who had a brilliant record as Minister to the Philippines but who knows very little about Eastern Europe, was assigned to the ambassadorship in Warsaw, while Charles E. Bohlen, the Government's most distinguished expert on the Communist movement, was sent to the Philippines, which he knows nothing about. There are many similar illustrations.

MONEY IS A PROBLEM

The elements of money and politics are important in this whole question of the appointments to the main embassies, but probably not as important as they seem. The principle of putting the best men in the key posts at a time of lively and even critical diplomatic negotiation is popular with the people, and if dramatized and insisted upon by the President, could probably prevail even under present political circumstances.

Legislation is needed to provide representation allowances large enough to enable men without private means to take the big embassies. The fight for this is being led by Senator MIKE MANSFIELD, the Democratic whip from Montana, and it has a great deal of support within the Foreign Relations Committee.

The amounts of money involved in solving this aspect of the problem—$3 million or $4 million at the outside—are peanuts compared even with the budget for United States propaganda, and nothing helps the United States propaganda effort more than brilliant American ambassadors in key posts.

If such a fund were available—the President has said he is for it but has done nothing to push it through Congress—it would then be possible for the White House to

establish a system of recruiting, not just the men who can afford to serve, but the best men in the country for the jobs.

No such effort is made now. The resources of the Republican Party have not even been exploited by the administration. This is a party that must command the allegiance of 80 percent of the lawyers and maybe 90 percent of the skilled administrators in American business and industry. Even in the universities it has far more support than is generally recognized. Yet Maryland University spends far more time and energy finding a good backfield coach than the administration devotes in recruiting many ambassadors.

And the curious paradox of all this is that nobody in Washington agrees with the above thesis more than the President of the United States. What has rendered the last few months so interesting in this field is that President Eisenhower not only has the large objective of the best men in the key jobs but also has the undoubted political power to make the principle prevail.

Better than any of his recent predecessors, he has defined the problem and stated the goal, but he has left the job to others who find it easier to go on about as before.

Tribute to Hon. Carl Hayden, of Arizona

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. GOLDWATER. Mr. President, in the Arizona Republic, published in Phoenix, Ariz., there appeared last Sunday a very well deserved tribute to the present occupant of the chair, the President pro tempore, my distinguished senior colleague from Arizona [Mr. HAYDEN].

Having known the present occupant of the chair all my life, I take great pleasure in submitting the article for inclusion in the Appendix of the RECORD, so that my colleagues may see the high esteem in which my colleague is held in our native State of Arizona.

The PRESIDENT pro tempore. The Chair is inclined to object. However, if there is no objection, the article will be printed in the Appendix of the RECORD.

The article is as follows:

HAYDEN KNOWN AS SILENT SENATOR—DURING HIS 45 YEARS IN CONGRESS ARIZONA'S CARL HAYDEN HAS GAINED A REPUTATION FOR KEEPING HIS MOUTH SHUT—YET, HE IS ONE OF THE MOST INFLUENTIAL MEN IN WASHINGTON

(By Arthur Edson)

WASHINGTON.—When cartoonists try to draw a typical Senator, they often come up with the same stock character: a man who is fat, of medium height, and who usually has his mouth open.

A strong argument could be made that few of today's Senators completely meet these requirements. And the man who has been Senator longer than anyone now in the business doesn't fit the picture at all.

For CARL HAYDEN, of Arizona, is lean and gaunt, and though at 79 he's naturally a bit stooped, he still stands more than 6 feet tall.

As for the open mouth, HAYDEN has kept his so resolutely shut—in public at least—that after 15 years in the House and 80 years in the Senate he truly can be called the silent Senator.

Indeed, he has kept so silent that, even though on February 19, 1958, he stands to break the service record of 46 years in Congress held by the late Representative Joseph G. (Uncle Joe) Cannon, he remains almost unknown to most of the country.

Yet HAYDEN is no mere timeserver.

Harry S. Truman called Hayden one of the most important men in Congress. And the late Senator Alben Barkley (Democrat of Kentucky) said of him: "No more effective legislator ever served in either House."

Republicans don't spare the adjectives either.

WILLIAM F. KNOWLAND, of California, the GOP Senate leader, has said: "His actions have been based not on narrow partisan lines, but on what is best for the welfare of our country."

Others will contend that HAYDEN, with his long interest in public roads and reclamation, has helped to change the face of a Nation, especially in his beloved West.

HAYDEN is President pro tempore of the Senate, largely an honorary position that goes to the member of the majority party who has served longest.

The duties aren't onerous—he has the right to preside when the Vice President isn't around—but in a time of mass disaster it could be exceedingly important. HAYDEN is third in line to the Presidency, behind Vice President NIXON and Speaker of the House SAM RAYBURN.

It's fairly easy to explain HAYDEN's power. The trouble starts when an attempt is made to explain why this hasn't been matched by a flood of publicity.

HAYDEN has been a member of the Appropriations Committee since he has been in the Senate, and now is its chairman. Since every Senator has a pet project involving money, it's good business to stay on good terms with HAYDEN.

Yet his friends insist another Senator might have his job and still not have his influence. HAYDEN's strength, they say, comes from two additional sources:

1. His ability to make friends—many Senators of both parties have said HAYDEN went out of his way to be kind to them when they first arrived in Washington.

2. His mastery of the intricate art of legislation.

As for HAYDEN's knack of staying out of the headlines, a reporter who spent years covering western news says he never got more than 2 or 3 stories out of the man from Arizona.

"I remember one of these very well," the reporter said recently. "A committee was breaking up and Senator O'MAHONEY called me over and said, 'Carl's got a big story for you.' Then O'MAHONEY explained how the committee had agreed to something the West had been wanting.

"O'MAHONEY gave me all the facts, and when he finished he turned to HAYDEN and asked, 'Isn't that right, CARL?' HAYDEN nodded, but never said a word.

"It was the biggest story I ever got from him."

The man with this unusual gift for silence was the first white child born in Haydens Ferry, Ariz. The town, now known as Tempe, was founded by his father.

One early incident had an almost prophetic note.

When he was around 10 years old CARL found a dynamite cap.

It exploded and blew a finger off his left hand.

Hurriedly the family started for medical help.

"Although it was 9 miles across the desert," a friend recalled, "there was not one whimper from little CARL on that long ride into town."

Even then, it seems, HAYDEN preferred to keep his mouth shut when it would do him no good to open it.

After attending the normal school of Arizona, HAYDEN went to Stanford. There he made the football team—he was a center—and lost a close election for presidency of the sudent body.

That's worth mentioning because never since has he lost a political race. He became county treasurer and then sheriff, and when Arizona became the 48th State, on February 14, 1912, he was its first Representative.

From that day to this, throughout its entire statehood, Arizona has kept HAYDEN in Congress.

HAYDEN rarely speaks on the Senate floor, and when he does he never is mistaken for Daniel Webster.

His voice is flat, with no appeal to the emotions, and often even those nearest him have trouble hearing.

One Senator has decided that HAYDEN deliberately speaks softly.

"The bill comes to the floor and someone asks HAYDEN about a detail," this Senator said. "HAYDEN will get up and mumble something and sit down. Well, the Senator who asked the question won't have any idea of what CARL has talked about, but he will decide if HAYDEN thinks it O. K., he'll let it go."

When asked about this theory, HAYDEN denied he attempts legislation by inaudibility. "They know what I'm talking about, all right," he said.

Oddly, during his early days in the Senate this man of silence took part in a couple of filibusters. Once he carried on singlehanded for 2 days in a successful effort to beat a bill to prohibit the importation of Mexican farm laborers.

Another time HAYDEN teamed with Henry Fountain Ashhurst, then the senior Senator from Arizona, to block a Boulder Dam bill. Their objective: to get a better share of water for Arizona.

They tied up the Senate for about a month and eventually accomplished their goal. It must have been quite a spectacle—Ashurst, famous for his literary allusions and grand flourishes; HAYDEN, quiet, colorless, matter of factual.

If HAYDEN has any regret about choosing the quiet way, he doesn't show it.

"Let me tell you a story," he said, leaning back in his chair and propping his knee against his desk.

"Just before the war General Marshall called up and said he had something important to discuss with us. It was so top secret we sent the stenographers and clerks out of the room. Only the Senators and the general were present.

"Well, the meeting broke up, a cord of reporters were outside the door. You know how it is. Everyone was shouting, 'What did he say? What did he say?' One young reporter—I never had seen him before—came up to me and asked what Marshall had said. Before I could say anything an oldtime reporter said:

" 'Don't bother HAYDEN. He wouldn't give you the time of day.' "

The silent Senator grinned at the memory and said:

"It was the finest compliment ever paid me."

The Role of the States in Housing

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. CLARK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts

from a speech delivered by Joseph P. McMurray, Commissioner of Housing for the State of New York, on March 19, 1957, before the third annual dinner of the Pittsburgh Housing Association at Pittsburgh, Pa.

Commissioner McMurray is well remembered in the Senate as the former staff director of the Committee on Banking and Currency. His speech discusses the role of the States in housing, and I believe Senators will find his remarks informative and thoughtful.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The achievements of your organization, dating back to its founding in 1928, are outstanding in the record of action by citizens housing groups throughout the country. The projects you have successfully engaged in over the years are in the best tradition of American citizenship. Your energy for work and your talent for diversity humble me.

As occasionally happens, your celebration tonight is tempered somewhat by the fact that you are losing the services and companionship of one of your most vigorous workers, John P. Robin. He has done a truly grand job as president of the Pittsburgh Regional Industrial Development Corp.

I am happy to join in your tribute to Mr. Robin tonight, and I wish him godspeed and every success in his new undertaking.

It was suggested that I talk to you about the role of the State in housing. Actually, I find it is quite impossible to talk about housing without also talking about a lot of other matters from which housing cannot be separated.

We must certainly include considerations of city planning, if not regional planning. We must also include the planning of roads and highways, schools and shopping centers, and the way a city or an area is going to develop in the coming years.

Therefore the first point I want to make is that it is no longer possible to talk only about housing. We have to talk about housing and planning almost in the same breath.

Here we immediately run into obstacles and fears over the word "planning" that often hinder us from coming to grips with problems in the only effective way they can be resolved.

I'm sorry to say that the concept of planning when applied to Government is still considered by all too many people as something unsavory—an indulgence of "egg heads" and "deep thinkers" into the sphere of fantasy. I see some change in this attitude coming about, but it is all too slow.

Yet to shy away from planning because of such shallow misconceptions, or to be overawed by its challenge, is to commit the most serious folly. That would be evading our responsibilities to our children and to the generations yet unborn.

Actually planning is the application of economic science or economic commonsense to the problem of government, just as is done in the management of great private enterprises.

The large industries that are identified with your city and other giant industrial and commercial corporations throughout the land spend a good deal of their funds and assign their best brainpower to planning their programs not only for the year ahead but for decades ahead. It makes economic sense to hard-headed businessmen. It makes the same kind of good sense when applied to government.

* * * * *

Government is already playing a determining role in our national life and an increasingly important role in our community life. Trying to halt this development or stop it is useless. If you examine the facts of our community and national life, you have to recognize that the problems of modern industrial life and of social forces today are of such magnitude that nothing short of serious overall planning on all government levels is required.

Government today is so big and complex, and its expenditures form so large a part of our financial output, that we cannot afford not to treat it as we would a heavily capitalized big business.

We have to look at government problems from the economic point of view. We are all investors in a gigantic public corporation. We should look at our capital expenditures as investments for future social and economic gains. We should examine carefully operating costs and income.

From my experience in these matters, approaching the various problems that confront our governments from the economic point of view will almost invariably result in the correct answer from a social point of view. It just doesn't pay not to plan, not to invest and not to spend on needed developments that call for action.

What is to be done? How shall we proceed in the field of housing and planning? Which level of government has the prime responsibility for meeting the present-day problems of slums, inadequate and insanitary housing, poorly planned cities? The Federal Government? The city government? The State government?

Actually, today, we know that to a large extent the Federal Government and the city government have faced up to their responsibilities and are attempting to meet the problem of housing and planning with concrete programs. One may complain that these programs are inadequate, but the point I wish to make is that the pattern of Federal and municipal action has been established.

How about our States? On this level of government there has been altogether too little action. As a matter of fact, most of our State governments have not even begun to think about these problems, let alone formulate any kind of program that would assist the Federal Government and municipalities tackle these problems. What can be done on the State level, therefore, is what I would like to stress tonight.

As you will recall, one of the issues raised by the joint executive and congressional commissions on intergovernmental relations, the Kestnbaum report, was the part the State should play in transmitting Federal financial aid to the community for planning and housing. It in effect proposed that the State become the intermediary agency between the Federal Government and the city.

The State would become the agency to which the Federal Government would dispense its aid and assistance. It would, in a word, break the traditional and hard-fought relationship that was built up during the thirties between the Federal Government and the city government.

In the State of New York, Governor Harriman asked me to comment upon the proposals in that report as they affected those problems which came within the jurisdiction of my agency.

I advised him that nothing should be done, in any way, to interfere with or break down the relationships and communications lines of aid and assistance between the Federal and local governments that had been built up. To do so would be a mistake and a backward step, jeopardizing the hard-won right of our urban centers.

If this be so, then is there anything left for the State to do? Very definitely so. The State can play a very important role of providing aid and assistance to municipalities. The problems we are confronted with are so vast and so complex that help from this quarter, as from any quarter, is very much in order.

Even large cities such as New York, Philadelphia, and cities such as your own, which probably could get along fairly well without any State assistance, could still benefit to a large extent and increase the scope of its housing and planning programs through State aid.

But the most important role the State can play is in assisting smaller cities and towns, whose local facilities and personnel are either in very short supply or nonexistent, so far as being in a position to do the kind of jobs that need doing in their communities or to take advantage of Federal-aid programs.

Here the States have a real responsibility to the local communities to give technical aid and advice, to make known the available Federal and State aids, to assist in implementing Federal programs, and to stimulate and add to the programs by some form of State aid.

The State can serve as a source of education and information for its municipalities, a sort of thinking machine and a clearinghouse of ideas and information. It can exert a powerful influence on legislators and administrators. It can serve as a rallying point and a means by which numerous communities can pool their resources toward a common objective.

I do not advocate that the States actually do the work for the communities but they can give direction, consultation and assistance to stimulate local action.

When we look at slums from the standpoint of dollars and cents, it just plain doesn't pay to permit them to remain when the land they occupy could be put to a higher and better reuse.

In a properly planned urban renewal program in a Connecticut city it has been estimated that the tax return from just one new building which will occupy but one-fourth of the project area will be more than the entire area returned prior to its clearance and redevelopment.

In New York City it has been estimated that the increased taxes from title I areas will produce enough in 7½ years to pay the entire cost of the city's participation in the program.

To cite still another example, the coliseum which was built at Columbus Circle in New York City as a result of an urban renewal operation has since April 28, 1956, attracted over 2 million persons to various public expositions and trade shows.

It has been estimated that these visitors spent about $72 million of which $2 million went to New York City in sales tax. The Federal Government likewise enjoyed vastly increased tax revenues.

When you compare the returns from these areas after redevelopment with what was being returned in the past, it is truly a remarkable achievement. It is another dollar and cents argument for proper planning.

In this connection I am reminded of a city in upstate New York which was interested in providing an offstreet parking lot. The intention was to buy an area, demolish the structures and develop the parking facility. The local officials paid no heed to the urban renewal process.

Through proper planning coupled with urban renewal and with $2 of Federal money matching each $1 of local money the community could have had not only its parking lot, but also could have cleared and removed a substantial amount of existing slums without any additional expenditure.

Need I say more except to reiterate the responsibility of the States to make known to their communities the benefits of proper planning and how the Federal Government can help.

I am not advocating that all States must have State-aided housing programs, although we are happy in New York State that we do have such programs. I do feel, however, that

the States have a real and a definite responsibility to encourage good housing within their boundaries.

Let me tell you what we are doing about housing and its related problems. With respect to State-aided public housing, we have been authorized to make loans to local housing authorities up to a total of $885 million to house low-income families.

To date, we have financed the erection of approximately 38,000 completed dwelling units, with over 19,000 additional low-rent units either under construction or in planning.

These State-aided projects vary in size from 66 units in one small community to 3,500 units in a single development in New York City.

I have never felt that a worthwhile State-aided housing program should meet only the needs of families in the lowest income brackets. To be well-rounded and to serve properly equally urgent needs by others, some housing must also be provided for middle-income families whose present accommodations are inadequate and for whom very little has been provided in the past decade.

New York State, therefore, has been authorized to make mortgage loans out of the proceeds of a State bond issue of up to $50 million to housing companies for the development of middle-income housing projects for those families who can afford about $20 per room per month. These loans will be fully repaid with interest. All of this fund has been entirely allocated, for all practical purposes, and there is real need for additional authorizations for this State-sponsored private enterprise middle-income housing program.

When State-aided public housing projects are built on vacant sites, we require an offsite slum clearance operation as well.

I have arranged with the Federal Urban Renewal Administration that non-cash-grant-in-aid credit be given for such offsite slum clearance areas when they are located within the boundaries of an urban renewal project.

The result of this agreement is that instead of $1 of local contribution bringing in $2 of Federal money, every dollar of local money matched by our State brings in $4 of Federal money. Such coordination among the State, city, and Federal governments produces renewal programs of realistic size.

I feel rather deeply that the one-third local contribution for urban renewal activity is excessive. It may be too heavy a financial burden for limited local resources.

Yet I do not believe the local contribution should be cut to the vanishing point. Unless localities have a financial stake in renewal they may act in an irresponsible manner.

The limit of the State's contribution for renewal, counting any offsite clearance allocation, should not exceed one-sixth of the net renewal project cost.

The State can be a tester and a demonstrator for new ideas and new programs. For example, I have worked out with the Urban Renewal Administration two proposals under section 314 of the 1954 Housing Act. The first of these is a study leading to the development of a statewide housing code which could be adopted by reference by municipalities. Such a code giving minimum housing occupancy standards would be a valuable tool. This study should have national significance.

In this work we have already surveyed existing codes and ordinances, or the lack of them, in 55 of our cities, towns, and villages. At this preliminary stage it is apparent that the degree of enforcement varies widely from community to community. Examples of good enforcement are all too rare.

To assure proper code enforcement it may be necessary to provide some form of State subsidy to help pay sufficient salaries at the local level to attract competent enforcement personnel and to train them.

Our second 314 study will be carried out in Utica, a city in the central part of our State. It will be an attempt to demonstrate the full effect upon a city if all the legislation, Federal, State or local, is brought fully to bear on the community's housing and planning problems.

The study will point out what planning base should exist to make the best use of the urban renewal concept and will reveal shortcomings or needed additions to existing legislation, local, State and Federal.

We think that the State has a responsibility to review constantly the relationship of the cities to the State and the laws which give the city governments their powers.

We think that the State can do a great deal in promoting racial democracy and more balanced neighborhoods in our communities by enacting laws such as the Baker-Metcalf Antidiscrimination Law in our State and by setting up machinery such as New York State's Commission Against Discrimination.

The problems that confronted our larger cities for decades are now also the problems of the smaller cities and towns and the unincorporated areas in our counties. The machine age and our enormously expanded population have so spread and so intensified the problem of proper planning and proper housing throughout most areas of our States, that the State can no longer afford to ignore the problem.

The State must act if we expect to continue to raise our level of living and to make an increasingly better and happier land in which to prosper and raise our families.

Address by Hon. John Sherman Cooper, of Kentucky, on Celebration of the Foundation of Ghana

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Friday, April 12, 1957

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address I delivered at the Town Hall in New York City on the occasion of the independence of the new nation of Ghana, on March 6, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are here this evening to mark and to celebrate an event of truly historical significance. Today, the people of a former colony, the Gold Coast, became the new nation of Ghana.

During the past 12 years, many peoples have joined the family of nations—moved by the powerful forces of freedom which have swept across Asia, through the Middle East, and into Africa.

But the establishment of Ghana has new significance in this development, and will undoubtedly strengthen the movement toward independence in Africa. For the people of Ghana are the first in Equatorial Africa to complete the transition from colonial status to full independence and sovereignty.

For this transition, we must not fail to pay tribute to Great Britain and to her enlightened statesmen. Quietly, but faithfully, Great Britain is carrying out a policy of assistance in the development and independence of many of its formerly subject peoples. In a narrow sense, this has been described as the breakup of a great empire. But historically, it is the development of a greater system of world collaboration, based on freedom and justice.

The new nation of Ghana bears the impression of England at her finest. And we are glad that Ghana has become the ninth link in the British Commonwealth, comprised of independent and democratic nations, united voluntarily in free association, and truly devoted to peace.

Tonight, I do not want to subordinate the fact of Ghana's independence, and the struggle of her people for independence and freedom, to the world problems with which our country and the older free nations must deal.

Yet it is a fact that this day of independence takes on added world significance when we contrast it with the fates of older nations in other parts of the world.

In the nearly 12 years since World War II, the world has watched two main attitudes toward colonialism. One has penetrated the belt of the world's colonial areas in Asia and Africa, liberating hundreds of millions of people, and opening for those who have known little opportunity, new horizons of freedom and development. The other, radiating from the Soviet Union, has penetrated by force, ancient civilizations to the West and to the East which had long known independence, and had long contributed to humanity the fruits of their ancient cultures.

The evolution of Ghana as a country fully free must forever stand in strong contrast to the revolution in Hungary 4 months earlier, which saw a great people once more subjected to domination slavery.

No matter how symbolic, no matter how representative, Ghana may be in the long struggle of man to be free, Ghana stands at the commencement of the difficult task of building a new nation. It must be considered, not as a model or as an ideal alone, but as a concrete instance of nearly 5 million people assuming the rights, and also the obligations and problems of independence.

The tasks faced by the newly independent countries of Asia and Africa is immense. With a small body of trained civil servants, they must take over their governments and maintain political stability—and often in the face of bitter harassment of anti-democratic parties, whether Communist or extreme rightwing groups.

Poverty, illiteracy and malnutrition are other forces against which the newly independent peoples will have to fight for a long time.

Ghana's future has not been guaranteed success. Its problems, political, economic and social, are many. They will challenge the new government and citizens of Ghana with unusual demands of patience, ingenuity, self-restraint, and mutual cooperation. But it is fortunate that in its political and economic resources, Ghana enters independence under favorable auspices.

Due to the wisdom and restraint of its leader, a great leader, as well as the understanding of Great Britain, it has enjoyed for years a continuous, orderly and peaceful development of parliamentary experience and constitutional processes.

We are glad to read that Mr. Nkrumah, the first Prime Minister has noted the rich agricultural, mineral, and power resources of his country, which unite to produce a per capita annual income of $140 for its nearly 5 million people—high for an African nation, and exceeding the combined per capita incomes of India, Pakistan, and Ceylon.

Ghana presents also a challenge to her friends in the community of free nations—to offer sympathetic interest and assistance.

Just as we, as a young and weak United States of America, looked to our friends in Europe, so let us now stand ready to lend assistance to our newest and youngest neighbor.

It is a real challenge to our wisdom and understanding. For if our interest and friendship are to be valued by Ghana, we must accept, without question, that Ghana is an equal in the family of nations—free to develop its own democratic forms, institutions, and policies.

This is sometimes difficult for us to do. We must remember that newly independent countries, having won statehood, are jealous of independence. They want first to keep it, to strengthen it, to make it secure. It is difficult for them to agree that decisions affecting their country shall be predetermined by stronger powers. And they desire to achieve some measure of economic self-sufficience—a freedom, as they see it, from economic as well as political colonialism.

This policy is fundamentally one of self-interest, based on the need for internal stability and peace over a period of years. It is similar to the policies that guided the United States in the early years of our independence.

I am sure that governmental statements on independence and freedom have little meaning for millions of people throughout the world if those statements ignore the issue of colonialism.

The fight against colonialism is an integral policy of every Asian and African country. Only yesterday the new Prime Minister of Ghana told the final session of the Gold Coast Assembly that his Government would seek to help all African peoples in their pursuit of freedom and social progress.

It always comes as a shock to us when our attitude toward colonialism is questioned.

The United States has declared again and again its commitment to the principle that all peoples should be free, and I believe that our history—immediate, as well as distant—shows that sustained purpose.

The United States is one of the few large powers which has no colonies—and it seeks none. In those cases in which the full power to make a decision lay in our hands, the decision was made for independence. This is true with respect to Cuba, the Philippines, and Puerto Rico, which refused full independence.

We spoke and acted with others for Indian and Indonesian independence. And surely the world knows our great sacrific for Korean independence.

Since World War II, we have been deeply, sometimes violently, involved in a world struggle between two great centers of power. The goals of this struggle have been the peace and freedom of all mankind—nothing less.

I believe it is only fair to admit that this issue has influenced our relationship with our allies—some of whom are colonial powers—and that we have been required to direct our immediate efforts to what we have believed was an attack on our security and the very concept of world freedom.

I would point out also that it may well be that the resolution of our own country and other free nations has guaranteed for many newly independent countries an opportunity for peaceful development.

One of the major criticisms directed against the United States is that it does not put sufficient pressure on its allies to relinquish their colonies.

It is true philosophically as Gandhi said, "There is no such thing as slow freedom" and that "all birth takes place in a moment."

Nevertheless, the United Nations, including former colonial peoples in the United Nations, recognized that in some cases independence is an evolutionary process—as it set up a Trusteeship Council for the non-self-governing territories. The record will show that our country has adhered to this spirit in the United Nations. Ghana itself is an example of this process.

Despite our record, however, the United States is faced with the continuing problem of convincing the Asian and African peoples of our genuine support.

I would suggest that we apply to this evolutionary policy, called gradualism—wherever it is employed—a condition for our support. This test resides in whether it is being used to promote independence, step by step, or whether it is employed as a cloak to prolong colonial domination and deny the advance of freedom.

To our friends in Asia and Africa, we must point out that a true test of a great power's attitude toward independence and freedom is whether it strives to cooperate, and to aid new countries to hold their newly won independence, or like Soviet Russia, fasten on them a new control and domination.

There is a final point which bears deeply upon the attainment of understanding and sympathy between our country and Ghana and indeed on our influence for world freedom.

It is the issue of racial discrimination.

I see here, as I know you must see, a parallel between the international issue of colonialism and racism—and the work of full civil rights and desegregation going on here. There is a grave obligation on our Government, and the people of this country, who subscribe to the principle of freedom and constitutional processes to see that the positive, effective steps are taken without delay to remove discrimination and to assure the full freedom of all our people.

This is true as a matter of justice and humanity at home. It is also necessary if we are to be able to communicate real meaning to our leadership in the world. We must have faith in the full practice of freedom at home if we are to have influence in its growth in other countries. That is the reason that I emphasized at the beginning of this speech, the challenge of freedom.

The announced objective of our foreign policy is not peace alone but peace with justice and freedom. We distinguish our policy from that of the Soviet Union, upon the ground that ours is based on some first principle—some ethical standards. If at times these standards do not seem to prevail, we believe it is nevertheless their formulation and the continuing effort to make them effective, that holds peaceful nations together, makes the world more civilized, and gives a gleaming hope of peace. Surely we cannot compromise our world standards by the failure to assure full freedom and justice at home to our own people.

I am glad that the President of the United States has sent to Ghana as his representative the Vice President of the United States, to express the friendship of our country to the people and Government of the new state.

It is an honor to meet with you tonight. While none of us here speak in an official capacity, we believe that we represent our country's tradition of freedom and express the sentiment of the people of the United States as we join you this evening to hail Ghana's independence. Unfortunately, freedom is not inevitable, or its spirit constantly irresistible. President Eisenhower, in a recent address, recalled the wise observation of the great Justice Oliver Wendell Holmes, "the irresistible comes to pass, through effort."

This then is the thought upon which I end—that we in the United States must practice freedom at home to encourage this exercise everywhere and help those countries and those people who genuinely demonstrate our desire to be free.

Through effort—our effort—joining with that of millions and hundreds of millions throughout the world, freedom can prevail.

Reporters' Roundup

EXTENSION OF REMARKS
OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, April 12, 1957

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the transcript of the proceedings before a radio panel entitled "Reporters' Roundup," on April 8, 1957, on which I appeared.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATOR KARL E. MUNDT, REPUBLICAN, OF SOUTH DAKOTA, IS GUEST ON REPORTERS' ROUNDUP RADIO PROGRAM FOR MONDAY, APRIL 8, 1957

Senator MUNDT is questioned on numerous newsmaking topics, including "What new legislation is needed to deal with abuses of power by labor union leaders?" "How can American labor unions protect themselves against rackets and racketeers?" "What evidence will the Senate Rackets Committee produce against AFL–CIO Vice President Reuther?" "Do you feel that most labor unions are run in an honest manner?" "When will the Senate investigate improper activities in management as well as labor fields?" "Is Postmaster Summerfield trying to blackmail Congress for postal funds?" "Have United States foreign-aid dollars been spent wisely for the future of American peace and prosperity?" "Should the administration barter surplus United States products for strategic goods from Russian satellites?" "Do you think there still are Communists employed in governmental agencies?"

Senator MUNDT is questioned by well-known newsmen of the Washington Press Corps: Mr. Bill McGaffin, Washington correspondent of the Chicago Daily News; and Mr. Donald O'Connor, Washington correspondent of the Detroit Times. This panel program is moderated by Robert F. Hurleigh, commentator and director of Mutual's News and Special Events Operations.

Attached is a complete transcript of Reporters' Roundup radio, a weekly nationwide feature of the Mutual Broadcasting System. This program is heard on some 584 Mutual affiliates from coast to coast, 9:30 p. m. eastern standard time, on the Mutual network.

REPORTERS' ROUNDUP

(Guest: United States Senator KARL E. MUNDT, Republican, of South Dakota. Moderator: Robert F. Hurleigh. Panel: Bill McGaffin, Chicago Daily News; Donald O'Connor, Detroit Times.)

ANNOUNCER. Reporters' Roundup, where bylines make headlines. In a moment hear United States Senator KARL E. MUNDT, Republican, of South Dakota, answer questions fired at him by a panel of veteran reporters.

Mr. HURLEIGH. "What new legislation is needed to deal with abuses of power by labor union leaders?"

Mr. O'CONNOR. "How can American labor unions protect themselves against rackets and racketeers?"

Mr. MCGAFFIN. "Do you feel that most labor unions are run in an honest manner?"

Mr. HURLEIGH. The Senate's current investigating committee is doing an important job for the American people by exposing improper activities in labor and management fields. The Senate select committee's open investigation of labor racketeering has turned up a distressing situation which appears to be the beginning of extensive

public hearings concerning corruption and maladministration with labor and management. And, as the Senate select committee prepares to hold new hearings in Washington next week, AFL–CIO leadership is committed to its own drive to purge labor of undesirables holding positions of influence in member unions. Reporters' Roundup guest tonight is a well-known member of the Senate Select Committee on Improper Activities in the Labor and Management Fields. He is United States Senator KARL E. MUNDT, Republican of South Dakota. Senator MUNDT is one of the ranking Republican members of the Senate's powerful Committee on Government Operations. He also serves as a member of the Senate Appropriations and Agriculture and Forestry Committees. Senator MUNDT continues to rally nationwide public opinion on such vital public affairs issues as created by the current investigations conducted by the Senate Select Committee on Improper Activities in Labor and Management—on which Senator MUNDT serves. Senator MUNDT received a master's degree from Columbia University in 1927. He served in the United States House of Representatives for 10 years before he was elected to the Senate in 1948. Senator MUNDT was reelected to the Senate in 1954. And now, our guest is ready.

ANNOUNCER. Reporters' Roundup, which comes to you transcribed from the Senate Radio Gallery in your Nation's Capitol, is presented by the Mutual Broadcasting System as part of its public service programing to stimulate interest in current public affairs issues. Reporters' Roundup is devoted to encouraging a desire in all Americans to listen, read, and think more about public affairs. When the American people inform themselves from sources of their own choosing, they make wise decisions. May the opinions you will now hear expressed by our guest prompt you to further thought. Our guest is United States Senator KARL E. MUNDT, Republican, of South Dakota. Senator MUNDT is prepared to answer the challenging questions of this panel of well-known and able reporters: Mr. Bill McGaffin, Washington correspondent of the Chicago Daily News; and Mr. Donald O'Connor, Washington correspondent of the Detroit Times. Your moderator, Robert F. Hurleigh, commentator and director of Mutual's News and Special Events.

Mr. HURLEIGH. And now, Mr. McGaffin, let's have the first question for Senator MUNDT.

Mr. MCGAFFIN. Senator MUNDT, there has been quite a sharp exchange between Senator MCCARTHY and Walter Reuther, the union leader. You recall that Senator MCCARTHY said a few days ago that the Senate Rackets Committee investigation of Reuther would produce information that would make Beck, and I quote, "smell like the attar of roses." Mr. Reuther, in reply to that accused Senator MCCARTHY of "trying to run interference" for Teamster's boss, Dave Beck. What do you think of that exchange, sir?

Senator MUNDT. Well, I've been reading about it, and it seems like it's acrimonious enough to attract a lot of interest. I don't know anything about the merits of the pros and cons of the running debate which is going on between Reuther and MCCARTHY. MCCARTHY did announce one day in the committee that he had done some independent investigating of some of the unions headed by Walter Reuther and asked the Chair to call an executive committee meeting to present his evidence, which the Chair has agreed to do. The meeting has not yet been held so I know nothing about what facts Senator MCCARTHY may have in that area.

Mr. MCGAFFIN. Well, Senator, on today's news ticker there was a story out of Atlantic City quoting Mr. Reuther as saying that he had been advised by Mr. MCCLELLAN that the committee had found no basis for investigation of the UAW. Do you know anything about that?

Senator MUNDT. I think that dealt with one particular facet, Mr. McGaffin, of the investigation which had to do with the man who had been buying all the clothes, furniture, etc. for Dave Beck, and Mr. Shefferman had answered a question asked by some member of the committee as to whether he had done that for other labor unions and in that connection Mr. Reuther's name was brought in. I interpreted Senator MCCLELLAN'S statement to be that they found nothing in that particular transaction improperly involving Mr. Reuther.

Mr. O'CONNOR. You have no personal knowledge then, Senator, of any information the committee might have against the UAW?

Senator MUNDT. None except that there is before the committee a considerable and growing body of evidence in connection with the so-called Kohler strike out in Wisconsin, which I believe does involve one of Mr. Reuther's unions.

Mr. O'CONNOR. Senator, do you think that labor has taken the findings of the committee to date seriously enough to the extent that it has shown a willingness to celan its own house where corruption does exist?

Senator MUNDT. Yes; I think that willingness has been manifest in a majority of the labor unions. I would not want to say that universally they have agreed to clean their own house nor am I at all certain that union members have the capacity to clean their own house without the helping hand of the Government enacting some new legislation, but, in the main, I would say, American unionism has demonstrated a desire to cooperate with appropriate steps to clean its house.

Mr. O'CONNOR. Do you think that is a direct result of the committee investigation, sir?

Senator MUNDT. Yes. I think that its expression certainly—it, referring to the labor union movement—that its expressions in this connection have grown out of the hearings and the investigations. It is also true that within the labor union, such as this bakery union ruckus right here locally, there have been some indications that some officers within the union were desiring to clean it up but I am certain that there has been a great momentum given this whole movement by the committee hearings.

Mr. MCGAFFIN. Senator, what is going to happen to Dave Beck, in your opinion?

Senator MUNDT. At the moment, Mr. McGaffin, I think the major difficulties confronting Dave Beck are outside of our committee room and are in two fields; one of them very definitely involving his troubles with the Internal Revenue Service, and I think they are going to bring into the purview of their authority his financial transactions, his income-tax reports, and, of course, that will be adjudicated in conformity with justice before the courts, but he is certainly in trouble in that area. The other area of difficulty with which he finds himself surrounded now I think is within the American trade union movement itself, where his associates in other unions and some of his associates in the teamsters union have frowned very disapprovingly upon his repetitious use of the fifth amendment and his failure to make disclosures when he appeared before our committee. Now those two areas of difficulty are immediate and urgent and are on Mr. Beck's doorstep right now. Our committee, of course, is also continuing its investigations of his activities and it is entirely possible that some time later we'll have Mr. Beck before us again.

Mr. MCGAFFIN. To get back to Reuther for a minute, Mr. Reuther, according to the news dispatches, said that if the committee didn't call him he would insist on coming to testify before it. Do you know whether there are any plans to call Walter Reuther any time soon?

Senator MUNDT. Well, as I said in connection with the Kohler matter, I presume that Mr. Reuther will be a witness in that area when, as and if, we actually get it into the stage of an open hearing, and certainly if Mr. Reuther or any other well-known labor-union leader makes the request to appear before our committee our response will be affirmative.

Mr. O'CONNOR. Senator MUNDT, Dave Beck's Washington attorney, Arthur Condon, who appeared with him at the hearings, claims that Leonard Hall, the former chairman of the Republican Party, solicited Beck's assistance in the 1956 presidential election. Do you know, sir, whether this is true?

Senator MUNDT. No; I do not. I have read that exchange of opinion on the part of Mr. Condon and Mr. Hall; one says "Yes" and one says "No." I know nothing about it whatsoever. I can say only that as far as my relationship with the 3 campaigns go and in 1952 I was serving as director of the Republican speaking program for Eisenhower-Nixon, and in 1956 heading the truth squad, that as far as my personal knowledge goes, no requests were made by Mr. Hall of Mr. Beck, but I don't know all of the facts that may have developed in the course of the campaign.

Mr. O'CONNOR. Well, Mr. Hall, of course, today denied that he had ever solicited Mr. Beck's financial assistance. He admitted that he had talked to Condon and that they probably had talked about politics. Do you think, however, that this exchange, which is in the newspapers, will affect Mr. Hall's future? He has been rumored as a candidate for Governor of New York.

Senator MUNDT. No, I do not; because I think it's quite logical that any national chairman in the course of a campaign is solicitous to secure whatever support he can and if it were true—and Mr. Hall says it is not true—but if Mr. Hall had requested Mr. Condon, as a friend to Mr. Beck, to support the Republican candidacy, at that time none of the evidence which is now before us was before him, so I see nothing improper about such a request, had it been made.

Mr. MCGAFFIN. Well, Senator, there was another matter that came out toward the close of the campaign. You recall the Brooks subcommittee, which was investigating the Government nickel plant in Nicaro, Cuba, and the construction of an addition to that plant. And, testimony was given before that subcommittee to the effect that Mr. Hall had—I believe the charge was that he had indulged in a shakedown of a contractor to get him to contribute to the Republican campaign, and one of the Congressmen, after listening to this testimony, said, "Well, if this testimony is true, Len Hall should be in jail," and we've wondered what you think about the charge and whether you think that might have something to do with the fact that Mr. Hall didn't get a spot in the cabinet as many people thought he would.

Senator MUNDT. I remember the charge which came during the latter days of the campaign which I interpreted at the time as one of these last-minute political roarbacks which sometimes come. I remember what Mr. Hall said in response. He said, "It's a lot of poppycock; there's no truth to it; I'll be happy to come down and appear before the committee if they will call me after the campaign is over. If this is a ruse simply to make me immobile during the campaign, I'm not going to fall for that political trickery." He offered to appear before the committee afterward. I think it speaks very eloquently that the subcommittee has not called him since the election. I am sure it had nothing to do with Mr. Hall's not getting an appointment from the White House because I know Mr. Hall pretty well personally and he has told me that he has never

been an applicant for any such appointment and knows of no appointment in the Federal Government that he, at the moment, would be willing to accept.

Mr. O'CONNOR. Senator, you have held 5 or 6 weeks of hearings, I believe, on the Teamsters' Union. Where do we go from here?

Senator MUNDT. Scranton, Pa., starting next week, except we don't go to Scranton. Scranton comes to Washington. The hearings deal with the situation in Scranton.

Mr. O'CONNOR. What specifically in Scranton are you going to investigate?

Senator MUNDT. It is going to involve the general area of the construction industry and perhaps indirectly again the teamsters, but the whole area of improper activities in the construction industry in the area of Scranton, Pa.

Mr. O'CONNOR. You were quoted today, Senator, as having said that the labor rackets committee will soon investigate dishonest management and dishonest labor unions in the construction industry in New York.

Senator MUNDT. That is correct. That is going to follow the rather brief hearings we're having in connection with the Scranton situation which I don't believe will carry us much beyond 10 or 15 witnesses and we should be able and we hope to be able to conclude before the Easter recess. After the Easter recess, then we come to the New York-Manhattan Island situation.

Mr. O'CONNOR. We have heard a lot about dishonest labor leaders so far, Senator. What type of dishonesty do you expect to find among management connected with labor?

Senator MUNDT. We know what we're going to find in the New York City-Manhattan area because before the select committee was created our regular Senate investigating subcommittee, which Senator MCCLELLAN also heads and on which I serve, had a number of witnesses from the New York City-Manhattan area involving the construction industry, and the kind of dishonest practice we discovered there was this. That dishonest contractors would make special under-the-table deals with dishonest labor leaders, so that in the competitive bidding for a housing project, for example, they could always underbid their competitor because the dishonest union leader would say, "If you'll underbid him and slip me a little money, we'll eliminate the welfare fund payment or some other fringe benefit payment," so that the man who got gypped, of course, was the workingman who didn't get all the benefits he expected to get. The man who profited primarily was the dishonest contractor who got the job because he had an advantage in the bidding and the dishonest union leader got the benefit of whatever bribe was paid him by the dishonest management.

Mr. MCGAFFIN. Senator, is it possible that another phase of management that you might investigate is the unwarranted use of expense accounts for entertainment employed by management?

Senator MUNDT. Yes; I think that is certainly possible. We have had within the last 2 weeks the interesting beginnings of some evidence which would lead us in the direction of believing that in certain managerial groups, certain corporations—probably not the great gigantic corporations—but in smaller corporations that there has been a tendency to misuse stockholders' money and stockholders' funds, much in the same manner that the evidence leads us to believe Dave Beck misused the dues paid by the union members. Since we are authorized by the act to study improper practices in labor and management or labor or management, it is certainly within the realm of possibility that this kind of evidence will be firmed up sufficiently to justify some investigation in that area. There is this important difference which I should point out, because our responsibility essentially is in the direction of the public interest. In the field of the union, you have a situation where a man, in order to get a job to support his family, must join a union. Then, to belong to the union he has to pay compulsory fees and dues for the various kinds of fringe advantages he gets, so he has no choice but to belong to the union or not support his family. A stockholder in a corporation has a lot more independence. He can buy stock or sell it. He doesn't have to stay in the corporation if he believes something dishonest is going along. So, while we would be interested in correcting those dishonest practices either place, our major public responsibility obviously is in the field of compulsory unionism, where a man has to belong to a union, has to subject himself to the improper practices in order to have a job to support his family.

Mr. MCGAFFIN. Well, what other field of management, Senator, do you think you might investigate? You mentioned the example of dishonest contractors.

Senator MUNDT. Yes. Well, we're not prepared, of course, to list the whole series of areas in which we might go, but the contracting industry seems to lend itself especially to that kind of investigation. There's another area which deals with such things as garbage collection, places where unions of associations of garbage collectors or whatever you call them make some kind of a contract to get an exclusive right or privilege to do a certain thing in the city, and there management, call if you will city management, or politicians at the local level—there's a great opportunity for graft and corruption in that area.

Mr. O'CONNOR. Senator, if I may change the subject for a minute here, it is reported that the United States has threatened to cut off the Hungarian escapee program, that is, bringing the Hungarians into this country, which supposedly is causing a lot of suicides and frustration among the Hungarians awaiting entry here from Austria. Do you think the escapee program should be continued and will Congress do anything about it?

Senator MUNDT. Well, I don't think the escapee program should be continued indefinitely and without limit, if that is your question. Whether we should cut it off on a particular day or at any particular number I would want to see a lot of evidence to know what answers I would consider appropriate for that. But if the question is, should we go on with an unlimited program, my answer is, I don't think so.

Mr. O'CONNOR. No, sir, that isn't the intent of my question. It's, should we cut it off now.

Mr. MCGAFFIN. Senator, there are about—if I may cut in here, Don—there are about, I believe, 30,000 refugees who have made it out of Hungary and are sitting in camps in Europe, and that is where the wave of suicides started at the report from here that no more were going to be admitted to the United States. Those people are sitting out there on a limb in a very bad spot. Also, I think many thousands of the refugees who came into this country on a payroll status have had no assurance from Congress that their status will be regularized, and they are getting——

Senator MUNDT. Yes, well, that, of course, gets into two different areas. I am confident that those who are here now and who are legitimately here and appropriately here and justify their being here because they are honest political refugees, that they will be given continuous haven in this country. Now, from the standpoint of those who are still over there and wanting to get here, I think we will insist on our original understanding, and that was that the United States would take its share, not all of them, but its share. I'm sure we'll make exceptions in that direction from the standpoint of the importance of reuniting families where you have people over there whose wives may be here, whose parents may be here, or whose intimate members of the family are already here, I'm sure we will adjust things so that they can continue to come.

Mr. MCGAFFIN. Well, what would you regard as a fair share for the United States?

Senator MUNDT. Well, of course, that is a pretty difficult thing to put down in mathematical terms. It's a question of surveying what has been done by the other recipient countries, the other countries which are able to absorb refugees, which have the same disposition toward communism that we have, and I think it is something which, on balance, you have to study very carefully, and I wouldn't be able to give you an off-the-cuff answer as to the exact number of refugees I would consider to be fair.

Mr. O'CONNOR. Senator, a quick question before we go off. Do you think Postmaster General Summerfield is trying to blackjack Congress into giving him more money by threatening to cut the mail services?

Senator MUNDT. I prefer to use the word "nudge." I think he's trying to nudge Congress in that direction and that probably if Congress does not make the funds available he will have to carry out his program of reducing some of the postal service.

Mr. HURLEIGH. I'm sorry, gentlemen, but I am going to have to cut in here. Our board of judges has selected the prize-winning question submitted by our listeners for this broadcast. In a moment, Senator MUNDT is going to answer these questions. Stand by for the names of the winners.

And now, Senator MUNDT, here are those prize-winning questions from our listeners.

ANNOUNCER. Mrs. Belle L. Crawford, of Phoenix, Ariz.

Mr. HURLEIGH. "Do you think there are still Communists employed in governmental agencies?"

Senator MUNDT. Yes; I am sure that there must be in the almost 2 million civilian employees here and there some Communist who has not yet been discovered and disclosed, but I am equally confident that they have been reduced to a very small minimum and that everything that the FBI and that internal security can do is being done to eradicate them, so I would not think that they are in important places today or having any great impact in the formation of public policy.

ANNOUNCER. Mrs. Sidney Armstrong, of St. Louis, Mo.

Mr. HURLEIGH. "Have United States foreign aid dollars been spent wisely for the future of American peace and prosperity?"

Senator MUNDT. I would say some of them have and some of them have not. Certainly we have not thrown away all of our foreign aid; a lot of it has been used judiciously and wisely and constructively and inevitably in developing the great kind of bureaucracy that has to distribute these dollars abroad much of it has also been used wastefully, and as a member of the Senate Committee on Appropriations, I'm one of those who this year proposes to squeeze out as much of that waste and eliminate as much of the useless expenditure as is possible.

ANNOUNCER. Miss Mary Philips, of Tulsa, Okla.

Mr. HURLEIGH. "Should the administration barter surplus United States products for strategic goods from Russian satellites?"

Senator MUNDT. I don't think I could answer that one categorically yes or no. My disposition is to look with pretty much of a jaundiced eye on any such barter arrangements with satellite countries, but I would not be prepared to say I want to slam the door entirely against consideration of such conceivable exchanges. In my opinion we would have to balance each transaction in relation to how it answers this criterion: Does such an exchange benefit the free

world? Is it serving the self-interest of the United States? Will it do more to preserve freedom than to promote Communism? If those answers could be given so as to benefit the American side, I would say such exchanges might be justified, but if in any remote respect they tended to strengthen the other side rather than our side, I think we should stay completely away from them.

Mr. HURLEIGH. I want to thank United States Senator Karl E. MUNDT, Republican, of South Dakota, for being our guest on Reporters' Roundup, which came to you transcribed from the Senate Radio Gallery in your Nation's Capitol. And, my thanks, too, to the reporters on our panel: To Mr. Bill McGaffin, Washington correspondent of the Chicago Daily News, and Mr. Donald O'Connor, Washington correspondent of the Detroit Times.

ANNOUNCER. This broadcast of Reporters' Roundup will make news because its guest, United States Senator KARL E. MUNDT, Republican, of South Dakota, faced questions which are asked by most Americans. Next week, and each week thereafter, Reporters' Roundup will seek out the top news and the man who makes it. You'll get the story behind the headlines as our guest answers the questions of Robert F. Hurleigh and a panel of veteran reporters. This is Jaffray Ford speaking.

Jewish War Veterans Oppose Return of Seized Property

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by William Carmen, national commander of the Jewish War Veterans of the United States, before the convention of the Department of Massachusetts.

Mr. Carmen presents cogent arguments against the return of German property now in the hands of the Alien Property Custodian, which would be contrary to the Bonn Treaty and would, of course, be another expense to the overburdened taxpayers of the United States.

The Jewish War Veterans propose instead that Congress pass the bill sponsored by the Senator from Florida [Mr. SMATHERS] to use proceeds from the property for education in the fields of science and engineering.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY WILLIAM CARMEN, NATIONAL COMMANDER OF THE JEWISH WAR VETERANS OF THE UNITED STATES OF AMERICA, BEFORE CONVENTION OF THE DEPARTMENT OF MASSACHUSETTS, JEWISH WAR VETERANS, APRIL 7, 1957

History has decreed that I should become your national commander at a time of great crisis, a time when events have literally shook the world. In recent months we have witnessed a deep crisis in the Middle East. We presented our position forthrightly on this crisis and voiced our opinions with all the effectiveness that our resources could command.

* * * * *

But while the full orchestration of our symphony played on the question of the Middle East during the past few months, and has since quieted down somewhat, it is time for the men in the pit to rise again to the occasion of another deeply felt policy of JWV.

I refer to the present bill before the Congress of the United States that would return to our former enemy, Germany, the so-called seized assets which are now in the hands of the Alien Property Custodian.

Twice in the past 6 years our organization found itself compelled to take a position on the return of the alien property. At our 56th national convention in Atlanta, Ga., in September 1951, we passed a resolution opposing the return of properties and funds to the Germans and further resolved that such property and funds be used to compensate Americans injured and sacrificed by the Germans in prison camps and otherwise for the payment of their just claims.

As recently as July 17, 1954, our NEC recommended that JWV go on record as opposed to a bill introduced by Senator DIRKSEN providing for return of German property now in the hands of the Alien Property Custodian.

There are, generally speaking, three possible grounds on which to base a decision on this subject. The first of these is purely emotional; the second is moral, and the third is business and financial.

In terms of emotional objections, these must be obvious to everyone in this room. If there ever was a time when the memory our our 6 million departed brethren should be memorialized in our hearts, it is now—when our coreligionists find themselves once again, the butt of indignities and degradation in the Communist countries and Egypt. Let our protest to any return of seized German property be based upon emotional grounds alone and I am sure that righteousness, decency, and honor would be on our side.

Moral grounds offer a somewhat different basis for our decision. It is true that all German assets were seized immediately upon the declaration of war betwen our country and that dominated by Hitler.

But also at that time all British and French nationals were required to surrender their American stocks to their Government, which sold them on the open market and used the proceeds in American dollars to buy munitions. No step is being taken to return these stocks or their value in American dollars to these people. Therefore, would we not be putting our former enemies in a better position than our allies by taking this action? Of course we would. Also, a formal treaty with the Bonn government definitely stipulated that the Bonn government would waive all rights to this property in turn for no reparations on the part of the German Government.

In addition, the West German Government pledged to make good its own nationals that property seized by the Government of America. This, of course, was in lieu of reparations.

This would be moral grounds enough, since, if you enter into a treaty, it would seem logical that you honor it—that's the very basis of morality.

Now the Germans scream so self-righteously about the sancity of private property. What about the sanctity of treaties between nations? Yes, there is a time when the hatreds and prejudices of the past must be buried. German property presently held by the Alien Property Custodian is, literally, their remains. Let it be buried with the past and forgotten by that nation who, but for the grace of God and the mighty power of America, would have led us all to the gas chamber.

Now for the business and financial grounds on which we reject the return of German property. Where, generally, will this money come from which will be used to reimburse German nationals? This property cannot be returned since, basically, the property has been taken over by Americans. Therefore, the only thing that can be returned is hard cash, and where is this cash going to come from? From your pockets and from mine. As a matter of fact, the money that would be returned would be far in excess of the actual assets of the corporations and property taken over at the time of World War II.

The passage of such a bill would be, to me, an affront upon the honor of the American citizen. It would be an insult to his dignity. Must the American people, taxed to the hilt at the present time, be forced to dig even deeper into their pockets to pay our former enemies for so kindly making a volcano out of the world?

Ask the mother of any son who died in Europe if she is willing to have this German property returned—and pay for it no less, out of her own pocket. Ask a man who was fortunate to come to this country after 6 years in a German concentration camp and who has since become a citizen, whether he is willing to dip into his pockets to pay the German people for so-called seized assets. And ask yourself and ask me and I say that this would not only be immoral, it would be a sin against humanity.

But there is an attempt to utilize this money for some common good. Senator SMATHERS, of Florida, who, you will recall, addressed our national convention in 1955, has introduced a bill which would utilize the money held by the Alien Property Custodian for the education of children of veterans, particularly in the badly needed fields of science and engineering. What better way to use this money than for educational purposes?

The Senator from Florida is to be congratulated on his vision and forthrightness in presenting this bill to the Senate of the United States.

Our national legislative director last week testified for this bill and, of course, against any bill to return German property.

Thus, I have made the question of the return of enemy property the theme of this little talk this evening. There are many, many ramifications to this proposed return, some of which would take hours to discuss. But the kernel of our thinking is contained within these remarks. I have been informed that the lobby which is attempting to railroad this bill through Congress has been spending upward of a million dollars to do the job. There is only one way to counteract this action if you haven't got dollars and that is with truth.

If we tell the truth, the truth will make us free, it has been said. This has been the foundation stone of our organization. If we have been accused of sometimes being outspoken, this then is the reasoning behind such so-called outspokenness.

It has been a privilege and a pleasure to have been able to present these facts before you tonight. Be informed, be aware of the problems that we face in this world, and in the long run you will discover that we are making a better world for our children and our children's children.

I thank you.

Results of Poll Taken in Sixth Congressional District of Washington

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. TOLLEFSON. Mr. Speaker, I recently mailed about 20,000 question-

naires to a list of residents in my congressional district whose names were selected at random. They represented a good cross section of the people in my area.

The returns have exceeded my expectations. There has been a 15-percent return to date, and the completed questionnaires are still pouring in.

I am sure that Members of Congress will be interested in the views of my constituents and for that reason am inserting the percentages of the current tabulation of the answers in the CONGRESSIONAL RECORD. When all the questionnaires are returned I shall tabulate the complete results. The current tabulation follows:

	Percent		
	Yes	No	Undecided
1. Do you approve the emergency use of military force in the Middle East by the United States as proposed by President Eisenhower?	40	45	6
2. Do you approve the expenditure of large sums of money by the United States for use in developing Middle East countries?	17	77	6
3. Do you think the Middle East problem is one for the United Nations only?	49	44	7
4. Do you believe we should continue our foreign-aid program which calls for the expenditure of $4,300,000,000 in military and economic aid to our allies and free countries during the next fiscal year?	26	66	8
5. Do you favor balancing of the Federal budget?	86	9	5
6. Do you favor balancing the budget before Congress votes a tax cut?	68	27	5
7. Do you favor an increase in postal rates to meet postal deficits?	65	31	4
8. Do you approve direct Federal grants to States to help build schools?	65	32	3
9. Do you approve an increase in the minimum wage?	61	31	8
10. Should labor union welfare funds be regulated by law?	84	12	4
11. Do you favor amending the Taft-Hartley Labor Act?	44	45	11
12. Do you think the Federal Government should continue its support programs for agricultural products?	42	50	8
13. Do you favor the Bricker amendment limiting the effect of international treaties?	46	19	35
14. Do you favor a protective tariff or quotas on imports of foreign products which compete with our own products, such as plywood, fish, and bulbs?	77	19	4
15. Do you believe that overnight facilities should be maintained within the boundaries of Rainier National Park at or about the present altitude?	82	12	6
16. Do you believe that the National Park Service should permit the construction of some sort of ski lift or aerial tramway in Rainier National Park?	71	22	7

Amendment of Anglo-American Financial Agreement

SPEECH

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 10, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the joint resolution (S. J. Res. 72) to implement further the act of July 15, 1946, by approving the signature by the Secretary of the Treasury of an agreement amending the Anglo-American Financial Agreement of December 6, 1945.

Mr. HAYS of Arkansas. Mr. Chairman, I yield myself such time as I may require.

Mr. NICHOLSON. Mr. Chairman, will the gentleman yield?

Mr. HAYS of Arkansas. I yield to the gentleman from Massachusetts.

Mr. NICHOLSON. I would like to ask the gentleman from Arkansas if it is really necessary to have this matter brought up in the House of Representatives because the Secretary of the Treasury under the 1946 agreement could agree to do this and we have made ample provision for it. Why is this a matter for the Congress to pass on when it is all written out as to what they can do when England finds itself not in a position to take care of the principal and interest payments. Is it not a matter than can be taken up by the executive department or the Treasury?

Mr. HAYS of Arkansas. Mr. Chairman, the Secretary of the Treasury thought not. Of course, he spoke on advise of his counsel and, I think, perhaps, I was the one in the hearings who asked that question or at least the question was raised. As I recall the testimony, the legal staff of the Treasury Department held that congressional approval was either necessary or desirable.

Mr. VORYS. Mr. Chairman, will the gentleman yield?

Mr. HAYS of Arkansas. I yield.

Mr. VORYS. If the gentleman will look at page 12 of the report, he will find the original agreement. Section 12 of that agreement provides, and I quote:

Consultation on agreement: Either government shall be entitled to approach the other for a reconsideration of any of the provisions of this agreement, if in its opinion the prevailing conditions of international exchange justify such reconsideration, with a view to agreeing upon modifications for presentation to their respective legislatures.

Therefore, under section 12 of the original agreement, it provides that modifications must be presented to the respective Legislatures of the United Kingdom and of the United States.

Mr. NICHOLSON. Mr. Chairman, will the gentleman yield?

Mr. HAYS of Arkansas. I yield.

Mr. NICHOLSON. I understand, whether it is in the report or not, that the British Parliament did not act on this and does not have to act on it and that the Prime Minister of England, or someone he designates in any event, just has to sign his name and it does not go before the Parliament; is that not so?

Mr. HAYS of Arkansas. Yes, I think the gentleman is right. Of course, that is true only because of the difference between our form of government and the British form. The British have a parliamentary government.

Mr. JUDD. Mr. Chairman, will the gentleman yield?

Mr. HAYS of Arkansas. I yield.

Mr. JUDD. Is not the situation this, that under the British parliamentary system when England's Government enters into an agreement and presents it to the Legislature, unless there is an objection, then it is ratified. Whereas, under our system, it requires a positive act by the Legislature to make official such an agreement by our Executive. That is why this resolution is before us. The British Parliament ratified it when it raised no objection. We have to take a positive action to ratify it.

Mr. HAYS of Arkansas. Yes; I think that is a good statement. I would like to say further to the gentleman from Massachusetts that I have the feeling even if the question as to the necessity for referring this to the Congress were answered in the negative, I still believe it might be desirable, aside from the point which it seems to me the gentleman from Ohio disposes of, that section 12 does require congressional action. In matters of fundamental import where there is a policy decision that might represent a departure from previous action, it is right for Congress to take a look at it. I yield further.

Mr. NICHOLSON. I want to thank the gentleman for permitting me to interrupt him. There are duties that the Congress must perform and duties that the executive and judicial branches of the Government must perform. I object, and I think I am right in objecting to this procedure, because it puts the Members of Congress in the position that ought to be filled by some other people, because this matter was signed and sealed in 1946, and that agreement said that if the British Government finds they cannot pay this that they can have a waiver or something in parentheses, which is about the same thing. That is on the books. There is nothing for us to do. We have already given them the right to do it. England has now said, "We cannot stand this." Therefore, the proper authority should act on it, and I do not believe the Congress is the proper authority in this instance.

Mr. HAYS of Arkansas. I always respect the gentleman's opinion, and I was glad to yield to him for the statement.

Mr. HAYS of Ohio. Mr. Chairman, will the gentleman yield?

Mr. HAYS of Arkansas. I yield.

Mr. HAYS of Ohio. This question of British Parliament's ratifying or not ratifying this matter has been brought up at least two or three times thus far, and I think it ought to be made perfectly clear.

Under our form of government, we have three separate, distinct, and somewhat independent branches—the legislative, the executive, and the judicial—whereas England has not, as I think the gentleman has pointed out. In England the legislative branch is also the executive branch. The ministers are also members of Parliament. In presenting the British budget, for instance, the ministers, who are members of the majority party, bring in the budget, and they decide what it is going to be, and there is not even a vote on the various items as there is in this Congress. If somebody demands a vote, it then becomes a matter of a vote of no confidence in the Govern-

ment. If members of the majority party vote against themselves, they vote themselves out of office and into an election.

So you have an entirely different system, and you just cannot say because the British Parliament did not formally take a vote that we should not. The British Parliament, as the gentleman from Minnesota [Mr. JUDD] has pointed out, assents by the minister assenting, and the question is not raised. It is the same as if they had a vote on it.

Mr. HAYS of Arkansas. I thank the gentleman from Ohio.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. HAYS of Arkansas. I yield.

Mr. GROSS. Can we not boil this situation down to size? I believe the gentleman has stated that this new agreement has already been signed by the Secretary of the Treasury and some authority for the British Government. In other words, it is signed, sealed, and ready for delivery if the House puts its stamp of approval on it, for this is a Senate resolution we are considering. In other words, the difference between the British Parliament and the House of Representatives of the United States is that the House, if it approves this resolution, will admit it is a rubber stamp, whereas the British Parliament does not have to admit it.

Mr. BATES. Mr. Chairman, will the gentleman yield?

Mr. HAYS of Arkansas. I yield.

Mr. BATES. I want to commend the gentleman for the fine statement he has made, but he and others have raised certain questions in my mind. It appears from what has been said that this is an exceptionally good bill from the point of view of the United States. This being so, I wonder why the British are so anxious to accept it.

Mr. HAYS of Arkansas. It is believed that the new arrangement is in the interest of both. If it is in our own interest it does not follow, of course, that it thereby conflicts with Britain's interest. I think in this instance it is fair to say—the committee was so convinced—that this is a very reasonable adjustment of a confused clause Mr. Humphrey argued vigorously, and I think it was a reasonable position, that since it was in the interest of clarification it would establish a better relationship for future payments and less possibilities for difference of opinion. That is the story, I may say to the gentleman from Massachusetts.

Mr. BATES. I am certain that the relationship would be increased and bettered between the United States and Great Britain after the passage of this, but after these many statements which have been made here indicating the United States might gain some $2 billion as a consequence of the enactment of this proposal, the converse would appear to be true also, and that Great Britain would be harmed by it. I wonder why she would be so strongly in favor of it.

Mr. HAYS of Arkansas. It was the unpredictability of the rulings and construction of these two sections that led the United Kingdom to seek clarification.

Mr. GROSS. Mr. Chairman, I make the point of order a quorum is not present.

The CHAIRMAN. The Chair will count. [After counting.] One hundred and ten Members are present, a quorum.

Mr. HAYS of Arkansas. Mr. Chairman, I do not wish to take any further time right at this moment.

Mr. VORYS. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, I voted against the British loan in 1946 but I am for this bill.

Mr. GAVIN. Mr. Chairman, I make the point of order that a quorum is not present. The gentleman has a very important statement to make and he should be heard.

The CHAIRMAN. The Chair will count. [After counting.] One hundred and twenty-one Members are present, a quorum.

Lives or Dollars

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 2, 1957

Mr. CANNON. Mr. Speaker, are we building our new highways for the safety and enjoyment of the public or for exploitation by private greed? Shall we make them safe and give the people an opportunity to see America first? Or shall we erect billboard canyons and ribbon slums, hemmed in with blatant advertisements of pink pills for pale people and 57 kinds of beer, interspersed with pinboard carnivals and hotdog stands?

The question involves not only the safety of the individual but the safety of the Nation. Rear Adm. Neill Phillips testified before a congressional committee that the restriction of billboards along our superhighways is necessary for national defense. He testified that restriction of billboards along the superhighways is necessary for national defense.

He said billboards would impede movement of troops and refugees in emergencies and interfere with directional signs vitally important in civil defense operations? He contended that billboards would distract drivers and present fire and splinter hazards to civil defense.

Referring to arguments that billboards would stimulate business, he said:

I just don't believe that the voters of America can be made to believe that it is good for the national economy to squander millions of dollars to deface our country with a hideous rash of billboards along the network of our new superhighways.

The St. Louis Post-Dispatch said editorially in its issue of March 29, 1957:

BEAUTY, NOT SAFETY, THE ISSUE

A great many people must respond favorably to the idea that the new interstate highways should be protected against the commercial exploitation that has turned many existing highways into rural slums.

We reach that conclusion because the outdoor advertising industry has begun to fight back. It sponsored a study at Iowa State College which concluded that billboards along highways have some slightly beneficial effects in that they keep drivers from succumbing to highway hypnosis. Another paper based on research in Iowa and Michigan concludes that there is no significant relationship between outdoor advertising signs and highway accidents, and that the evidence, if any, is slightly in favor of signs as a safety measure.

These conclusions are tenuous enough to warrant being ignored, but we do not expect the billboard people to ignore them.

Actually the safety issue is not the basic one. The new highways should be protected from commercial exploitation because the motorist is entitled to see some natural beauty just for the fund of it—or the good of his soul. And there are other ways of combating highway hypnosis than obscuring the view with signs.

And the Washington Star on March 30, 1957, said:

ROADSIDE EYESORES

The movement to safeguard the proposed 41,000-mile Interstate Highway System from roadside eyesores of the type so familiar to travelers on United States Route 1 is worthy of public support—although the movement is a bit belated. It would have been better if some statement of policy, at the least, had been included in the 1956 Federal Highway Act which authorized the network. For it is evident that a strong fight will be waged by commercial signboard and other interests to make the most of the new roadside locations opened up by the huge highway program.

The law's deficiency was brought to public attention last December by Robert Moses, New York's park chief, in a Harper's article. He wrote that the new expressways would be "all left exposed to an indiscriminate mushrom growth of ugly filling stations, hotdog stands, and all the other familiar roadside eyesores." He warned that "if the billions of public investment * * * are to be protected and the value of our scenery and natural assets is to be preserved, steps to prevent the onslaught of commercial advertising must be taken before construction gets underway." Since then several bills have been introduced calling for varying degress of Federal control of roadside defacement—either by the setting of standards voluntarily to be enforced by the States or by the withholding of Federal funds for noncompliance with the standards. Hearings on some of these proposals are being held this week.

We hope that some reasonable method of control can be worked out, so that the new vistas of natural scenery through which the new highways will run will not be desecrated as some of our older highways have been.

We have at the gates of Washington one of the most convincing demonstrations that could be made. Driving out of the city on Highway No. 1 we find an arterial highway so blinded by obscuring billboards—although it has not yet reached its ultimate nuisance potential—such a discordant riot of gaudy billboard excesses as to completely hide one of the most beautiful countrysides to be found in historic Virginia.

On the other hand, entering the city from the same direction is the famed Shiley Highway from which the reckless dollar-crazed exploiters have been excluded and which is a delight to the eye of the tired city dweller who enjoys a Virginia landscape of surpassing beauty, uncontaminated and unspoiled by the blare and glare of vandal billboards.

Drive over these two highways and take your choice.

Airlift Gamble

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an excellent address entitled "Airlift Gamble," delivered by Delos W. Rentzel, chairman of the board of Slick Airways, before the Aviation Writers' Association luncheon at the National Press Club, on April 11, 1957.

Mr. Rentzel, who is one of the foremost authorities on civil aviation, occupied the positions of Chairman of the Civil Aeronautics Board, Administrator of the Civil Aeronautics Administration, and Under Secretary of Commerce for Transportation, all during recent administrations.

Mr. Rentzel, in his address entitled "Airlift Gamble," pointed out some of the grave dangers we are risking today in our failure to provide ourselves with a modern, adequate, and ready force for a worldwide airlift.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AIRLIFT GAMBLE

(Address by Delos W. Rentzel, chairman of the board, Slick Airways, before the Aviation Writers' Association luncheon at the National Press Club, April 11, 1957)

There are people, well informed and otherwise, who refer almost casually to our worldwide commitments in foreign policy. A discussion of what we are doing internationally and what we want to do, as well perhaps as what we are failing to do, often sounds just a little like an atlas—we shift rapidly in our conversation from Suez to New Delhi; from Indonesia to the African Gold Coast; from Buenos Aires to Yemen.

Now we may wish all these distant places would disappear or at least stop bubbling and boiling. However, they exist and our concern with what happens in them and between them is very great. As the leader in the alliance of free nations, we do have worldwide commitments no matter what it may cost, no matter how much this interferes with other activities, no matter how long.

And so we must gear our economy, our way of life, to these responsibilities that have been thrust upon us. Fortunately, however, never before has a nation been so well qualified to exercise this needed leadership. I am speaking particularly of technological capability—the impressive, and at times awe-inspiring ability that our engineers and scientists have developed to bring organized human and machine energy to bear on a problem, no matter, what it is, no matter where it is located. This is fortunate, of course, because from a manpower standppoint we are not in a position to compete with the nations behind the iron and bamboo curtains. They increasingly outnumber us and so we must redress the balance with our not-so-secret weapons, advanced technology and energetic, imaginative administration.

A prime example of technological strength in this modern world is, of course, air power which provides a control of accessibility never known before in history. The wide-ranging B–52s of the Strategic Air Command, strengthened by the tremendous firepower made available to them, are without question the greatest shield we have against total war. However, because of the nature of our international obligations, total war is not our only worry. Put very simply, we must at all times be concerned with what are sometimes referred to as brush fires. We do not wish to lose strength piecemeal and be nibbled to death—and to me, this is our worst danger.

The ability to move men and materials, tanks and military policemen, ground atomic weapons and relief supplies for civilians, into distant areas quickly and economically is an important element in our international power. And whenever it is to be done, it must be done swiftly and expeditiously. I am not suggesting we repeat the experiment carried on by our allies in Suez, but it is an instructive lesson. The slow, tedious shipment of men and supplies in that action was as responsible as anything for the French and British failure to accomplish what they set out to do.

Complete and effective use of airpower requires more than applied firepower, although this is certainly essential. The less than full acceptance of all the implications of air logistics is to blunt our weapon and fail to make use of our fundamental strength. Some have argued against providing ground units or advanced air bases with atomic weapons on what are apparently moral grounds. I would suggest that it is far more immoral, once we are committed to an action, whether aggressive or basically defensive, to fail to make use of our full technological strength to guarantee that sufficient men and materials are where they are needed at a time when they are needed. Von Paulus' failure at Stalingrad for the lack of 300 tons of daily logistics, was the ultimate failure in logistics support and broke the back of the German Army.

This awareness of the range and depth of true airpower has long been shared by some of our military leadera. For instance, the late Hap Arnold once wrote:

"Airpower includes a nation's ability to deliver cargo, people, destructive missiles, and warmaking potential through the air to a desired destination to accomplish a desired purpose. Airpower is not composed alone of the warmaking components of aviation. It is the total aviation activity—civilian and military, commercial and private, potential as well as existing."

The recognition that airpower includes the ability to move men and materials, as well as deliver explosives, has increased since the magnificent airlifts of World War II, Berlin, Korea. In addition, there has been an increased awareness that the very speed of air transport is transforming our conception of military logistics.

During the Revolutionary War it took 3½ days to move supplies from Boston to Portsmouth, an estimated speed of 1½ miles per hour. In the later stages of World War II it took 106 days to move supplies from the United States to the combat commander in Germany, a calculated speed of 3½ miles per hour. In about 175 years we increased the overall speed of moving military supplies only 2 miles per hour.

Now General Washington's quartermaster, who did so well with the transport equipment available to him, is no longer with us. However, it does seem at times as if his influence pervades the Pentagon. We still rely overmuch on enormous, costly stockpiles and fill long supply pipelines with men and materials.

Of course, there has been much talk, public and private, of the new values of air logistics. And, in truth, the military has been making greater and greater use of air shipment. Most striking, perhaps, the Federal Government is today running the world's largest airline, the Military Air Transport Service, better known as MATS. This gigantic airline, by its own statement, airlifted every hour of the day last year about 100 people and nearly 20 tons of cargo for all branches of the Department of Defense. And its service is increasing for it flew a plane over the Atlantic or Pacific every 23 minutes during 1956 as compared with every 32 minutes in 1955. Operating on published timetables over many of the same domestic and international routes flown by United States scheduled commercial airlines, MATS is, without question, a major airline business.

Why then, with this larger taxpayer-supported, Government-run airline operation do I seem to raise serious questions about our military leaders' understanding of air logistics? Why do I feel that our Nation's plans for airlift in time of national emergency are insufficient? To put it simply, why do I contend that we are running the risk today that the airlift we will have, should an international crisis develop, will not be sufficient?

First let me quote a statement that I am sure you are all familiar with. The Senate subcommittee, headed by Senator SYMINGTON, studying airpower came to this disturbing conclusion:

"The United States has insufficient airlift capacity to maintain the mobility of the Army and to enable the latter to meet overseas commitments; nor do plans include provision for adequate airlift."

A serious charge. However, let's approach this problem in a more fundamental manner. Let's examine what elements are required to meet the airlift needs of our Nation.

Technology, in the sense in which I have used it, means more than hardware or electronic devices. It also means modern, systematic administration and management. In a national-defense sense, it also means the intelligent planning and mobilizing of all resources, from whatever source, at the proper time and in the proper place. This involves careful allocation of our resources. We must not burden our economy with a form of clumsy and illusory over-preparedness. For this runs the risk that, in time, the taxpayers and voters, demanding relief, will throw out the baby with the bath. This kind of situation, if we blunder into it, leads to a form of Maginot Line thinking in which today's weapons, today's airplanes, today's tactics become fixed forever—because of economy reasons.

Modern technology and international requirements demand that we wage wars, whether hot or cold, small or large, with an organization in depth. It is, unfortunately, always easier and less of an administrative headache to organize large standing armies and huge stockpiles rather than to put up with the intricate and complicated plans that permit flexible growth of both national defense and a healthy civilian economy. The time is long past when we can debate a choice between guns and butter. In all candor, for economic reasons as well as equally sound political reasons, we must strive for both.

We learned in past military airlifts that we needed both the military and the civilian air-transport facilities and personnel. This conclusion has been agreed to by spokesmen for MATS, incidentally. For instance, Rear Adm. Thomas B. Williamson, commander of the Pacific Division of MATS, declared recently:

"We aren't set up to do the whole job in a crisis. A force of that size would be too costly to maintain. But we can and do provide a hard core of trained forces around which to rally the Nation's total airlift potential."

This recognition of the partnership, required if the job is to be done without delay and without waste, led to the creation of the Civil Reserve Air Force plan. Under the CRAF program specific planes, crews, maintenance personnel—even bases and operation

systems—are earmarked for military duty at a time of national emergency. This is not just a mobilization of available aircraft, for it contemplates blending the operating competence and ability of the scheduled airlines into the full defense effort.

This plan is based on the assumptions, as James H. Douglas, Under Secretary of the Air Force and newly appointed Secretary, has put it, that "Airlift can't be stored—it must be in operation." An airplane, after all, is only one element in a successful airlift. There is need of flight crews, maintenance men, and operations managers all working and organized within an air-transportation system.

Because of these operating facts we can take two major roads to reach the desirable goal—sufficient airlift to do the job. The Department of Defense might try to justify to the Congress the need for a great deal of the best and biggest equipment, with the constant obsolescence and reequipment cycle that we find in both military and commercial aviation. Or it can take another approach. Defense could concentrate on a nucleus fleet of the best possible planes of the jet age and encourage the civilian American-flag carriers to expand and increase their contribution to the CRAF fleet.

Sadly, the military has apparently decided to reject either of these two approaches. We have a large and growing MATS fleet composed of piston-engine equipment. This at a time when the commercial airlines of the free world as well as the Russians, are busy making concrete plans to enter the jet age. Frankly, I think the military is just as alert to the air transport needs of the jet age, so far as military airlift is concerned, as any of us. However, they are unwilling, apparently, to tell the Nation what is required. Even more they have recently rejected an opportunity to move into the future. I refer to the Douglas C–132. This huge plane with a payload of 100,000 pounds, built to fly at over 460 miles per hour with a range of 3,500 to 4,000 miles, could well have launched a new era of air logistics, both civil and military. For example: Nine of these planes could have accomplished the Berlin airlift that required better than 250 planes. It could do the job of a C–2 cargo ship—and cost little more.

The flexible logistics power this plane alone would provide is obvious. However, after spending tremendous sums, the Air Force canceled the development of the C–132 for economy reasons. The builder retorted that this was a "voluntary retreat from progress" and this seems an apt conclusion. Having rejected the idea of a major modernization and expansion of the MATS fleet, has the military taken the other approach and encouraged the growth of the civil airlines so that CRAF can take on a greater burden? The answer is a flat no.

While the military has been sending more men and supplies by air each year, it has been permitting the civil carriers a lesser share each year. In 1951, for instance, civilian carriers handled 37.3 percent of the more than 345,000 passengers hauled by MATS, and more than 30 percent of 62,000 tons of cargo and mail. The story in 1956 was drastically different. The total hauled had gone up sharply—to 845,000 passengers and 165,217 tons of cargo and mail. However, the proportion hauled by civilian carriers had dropped to 18.4 percent of the passengers and 9.1 percent of the cargo.

This is a remarkable contrast to the policy and practice of the Military Sea Transportation Service. The commercial shipping interests of the United States in 1954 and 1955 received more than two-thirds of the dollar outlays by MSTS for movement of traffic. As a result of this policy the civil shipping industry has permitted the Navy to apply resources in funds and personnel to other Navy combat tasks.

This question of the best use of trained personnel points up a major problem our Air Force faces today. General Nathan Twining, the Air Force's Chief of Staff has stated the problem clearly. He said recently:

"Over the last 5 years, in fact, our requirements for technically-trained people have increased twice as much as all other personnel requirements put together. The technically-trained people are the ones we need and the ones we must retain. Unfortunately, those are the ones we find it hardest to hold. The record shows that about 80 percent of the people we lose are skilled technicians or supervisors. Although the Air Force reenlistment rate has been rising encouragingly, we are now able to retain only 1 technician out of every 3 men that reenlist."

Because of this shortage of skilled personnel at a time when our Nation's security seems to depend literally upon the efficiency of the Air Force, it would seem logical to let civilian organizations do as much of the nonfighting job as possible. Civilian transports can obviously not substitute for the guardian planes of General LeMay's force nor can they take over the vital functions of the Air Defense Command. Both of these commands, as well as other fighting elements of the Air Force, are desperate for trained and proficient flying, maintenance, and operations personnel. Where we can shift a uniformed man to a job closer to a combat role let us do it, both in the name of military efficiency and for the benefit of the taxpayer.

It has been contended that MATS requires considerable training so that it shall be in readiness should trouble develop. This training in turn produces carrying capacity as an incidental development. Hence, it would be wasteful not to use this capacity. Routine military traffic is therefore handled by MATS rather than the commercial carriers. So far as training requirements are concerned, the Hoover Commission reported enough instances of nontraining flights to at least suggest this training argument might be something of an after-the-fact explanation. The fact is that the more first-rate, modern airplanes, regardless of ownership, we have active on a day-to-day basis in routine military carriage the better our airlift capacity will be when needed.

This raises two questions. First, just how truly ready and useful are the various components of our overall national airlift, and second, how much capability can the civil carriers provide?

Because air transport is much more than just planes or even flight crews, it is far easier to move from 8 hours of utilization to 10 than from 4 to 10. The daily aircraft utilization rate of the civil carriers averages about 8 hours. MATS reportedly averages about 4.4 hours. There have been reports that MATS is programing to increase to 6 hours but unless present operation is inefficient the increased peacetime rate will require more maintenance; more skilled personnel and, therefore, greater expense.

How about the ability of the civil carriers to provide enough aircraft? Present CRAF plans call for something more than 300 civilian planes. However, actually there are 1,000 four-engine aircraft, either in the present fleets of the civil scheduled airlines or in production, that are considered by the Air Force to be suitable. In airlift terms this means that if the defense so required, there could be available during the initial emergency period double the capacity of the present Civil Reserve Air Fleet.

By 1961, because of equipment plans, the civilian airlift contribution could be increased by more than four times over today's plans. Incidentally, this would be enough capacity to transport across the North Atlantic more than 1 million troops in 30 days.

The major airlift problem will exist tomorrow in increasing measure. The question is not should we have a good one but how do we pay for an ever-improving air transport fleet?

What we require is not a debate, public or private, as to what percentage of the traffic should be carried by civil or military. We need a new partnership concept built on the assumption that the national defense requires a detailed and efficient use of all transport facilities available if we are to make full use of air logistics. It requires detailed planning and close association. Certainly we need a vigorous and well-equipped MATS nucleus. However, we also need a coordinated effort between military and civil air transport services.

It has been noted that it is sometimes difficult to get a new weapon, or a new technique adopted by large organizations. Administrative inertia often interferes. Let me quote Alfred Mahan, who once pleaded for an understanding of new techniques. He said:

"Changes in tactics have only taken place after changes in weapons, which necessarily is the case, but the interval between such changes has been unduly long. This doubtless arises from the fact that an improvement in weapons is due to the energy of one or two men, while changes of tactics have to overcome the inertia of a conservative class."

Often in recent years we have heard Air Force theorists quote this Mahan conclusion with warm approval. I am confident that these same pioneers will recognize the facts of our international and domestic life today and implement this organizational idea that I have been discussing for the benefit of the Nation.

We cannot afford to continue to gamble that an effective airlift will be present when we need it. Now is the time for us to jointly plan for the future, for on our use of airpower—and its crucial adjunct, airlift—may well depend our security and freedom.

A SOLUTION

1. A permanent working conference between MATS, as the single management group for the military, and a representative airlines group to draft a practical plan to expand CRAF, and work toward aircraft of logistics types which can equally be used by airlines and the military on an economically sound basis.

2. A system of expanded use of civil air carriers by annual steps until at least 50 percent of the military transport requirement moves in commercial aircraft.

A part of this program could be a requirement for constant modernization of the commercial logistics fleet.

Bailment or lease of aircraft may be temporarily necessary until replacement aircraft can be procured, but this can be accomplished in such a way that no subordination is required of the military.

3. A program of joint procurement by the military and civil carriers of suitable truly logistics-type aircraft.

4. Expedite the completion of all standby projects on aircraft assigned to CRAF so that all such aircraft are truly in a state of instant readiness. This could include the requirement that flight and supporting personnel are ready to go into uniform if necessary to meet D-day assignments, whatever they may be.

5. Stop talking about why we can't provide the military services with enough airlift and get serious about finding ways and means to do so. The kinds of aircraft now under development to do the job can be used successfully in the commercial airlifting of things and in the peacetime movement of purely transport military requirement.

Racketeering and Embezzlement of Union Funds—Address by George Meany, President, AFL–CIO

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. NEUBERGER. Mr. President, many Americans have been disturbed in recent weeks by certain disturbing manifestations of alleged racketeering and embezzlement of union funds in some segments of the labor movement. This is an alarming development.

It is important that the general public remember that the vast majority of American trade-union members and officials are law abiding and honest.

One reassuring fact has been the speed with which national leaders of organized labor have acted to suspend from positions of trust and influence those who may have violated this trust. An effective and forthright statement by one of labor's outstanding national leaders, George Meany, president of the American Federation of Labor and Congress of Industrial Organizations, was delivered by Mr. Meany to the annual convention of the United Automobile Workers in Atlantic City, N. J., on April 9, 1957.

So that Members of the Senate can have the benefit of reading the full text of Mr. Meany's remarks, I ask unanimous consent that his speech, as published in the New York Times of April 10, be printed in its entirety in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

President Reuther, officers of the United Automobile Workers, and delegates to this 16th constitutional convention of a great American trade union, I take a great deal of pleasure in the opportunity afforded to me this morning to address you for a few moments. At this most vital and significant moment in the affairs of our trade-union movement and of our Nation, there are many matters that I would like to discuss with you—matters of importance to you and me as trade unionists and as American citizens.

However, time will not suffice to talk about all of the things that I would like to talk about, so, outside of a brief reference to the merger and the problems that have come with it, I intend to devote my time here this morning to what I think is the most important subject facing American labor.

In regard to the merger, I appreciate very much the remarks of your president here this morning and want to say to you that in attempting to work out the problems that have come with the merger, he has delivered a fine service to the merged federation and to his own union.

OPTIMISTIC ON MERGER

The problems that we have in connection with the merger are not problems that are new to us. They are problems that we had every right to expect that we would have. I am not in the least bit pessimistic about these problems because while we are wrestling with them we are learning to live with one another in one house.

I am sure that we are going to solve these problems. I am sure because of the people who made a contribution of good faith and good will to bring about the original merger and that includes as No. 1, Walter Reuther, that those people are applying the same good faith and good will to making the merger succeed.

Yes; we are going to continue to have problems; it is part of the complex life in which we live. But there is one thing that I am more certain of now than ever before, and that is that in attempting to meet these problems we will meet them and in the tradition of the American trade-union movement with good faith and good will and that we will not again attempt to settle them by dividing.

I want to deal with one problem which I spoke about a moment ago which is most urgent and which perhaps today is uppermost in the minds of many of the American people and surely is uppermost in the minds of those who are dedicated to the philosophy of free trade unionism. This problem is the problem of corruption, racketeering, thievery, fraud, embezzlement—anything you want to call it that exists in some unions within our movement.

CITES LABOR'S IDEALS

I intend to discuss it with complete frankness in keeping with the American tradition of free discussion, and I intend to discuss it with a sense of loyalty to the movement and to its ideals and conscious of the achievements that have been written over the years by our movement in raising the standard of American life and making a contribution at the same time to the standing of the Nation as a whole.

The tradition of our movement, the importance of our movement to the American people, and if I may say to the entire free world, commands that we meet that problem head on, without evasion and with no attempt to sweep it under the rug.

Keep in mind that in facing this problem we must realize that this is not a business that we are in. We are not producing something for profit. We are not trying to build up the wealth and the income of a few people.

This is a movement dedicated to the highest humanitarian ideals. A movement dedicated to good: To good for those we represent, their wives, and their families, and good for the Nation as a whole.

If we were to fail to meet this problem we would, in effect, be liquidating the traditions of those who founded our movement.

STRESSES PUBLIC OPINION

No. 2: There is a good, sound and practical reason why we have to meet this problem. We run the risk of adverse public opinion, which is so important to our movement. Let me emphasize, however, that this is not the main reason. The main reason is the No. 1 reason—that we are against racketeering, no matter what form it may take, not just because it is bad for the labor movement but primarily because it is wrong.

If we fail to meet this problem we will incur adverse public opinion. We would, in a sense, be taking the position that we were not concerned with public opinion—that we were a class apart, as it were, from the rest of the citizens of this country.

We believe in the movement and the United States of America. We believe this is the only type of Government in which workers can gather together in free trade unions and collectively advance the cause of all in the movement and do the things collectively for all that none can do as individuals.

Under that theory we believe that a democracy is a place where no one segment of the population can make progress at the expense of others, that democracy is a place where there are no special privileged groups—and that applies to labor as well as anyone else.

SEES HOSTILE PRESS

Don't let anyone tell you that labor hasn't stood well with the general public. Don't be fooled by the fact that most of the time we have a hostile press. Don't be fooled by the fact that the press gives greater emphasis to our mistakes and our sins of omission and commission than it does to the advance of the progress that we make.

I am quite sure that the American people as a whole are aware of the contribution that the American trade-union movement has made to this way of life we have here in this country of ours.

I am quite sure that the great mass of the people are aware of the fact that this dynamic American economy which has provided so much of the good things of life to the people of this great country depends for purchasing power on the base of the economic structure. They know that purchasing power in large measure has been developed because of the activities of the free trade union movement.

Don't let anyone tell you that the American people as a whole do not recognize the fact that free trade unions such as we have in this country are a bulwark of democracy. They are a guaranty against dictatorship and a guaranty of the preservation of the way of life that we love.

SEES WORLD WAITING

I am quite sure it is not too much to say that not only the public in this country knows of the good that labor has done and generally supports labor's objectives, but that it is also not too much to say that free people all over the world recognize the contribution that labor in America has made to democracy and to social justice.

So don't let anyone try to give you the line that we are not interested in public opinion, that public opinion makes no difference to us or that we don't care what the public thinks about us.

That is a line that could be characterized as a "public-be-damned" line. We don't take that line because we consider ourselves an integral part and an important part of the American public.

Another reason we have got to meet this problem head-on if we are determined to advance and to build on the achievements of the past, to bring an ever-better day to the American workers—yes, a shorter workweek with higher worker income and all the things to which we aspire—we must conduct our affairs in a way to command public commendation.

American labor has come of age. No longer can we take the position that we are the underdog. We have 15 million people organized in the AFL–CIO, and that is big labor then we must assume big responsibility.

The American people expect us to bear a responsibility in keeping with the size of our organization, and the American people have every right to expect that we discharge that responsibility in keeping with the highest ethical and moral standards possible. Failure to live up to these standards will undoubtedly give ammunition to our enemies—and we still have our enemies.

RECALLS CRITICISM OF MERGER

You remember the cry of power of the anti-labor forces a year or so ago upon the completion of merger between the American Federation of Labor and the Congress of Industrial Organizations.

We don't hear so much about that today except as it pertains to the future. We hear the charge that a labor monpoly has been created. This, of course, is for the purpose of trying to fasten upon labor restrictive legislation in the form of right-to-work laws and further restrictive amendments to Taft-

Hartley so anyone who is conducting the business of the union in a corrupt manner is playing into the hands of America's labor enemies.

This is not an issue of a corrupt official here or there. This is a question that we must face as something which jeopardizes the very high principles of our movement; that jeopardizes the tradition of the weak against the strong as being the purpose of the trade-union movement.

This corruption threatens our everyday situation as an instrumentality to fight for human dignity at home and as a dynamic factor for freedom and justice throughout the world.

All of this brings us to the inevitable conclusion that labor racketeering, in whatever form it may take, and true trade unionism have nothing in common.

They cannot mix. The one is the negation of the other, and sooner or later, no matter how strong the union, no matter how good the conditions that have been built up and secured by the union, if that union is under racketeering or corrupt control, it is bound to go down with irreparable injuries to the members of that union.

LEADERSHIP NOT A BUSINESS

I am all for running unions on a business basis, but this doesn't mean that unions should become business organizations, or that union leaders should make a business of their leadership and use their offices in the union for private profit.

Trade unions are set up for a specific purpose and a very simple purpose—to advance the welfare and interests of the workers represented by the union. When men are elected to office in a trade union, they are elected to office to that same purpose and no other purpose.

I would like to point out that the AFL–CIO is not a law-enforcement agency. We are not charged with the duty of enforcing the laws of various States and of the Nation as a whole.

But we are an agency set up to carry out a law having to do with trade-union ethics. And while we intend to leave the question of law enforcement to the proper authorities to act in order that we may act on our own law of trade-union ethics. That is our job and we are going to do it.

QUOTES CONSTITUTION

The AFL–CIO constitution states very plainly that one of the purposes of the merged organization, and I will quote, "is to protect the labor movement from any and all corrupt influences and from the undermining efforts of Communist agencies and all others who are opposed to the basic principles of our democracy and free and democratic unionism." That's our job.

Whether the district attorney or the grand jury moves or not, this is still our job. Whether management is involved in some of these crimes and perhaps committees or public officials are not as zealous in going after management as they are after labor, that doesn't make any difference and provides us with no excuse not to do our job.

For instance, borrowing money without the knowledge of the membership and without them being informed that you borrow it, and without paying interest may not be against the law of the land. I don't know. But it is against the trade-union law.

Buying property as an individual and then making a decision as the head of the union that the union will buy that property at an exorbitant profit to the individual may not be against the law. It may not be illegal. But it's against the trade-union law.

Taking the fifth amendment, which is part of our basic law and is designed to protect the innocent and protect the average citizen from being compelled to testify against himself—that, of course, is not illegal.

It's part of the basic law and all citizens have a right as citizens to take the fifth amendment.

CITES TRADE-UNION LAW

But taking the fifth amendment on the question of personal corruption in connection with the handling of trade-union funds, the refusal to give an account of the stewardship of those funds, while that may not be against the law, it is against the trade-union law and no one has the right to take that position.

There is another theory that hold trade-union office who has been expressed in the last few weeks to which I do not subscribe. That's the theory that the membership of the various unions have no interest in these matters if their pay is good and their conditions are good; that they are not interested in some of these borrowings and other things, some of these shenanigans with their money; that they are only interested in their pay envelope and their conditions.

Well, gentlemen, I have a much higher concept of the intelligence of the American worker than that. I think the American worker is interested in his union.

I think he has intelligence enough to know that even if the union has, to some extent, been successful in building up his standard of life and of work, it cannot very long continue to serve him in that capacity if it is under the corrupt influence of corrupt officials.

I believe the American worker is interested in his union and that he wants his union run in keeping with the tradition of the American labor movement and in complete keeping with the purpose of the union, which is to serve the membership.

TELLS OF IMPLEMENTATION

The AFL–CIO constitution, that portion of it which I just read, has been implemented by the establishment of an ethical practices committee to apply the trade-union law.

That committee is active, that committee is going to handle all the cases that come before it, and I can assure you that the committee is going to interpret the constitution of the AFL–CIO in the same manner for a small union as it does for a big union. No big union is going to be immune from that law.

I feel confident that the American trade-union movement is going to do its full part, a little more than its part, in eliminating corruption from the ranks of labor. I hope that the public authorities show as much determination and as much zeal in playing their part in connection with this problem to see to it that laws that are on the statute books are observed and that those who violate the laws are punished.

There have been many predictions that these revelations of union corruption are going to weaken the trade union movement.

SEES ORGANIZING CURBED

Yes, we know that there are those who will use these revelations and these scandals as the basis for fastening restrictive anti-labor legislation on labor. They will try to use these sins of the few to push legislation of that type and hypocritically state that their real concern is the purity of the trade union movement.

I know those things are going to happen. I know that the organizers organizing in the nonunion field are going to have some added resistance, perhaps, because of these revelations.

But I contend that the elimination of these corrupt practices that have been exposed, no matter how that elimination is accomplished, whether by the trade union movement itself or by the public authorities, in the final analysis is good for the trade union movement and we will profit by it.

I know the American trade union movement is basically sound. I know that it is steeped in the tradition of those who founded our movement. I know there are thousands upon thousands of dedicated trade union leaders for every single crook that is turned up.

I am confident that in that tradition of American labor we will move forward, that these things that are happening will serve as a spur for us to to work harder than ever before so that this movement, dedicated to human justice and decency and freedom, will continue to make progress for the people it represents and for the Nation in which we live.

In this effort I am confident that your organization, under the dynamic leadership of Walter Reuther, will pay its full part.

Thank you very much.

Aid to Small Business

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Friday, April 12, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Washington Post and Times Herald of April 11. It is a report on a speech made by Edward T. McCormick, president of the American Stock Exchange, in which he said:

> If the financial health of our country is to improve and not deteriorate, far more serious attention must be given to facilitating the raising of funds for this classification of business.

I think it is very encouraging indeed that a man who might essentially be regarded as a spokesman of big business should begin to recognize that the welfare of big business is related to small business.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MCCORMICK TELLS ANALYSTS GROUP HERE WALL STREET SHOULD AID SMALL FIRMS

Edward T. McCormick, president of the American Stock Exchange, yesterday urged investment bankers to give small business firms more assistance in raising equity capital.

Addressing the Washington Society of Investment Analysts at a luncheon meeting in the Occidental Restaurant, McCormick said in part:

"If the financial health of our country is to improve and not deteriorate, far more serious attention must be given to facilitating the raising of funds for this classification of business."

Short-term funds are apparently available, he said, without too much difficulty from the banks and the Small Business Administration. The problem, he added, is "the more serious one of obtaining from one-half to 1½ million dollars of long-term capital on a national basis for plant expansion and the development of new and improved products at lower costs."

What is needed, he declared, is equity capital, for debt could prove to be the death-knell of many of these companies in the event of an unforeseen recession in their business.

He proposed that leading investment banking houses designate representatives to

a special committee. They would provide a continuing available group of experienced men with whom these small companies may come with specific problems for financing and to be able to receive appropriate guidance.

He emphasized that while the Federal Government has given long consideration to the problems of these smaller companies, I don't think that we in the securities business should, or can allow the problem to rest there. I think we have a serious responsibility to try to find some practical answers to the equity needs of these small businesses.

J. Sinclair Armstrong, chairman of the Securities and Exchange Commission, was a guest at the analysts meeting. He asked McCormick if some companies would rather not list their securities on an exchange because of SEC regulations.

McCormick replied that many firms have unwarranted fears of SEC regulations. On the other hand, he added, some companies are now seeking listing privileges because of tighter SEC proxy rules. He indicated that such rules protect management in the event of a control battle.

To another question, McCormick agreed that mutual funds could be a good source of equity capital for a small firm. He also agreed that too often a small firm has to refuse offers of new capital because management control is an issue.

McCormick left the Securities and Exchange Commission in 1951 to head the American Stock Exchange. He pointed out that 19 of the American Exchange's member offices are in Washington.

Amerst E. Huson, head of the local analysts group and an official of the SEC, presided at the meeting here.

The McLeod Appointment

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. CLARK. Mr. President, the Senate has before it at the present moment the problem of confirmation of the nomination of Scott McLeod, to be Ambassador to Ireland. Mr. President, I hope that my colleagues on the Committee on Foreign Relations and on the floor generally will accord very careful consideration to his nomination before giving it their approval.

As the New York Times said on April 11, 1957, Scott McLeod is the symbol in the State Department of all that has happened in the last 4 years to lower morale so drastically and to drive from the diplomatic career some of the best officers we had.

Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the editorial from the New York Times of April 11, 1957, entitled "The McLeod Appointment."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MCLEOD APPOINTMENT

Scott McLeod is the symbol in the State Department of all that has happened in the last 4 years to lower morale so drastically and to drive from the diplomatic career some of the best officers we had. He entered the State Department in the security section in 1953 as the representative of Senators BRIDGES, MCCARTHY, and the late Senator McCarran. No one man has represented in the public mind more than Scott McLeod all the evils of McCarthyism as applied to diplomacy. On Tuesday he was nominated as Ambassador to Ireland.

Is it any wonder that a storm of criticism has arisen throughout the country over diplomatic appointments when such things can happen? It would be unjust to make a blanket condemnation, for some fine appointments were made, but there have been bad appointments, and this one comes as a climax. It would be hard to imagine a wrose blow to the diplomatic crops or a worse example of playing politics with the foreign affairs of the United States. Secretary Dulles must take the blame for Mr. McLeod's unfortunate work in the field of so-called security and the refugee problems, for he, after all, is the head of the Department, and he must take the blame for this appointment.

Ireland deserved a better fate. She has been most fortunate since 1953 in having a first-rate envoy—Ambassador William Howard Taft 3d. Dublin is a post where the work is not arduous and life is wonderfully pleasant. The man who is named to Ireland is a fortunate man. If he is a career diplomat like Mr. Taft he is a lucky man. For the noncareer man it is a reward.

And now it is Scott McLeod who is going to get this reward if his nomination is ratified. Whether he gets it or doesn't is not a personal matter. He is a well-intentioned if woefully misguided young man and no one begrudges him any happiness he can get. But the damage to the State Department and the United States diplomatic corps that will result from this appointment is public business. The Senate should block it.

Mrs. Nixon as Ambassador

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Mrs. Nixon as Ambassador," which was written by Earl Mazo, and was published today in the New York Herald Tribune.

Mr. President, I think the article is most worthwhile and long overdue.

I have heard the great majority leader of this body say, on many occasions, that it takes 2 good women to make 1 good man—in other words, that it takes the man's mother and his wife.

Of course, the Vice President is fortunate in having a very wonderful mother, whom I have had the pleasure of meeting, and I know her to be a very lovely lady. But I think all of us will agree that much of what the Vice President is doing and has been able to do could not be done without the help of his most lovely wife, Pat Nixon. So I think the article is most deserved.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MRS. NIXON AS AMBASSADOR

(By Earl Mazo)

WASHINGTON.—Pat Nixon has become a top-rung personality—a woman of considerable importance at home and abroad—simply by being herself.

That may be a novel achievement in Washington where nothing is more fierce than the competition for standing—and women normally assume an aura of power by shining as party givers, promoters of causes, or makers of profound or witty observations on foreign or domestic matters.

But Mrs. Nixon's status is easily understood in the American towns where she campaigned with her husband or the countries where she was a vital part of tremendously successful Nixon good-will missions.

Without appearing to try, Mrs. Nixon showed again during the Vice President's 3-week tour of Africa and Italy that she is this country's most effective female ambassador of good will—as well as the most aggressive campaigner a politically soaring husband could have in his corner.

She charmed peasants by the thousands and potentates by the dozens. It was like the five previous NIXON trips overseas and the political campaigns at home.

Folks saw in the friendly, attractive lady who moved so freely among them a symbol of the dedicated American helpmate—or the favorite schoolteacher, the pleasant, unpretentious one who always seemed to make things right, at least for the moment, when she smiled.

Back and forth across the African continent, and up to Rome—in an audience with the Pope, meetings with sultans and prime ministers, and handshaking and baby-patting tours through streets of hovels—the Vice President's wife invariably was the same crisp, unhurried Pat Nixon who never grew weary and was even immune to native bugs that attacked everyone else, including her husband.

In Liberia, several women political leaders showed up to accompany Mrs. Nixon around town. They wondered at first why she wouldn't talk politics.

"Funny thing for a politician's wife, says she doesn't poach on her husband's territory," one of them said as the group left for an afternoon of handshaking and baby hugging.

Within an hour the women leaders were converts.

"She's shrewd. Also sweet," said the original doubter. "She gets along like that without saying a thing about politics. Imagine that."

In the ramshackle Monrovia marketplace, ragged women flecked hordes of flies and wondered why such a fine lady would visit their fetid stalls.

The Vice President's wife marveled at their wares, shook their hands, praised their runny-nosed babies, and the atmosphere changed. People laughed out or whispered excitedly. "She's Mrs. Nixon, the American President lady."

When she left, young and old sang out, "Bye, bye, darling."

It was no different with the big shots.

Sultan Mohamed V, all-powerful ruler of Morocco, shattered an ancient tradition of his court that females are tolerated only in connection with the informalities. He granted Mrs. Nixon a formal audience. The scene was one of pomp and high policy, but the Vice President's wife brought things down to earth quickly by observing Morocco was pretty much as she had seen it in the National Geographic magazine.

In one country, Mrs. Nixon was assigned an air-conditioned Fleetwood Cadillac. It was the President's own pride and joy.

At the first stop it broke down. But before her hosts could recover their composure enough to show embarrassment, Mrs. Nixon sang out, "It always happens in Washington, too," then trotted off to a less sumptuous vehicle.

She gave hard candy to kindergarten classes and taught the youngsters to remove the paper wrapping before gobbling it down.

"Children are the same all over the world. They're so cute I can't resist them," she said. Teachers and parents bubbled agreement and thanks.

Fifth-grade classes from Ghana to Uganda laughed and shook their heads over the heavy budget of home work Mrs. Nixon's fifth-grade daughter had to tackle in faraway Washington.

At a pathetically-inadequate welfare home in a town that needed a thousand of them, the pioneer founder told of the troubles she was having supporting just one.

"It just takes somebody to go ahead on these things," Mrs. Nixon said. "Please don't get discouraged."

In Tunis one surprisingly brisk morning, the Nixons showed up in the reviewing stand on time for a parade scheduled to begin at 8:15 a. m.

But the local custom was for everything to be at least 45 minutes late, so the Vice President and his wife sat there in the cold, practically alone—but smiling.

Tunisian newsmen kept insisting it was practically unthinkable for Tunis to have such a cold morning. Then they noted the Nixons were good sports to sit there and wait.

"They are also good friends of Tunis," a photographer added.

"Out of respect for us they do not shiver. That is a fine gesture."

Had she heard it, that remark probably would have made Pat Nixon consider the discomfort worthwhile.

One thing she hopes for most fervently on public trips is that whatever she and her husband do will convince the people "we enjoy being here and are genuinely interested in them."

American Aid to Poland

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. SALTONSTALL. Mr. President, Dr. Michael Albery, of Boston College, and his associate, Dr. John Hooker, have prepared a thoughtful and interesting column on the question of American aid to Poland, which appeared in the Richmond Times-Dispatch on March 24, 1957. I ask unanimous consent that the column be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES-POLISH TALKS RAISE BIG ISSUES

(By Michael Albery and John Hooker)

DILEMMA OVER POLAND

A delegation from Gomulka's national Communist government of Poland is currently in Washington, seeking large-scale economic help. If they succeed, they could set a pattern for future American help to the rest of the Soviet satellites. Time is therefore ripe to draw up an American-Polish balance sheet.

On the "debit" side: Yalta is still with us. To invade East Germany in World War II, Stalin was of course bound to overrun Poland anyway. But the Yalta agreements, whereby the United States and Britain yielded Stalin the right to decide the future of Poland, went far beyond anything Stalin could have got for himself by mere right of conquest.

The western allies forgot geography, and forgot that Poland is historically the bulwark of the Christian West against Asiatic barbarism. Acting upon Yalta, Russia seized Polish lands rich in timber and oil, and Poland itself got questionable compensation in territories which she will have difficulty in retaining, once Germany is reunited.

Russian bayonets installed a Communist government, ignoring feeble United States protests. Poles from UNRRA refugee camps were deported back to Communist Poland against their will.

Upon every battlefield of World War II Polish blood was shed without stint, in the cause of a free fatherland which the allies of Poland were legally committed by treaty to restore. But the allies have wriggled out of their treaty engagements. Families of Polish soldiers, sailors, and airmen killed in the Battle of Britain, at Monte Casino, at Alamein, in Burma, and in the Pacific mourn their dead, frequently in dire financial straits. So do the surviving relatives of Polish officers murdered in the notorious Katyn massacre. Poland's citizens today lack food, fuel, and the barest amenities of comfort. Returning tourists render appalling accounts of the misery in postwar Poland. Russia siphons off the bulk of Polish harvests.

On the credit side of the ledger is the help the United States gave to Poland during its brief moment of independence from the collapse of the Russian Army in 1918 to Hitler's invasion of Poland in 1939. The United States Government assisted Poland to the tune of more than $240 million. United States corporations erected factories and created distributive networks. Private United States investors bought bonds of Polish municipalities, and subscribed to loans intended to stablize the Polish currency.

Millions of gift parcels of foodstuffs, clothing, and drugs were shipped by Polish-Americans to their destitute relatives. Today, this zeal is thwarted by the imposition of prohibitive import duties, which few of the intended recipients can afford to pay.

Poland's prewar bonds have been defaulted, and we cannot put much faith in any promises offered by the representatives of the Gomulka regime. Nor can we prevent the Russians grabbing United States shipments of machinery, food, or clothing.

But the Poles have always been among our stanchest friends. We think the United States ought to run some risks in order to justify their friendship. Some Members of Congress appear to think so, too.

At the same time, the United States administration ought to make certain demands on the Polish Government. First, the import duty on gift parcels must be abolished at once, and not replaced by complicated customs formalities designed to have the same effects as the unjust import duty.

Defaulted bonds must be recognized. Such recognition may prove of little intrinsic worth to the holders of such bonds, but we in the Western World must stop the lenient attitude which has permitted dictatorships to nationalize foreign property and denounce freely-assumed obligations ad lib with impunity.

United States taxpayers owning property in Poland must be allowed a safe conduct to go back and reclaim it, sell it, or remove it from Poland as they choose, irrespective of the laws prevailing there at present.

If we grant technical assistance, we must have our own personnel on the spot supervising its disposition, to prevent its being diverted into the bottomless pit of Russia.

None of these requirements should be impossible for the modified national-Communists of Gomulka's Poland to undertake. If the delegation in Washington can pass these tests, then it may not be a waste of time to do business with them.

Suez and Sovereignty

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD an article from the Christian Science Monitor entitled "Suez and Sovereignty."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SUEZ AND SOVEREIGNTY

(By Joseph C. Harsch)

WASHINGTON.—The attitude of the Government of the United States toward Egyptian rights in the Suez Canal would have been different if John Foster Dulles had taken his position from the past position of his own country on a similar issue.

Mr. Dulles has accepted the theory that Egypt has unquestioned rights of sovereignty over the Suez Canal. On the basis of that theory Secretary of State Dulles opposed Israeli-British-French intervention and has concurred in the exercise of Egyptian sovereign rights over the canal.

Presidents Theodore Roosevelt and Woodrow Wilson and Secretaries of State Elihu Root and William Jennings Bryan would not have agreed with him.

The principal legal arguments which both the Roosevelt and Wilson administrations employed in the case of the Panama Canal were phrased by Elihu Root, first as Secretary of State and then as a Member of the Senate of the United States.

The Root position was employed by Mr. Roosevelt in the original acquisition of United States rights to build and operate the canal and by Mr. Wilson when the question came up over whether United States shipping should enjoy preferential tolls over foreign shipping. In one case the position was to the immediate selfish advantage of the United States, and in the other case, that of the tolls, it was to the immediate selfish disadvantage. But it prevailed in both cases, and was the solid foundation of the United States attitude toward such matters down to the Suez crisis.

In 1904, when the issue was whether the sovereign rights of Colombia had been infringed, Mr. Root, contended:

"They are in error who assume that the relations of Colombia to the other nations of the earth as regards the Isthmus of Panama were, in truth, of unqualified sovereignty and right of domestic control according to her own will, governed and protected by the rules of international law, which describe the attributes of complete sovereignty. * * *

"The stupendous fact that has dominated the history and must control the future of the Isthmus of Panama is the possibility of communication between the two oceans. * * *

"The formal rules of international law are but declarations of what is right in the generality of cases. But where the application of such a general rule would impair the just rights or imperil the existence of neighboring States, or would unduly threaten the peace of a continent, or would injuriously affect the general interests of mankind, it has always been the practice of civilized nations to deny the application of the formal rule and compel conformity to the principles of justice upon which all rules depend."

In 1913, when Congress wanted to maintain preferential tolls for United States shipping through the canal, Mr. Root said:

"It is only because civilization had its rights to passage across the isthmus, and because we made ourselves the mandatory of civilization to assert those rights, that we are entitled to be there at all. * * * How idle it is to say that because the Canal Zone is ours, we can do with it what we please."

Thus, according to the Root thesis, the "general interests" of all nations constitute a right of eminent domain where "the possibility of communication between the two oceans" is concerned. On that thesis the United States denied the right of Colombia to prevent construction of the canal and also denied its own right to charge lower tolls to its own shipping.

On the basis of this thesis the United States controls the Panama Canal today.

But if the doctrine of unlimited sovereignty is applied then the United States never had a right in Panama in the first place and has no continuing right to be there today. The concession to Egyptian sovereignty over Suez has invited Panama to assert the same claim to the Panama Canal. If it chose to do so it could cite Mr. Dulles and his Suez policy.

Under the Root doctrine of rights in respect to canals, President Nasser did everything he shouldn't do. He used his control of the Suez Canal to "imperil the existence of neighboring States" (Israel), to "threaten the peace" (of the Middle East), and to "injuriously affect the general interests" (of all maritime nations using the canal).

Rights of sovereignty, like rights of property, are controversial. The general public interest does at times take precedence over personal property rights. The general public interest has at times past taken precedence over claims of absolute sovereignty. General Nasser has asserted his absolute sovereignty over the Suez Canal. General interests have been adversely affected.

Had the United States taken its position from its own record it would certainly not have acquiesced to the extent it has to the claims of Egyptian sovereignty.

Facts About the Supreme Court

EXTENSION OF REMARKS
OF

HON. GORDON ALLOTT

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, April 12, 1957

Mr. ALLOTT. Mr. President, the two recent appointments to the Supreme Court of the United States caused a member of my staff to make an independent research concerning some interesting and illuminating facts and documents about the Supreme Court. I ask unanimous consent to have printed in the Appendix of the RECORD the paper entitled "Facts About the Supreme Court," which was written by Svend Petersen.

There being no objection, the paper was ordered to be printed in the RECORD, as follows:

FACTS ABOUT THE SUPREME COURT

(By Svend Petersen)

Since President Dwight D. Eisenhower has appointed four members of the United States Supreme Court, Chief Justice Earl Warren and Associate Justices John Marshall Harlan, William Joseph Brennan, Jr., and Charles Evans Whittaker, there may be some curiosity as to which Chief Executive appointed the most members of the Nation's highest tribunal.

Although Justice Whittaker is the 91st man to sit on the Supreme bench, there have been 94 appointments, inasmuch as 2 Associate Justices were elevated to the Chief Justiceship and 1 Jurist served 2 separate tenures. William Howard Taft, a Republican, promoted a Democrat, Edward Douglass White, from Associate to Chief Justice, in 1910, and Franklin Delano Roosevelt, a Democrat, elevated Associate Justice Harlan Fiske Stone, a Republican, to Chief Justice in 1941. Charles Evans Hughes, who had left the Supreme Court in 1916 to run for President of the United States, returned to the highest tribunal as Chief Justice in 1930.

George Washington, the first President, appointed the most Justices, 10, including the 5 original ones. Franklin D. Roosevelt named 9, including the elevation of Stone; however, he only named 5 during his first 2 terms. Taft, who later became Chief Justice, named six Justices in a single term, including the promotion of White. Andrew Jackson named 6 in 2 terms, including 1 the day he left office. The Court had been enlarged by two members the day before "Old Hickory" left the White House.

The only Presidents who did not appoint any Justices were William Henry Harrison, Zachary Taylor, and Andrew Johnson, none of whom served a full term. Harrison died a month after his inauguration, and Taylor 16 months after taking the oath. Johnson, however, missed serving a full term by only 6 weeks.

The number of appointments by each President follows:

Washington	10
John Adams	3
Jefferson	3
Madison	2
Monroe	1
John Quincy Adams	1
Jackson	6
Van Buren	2
W. Harrison	0
Tyler	1
Polk	2
Taylor	0
Fillmore	1
Pierce	1
Buchanan	1
Lincoln	5
Johnson	0
Grant	4
Hayes	2
Garfield	1
Arthur	2
Cleveland	2
B. Harrison	4
Cleveland	2
McKinley	1
T. Roosevelt	3
Taft	6
Wilson	3
Harding	4
Coolidge	1
Hoover	3
F. Roosevelt	9
Truman	4
Eisenhower	4
Total	94

Of the present personnel of the Court, Associate Justices Hugo Lafayette Black, Felix Frankfurter, and William Orville Douglas were named by Franklin D. Roosevelt, while Harold Hitz Burton, and Thomas Campbell Clark were appointed by Harry S. Truman. Roosevelt had been in office for over 4 years before the resignation of Willis Van Devanter made room for the appointment of Senator Black of Alabama. Frankfurter and Douglas were both appointed in 1939. Burton, whom Truman, a Democrat, appointed in 1945, was a Republican senator from Ohio at the time of his selection.

Another of Franklin D. Roosevelt's appointees, James Francis Byrnes, resigned after a year on the Bench. He later served as Secretary of State. He had served in both the House of Representatives and the Senate prior to going to the Court, thus having been in the legislative, judicial, and executive branches of the Federal Government, including both branches of the first named.

Stanley Forman Reed and Sherman Minton, who were named by Roosevelt and Truman, respectively, have resigned during the past few months.

Eisenhower is the fourth straight Chief Executive to appoint a Chief Justice, inasmuch as his three predecessors also named men to that post. Herbert Hoover named Hughes to the head position of the Court, Roosevelt elevated Stone, and Truman appointed Frederick Moore Vinson.

Washington named three Chief Justices, John Jay, John Rutledge, and Oliver Ellsworth. Rutledge, a recess appointee, presided over the August 1795 term of the Court, but the Senate rejected him the following December 15. When the President nominated him and the Senate confirmed him as one of the original Associate Justices in 1789, he declined the appointment.

John Adams named John Marshall Chief Justice a little over a month before he left the White House. Appointments as Chief Justice, besides those already mentioned, include: Andrew Jackson appointed Roger Brooke Taney, Abraham Lincoln named Salmon Portland Chase, Ulysses S. Grant chose Morrison Remick Waite, Grover Cleveland picked Melville Weston Fuller, and Warren G. Harding selected Taft. The last named was the only man to occupy both the highest elective and the highest appointive offices.

It is an amazing coincidence that Taft appointed White Chief Justice and later succeeded him, and that Taft appointed Hughes Associate Justice and was later succeeded as Chief Justice by Hughes, who had resigned as Associate Justice in order to be the Republican nominee for President following Taft. Hughes missed the Presidency in 1916 by an eyelash. A shift of 1,983 votes in California would have given him the office, 267 electoral votes to 264. As it was, that State's 13 electors voted for Woodrow Wilson, who won by 277 to 254 in the electoral college.

Four Supreme Court Judges each served a third of a century on the Tribunal. Stephen Johnson Field's appointment as Associate Justice was confirmed March 10, 1863. His resignation took effect December 1, 1897. He had delayed his retirement in order to better the record of John Marshall, serving a period of 34 years and 9 months.

Marshall was appointed Chief Justice January 20, 1801, was confirmed by the Senate January 27, and took the oath on February 4. He served until his death, July 6, 1835, a period of 34 years and 5 months. Marshall had declined an appointment as Associate Justice, which had been tendered September 26, 1798. The Liberty Bell cracked during his funeral procession.

John Marshall Harlan, a grandfather of one of the present members of the Court, was appointed Associate Justice October 17, 1877, was confirmed November 29, and took the oath December 11. He served until his death, October 14, 1911, a period of 33 years and 11 months. He had entertained an ambition to set a record that would surpass that of Justice Field. As it was, he set the third best mark. It is noteworthy that his namesake, John Marshall, set the second best.

Joseph Story was appointed Associate Justice November 18, 1811, and served until his death, September 10, 1845, a period of 33 years and 10 months.

Of the Chief Justices, Marshall served the longest, 34 years. His successor, Taney, served 29. Presidents came and went during Taney's regime, as no less than 10 Chief Executives occupied the White House while

he sat on the Supreme Court. Chief Justice Fuller served 22 years for the third best mark.

Supreme Court Judges were born in 23 different States, in three foreign countries, and on the ocean. Ten were born in New York, 9 in Virginia, 8 each in Kentucky and Massachusetts, 5 each in Connecticut, Maryland, Ohio and Pennsylvania, 4 each in Georgia and New Hampshire, 3 each in South Carolina and New Jersey, and 2 each in Indiana, Minnesota, and Tennessee. The following States have each contributed one: Alabama, California, Illinois, Kansas, Louisiana, Maine, Michigan, North Carolina, and Texas. John Catron was born in either Pennsylvania or Virginia.

James Iredell, George Sutherland, and James Wilson were born in Great Britain, the first two in England and the last-named in Scotland. David Josiah Brewer was born in Turkey of American missionary parents. William Paterson was born at sea while his parents were migrating from Ireland to what is now the United States. Felix Frankfurter, one of the present members of the Court, was born in Austria.

The "Fighting Irish"—the McLeod Appointment

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. CLARK. Mr. President, in the Washington Post and Times Herald for April 11, 1957, there appeared an editorial entitled "Fighting Irish," in which it is contended, with reference to Mr. McLeod's appointment:

To appoint such a man to a diplomatic post is an insult to the recipient nation and a degradation of diplomacy. How can the Senate, which is at frequent pains to demonstrate its friendship for Ireland, view this as a friendly act?

Mr. President, I ask unanimous consent that the editorial of April 11, 1957, published in the Washington Post and Times Herald, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FIGHTING IRISH

What has Ireland done to the United States to deserve Scott McLeod? President Eisenhower was scarcely his most persuasive yesterday in explaining his nomination of Mr. McLeod as Ambassador to Ireland and of Henry J. Taylor as Ambassador to Switzerland. Neither Dublin nor Berne comes in the category of a post to which a career appointment is ruled out by expense. It is hard to see what special qualifications either a glorified gumshoe or a somewhat credulous radio broadcaster possesses to merit this sort of reward.

The President justified Mr. Taylor's appointment on grounds of personal admiration and friendship. This is at least understandable if not commendable, although Mr. Eisenhower's assertion that Mr. Taylor's views in the foreign field coincide with his own raises the question whether he has listened to Mr. Taylor's broadcasts recently. At any rate, perhaps Mr. Taylor can entertain the Swiss with tales of flying saucers, in which he advertised himself as an expert and ardent believer a few years ago.

In the case of Mr. McLeod, who has headed the State Department's Bureau of Security and Consular Affairs, the President offered no such personal justification. He acted, he said, on the recommendation of Secretary Dulles. Yet, if we are to believe John Beal's biography of Mr. Dulles, the Secretary attempted to fire Mr. McLeod for insubordination 4 years ago. Mr. Dulles' interest in promoting Mr. McLeod out of his way is obvious, but the Irish may reasonably inquire (and the Irish press has inquired), "Why at our expense?"

This is the man who acted as a stooge for Senators MCCARTHY and BRIDGES; who leaked information to the McCarthy inquisition; who attempted to frustrate confirmation of Charles E. Bohlen as Ambassador to Russia; who conducted a reign of terror among State Department employees on security charges; whose office suspected the Department Policy Planning Staff because members were assigned as a part of their jobs to read the Daily Worker and (in a totally different category) even the Reporter; who presided over the Refugee Relief Act with such severity that it became a mockery. The fact that Mr. McLeod recently has seemed to mend his ways and keep out of the bad news by no means makes a rose of his past malodorous record.

To appoint such a man to a diplomatic post is an insult to the recipient nation and a degradation of diplomacy. How can the Senate, which is at frequent pains to demonstrate its friendship for Ireland, view this as a friendly act?

Housing

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article published in the Wall Street Journal of today entitled "March Housing Starts Dipped to Lowest Annual Rate in 8 Years; Builders Demand Government Action."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARCH HOUSING STARTS DIPPED TO LOWEST ANNUAL RATE IN 8 YEARS; BUILDERS DEMAND GOVERNMENT ACTION—ADMINISTRATION OFFICALS SAY IT'S UP TO CONGRESS TO PROVIDE RELIEF

Housing starts in March plunged to a seasonally adjusted yearly rate of 880,000 units, lowest for any month in more than 8 years. Government housing officials said it's up to Congress to reverse the downtrend.

A Wall Street Journal check of builders across the country found many of them hollering for Government help. Most of them, as they have before, said scarcity of credit is the key reason for the home building slide.

In many areas, they reported practically no mortgage money available for low-down-payment loans backed by the Veterans' Administration and Federal Housing Administration. Such mortgages also carry interest ceilings below the rates currently being charged on conventional mortgages in most sections.

And the president of the National Association of Home Builders issued a bitter statement that assailed the administration, Congress, and the Federal Reserve Board. He implored the administration and the lawmakers "to stop gambling with the welfare of the American people."

The Labor Department said February's adjusted rate on housing starts was the lowest since February 1949, when new homes were started at a rate of 796,000 units. March home building compared with annual rates of 910,000 units in February and 1,094,000 in March last year.

ACTUAL STARTS

Actual starts during March totaled 83,000 units, the Department said. This was a 28 percent climb over February but still 16 percent below a year ago and the lowest for any March since 1949. March starts included 75,500 private and 7,500 public housing units. The Department said the unusually large number of public units placed under construction were all in the military housing program.

The Labor agency said new private and public housing starts in this year's first quarter amounted to 213,000 units—less than in any other first quarter since 1949. Privately financed units alone totaled 200,200, the report said, for a seasonally adjusted annual rate of 933,000 units.

Final Department reports for the year 1956 showed 1,118,100 nonfarm dwelling units were started during the year, 16 percent lower than in 1955. Building of single family houses, which made up nearly 89 percent of the 1956 total, was 17 percent below the record set in 1955. Rental-type units continued their 6 year downtrend with a further drop of 5 percent during 1956, the Department said.

The sharpest home building cutbacks last year were in the metropolitan areas, where housing starts were down 20 percent compared with only a 4 percent decline in the nonmetropolitan areas.

TOP OFFICIALS UNAVAILABLE

Both Housing Chief Cole and Federal Housing Commissioner Mason were unavailable for comment in Washington on the March home building decline. Aids said there was little action the administration could take. "We've done about all we can," declared one official. "Now it's up to Congress."

The administration has asked, and the House has rejected, an increase to 5 percent from 4½ percent in the interest-rate ceiling on VA-backed loans.

Also, the administration has asked for power to reduce further the minimum down-payments on FHA-insured mortgages. This proposal has been altered considerably by the House Banking Committee. Last month the FHA cut downpayment requirements on mortgages it insures to the present legal minimum—5 percent on the first $9,000 of appraised value and 25 percent on the value above that figure. Officials felt this move came too late to have any marked effect on March starts.

FHA officials yesterday did express hope the March home building drop was the "darkness before the dawn." They cited new figures on the flow of mortgage insurance applications into FHA as an indication of a possible building upturn ahead.

Applications for FHA mortgage insurance on proposed houses amounted to an estimated 16,200 in March, officials said. This was about a 34 percent climb over February's 12,102. Still, it was well below the 24,884 received in March of last year.

On already-built homes, officials said preliminary reports showed 18,400 applications were received in March. This was higher than the 14,563 it received in February but below the 26,067 of a year earlier.

GOODYEAR'S STATEMENT

The statement by the president of the home-builders group, George S. Goodyear, declared, "not only is the homebuilding industry being crushed by an inflexible policy of tight money, but we are laying the

groundwork for a housing shortage that will plague the country for years to come."

The NAHB chief accused the Federal Reserve Board of proceeding on the blithe assumption that housing is postponable and pursuing monetary policies that have kept the home-building industry tottering on the brink of disaster.

"This economic brinkmanship is a dangerous game that the country can no longer afford to play," Mr. Goodyear asserted. "Strong, affirmative action is necessary before the Easter congressional recess, which is almost upon us. It cannot wait."

The NAHB said that every workingday that elapses without corrective action means the loss of 1,000 new homes and costs construction workers $5 million a day in wages.

OTHER FACTORS CITED

So-called tight credit, however, wasn't the only thing cited by builders across the country for less business.

Some declared the heavy buying of smaller homes by veterans since World War II had about dried up that market, and the higher-priced new homes compete for buyer attention with older, larger houses. Lenders require larger downpayments of course, on costlier or older homes, whether the mortgages are Government-backed or not. Builders said a lot of potential customers can't raise the required amount of cash, even if the financing is available.

At least one builder, Ralph Bodek, of Philadelphia, indicated he is stymied on his construction scheduling while the congressional wheels grind along on Federal housing proposals.

"What we need more than anything else is a consolidated opinion out of Washington," he asserted. "Builders won't do much without it, and I'm one of them."

Mr. Bodek said "uncertainty in the mortgage market" has knocked the number of his housing starts 'way down." He added: "Things are still low in April, and I don't see any dramatic changes in the wind."

Practically nationwide were reports of little activity on homes financed under the VA or FHA programs.

"I'm out of business and will be until we get some kind of relief," said H. S. Brownett, Jacksonville, Fla., builder who has concentrated on VA-financed homes. He said he has started 6 houses this year and sold only 1.

"If we could get money at a 4- or 5-point discount we could get back in business," he said. GI mortgage money in Jacksonville is currently offered at a 10 percent discount, meaning the lender actually puts out only 90 percent of the face value of the mortgage and is to be paid back the principal and interest on the full amount. The 10 percent difference has to be either absorbed by the builder or put up by the buyer as a larger downpayment. Usually it's the builder that takes the loss on a new house.

"GI housing is out the window as far as we're concerned," said C. D. Crawford, owner of a Pittsburgh home construction concern. He reported the company has expanded its luxury home building and is edging into the commercial field.

In New York, Dime Savings Bank of Brooklyn has just announced it is cutting out all new VA mortgages with "extreme reluctance." Williamsburg Savings Bank of Brooklyn, another large mortgage lender, said it is thinking about charging a 3 percent discount on VA-backed loans. Some builders reported Williamsburg has already notified them of such a plan.

SOME DISSENTS

There were some dissents from the general feeling, of course.

John R. Butler, vice president of T. J. Bettes Co., Houston mortgage concern, claimed "there is plenty of FHA and conventional loan money. The (home) purchaser is the missing item."

Said a Philadelphia banker: "There are plenty of houses in this country still unsold, with the mortgage requirements taken care of. We've been putting money into housing, but not where we don't think it will sell."

Complained Ralph Scherger, co-owner of a Pittsburgh construction company: "People are just edgy these days; they don't want to go in for any more monthly payments than they have to."

Builders in Chicago and Cleveland cited the storms of the past weeks as one reason home starts have been held up in their areas. They said they plan to go ahead now.

Campanelli Bros., Inc., Framingham, Mass., also cited cold and stormy weather, said it planned to begin 150 houses in April, as it did last year.

In the Los Angeles area, a builder and a banker both said overbuilding in the past has put the supply of houses ahead of demand.

In Dallas, Fox & Jacobs Construction Co., Inc., said it started as much dollar volume—$350,000—of houses in March as it did last year. An official said optimistically: "We'll be disappointed if we don't do as much business this year as last."

But Triangle Construction Co., also in Dallas, said it's "probably building less houses in April than any April for the last 5 or 6 years. The March situation was about the same."

Basic Right

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. TALMADGE. Mr. President, I ask uanimous consent to have printed in the Appendix of the RECORD an editorial from the March 26, 1957, issue of the Nashville (Tenn.) Banner entitled "What More Basic Right Than Trial by Jury?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT MORE BASIC RIGHT THAN TRIAL BY JURY

Sections 3691 and 3692 of title 18 of the United States code are those cited as abridging the right to trial by jury. They relate to contempt cases, and have been brought to the fore by realistic study of the so-called civil-rights legislation. For it is under this formula that a jurist may constitute himself judge, prosecutor, and jury.

Far more than a mere legalistic anomaly, there is a glaring contradiction in the view that one set of civil rights justifies abrogation of a basic right three times spelled out in the Constitution. Advocates of the proposed new law—from the NAACP to Attorney General Herbert Brownell, and miscellaneous "liberals" in between—have yet to explain just why their injunctive process should sidestep the Constitution on this point. Why do they oppose a jury trial?

The Federal code, incidentally, says that in contempt cases the defendant, on demand, shall be entitled to trial by jury, but "this section shall not apply in any suit or action shall be instituted, not in the name of the United States." Further, the proposed civil-rights law says that injunction proceedings shall be instituted, not in the name of the real plaintiff who thinks he has been prevented from voting or exercising some other right, but in the name of the United States.

Georgia Senator HERMAN E. TALMADGE has introduced a bill to clarify the right to trial by jury. It provides that all persons cited for contempt of a Federal court for any acts other than ones committed in the presence of the court "shall enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the contempt shall have been committed." Further, it would provide that no person can be bound by an injunction unless he is a party to the proceeding; is named in and served with a true copy of the injunction; or has read and explained in his presence by a judge in open court the provisions of the injunction.

This is, of course, a Government of laws—not a government arbitrarily of men, or of injunctions. It rests upon the Constitution—in persuance of which (and not otherwise) laws are enacted and enforced.

The most infamous criminals in the land—from murderers to kidnapers, running the gamut of the whole underworld—are entitled to trial by jury. Is not a citizen so entitled who might happen, quite circumstantially even—to be caught under a blanket injunction?

The United States Constitution is recommended reading just now for every citizen, and particularly those in Washington charged with enacting and interpreting and enforcing the law.

Montgomery College Has Functions Unique in Area

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Montgomery College Has Functions Unique in Area," which was published in the Washington Post and Times Herald of April 6, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MONTGOMERY COLLEGE HAS FUNCTIONS UNIQUE IN AREA

In Takoma Park, a bustling, friendly 10 year old is growing up. The youngster is Montgomery Junior College, only public school of its kind in the Washington area.

Its aims are simple, unassuming, and realistic. Eric Labouvie, professor of modern languages who has been at Montgomery since the school was founded, explains it this way:

"Many of the students who come to Montgomery are not ready for college—at least not ready for the factory method in force at so many of our universities. Others have been refused admission to larger schools. Some have failed at other schools.

"We believe that many of these students are very definitely worth saving."

SPECIAL ATTENTION

Labouvie continued:

"We give these students individualized attention. The student-teacher ratio is very favorable, and most of the classes have fewer than 25 students. Here they get help and special instruction they couldn't get at a larger school.

"The results are rewarding." Students have gone gone from here to the dean's list in other universities. They have graduated from demanding 4-year colleges. Some have gone on to take advanced degrees and other professions like law.

About 700 students attend classes on the college's 7-acre campus. Most come from Montgomery County. For county residents, the tuition is low—$100 per semester—and students can economize by living at home. Montgomery has a cafeteria, but no housing.

FULLY ACCREDITED

Dean Donald E. Deyo emphasizes that Montgomery, first junior college in Maryland fully accredited by the Middle States Association of Colleges and Secondary Schools, is open to all.

This year, for example, 2 foreign students are enrolled, along with 25 from outside Maryland, and 118 residents of the District.

They are offered a dual-purpose program: One is designed for students who will go on to complete 4 years of college. The other is for those seeking business or technical training to equip them to enter the work-a-day world after 2 years.

The school has two campuses. The main campus, at Takoma Avenue at Woodbury Drive, offers academic programs—like pre-law and engineering—and some vocational courses, including secretarial work.

The other is in Rockville, at the site of the formerly all-Negro George Washington Carver Junior College in the Carver High School. Here the college offers trade courses.

Montgomery was set up in May 1946, with $10,000 in county funds. It was housed in temporary buildings behind the Bethesda-Chevy Chase High School.

Today the school is listed for $164,523 in the county board of education's budget. It also receives State funds. Montgomery has six main buildings. A school of practical nursing will be opened next year in cooperation with nearby Suburban Hospital.

Dean Deyo is working on plans for a $1,370,000 expansion program which, over a 2-year period, would give Montgomery a new field house, library, and science building. County educators think he will see the plans realized.

Dr. Arthur Schlesinger Jr., on the 22d Amendment

EXTENSION OF REMARKS
OF
HON. STEWART L. UDALL
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 3, 1957

Mr. UDALL. Mr. Speaker, I present today the incisive comments of the young historian, Arthur Schlesinger, Jr., on the 22d amendment.

Dr. Schlesinger, a member of the Harvard University faculty, has already carved out for himself an enviable niche as a historian. His works include The Age of Jackson, and more recently, the first volume in his 4-volume The Age of Roosevelt biography.

Dr. Schlesinger's reply to my inquiry follows:

HARVARD UNIVERSITY,
Cambridge, Mass., March 28, 1957.

Congressman STEWART L. UDALL,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN UDALL: I am heartily in support of your joint resolution proposing to repeal the 22d amendment.

That amendment, in my judgment, represents an anomaly in our Constitution. Except for the 22d amendment, all present amendments to the Constitution aim to enlarge the rights of the people. The 22d amendment restricts the rights of the people. Only one other amendment was similarly restrictive; that was the 18th amendment which the people in due course repealed. I am confident that due consideration will lead in time to the repeal of the 22d amendment.

The notion that unlimited Presidential reeligibility threatens dictatorship is, in my judgment, chimerical. It did not do so in the 160 years of American history before the adoption of the 22d amendment. It should be noted that our northern neighbor, Canada, had the same man as Prime Minister for a total of more than 20 years without suffering any notable diminution in the rights and freedoms of the people. If we ever get dictatorship in the United States, it will come, not because public officials can be reelected to office, but because of some far more fundamental breakdown of Government. To suppose that the 22d amendment has blocked up what otherwise might be an invitation to totalitarianism is to accept a most superficial view of the origins of totalitarianism. As George Washington once said, "When a people shall have become incapable of governing themselves, and fit for a master, it is of little consequence from what quarter he comes."

The 22d amendment is based on the premise that the American people cannot be trusted to make the decision about the third term themselves. I do not see that our experience as a nation justifies this conclusion. More than this, the limitation imposed by the 22d amendment may at some time be a source of genuine peril. As George Washington said, "I can see no propriety in precluding ourselves from the services of any man, who on some great emergency shall be deemed universally most capable of serving the public." Theodore Roosevelt put the point this way: "If, for instance, a tremendous crisis occurred at the end of the second term of a man like Lincoln, as such a crisis occurred at the end of his first term, it would be a veritable calamity if the American people were forbidden to continue to use the services of the one man whom they knew, and did not merely guess, could carry them through the crisis." In point of fact, the one time the American people chose to continue a President beyond the traditional two terms was in exactly the circumstances envisaged by Washington and by Theodore Roosevelt. If we purport to believe in democracy and self-government, why not trust the people?

Sincerely yours,

ARTHUR SCHLESINGER, Jr.

United States Savings Bonds

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1957

Mr. MULTER. Mr. Speaker, the following is my testimony before the House Ways and Means Committee on February 21, 1957, regarding the interest rate on United States savings bonds:

STATEMENT OF HON. ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. MULTER. Thank you, Mr. Chairman and members of the committee, for the privilege of appearing here today.

The CHAIRMAN. We will be glad to hear you on H. R. 4734, Mr. MULTER.

Mr. MULTER. I am sorry I do not have a prepared statement, but I did not know until yesterday that the committee intended to have these hearings today.

The bills that are before you, H. R. 4734 and H. R. 4735, to amend the Second Liberty Bond Act to authorize a change in the maximum interest rate permitted on United States savings bonds, as I read them, apply to sales of bonds after the enactment of these bills.

I think, as already indicated, it is the intention of this legislation to cause the American public not only to invest in these bonds, but to continue their present investments in them. I think an important thing that you must consider is that those who hold these bonds today, particularly the E-bonds, must be encouraged to continue to hold those bonds rather than to cash them in.

As early as 1951, I introduced bills in the House, two companion bills, to accomplish the purpose of causing the general public to retain their E-bonds, and, as they purchased them in the future, to retain those additional investments for the longest possible term.

I have been putting similar bills in at every session since, and on January 3 of this year I again introduced the same bills which bear the numbers H. R. 2480 and H. R. 2481.

The one bill, H. R. 2480, provides for payment of a premium on savings bonds and savings certificates, while H. R. 2481 provides for tax exemption on the earnings on these E-bonds.

If you enact the bill as you have it before you, you are creating, instead of an incentive to holders of E-bonds to hold them, an incentive to cash them in and buy the new bonds if and when the Treasury issues them at the higher rate.

I think it is just as important if not more important that you give an incentive to the present holders of E-bonds to retain them for the maximum period possible. You will accomplish that if you enact bills similar to the bills that I have mentioned to you a moment ago.

I know the aversion to tax exemption, but I can think of no greater incentive to the holder of E-bonds than to say to him, "If you will hold your bonds for 10 years you will then have tax exemption on the earnings on those bonds."

My bill provides that the tax exemption shall be earned only if he holds the bonds for the full period of 10 years. It also provides that if he should decide to cash them in at some time before the end of the 10 years, then the income on those bonds is taxable.

It may be that you will decide that a better way of doing it is to increase the interest rate or give a premium for holding the bonds.

Rather than proceeding as indicated in Chairman Cooper's and Congressman Reed's bills, of increasing interest rates, my bill H. R. 2480 provides for a premium to be paid for holding the bonds for the full 10-year period. As I indicated, it would apply to bonds that are presently issued and outstanding, as well as new bonds. Again I urge upon you, that is extremely important.

The CHAIRMAN. Does that complete your statement?

Mr. MULTER. In a half moment, sir.

There are, according to the Federal Reserve Bulletin of January 1957, some $50 billion in E bonds or E and F bonds outstanding today. If you are going to increase the rate of interest payable on your new bonds you are going to cause those bonds to be cashed in in large part. Once the owners of those bonds cash them in, it is doubtful as to how many will then reinvest them in other E bonds or Government bonds.

Today, because of the higher yield being obtained from other sources of investment—

stocks and particularly municipal and State bonds which are tax exempt—the person who will cash in his bonds—and many of them are doing it today—will buy something other than these Government securities.

The fact of the matter is that since 1951, every year, there have been more E bonds cashed in than have been sold during each of those years.

I urge the committee to consider seriously the terms of H. R. 2480 and H. R. 2481 in connection with the bills that you have before you. I do trust that, in any event, you will increase the rate not only on new issues but on the presently outstanding issues that are being held by the public, so as to give them an additional incentive to hold those bonds.

The CHAIRMAN. Does that complete your statement?

Mr. MULTER. Yes, sir.

The CHAIRMAN. We thank you for your appearance and the helpful information given the committee. We will bear your suggestions in mind.

Mr. KEOGH. Mr. Chairman?

The CHAIRMAN. Mr. Keogh.

Mr. KEOGH. May I commend my colleague from New York for his obviously fine statement, and say for the record that he has presented himself in a manner that those who know him know he always does, with great diligence and competence.

Mr. MULTER. Thank you, sir.

Mr. EBERHARTER. Mr. Chairman?

The CHAIRMAN. Mr. JENKINS of Ohio will inquire.

Mr. JENKINS. I know you are an expert on this matter. You have introduced your bills, and our chairman has introduced a bill, and so has Mr. REED.

There are a lot of people interested in what we are talking about all over the country.

What do you think as between your proposed legislation and the legislation proposed by these gentlemen? Do you not think that their legislation would be preferable to these thousands of people who are interested?

Mr. MULTER. I have the utmost confidence in Chairman COOPER and Congressman REED, and I am sure that in introducing their bills they thought that was the best way to tackle the problem.

But I have pointed out to you, as I read the bills introduced, they apply to future sales of these bonds. I think it is extremely important to give an incentive to holders of outstanding bonds that they shall hold on to their bonds.

You can imagine what it would do to inflation if only half of the outstanding $50 billion or $25 billion were cashed in within a short time after this bill is enacted because the new bonds are going to carry a higher interest rate than their bonds.

I might say this: there has been newspaper comment and magazine comment across the country most favorable to my bills. I have received hundreds of letters from all over the country supporting my bills. I will say that at that time the bills by Chairman COOPER and Congressman REED had not yet been introduced. But I think the point I have made about them is a very valid one and should be seriously considered by the committee.

Mr. JENKINS. That is all, Mr. Chairman.

The CHAIRMAN. Mr. EBERHARTER will inquire.

Mr. EBERHARTER. Mr. MULTER, you have touched upon a subject which I have previously thought about.

It occurs to me that there would be a tremendous switch from 3-percent bonds to 3¼-percent bonds. And whether or not the proper way to handle it is by the bills introduced by Mr. COOPER and Mr. REED is open to serious question in my mind.

It seems to me if we can convince the public to hold on to their present bonds we should do so. But now they have no incentive to hold on to them when they can switch over and get one-quarter percent more interest a year. So the Government will not gain anything by a switchover. In fact, it would lose money because of the higher interest rate.

That is your main contention, is it not?

Mr. MULTER. That is my contention.

May I point out to this committee that, as you well know, the E bond was always intended to carry about one-half of 1 percent per annum more interest than other Government securities. And when you increased the rate the last time it was with that in mind. There has been no increase since.

The result is that today your other Government securities, which you can buy today and cash in tomorrow without losing a penny's interest, are paying a higher rate than these bonds. There is no incentive for anybody to hold an E bond, and most people today are cashing them in as fast as they get them. Under these payroll plans, a man gets his bond today with his paycheck, and tomorrow he cashes it in.

The CHAIRMAN. All right.

We thank you for your appearance and the information given the committee.

Mr. MULTER. Thank you, Mr. Chairman.

CBS Action Makes Case for FCC Network Control

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 26, 1957

Mr. BYRD. Mr. Speaker, I wish to direct the attention of our colleagues to the proposed action by Columbia Broadcasting System to discontinue its television affiliation with Charleston, W. Va.'s station WCHS–TV, the only operating television station in the capital city of my State. Columbia Broadcasting System has announced it will transfer its network affiliation to station WHTN–TV in Huntington, W. Va., which has just been purchased by the Cowles interests, "a big-business operation in the Midwest." The unfairness of such action is clearly evident in the following letter which I have forwarded to the president of CBS. The public interest may also be involved if the contemplated transfer is effected. The following editorial from the April 10, 1957, issue of the Charleston Gazette clearly points up the issue. The letter and editorial follow:

APRIL 10, 1957.

Dr. FRANK STANTON,
President, Columbia Broadcasting System, Inc., New York, N. Y.

DEAR DR. STANTON: It has come to my attention that the Columbia Broadcasting System contemplates discontinuing its affiliation with Charleston, W. Va.'s only operating television station, WCHS–TV, and transferring its affiliation to WHTN–TV in Huntington. I understand that WCHS–TV has already been notified that its affiliation will be terminated on July 1, 1958, the expiration date of its contract with CBS.

I am quite familiar with the service being given by station WCHS–TV in Charleston, our State capital, which is the focal point for both State and Federal governmental activities in West Virginia. The Columbia Broadcasting System in having been affiliated with station WCHS–TV, has enjoyed the confidence and profound respect of the citizens of the area. The present facilities accommodate a very broad listening audience, and our capital and its people have been greatly benefited by the very adequate and complete services that have been rendered. In my opinion, no station could possibly provide better service than that being rendered to the public in the Charleston and immediately adjacent areas by station WCHS–TV. The transferral of network facilities from Charleston to a new station would deprive a rapidly growing industrial area of the kind of service it has been receiving and which it so rightly deserves. Unexcelled news service, national, State, and local, has been provided in the field of both radio and television by WCHS–TV, and Charleston has come to accept it as one of the indispensable factors in the progress and development which have caused the Kanawha Valley to be so often spoken of as the "magic valley."

If the plan that has been announced by CBS is carried forth to completion, I have no doubt that the citizens of all of West Virginia will be justified in feeling that Charleston's local station has been exploited to satisfy big business and absentee ownership. It would be said indeed if this should be the situation, because it is in just such situations that Government control, so often and so vociferously deplored in this day and age, is invited.

Charleston's station WCHS–TV is about to complete the construction of a new high tower erected at a cost of over $300,000. The location and the construction of the tower were approved by the engineering department of Columbia Broadcasting System. It would seem to me that CBS would be morally obligated to continue its affiliation with the Charleston station, now that WCHS–TV has gone to the trouble and expense of building the new tower. Transmittal of pictures via the new tower is expected to begin on May 1. The station constructed the tower in good faith in order to improve and expand its coverage. Instead of waiting until the station could have an opportunity to prove the performance of the new tower, CBS has arbitrarily announced that it will transfer network facilities to the Huntington area as soon as the present contract runs its course.

Dr. Stanton, I cannot help but be greatly disturbed about the action contemplated. I represent the congressional district in which Charleston is located. Mine is the greatest coal-producing district in the United States, and in the Kanawha Valley you will find one of the largest concentrations of chemical plants in the Western Hemisphere. It seems little short of ridiculous that the city in which is located the seat of State government, situated in such a large industrial and heavily populated area, is about to be deprived of its CBS outlet. I realize that the matter is one over which I have no direct supervision or control, but as Representative of an area which will be most vitally and injuriously affected, I cannot, in good conscience, avoid protesting the action being proposed. I am advised that the owners of television sets will be put to additional expense for purchase of new antennas, and I should think that CBS would be most reluctant to cause this additional burden to be placed upon the public. Moreover, the public has a natural, and, indeed, vested interest in retaining the outlet in Charleston, and I am at a loss to understand why the facilities should be moved to another community which already possesses the outlet of another leading network, namely, NBC.

I trust, Dr. Stanton, that the proposed action, although already announced, will not

be consummated. Local ownership has been recognized by the Federal Government as being the type of ownership which renders the most complete public service to the people. The people of West Virginia too long have suffered from out-of-State ownership of many of the industrial enterprises, and we look jealously and with askance upon the decision by CBS to weld another shackle and place another millstone around the neck of local ownership as is being done in this instance. I sincerely hope that reason and justice will prevail and that the Columbia Broadcasting System will not terminate its affiliation with WCHS–TV.

Sincerely yours,

ROBERT C. BYRD,
Member of Congress.

CBS ACTION MAKES CASE FOR FCC NETWORK CONTROL

The decision of the Columbia Broadcasting System to switch its television affiliation from WCHS, Charleston, to WHTN, Huntington, raises two rather astouding points:

1. That an organization of the supposed business sense of CBS would make such a decision in the first place; and

2. That the Federal Communications Commission, which has the power to regulate individual television stations down to the finest detail, has no control whatsoever over the giant networks.

On point 1, except for a business obligation to do the best possible job for its stockholders and what some may hold to be an obligation to the viewing public, we suppose the CBS decisions in such matters are its own business.

But on point 2, it seems to be astonishingly inconsistent that Congress would give the FCC control over individual stations, which would be in the relative category of small business and give an absolute free hand to the networks, which are big business with the power to make or break an individual station.

And nothing does more to emphasize this inequity than the case at hand, which we consider to be an unfair, arbitrary, and unreasonable action on the part of CBS to give one television station a great advantage at the expense of another.

It can hardly be denied that network affiliation is a big factor in the value of a local station. Thus, looking at it in the cold light of cash value, the CBS decision will be highly beneficial to WHTN and somewhat detrimental to WCHS just as it would have had a similar effect on the stations concerned if NBC had decided to swith from WSAZ to WHTN.

Therefore, it seems rather significant that the CBS decision came shortly after WHTN, admittedly a weak third station in the Charleston-Huntington area, was purchased by the Cowles interests, a big business operation in the Midwest.

Is this a case of CBS, which is big business itself, bowing to the demands of big business in the ownership of individual television stations?

And, with this switch in network affiliation, what happens to the value of the stock of WHTN, which certainly must have been acquired by Cowles at a modest price?

The only reasons made public by CBS for its decision were that it wanted to be in a more competitive position with NBC's Huntington outlet, WSAZ, and that Cowles had done an outstanding job of management in other cities.

But CBS prefers to ignore the advances made by WCHS after its main competition had a 5-year advantage in getting on the air, and the effort and expense to which it has gone to improve the CBS competitive position.

The thing that makes the CBS action so unfair, and casts suspicions upon the motives involved, is that the decision was made just before WCHS is to put in use its new transmitting tower which it is building at a cost of $300,000 to improve its competitive position.

Both WCHS and WHTN are in the process of building new towers. Therefore, if CBS had any interest in being fair in its consideration of affiliates, we contend that it would have waited until it could have had a firsthand comparison of the two stations on their performance with their new transmitters.

Instead, CBS arbitrarily announces its decision to kick its old friend, WCHS, off to the side and embrace an untried but wealthy newcomer.

Such an action certainly causes suspicions and raises questions that should be subject to review by the Federal Communications Commission.

In the public interest, Congress should do something to prevent this dog-eat-dog principle of permitting the big to swallow up the small.

Foreign Aid

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "United States Cash No Cure," written by Roy Covington, published in the Miami Herald of March 20, 1957, and reprinted and sent to me by Roy Hawkins, of Miami, Fla.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"UNITED STATES CASH NO CURE," KNIGHT—EDITOR LAMBASTES WASTE AND FOLLY

(By Roy Covington)

CHARLOTTE, N. C.—Foreign aid began as a means of rehabilitating war-torn nations of Europe. It was never intended to become, as it is today, a permanent arm of our foreign policy, John S. Knight, editor and publisher of the Knight Newspapers, charged Tuesday night.

"We seem to have the curious idea in this country that anything can be cured by shaking the United States money tree," said Knight in a speech before the Charlotte Executive Club.

High government spending and foreign aid in particular were targets chosen for criticism.

He also described the "free press as the last bulwark of individual liberty."

John S. Knight is editor and publisher of the Miami Herald, the Akron Beacon Journal, the Detroit Free Press and the Chicago Daily News.

He also serves as a director of the Charlotte Observer, of which his brother, James L. Knight, is president and publisher.

Introduced by C. A. McKnight, editor of the Observer, Knight spoke to some 300 executives, including a number of visiting newspaper editors and publishers from both Carolinas.

Knight said he did not decry all foreign aid, but, he said, "It is incomprehensible when the administration says that foreign aid cannot be cut, and Congress supinely agrees."

He cited "waste and folly" in the application of foreign aid funds.

"In Iran, for example, the International Cooperation Administration built a sugar-beet refinery. But it couldn't be operated for 3 years because the Iranians didn't know how to grow beets. One ICA office in Iran requisitioned 53 automobiles and 41 drivers for its 55 employees.

"There are literally dozens of such examples of waste and folly," said Knight.

He admitted he was one of Ike's earliest supporters for the Presidency.

But of late, he said, he has become "most concerned with the Eisenhower administration's change in directions since the President's reelection." The $72 billion budget proposed by the administration was a "shocker to all who believe, as I do, in holding down expenses of the Government," declared Knight.

"It is an undeniable fact that the budget can be cut," he said, "but the President and Congress are now engaged in a buckpassing contest to avoid taking responsibility."

"Mr. Eisenhower is wasting his breath in warning labor and business of the dangers of inflation when the Government itself, by gargantuan expenditures, is contributing to the spiral," Knight said.

The administration's philosophy of foreign aid as an arm of foreign policy is contributing to the overall spending spree.

"As our foreign spending rises, so does our spending at home," he said. Knight was disappointed that Mr. Eisenhower had not formulated a new and striking foreign policy.

"The incredible Mr. Dulles flies from one continent to another looking for trouble, and usually finds it," scoffed Knight.

Describing the results of a hit-and-miss foreign policy, Knight said "the British and French are miffed; the Israelis rightly complain that they were doublecrossed; Nasser, the troublemaker, is riding high; SEATO is falling apart; NATO has lost much of its effective fighting strength, and every nation with communism for sale is blackmailing us to the limit."

Knight said he also was troubled over trends evident in the thinking of the American people.

He listed as areas for concern:

The naive faith in President Eisenhower. The prevalence of let Ike do it symbolizes an inattentiveness to public questions.

Extremism in the field of racial conflict. "Instead of approaching a problem of this magnitude in a calm and rational manner, realizing it may never be solved in our time, the issues at stake have given rise to racial strife and hate mongering."

Wage inflation, in which annual wage increases are totally unrelated to productivity. "Collective bargaining, as it is sometimes humorously called, is actually nothing but the exercise of power by labor leaders who can cripple or ruin an industry at their will."

Decline of the small-business man. "It seems to me that we are losing much of the country's basic strength when the few supplant the many."

Decline of the individual. "We seem to have lost much of the rugged individualism of our forefathers. Today nearly every job applicant seems more interested in the hours of work and pension plans than in accepting responsibility and seeking achievement. Security has become a goal rather than an achievement."

Hon. Alexander Wiley, of Wisconsin, Condemns Latest Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, April 12, 1957

Mr. WILEY. Mr. President, one of the most inflationary pieces of legislation

of the 85th Congress has now been introduced.

I refer to the proposed legislation which would unfortunately make a hollow shell of Federal regulation of the prices of natural gas.

Specifically, I have reference to H. R. 6790 and H. R. 6791, introduced, respectively, by Representative OREN HARRIS, of Arkansas, and Representative JOSEPH O'HARA, of Minnesota.

In my judgment, this proposed legislation poses a tremendous threat to the American economy in more ways than one.

I ask unanimous consent that a statement I have prepared on this subject be printed in the Appendix of the RECORD.

Mr. CLARK. Mr. President, will the Senator from Wisconsin yield for just a moment in connection with that he has just said with respect to the Harris bill?

Mr. WILEY. I yield.

Mr. CLARK. I commend the Senator from Wisconsin for the action he is taking at the very start in opposition to the Harris bill, which has been introduced in the House.

When I was mayor of Philadelphia we had a mayors' committee which fought very vigorously against that bill. I know the distinguished Senator from Wisconsin was on that side, and did his very best to prevent its enactment. I assure the Senator from Wisconsin that he will have support in his efforts from at least one Senator on this side of the aisle.

Mr. WILEY. I thank the distinguished Senator. My opening remarks contained a statement of my views. I shall continue to restate them in committee, and before the Senate, when the subject comes before us.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR WILEY

For months, we have been reading disturbing newspaper accounts to the effect that a new version of the bill which President Eisenhower vetoed in the 84th Congress would soon be introduced.

Now this version has been offered.

This time, it attempts to accomplish its objective by permitting a so-called reasonable-market price to be charged.

But what is reasonable-market price?

It is the going price.

So, will this be regulation? Of course not; it is pretended regulation on the basis of an unregulated price.

So in its pretense at regulation, it is even worse than last year's more frank bill. In 24 pages of legal falderal, the bill deceptively makes noises as if some regulation were really being attempted.

It sets up a standard for a regulatory agency which the Commission would find it impossible to follow. The criterion would be a quicksand of uncertainty into which every regulatory case would founder—if any attempt were made to actually enforce it.

The reasonable-market price would be changing constantly—upward.

The Commission investigators would have to scramble to keep up interminably with what the latest market price was.

Consequently, the Commission would be following the market price rather than leading, abjectly approving rather than independently establishing a fair regulated price, as all regulatory commissions are supposed to do.

The supporters of this legislation make no bones about what they really have in mind.

Their aim is the very same as it was in the 84th Congress, the 83d Congress, and in preceding Congresses—to deny the consumers of this Nation the reasonable protection which the consumers had a right to expect under the Natural Gas Act of 1938.

For months, we have been reading reports from natural-gas associations to the effect that if the administration really wants this legislation enacted, it—the administration—will have to work hard for it.

I hope that the administration will do no such thing.

I say very frankly, however and yes, sorrowfully, that I will not be surprised if the administration does come once again to the unwise decision of backing the purposes of this legislation.

Unfortunately, the administration has allowed itself to swallow the misrepresentations which have been spread by the natural-gas industry.

Unfortunately, the administration, which has been wisely pleading for a curb on inflation—which has been pleading for voluntary efforts to hold down wage and price pressures, this same administration now seems determined to do a rightabout-face. Thus, it probably backs a bill which will be one of the most inflationary measures in the 85th Congress.

Fuel is the key item in the cost of living and in the cost of production. When industry has to pay higher fuel costs, when 30 million homeowners have to pay higher residential gas costs, what is that but inflation?

We see in this legislation, too, one more unfortunate step down the road of ineffective regulation by a so-called regulatory agency. It is a road in which a Federal Commission does not seem to be actively interested in protecting the very public interest which it was set up to protect.

I say, frankly, but respectfully: The Federal Power Commission has repeatedly failed in its obligations vigorously to protect the public interest.

Instead, by backing the previous version of this legislation and by reportedly backing the present version of this legislation, the Federal Power Commission seems to say, in effect: "Gentlemen of the Congress, we will be glad to authorize whatever the 'traffic will bear,' if you will just permit us to do so."

I want to be fair to the Federal Power Commission—which, after all, faces enormous work burdens. I am not, of course, reflecting on the sincerity of any of its members. I respect their honest differences with me. I am simply stating that the Commission is not uniformly doing the job which the Congress originally intended for it.

Lastly, I want to reiterate a point which I have previously made. The oil and gas industry is definitely entitled to a reasonable return on their investment. The local gas distributors are entitled to a reasonable return. The pipelines are entitled to a reasonable return on their investment.

But so, too, the public is entitled to reasonable protection.

There is no evidence whatsoever to indicate that the oil and gas industry has suffered under previous Federal regulation. There is every evidence to indicate that the industry has prospered, and that it will continue to prosper if reasonable regulation is carried on.

I hope, therefore, that this Harris-O'Hara legislation will be defeated.

I hope that it will be defeated on its lack of merit and not simply because of part of the oil industry's lobbying tactics, as carried on in the 84th Congress.

I hope the administration will reconsider its overall stand.

I support this administration generally. But I will not falter on my right to part company with the administration when my conscience tells me it is in the wrong.

Perhaps, there are some within the administration—within the Department of Justice or elsewhere—who support my stand and who disagree with the Harris-O'Hara bill. If so, I hope they will be in a position to come forth and openly say so.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

Appendix

Asian Assembly for Moral Rearmament

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, April 15, 1957

Mr. WILEY. Mr. President, there has just been completed in the Philippines an Asian Assembly for Moral Rearmament attended by representative leaders from 27 nations. This assembly was welcomed to this country by the late President Magsaysay, and was attended by his successor, President Garcia, with members of his Cabinet.

We in Washington would be wise to take note of what has been done and said at this gathering. The reconciliation of bitterness between races and nations, the demonstration of moral and spiritual power in men who can decide policy, the implications for the United States of this new understanding among the free nations of Asia—these are all matters of the highest significance.

Freedom has its ideology. Absolute moral standards give it firmness. The spirit of God gives it life.

If we in America live that ideology we shall find a response in Asia that money cannot buy. It could be the turning point.

The signs of response to these deeper realities at this assembly are a source of hope for us all—and a challenge to us to examine our policy and our practice in light of these truths.

Mr. President, I ask that a statement I have prepared on this subject be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ASIAN ASSEMBLY FOR MORAL REARMAMENT—STATESMEN UNITE AT MRA ASSEMBLY IN THE PHILIPPINES

President Carlos P. Garcia of the Philippines and Mrs. Garcia, with members of his Cabinet and leaders of the Philippine Congress, traveled by special train to Baguio to welcome delegates from 27 nations to the Asian Assembly for Moral Rearmament held March 29–April 8. President Garcia said: "I am glad that Moral Rearmament was born. It is sounding a chord that will find responsive hearts the world over."

The Presidential party included the Acting Secretary of Foreign Affairs, the chairman of the Senate Foreign Relations Committee, the chairman of the Senate Committee on National Defense, as well as other members of the Cabinet and chairmen of congressional committees.

The Manila Times reported that President Garcia went to fulfill a date made by the late President Magsaysay. Speaking of the late President, Senator Roseller Lim said:

"Since his breakfast a year ago with Dr. Frank Buchman, initiator of Moral Rearmament, the President said at least three times, 'Ros, we must decide this on the basis of what's right, no matter whose feelings are hurt, even my own.' On that basis many of the President's problems were solved. Five days before his death I told him about this Assembly. He said he would come to Baguio to open the conference, and expressed the particular hope that the three Colwell brothers would be coming."

Senator Emmanuel Pelaez, chairman of the Senate Committee on National Defense in the Philippines, said:

"It is for practical reasons that I want MRA to be a force here. From the standpoint of national security it can be a very practical, realistic bulwark against the infiltration of communism."

ONLY ANSWER A SUPERIOR IDEOLOGY

The former Prime Minister of Nationalist China, Gen. Ho Ying-chin, now chairman of the Military Strategy Advisory Board of Taiwan, summing up the results of the conference, declared that what he and others had "failed to achieve in 10 years of postwar diplomatic effort had been accomplished at this Asian Assembly.

"Although the war ended over 10 years ago, deep bitterness has remained. I see Moral Rearmament as the ideology which is uniting the Asian nations. Real contributions have been made to the welfare of Asia. Leading Japanese and Koreans have found understanding. We have seen a dream of long standing realized here. Enemies have become reconciled and great hope has been found.

"Today we need a superior ideology to safeguard our national freedom and democracy. Dr. Frank Buchman, from his knowledge of human nature, foresaw this need and has given the world an ideology of change. Twenty years' experience of communism has proved to me that the only answer is a superior ideology. Today there is only one road—that of moral rearmament—along which the whole world can advance to freedom and peace."

Gen. Ho Ying-chin pledged himself to accept gladly any responsibility through moral rearmament to consolidate this new spirit in Asia and the world.

PRIME MINISTER U NU DEFINES BASIS OF ANSWERING IDEOLOGY

The Burmese Prime Minister sent a message to the assembly which was broadcast over the Burmese National Radio: "Dr. Buchman has presented to the world a new ideology above race and class because it seeks to answer the needs of the heart. This ideology seeks to change men, their ideas, their motives, their aims. Its moral standards of honesty, purity, unselfishness, and love form the cream of all religious beliefs."

Prime Minister Nobosuke Kishi of Japan said in a message delivered by Niro Hoshijima: "I look forward to the day when all the peoples of Asia unite in friendship. This desire of mine makes me exceptionally happy to send my greetings to the Asian Conference for Moral Rearmament. Understanding between nations can hardly be realized by the official phase of diplomacy alone. What appears to me vastly more important is a reawakening to the moral and spiritual values involved."

Dr. Mohammad Hatta, former vice president and cofounder of the Indonesia Republic, sent a message declaring: "If with God's help you can achieve something to alleviate world tension, the whole of mankind will be grateful to you."

R. P. Sunarto, a director of Radio Indonesia, delivered Dr. Hatta's message and told of the widespread response to weekly broadcasts on MRA in Indonesia.

President Ngo Dinh Diem of Vietnam sent a personal representative, Dinh Van Huan, first president of the court of appeals. Mr. Van Huan said: "To remake the world we only need a determined nucleus in every country. I am deeply convinced of the objectives for which you are so effectively striving. An Asian Assembly for Moral Rearmament should be held at least once a year."

HISTORIC HATREDS HEALED

Niro Hoshijima, cosignatory of the Japanese Peace Treaty and oldest member of the Diet in point of service, said: "Relations between Japan and our nearest neighbor, Korea, are not what they should be. This is primarily the responsibility of the Japanese. Here we have been able to find the road to unity between Korea and Japan. With the spirit of MRA Japan can change and we can find lasting unity with the countries of Asia."

Yoon Sung Soon, chairman of the Foreign Relations Committee of the Korean National Assembly, said: "The real difficulties between Korea and Japan can only be solved through the spirit of moral rearmament. We need to change personally, but it also needs to issue in political, social, economic and international changes. I have to change and every nation has to change. Just as Korea and Japan have found unity through MRA, so too can every nation."

Senator Shidzue Kato, member of the Foreign Relations Committee of the Japanese Diet, asking forgiveness of the Korean people who suffered under more than 30 years of Japanese occupation, said: "I want to take full responsibility for what my nation did and for this I ask your forgiveness. I return with the determination that it will not just be lip service to an apology but to fight that this spirit becomes the policy of my nation."

Mrs. Park Hyun Sook, former Korean Cabinet Minister whom the Japanese had imprisoned for years and whose husband had been bedridden for more than 18 years as a result of Japanese maltreatment, said: "The unity of Asia can only be achieved when there is reconciliation between Japan and Korea. Through change in my own heart I lost my enmity and I am convinced that only on the basis of MRA can permanent peace be achieved in Asia and the world."

Senator Kato, in describing how the reparations agreement between the Philippines and Japan was ratified, said: "Before I met MRA I was champion in embarrassing the government to get my name before the public. But MRA taught me how to fight on the basis of what is right. Last June the Diet was considering ratification of our reparations agreement with the Philippines but this was endangered by our party's opposition to the government and the many conflicts in the Diet. I decided to take full responsibility as a member of the Foreign Relations Committee to fight for ratification, and 3 hours before the Diet session ended the reparations agreement was ratified."

Daw Nyein Tha, distinguished educator from Burma, said: "MRA has the secret of turning enemies into friends." She quoted Dr. Buchman: "'The best defense of your

country is the respect and gratitude of your neighbors.' "

Mr. Kichizaemon Sumitomo, head of the Japanese industrial family which before the war employed 500,000 men, said: "I realize that as a capitalist I was also responsible for what happened in the Philippines by providing the material strength for the Japanese militarists. But apology is not enough. We in management must work on a basis of what is right. It is not enough to rely on good will between individuals. We responsible leaders of our nations must commit ourselves to living a moral ideology."

After an apology by Renzo Yanagisawa, chairman of 250,000 Japanese shipyard workers, for what Japan did to the Philippines during the war, Donato Alarcon, vice president of the Philippine Transport Workers Union, said: "At this assembly we are developing the moral ideology where our mistakes of the past can be corrected and Japan and the Philippines can learn to live as members of one family."

Willard Johnson, president of the student body of 12,000 at the University of California at Los Angeles, and Jerry Nelson, another student leader from the same university, told of the unity MRA had brought to their campus. "We were the bitterest political enemies on the campus," said Nelson. "What we had been doing was divisive and selfish. MRA united us. America needs this ideology. It is the only hope of our country." Johnson said: "We Negroes have often attempted to answer racial prejudice with an equal amount of prejudice against the whites. Our real battle is against prejudice and not against the people involved in it. The ideology of moral rearmament can answer racial prejudice because it challenges both black and white to change and build a new world."

WORLD DICTATORSHIP, WORLD DESTRUCTION, OR WORLD RENAISSANCE

Dr. Douglas Cornell of Washington, executive officer of the National Academy of Sciences, said: "MRA is the ideology of freedom needed in the atomic age. I have worked 10 years in the development of weapons and have some knowledge of such facts as the marriage of atomic warheads with guided missiles. The new factor is that the next war would mean total destruction. Consciously or unconsciously everyone of us chooses one of three alternatives—world dictatorship, world destruction, or world renaissance. MRA offers every man the chance to play his full part in the creation of this renaissance."

Dante Calma of the office of the President of the Philippines, said: "As yet it is only in Communist countries that ideology is placed before self-interest. I fear for the future of my country and my children if there is not a change. Moral rearmament has proved a turning point in my life and for the first time I have become part of my Catholic faith. The future of this country as well as of Asia is being shaped here at this assembly. We Filipinos must make moral rearmament top priority."

Dean Vincente G. Sinco, dean of the College of Law, University of the Philippines, and chairman of the import-export committee, told the assembly: "I have been overwhelmed by the decisions which men and women have made at this assembly to take this ideology to Asia and the world. The spirit of greed, falsehood, impurity, and selfishness exists even where there is no communism. With MRA these forces will not become dominant in our nation. Only in this way will we have peace and unity."

Rajaram Shastri, Member of Parliament of India and General Secretary, 1954–55, of the All-India Hind Mazdoor Sabha, central organization of the Socialist trade unions of India with 500,000 members, declared:

"As a Marxist I spent 26 years of my life organizing the Indian working class on a basis of hatred and bitterness. When I saw the division around me I traveled for an answer to Soviet Russia, Red China, and several countries of Europe, but everywhere I found people suffering from the same disease—materialism.

"When I met moral rearmament I realized that for 26 years I had been pointing out the mistakes of others instead of seeing where I need to change myself first. MRA turned a torchlight inward. Through absolute moral standards and the guidance of God lies the way to bring peace and happiness to individuals, families, nations, and the world."

Cornelio Balmaceda, general manager of the Philippine Chamber of Commerce and former Minister of Commerce, who had earlier attended the World Training Center for Moral Rearmament at Caux, Switzerland, while a delegate to the ECOSOC Conference in Geneva, said: "Ideological controversy plagued the meetings in Geneva. At Caux I saw Communists changing and the force of an idea to unite the world. Most solutions center around material rearmament. MRA is an armament that does not cost nations billions to insure defense. While the masses of Asia are being serenaded by communism, the coming of moral rearmament is very significant and timely."

TRUE BASIS FOR EAST-WEST UNITY

In a cable to Mr. SAM RAYBURN, Speaker of the United States House of Representatives, and Senator THEODORE FRANCIS GREEN, chairman of the Senate Foreign Relations Committee, on the occasion of a private showing for Members of both Houses of the United States Congress of the all-African film Freedom, delegates at the Asian Assembly said:

"The Asian nations gathered at Baguio in the Philippines respond to your initiative in the presentation of the film Freedom to the United States Congress. The Asian premiere of Freedom was seen here this week by delegates from 24 nations attending the Asian Assembly for Moral Rearmament. This overwhelming film is providential for our nations at this critical time and must reach the millions of Asia now.

"The ideology depicted in the film Freedom, is the ideology Asia wants. It is the only true basis on which East and West can unite. Where diplomacy has failed to answer our greatest need, moral rearmament is succeeding. It is breaking down barriers of hate and bitterness and creating trust and unity. It is opening up avenues to reparations and concrete accords.

"We are grateful for the three American brothers, the Colwells, who responded to the late President Magsaysay's call that they come to Baguio. They have played a vital part in operating the spirit in which unity is being forged between our nations."

The cable was signed by: Senator Roseller T. Lim, the Philippines; General Ho Ying-chin, chairman, Military Strategy Advisory Board, Formosa; Niro Hoshijima, senior member, Japanese Diet; Senator Shidzue Kato, member, Foreign Relations Committee, Japan; Yoon Sung Soon, chairman, Foreign Relations Committee, Korean National Assembly; R. P. Sunarto, director, Radio Indonesia; Devar Surya Sena, Radio Ceylon; Dato Mahmoud Bin Mat, former speaker, Legisaltive Council, Malaya; Maung Maung Khin, editor, New Light of Burma; Rajaram Shastri, Member of Parliament, India.

A special showing for Members of Congress of the Philippines was held on April 13 and attended by the speaker of the house of representatives, the senate majority leader, chairmen of the three senate committees, and other congressional leaders. The morning session of the senate was delayed for an hour to enable Members to attend.

1890 or 1984?

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES

Monday, April 15, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, for the edification of my colleagues, a thought-provoking editorial published in the Wall Street Journal, entitled "1890 or 1984?"

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

1890 or 1984?

When President Eisenhower the other day was asked about the complaints over the size of his record peacetime budget, his retort was that this isn't 1890.

"In this day and time," he said, "we cannot * * * limit ourselves to the governmental processes that were applicable in 1890. We have got to adapt the great principles of the Constitution to the inescapable industrial and economic conditions of our time."

And that, we suppose we are to understand, explains everything.

The ghosts of Grover Cleveland and William McKinley have never been so popular as of late. Let anyone venture the smallest suggestion that old virtues—like thrift or prudence or self-reliance or local responsibility for local problems—might have some virtue today, as well for a government as for its citizens, and he is dismissed with some such phrase as "we can't turn the clock back to McKinley."

This is intended to be devastating. It is supposed to mark the critic as an ignoramus unaware of the march of history and more than likely an enemy of the people because he opposes progress. And naturally it also marks the speaker as a forward-sighted fellow whose gaze is fixed ahead, say on 1980.

It is a debater's retort that answers nothing. While it might be a happy thing if we could indeed turn the clock back to McKinley when the cost of Government to the citizens was measured in thousands instead of billions of dollars, no one has proposed any such thing.

As a matter of fact, the most vociferous critic of Mr. Eisenhower's budget is extravagant compared to Mr. Eisenhower only a few years ago. Then he proposed to turn the budget back to $60 billion; today the most hopeful reactionary dreams of taking no more than $5 billion or so out of Mr. Eisenhower's $72 billion budget. The critics of Mr. Eisenhower's program, men like Senator BYRD, for example, are neither unmindful of history nor fools.

But the debater's trickery in this kind of retort does not disturb us half so much as the fear that some of the people who use it do not see the trick and may suppose that they have uttered something wise.

For what is often really being suggested is not merely that the circumstances of history change but that the principles of wisdom have somehow changed also. The suggestion is not simply that it may be wrong to cut "x" billion out of the budget, a matter on which even practical men may differ; the suggestion is that it is somehow wrong even to suggest considering such an outmoded principle as thrift.

There is here a dangerous trap for the mind. A wise man once said that government is best which governs least. Now if Jefferson were alive today he would not

measure what is the "least" possible in 1957 by what was the "least" possible when he made his declaration against tyranny. But a mind so constituted would not be fooled into thinking that, however much circumstance had altered the application of the principle, the principle itself had been outmoded.

We take it as self-evident that the Government of the United States in 1957 cannot meet its responsibilities with the same sums of money it took from its citizens a century ago. That in an age when technology has diminished the boundaries between one part of the community and another its laws perforce must be more complex and farther reaching. But that is not the same thing as saying that the principles of wise government pass with the passing times.

That is why when men have visions of a world far worse than ours they do not look backward but forward. And what disturbs their vision is that somehow in the future all the ancient virtues will be forgotten because people may be persuaded of the view that because governmental processes are old they are outmoded.

The memory of 1890 is not half so terrifying as the specter of 1894.

The Washington Pilgrimage

EXTENSION OF REMARKS
OF
HON. STUART SYMINGTON
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, April 15, 1957

Mr. SYMINGTON. Mr. President, on April 27, at the seventh annual awards dinner of the Washington Pilgrimage, Washington, D. C., a civic leader of St. Louis, Mo., Mr. William Harper Bryan, will be honored as the Lay Churchman of the Year for 1957.

It will not be possible for me to be present on that occasion as this outstanding business executive receives this honor in token of his service to the church life of St. Louis and the Nation.

Other leaders will also be honored; therefore, Mr. President, I ask unanimous consent that a short explanation of the Washington Pilgrimage, together with a statement about the national church and lay awards for 1957, be printed in the Appendix of the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

THE WASHINGTON PILGRIMAGE

An inspirational and practical program which unites our commitment to America with a new understanding of the rich meaning of our national religious heritage, the Washington Pilgrimage, is the only organized movement in America which actively relates the principles of our American religious heritage to present-day moral and spiritual ideals, in terms of what we are, what we have, and what we aspire to in 20th-century America.

Critics of American life say we are too greatly concerned with financial gains, technological advances, and other evidences of material advantages. Perhaps they might more definitely say that we do not make enough of the basic reservoirs for good which are equally a part of our lives—the hope, faith, love, confidence—in ourselves, our families, our friends, and the countless other men and women we have neither seen nor known.

The Washington Pilgrimage's basic theme is This Nation Under God.

AWARDS FOR 1957

The Washington Pilgrimage national church and lay awards were announced in Washington on March 28. Dr. Louis H. Evans, famous Hollywood, Calif., minister, now minister at large for the Board of National Missions of the Presbyterian Church, United States of America, was named "churchman of the year." William Harper Bryan, of St. Louis, recently referred to as the "1957 Spirit of St. Louis," has been named "lay-churchman of the year." Mrs. W. Murdoch MacLeod, general director of United Churchwomen's 11 million members, has been named "churchwoman of the year."

The awards will be received in person by the recipients at the seventh annual awards dinner of the Washington Pilgrimage, Washington, D. C., April 27. Cecil B. deMille will be present to present the churchman award to Dr. Evans.

Other distinguished leaders who will participate in the pilgrimage of all faiths April 26, 27, and 28 include Justice William O. Douglas, Senator Francis Case, Judge Luther Youngdahl, Judge Homer Ferguson, Dr. Theodore Distler, and Bradshaw Mintener.

Paul LaValle, conductor of the Band of America, will direct massed bands at a special ceremony before the Lincoln Memorial in honor of the inclusion of the words "under God" in the Pledge of Allegiance.

In collaboration with the 350th anniversary celebration of Jamestown, a special program will be presented before the Jefferson Memorial honoring the early founders of the Nation.

Charles E. Wilson, president of the People-to-People Foundation, in cooperation with Col. Edward Kirby and George Denny, will present a program in the Senate caucus room at 12 o'clock noon Saturday, April 27.

President Eisenhower received the lay churchman's award for 1955. This year's recipient, William Harper Bryan, is president of the Associated Hardware Co. and former president of the Witte Hardware Co. As a civic leader, he founded the Polio Society of St. Louis; served as president of St. Louis Sales Executives Club, district governor of Kiwanis International, president and member of the board of directors of the St. Louis Convention Bureau for 20 years, member of the board of the chamber of commerce and chairman of the Century Club. As a church leader, he has served as a trustee of the Third Baptist Church of St. Louis for 18 years, often as president and sometimes chairman of the ways and means committee, has taught a Sunday school class since 1923, and has served the Metropolitan Church Federation as a member of the executive board and the finance committee.

Dr. Louis H. Evans, author, national preacher, and regular radio and TV speaker, is a graduate of Occidental College, Los Angeles, and McCormick Theological Seminary in Chicago. During college days he was chosen all-conference and all-State end in football and all-conference and all-Southern center in basketball. He is the founding sponsor of the Fellowship of Christian Athletes, Inc.

As minister at large, Dr. Evans covers 40,000 miles per year by plane and train and has filled 450 speaking engagements since September 1953. He has spoken before conventions of business, education, government, armed service, civic, religious, and lay leaders throughout this country and abroad. He has visited Japan, Korea, China, India, Africa, and the Near East, meeting with students, government and mission leaders. In 1955 he flew to Scotland to address the ministers of that country at the request of Dr. Billy Graham (clergy-churchman of 1956). For the past 4 years he has served a part of every summer as summer pastor of the National Presbyterian Church of Washington, D. C., the church of President and Mrs. Eisenhower.

Dr. Evans' books include Youth Seeks a Master, the Kingdom is Yours, and Make Your Faith Work, all published by Fleming H. Revell Co. He has received many honorary degrees and was chosen one of the 12 outstanding religious leaders of America in the Life magazine nationwide poll. Three of his four children are in full-time Christian service.

Mrs. W. Murdoch MacLeod has directed the work of United Churchwomen since 1948. Formerly the executive secretary of the United Council of Church Women, she is now the general director of the enlarged organization, United Church Women of the National Council of the Churches of Christ in the United States of America. Mrs. MacLeod served as a consultant at the assembly of the World Council of Churches in Evanston, Ill., 1954; attended the planning meeting for the World Council in England in 1949; visited refugee camps in Germany in 1955; and led a fraternal team of American women to Mexico in 1956 to attend a conference of Mexican Protestant women. She holds a number of honorary degrees and is a graduate of the South Carolina College for Women. She has two daughters and is the widow of Dr. W. Murdoch MacLeod, a minister in the Presbyterian Church, United States.

Federal Expenditures

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. NEAL. Mr. Speaker, those who oppose reducing the 1958 budget are just not responsive to general public opinion.

The progressive addition of bureaus and agencies calling for more Federal employees and annual increases in the cost of Government has aroused the people to the necessary tax burden that must be imposed on them to administer these programs.

Instead of continuing heavy taxes and spending to the limit of public forbearance, Government leaders might well read the signs of revolt so spontaneously generated by uniting their efforts to make this 1957 the year of the turning point from deficits and lavish indulgences.

Sensible reductions from amounts proposed by domestic Federal agencies, a more careful review of overlapping functions and waste in the Defense Department, and withdrawal of foreign aid from missions completing their assignments, can be the direct means of showing the folks back home that we are abandoning our disappointing experiences in assuming we can save the world.

It is traditional for heads of families and business organizations to periodically take account of capital depletion and correct unwarranted expenditures that endanger the safety and solvency of the financial structure.

The predicament of the United States Government, overdrawn, so to speak, in the sum of $275 billion, still insisting on increased budgets with no assurances of diminishing naitonal indebtedness and only an expression of hope for tax relief, should indicate the timeliness of a re-evaluation of our national financial prospects.

The American citizens have been extremely tolerant but that tolerance is waning. Let us recognize and profit by the warning before we encounter open revolt.

American Bar Association Recommendation Regarding Congressional Investigations

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, April 15, 1957

Mr. NEUBERGER. Mr. President, many Members of the Congress, and many persons throughout the Nation, recently have been disturbed by the excesses of some congressional investigating committees. While the process of continued analysis and investigation by the Congress is absolutely essential to the operation of the legislative branch of our Government, it is even more essential that these investigations be handled with fairness and tact and with full protection for the reputation and personal rights of anyone under accusation.

For this reason, I am calling to the attention of the Senate some pertinent recommendations made by a committee of the American Bar Association with respect to the conduct and methods of congressional investigating committees.

These recommendations are described in an editorial which was published in the April 14, 1957, issue of the Oregon Journal, of Portland, Oreg., which was written by Mr. Douglas McKean, associate editor of that newspaper.

I ask unanimous consent that this editorial be printed in full in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AMERICAN BAR ASSOCIATION RECOMMENDS CURBING INVESTIGATIVE EAGERNESS OF GROUPS IN CONGRESS

(By Douglas McKean)

Three years ago, the American Bar Association made an exhaustive study of congressional investigative committees as related to individual rights.

The report made some rather serious charges against methods of those committees and suggested rules of procedure which the bar believes would eliminate the abuses.

In reading this discussion of the bar report, two facts should be borne in mind:

1. Since the report was made 3 years ago, its recommendations can be evaluated in an atmosphere uncolored by feelings, pro or con, regarding the recent Senate committee hearings.

2. The report was made subsequent to hearings of what was popularly known as the McCarthy committee. In relation to these hearings, it should be remembered that the American Bar Association has never been accused of being soft on communism.

And it made its criticisms and recommendations in the face of the fact that the subject under investigation—subversion of our Government by agents of a foreign power, in other words, our national security—was much more vital than misuse of union funds or vice in Portland.

What the American Bar Association found was a continuing pattern of abuses, starting almost with the inception of our Government and continuing up to the time of the report.

The relation between this report and the current Senate hearings is recurrence in the current hearings of many of the abuses which the bar committee found in previous congressional investigations.

Early in its report, the bar committee says it approached the problem with no hostility toward the investigative function.

It recognized, in the case of Communist infiltration, that disregard of security out of an excessive concern with the rights of individuals may let the enemy reach the national jugular.

On the other hand, it also recognized that sacrifice of rights beyond the true needs of security is self-defeating, since the basic principles of freedom may be lost in the struggle to maintain them.

"It is apparent," said the report, "that the problem of striking the proper balance is difficult but of paramount importance."

And the bar committee became convinced that the choice is not between total emasculation of the investigatory power and unfettered arbitrary exercise of that power.

Crux of the problem lies in the fact that congressional investigations have gradually progressed from investigation of issues or facts pertinent to legislation, inquiries into the honesty and efficiency of the executive branch and aiding the Congress to perform internal duties relating to its own Members, to a new field—inquiry into matters of private opinion and what amounts to a trial of private citizens.

The bar report notes that trial of individuals is ordinarily a function of the judiciary, acting through its properly constituted trial courts.

It also notes that justice and due process of law are among the cornerstones of Western civilization and that any breakdown in judiciary protection is watched with microscopic eye.

Then the bar committee remarks, "But it would be a hollow victory if individual rights were protected in the courtroom but ignored in the more volatile atmosphere of the committee room or in administrative hearings."

In other words, the American Bar Association says that if the Congress is going into the trial business—and it admits some justification for this infringement of the judicial function—then at least it should adopt some of the courtroom practices which insure justice and fair play.

In this connection, the bar committee remarks that the concepts of due process developed through centuries of judicial history are not only fair, they are in general efficient tools for arriving at the truth.

And Wigmore, widely recognized expert on the law of evidence, has this to say on the matter of finding the truth:

"For two centuries past, the policy of the Anglo-American system of evidence has been to regard the necessity of testing by cross-examination as a vital feature of the law * * * it is beyond any doubt the greatest legal engine ever invented for discovery of the truth."

Preservation of the right of cross-examination to witnesses before a congressional committee is one of the key recommendations of the American Bar Association.

In brief, its recommendations are these:

1. That the scope of the investigation be clearly defined, that no less than two members of a committee be present at hearings, and that important matters such as issuance of subpenas and direction to a witness to answer a question be decided by a majority vote.

2. A witness should have time to obtain counsel, should be advised of the precise nature of the investigation, should be allowed to make a brief written or oral statement at the conclusion of his testimony, should have a complete transcript of the hearings, should be allowed to testify without radio or television broadcasting, and should have certain additional rights in executive sessions.

His counsel should have the right to accompany him to all hearings, advise him as to his rights, interpose objections, and should have the right to cross-examine adverse witnesses. The latter right would be subject to control by the committee to avoid abuse.

3. Third parties whose names are mentioned in a manner which tends to defame them should have the right to appear and testify under conditions comparable to those outlined above.

4. Committee files should be confidential and used only for the proper purposes of the committee.

5. All committees should be under supervision of a committee made up in the House of the Speaker and majority and minority leaders and in the Senate of the Vice President and majority and minority leaders.

This committee would act as an appellate body in matters arising under the proposed code of investigative procedure and in an advisory capacity as regards the need for a particular investigation and how it should be conducted, that is, whether it should be by standing, special, or joint committee. Each House would retain ultimate responsibility for action.

The right and the need for knowledge of all the facts by legislators and the public is recognized.

For example, recent Senate committee hearings on teamster union affairs may prove valuable as a basis for legislation which will aid honest unionism and may help the union itself put its house in order.

The American Bar Association report recognizes this potential good and does not decry investigations as such. What it does say is that these good results can be preserved without putting the private rights of individuals in jeopardy.

It was the abuses which, as far back as 1922, led Walter Lippmann to write of "* * * that legalized atrocity, the congressional investigation, where Congressmen, starved of their legitimate food for thought, go on a wild and feverish manhunt, and do not stop at cannibalism."

And only this year, William S. White, who has covered the Senate for some years for the New York Times, had this to say in his book, Citadel, on Senate investigations:

"For many months in each of several years the very corridors of the Senate Office Building—the site of the echoing marble caucus room where so many of these inquisitions were conducted—stank with the odor of fear and the odor of monstrous silliness."

This need not be, but as the American Bar Association report says, "Continuation of an easily removable shadow of an important part of congressional activities would be the worse abuse of all."

The bar said this 3 years ago and still the abuse continues. The congressional investigation can be of great value, but if persistently abused it will eventually fall into disrepute and either be abandoned or lose all effectiveness.

The Federal Flood Insurance Program

EXTENSION OF REMARKS
OF

HON. FRANK THOMPSON, JR.
OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, in recent weeks, I have been endeavoring to determine the reasons for the delay in the issuance of flood insurance policies to those who desire to purchase them. I have found that the delay was caused first by the administrative details which had to be ironed out before rates could be established, policies drafted and claims procedures established.

The administrative work has been completed now and excellent procedures have been developed under which extremely reasonable rates are proposed for policies which you will be able to purchase from your own insurance agent wherever you live. Fire and casualty insurance companies will issue the contracts and collect fees and losses will be handled through independent claims adjustment facilities.

I was delighted to learn of the excellent job which had been done but my spirits were dampened when I learned that the Federal Flood Indemnity Administration has been unable to get the Appropriations Committee to budget the $50 million which will be necessary. Members of the committee tell me that the States have indicated little interest and that the demand for the insurance on the part of individual homeowners is below expectations. The committee apparently has balked because of the campaign for economy and the whole program is in danger of collapse—this is shocking, but true.

The $50 million to which I have referred is not to be spent each year, and is necessary for two principal purposes: First, for subsidy premium payments into the reserve fund, and secondly, for payments to agents, carriers, and loss adjusters for their expenses and services. Obviously, if the Government sells an insurance policy and a loss occurs, the Government has a legal obligation to pay the loss, therefore a reserve fund must be set up. The program will be self-supporting, but, like any private insurance company, the Government must have money to start.

During the 84th Congress I was privileged to participate as a cosponsor with Senator Herbert H. Lehman and others in the first flood-insurance program ever established in the United States.

Senator JOHN F. KENNEDY said, on March 21 on the floor of the Senate, that—

The Nation's first flood-insurance program, in the shaping of which I was privileged to participate, was one of our proudest accomplishments in the last session of Congress. It was intended to fulfill a dire need on the part of homeowners and businessmen in all parts of the country, including New England. It was promptly considered and passed by both Houses of Congress, and swiftly approved by the President, because of the urgent need for such legislation before disaster struck again.

Now, nearly a year later, as New Englanders and others prepare for the consequences of spring and melting snows, what has happened to this program? No protection is available, no insurance can be purchased, no regulations have been published, no final policy forms have been agreed upon. Excessive bureaucratic delay, undue reliance upon a private insurance industry whose attitude has been negative from the beginning, and a diminution of popular interest as the result of restrictions, have all contributed to this administrative failure.

Senator KENNEDY puts his finger on one of the major reasons for the failure of the program to date. He said:

One of those legislative problems—the necessity of obtaining a special appropriation for administrative expenses—would not have occurred had the administration accepted the provision in my original bill for such expenditure to be made from program funds, which come from a Treasury revolving-loan fund. But once the present provision was enacted, the new Federal Flood Indemnity Administration was negligent in failing to submit a budget request in time for inclusion in the urgent deficiency appropriation bill, already passed by the Congress.

I have joined with Senator KENNEDY in sponsoring legislation to amend the present Federal Flood Insurance Act of 1956. My bill, H. R. 6334, was introduced on March 25, 1957.

I include here the text of H. R. 6334, together with a letter I have received from the Commissioner of the Flood Indemnity Administration. I feel both of these items will be of considerable interest to my colleagues:

Be it enacted, etc., That (a) section 4 of the Federal Flood Insurance Act of 1956 is amended by striking out all that follows the colon and inserting in lieu therof the following: *"Provided*, That in the precessing of applications for insurance under this act, the Administrator shall give priority to applications from persons who are not then protected against loss due to flood under any insurance provided by the Administrator under this act."

(b) Section 7 (a) of such act is amended by striking out the last sentence thereof.

(c) Section 15 of such act is amended—

(1) by striking out in the first sentence of subsection (b) the following: ", and the contributions made by the Administrator and the respectives States in accordance with section 7 (a) of this act"; and

(2) by striking out the last sentence of subsection (e) and inserting in lieu thereof the following: "Funds may be borrowed under this section at such times as may be deemed necessary by the Administrator, and funds so borrowed shall be deposited, in such proportions as the Administrator deems advisable, in the disaster insurance fund, the disaster reinsurance fund, and the disaster loan fund."

(d) Section 21 of such act is amended by striking out the second sentence thereof.

HOUSING AND HOME FINANCE AGENCY,
FEDERAL FLOOD INDEMNITY ADMINISTRATION,
Washington, D. C., April 11, 1957.

Hon. FRANK THOMPSON, Jr.,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN THOMPSON: This is in answer to the inquiry from your office yesterday about the current status of the Federal flood indemnity program.

On March 12, 1957, the President transmitted to the Speaker of the House proposals for supplemental appropriations for the fiscal year 1957, in which $50 million was requested for the operations of the Federal flood indemnity program. This amount is composed primarily of two items: One for subsidy premium payments into the reserve fund (disaster insurance fund); and the other for payments to agents, insurance carriers and loss adjusters as reimbursement for their expenses and services. You realize, I am sure, that this money can only be used as the business develops. Obviously, if we sell an insurance policy and a loss occurs, the Government has a legal obligation to adjust the loss and an adjuster must be paid. The same is true for agents who sell the policy and carriers who issue it in our behalf and perform accounting and statistical services. Until money is appropriated by the Congress for this purpose, we cannot legally incur these obligations.

The request is now before the Subcommittee on Independent Offices of the House Committee on Appropriations. Since the Federal Flood Insurance Act requires that all administrative costs, including payments to the insurance industry for selling and servicing this insurance, must be paid from appropriated funds, the date that we can offer this insurance to the American public is directly related to the action of the Congress. When Congress appropriates these funds, we can shortly thereafter commence issuing insurance policies.

By way of background, you will recall that the 84th Congress enacted the Federal Flood Insurance Act of 1956 on the closing day of the session and it was signed into law by President Eisenhower on August 7, 1956.

Acting under the authority of this act, Administrator Albert M. Cole established the Federal Flood Indemnity Administration as a constituent unit of the Housing and Home Finance Agency on September 28, 1956. On the same date, I was appointed Commissioner of FFIA.

Some of the potentially difficult administrative problems of establishing a new program lent themselves to prompt solutions. Acting under the authority of the act to utilize the private insurance industry to the maximum practicable extent, we have been able to lay out a marketing plan that contemplates maximum use of private facilities: Insurance agents and brokers throughout the country will sell Federal flood-indemnity contracts; fire and casualty insurance companies will issue the contracts and collect fees; and losses will be handled by independent claim-adjustment facilities. The marketing arrangements we have made will enable persons or corporate bodies to purchase flood-indemnity contracts in their own communities from the same agents or brokers who sell fire and casualty insurance.

We have been successful in negotiating with the insurance companies to have their services and facilities made available to us at cost; without profit or allowance for administrative expenses or other expenses normally incident to the operation of their business. These operations will be subject, of course, to our supervision and control.

After months of intensive efforts, we are now completing final drafts of the flood-indemnity contracts, underwrting rules and regulations, loss adjustment procedures and accounting and statistical forms and regulations, as well as completing the rate structure. Net rates (after the application of subsidy) will range for the major classes of our risks from approximately $1 to $2.50 per hundred of insurance on an 80-percent coinsurance basis.

Since you were so closely connected with the legislation which created the flood-indemnity program, you know that flood insurance for fixed-location property has never been generally available to the American people. Because of the high risk and catastrophic nature of floods, private companies have declined to offer this form of insurance.

This meant that we were charged with the responsibility for writing flood insurance without any prior flood-insurance experience to draw upon for ratemaking and underwriting. However, we had to comply with

provisions of the act which specified that rates shall be established which would produce sufficient proceeds to pay all claims for probable losses over a reasonable period of years, shall be based on consideration of the risks involved, and that the fees to be charged the purchasers of indemnity contracts shall be designed to achieve marketability.

We attacked the rate problem by calling on the services of two groups of specialists. One was a committee of highly competent rate experts from the insurance industry. The other was an interagency committee of the Federal Government, including engineers and hydrologists from the Weather Bureau, the United States Geological Survey, and the Corps of Engineers.

Each committee, working separately, came up with a different rating system. The industry suggested rates which would be applicable nationally. These rates would take into consideration, among other things, (1) the location of the property, whether over water (such as piers, wharves, and similar facilities) or not; (2) whether insurance covered only the building or the building and its contents; (3) the location of the contents within the building; (4) whether or not the insured desired to take advantage of coinsurance or contribution provisions; and (5) dollar and percentage deductibles.

The Government group suggested rates based on hydrological data and the mathematical probability of floods. This system would establish rates on the basis of location alone, that is, elevation and distance from the exposure, and upon the probability of a flood of a certain discharge at that site. These data, it was proposed, were to be used to develop contour maps which would indicate flood frequency, magnitude and intensity, and thus an average risk for property within prescribed zones shown on the map. This method is time consuming and expensive and not practicable for immediate use.

We have given both these systems exhaustive study and have arrived at a method which we feel combines the best features of each. We propose to adopt the general approach suggested by the insurance industry, but have modified it by considerations of flood frequency and damage in different areas.

By using the best data available, we have established a separate set of rates for each major river basin in the United States and for the more highly exposed areas along the Atlantic and Gulf coasts. We feel that the rates as now established meet the requirements of the act, including marketability.

I share with you and your constituents the concern over the need for protection against future flood losses, and I assure you that we are making every effort to offer flood insurance as soon as possible after the appropriated funds become available.

I trust that this answers your inquiry. If you have need for any further information, please do not hesitate to contact me again.

Sincerely yours,

FRANK J. MEISTRELL,
Commissioner, Flood Indemnity Administration.

Arrogance of the Postmaster General

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. PORTER. Mr. Speaker, a senior member on the Post Office and Civil Service Committee, Mr. LESINSKI, commented on an editorial of the Detroit Times of April 15, as follows:

Under law the Federal employees do not have the right to strike against the Government. However, the Postmaster General has achieved the same effect as a strike and some action against him should be taken. As per my previous statement and the following editorial from the Detroit Times of April 15, 1957, he should resign.

The editorial, which I endorse wholeheartedly, is as follows:

The arrogance of Postmaster General Summerfield has brought about a bureaucratic shakedown of Congress and American taxpayers.

His arrogance succeeded last Saturday in canceling all regular mail deliveries in the United States on a business day for the first time in history.

It has succeeded beginning today in curtailing deliveries and hours when post offices are open to the public.

Mr. Summerfield high-pressured a congressional committee into voting him $41 million extra to run his Department through the remainder of the fiscal year ending June 30. But even this did not move him to call off his cutback of service. He demands the money in hand.

His arrogance has hampered the operation of business and gravely inconvenienced the American people.

The "crack of doom" method he has used raises questions of his efficiency and competence.

Whatever bureaucratic victory he has gained, the Postmaster General has lost the confidence of the public.

He should resign.

Area of Production Definitions and the Farmer's Income

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. GATHINGS. Mr. Speaker, the farmer goes to the market place and asks: "What am I offered?"—for the American farmer must sell his product in the market and pay, in great part, for the processing of that product for market. The cotton farmer's price for his cotton must absorb the cost of ginning. The farmer cannot pass on to the consumer any increase in his cost of production.

When the wage and hour legislation was before Congress in 1938, Representatives from the Cotton Belt pointed out these facts to other Members of Congress. Congress realized that the cotton farmer had to pay the cost of the ginning and that to increase the cost of ginning would result in a reduction in the farmer's income. Accordingly, when it enacted the wage and hour legislation, Congress placed in the law an exemption applying not only to agricultural labor but in addition exempted the operations and processes involved in preparing for marketing and handling of agricultural commodities. This exemption is in section 3 of the act of 1938, as amended, and came to be known as the area of production clause.

However, despite the clear intent of Congress, the Secretary of Labor, through the definition of "area of production" has virtually nullified this exemption. So well have they drawn their definition that only 14 percent of the cotton gins in the Nation are exempt under this bureaucratic decree, and only 4 percent of the cotton compresses are eliminated from the provisions of the minimum wage and maximum hours law. Under the present departmental definition, and it will be remembered that earlier definitions issued by the Secretary have been condemned and nullified by the Federal courts, a cotton gin in a rural county in Arkansas is not considered as being in the area where cotton is raised if, first, more than 5 percent of the cotton received at the gin in any month was transported more than 10 miles from the farm, or, second, if the cotton gin is within 1 mile of a village having a population in excess of 2,500, or is within 3 miles of a city having a population of 50,000.

Another example to indicate the extent to which this definition has nullified the intent of Congress to exempt operations and processes involved in handling and preparing for market of agricultural commodities is the fact that cotton warehouses in the Cotton Belt which handle 94 percent of the cotton crop are not considered by the Department as being in the area where cotton is grown.

Only last year the Supreme Court denied a contention that poultry is not an agricultural commodity and, therefore, dressing and preparing poultry for market is not to be considered under this exemption.

Nor does the Department of Labor take into consideration new processes and techniques in preparing food for market. Canning of fruit and vegetables is exempt but the freezing of food is not. Today, great savings to the consumer have been effected by packing some vegetables in the field and hauling them to the packing sheds for precooling prior to shipment. But, this new technique is penalized by the Department, which has ruled that since the packing is done in the field the cooling operation is no longer exempt.

The following information, taken from official Government sources, shows graphically what has been happening to our farmers' income because of these increasing labor costs and processing charges:

[In billions of dollars]

Year	Gross farm income	Production expense	Labor cost of distributing products	Net farm income
1947	34.0	16.8	10.8	17.2
1948	34.6	18.6	11.8	15.9
1949	31.6	17.9	12.4	13.7
1950	32.1	19.2	13.0	12.9
1951	37.1	22.3	14.2	14.8
1952	36.7	22.5	15.1	14.3
1953	35.1	21.2	16.0	13.9
1954	33.5	21.4	16.5	12.0
1955	32.9	21.6	17.2	11.3
1956	34.0	22.1	(1)	11.8

[1] Not available.

It is apparent that action must be taken to eliminate the Department of Labor's authority to restrict and nullify the intent of Congress. In the Senate S. 1418 has been introduced by Senator STENNIS, of Mississippi. This bill will reemphasize the intent of Congress by de-

fining the meaning of "agriculture," "first processing," and "area of production." Senator STENNIS would define the area of production to be "all of each county in which such commodity is produced in commercial quantities, except that it shall not include the corporate limits of a city or municapility having a population in excess of 250,000 as reported in the 1950 census."

In the interest of protecting the farmer's net income as well as assisting the American consuming public, this legislation should be adopted.

Partial Return of Vested Enemy Property and Payment of Certain Categories of War Claims

---

EXTENSION OF REMARKS
OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. HARRIS. Mr. Speaker, I have introduced today at the request of the Foreign Claims Settlement Commission a bill designed to amend the Trading With the Enemy Act and the War Claims Act of 1948, so as to provide for a partial return of vested enemy property and the payment of certain categories of war claims. In view of the complexity of and the general interest in this subject, I desire to insert into the Appendix of the RECORD the letter, dated April 3, 1957, from Mr. Whitney Gilliland, Chairman, Foreign Claims Settlement Commission, addressed to the Speaker of the House of Representatives, which in a general way explains the background of this legislation, which was prepared jointly by the Department of State, the Department of Justice, the Treasury Department, and the Foreign Claims Settlement Commission. I also want to make public the explanatory memorandum submitted by the Foreign Claims Settlement Commission explaining in greater detail the specific provisions of this legislation.

The letter and memorandum read as follows:

FOREIGN CLAIMS SETTLEMENT COMMISSION OF THE UNITED STATES,
Washington, D. C., April 3, 1957.

The honorable the SPEAKER OF THE HOUSE OF REPRESENTATIVES,
Washington, D. C.

DEAR MR. SPEAKER: There is enclosed for the consideration of the 85th Congress the draft of a proposed bill entitled "A bill to amend the Trading With the Enemy Act, as amended, and the War Claims Act of 1948, as amended." The proposed measure is the culmination of long study by appropriate agencies of the executive branch of the Government of two important problems:

1. The disposition to be made of enemy assets vested as a consequence of World War II and

(2) The final settlement of unsatisfied claims of American nationals for World War II losses occasioned by enemy action.

Except for those provisions relating to the financing of war claims payments to American nationals, the proposed measure is essentially the same as that submitted by the executive branch for congressional consideration in the 84th Congress on June 6, 1955, which was introduced in the Senate June 14, 1955, as S. 2227 and in the House, June 8, 1955, as H. R. 6730.

The first part of the draft bill deals with the assets in the United States, title to which was vested in the Government under the Trading With the Enemy Act as a consequence of World War II. By far the greatest portion of these assets was owned by nationals of Germany and Japan. In general, this part of the draft bill provides for a limited return as a matter of grace of the vested assets, or of the proceeds of their liquidation, to such of the former owners or their successors in interest as are natural persons not in territory behind the Iron Curtain. The maximum value of property or proceeds returnable to any one individual is fixed at $10,000. In the few instances where property of charitable, religious, and educational organizations was vested, such property would be returned without regard to its value. Interests in trademarks would be returned to business enterprises as well as natural persons. All interests in copyrights would be divested in favor of the former owners or their successors in interest. Patent interests would not be returned.

The second part of the draft legislation deals with certain claims of United States nationals against Germany arising out of World War II. Payment of these claims is to be made out of the vested assets not subject to return under the first part of the draft bill. This arrangement varies from S. 2227 and H. R. 6730, 84th Congress, in that the latter bills provided for the payment of American war claims out of repayments to be made by the Federal Republic of Germany in settlement of its indebtedness to the United States for postwar economic aid. It now appears that sufficient funds will be available from the liquidation of vested assets to provide substantial compensation to Awerican war damage claimants and at the same time permit the partial return program envisaged by the first part of the bill.

I also enclose with the proposed bill a memorandum describing its provisions in detail and, where necessary, explaining the reasons for particular provisions. However, in order to afford a clear understanding of the general purposes of the draft legislation, it will be helpful to add here a brief statement of the events which have led to its recommendation.

By the first War Powers Act of December 18, 1941, Congress amended the Trading With the Enemy Act of 1917 to grant the President extensive powers to vest assets in the United States owned by foreign countries or their nationals. The 1917 act already contained provisions for the return of such of the property to be vested as might ultimately prove to be owned by nonenemies. However, neither the 1917 act nor the 1941 act provided for the disposition of World War II vested assets finally determined to be owned by enemy governments or their nationals. That matter was left open.

Early in 1942 the President created the Office of Alien Property Custodian as an independent agency and delegated to the Alien Property Custodian the power to vest property other than securities, cash, and credits. In June 1945, the Custodian's vesting power was expanded to include German and Japanese-owned securities, cash, and credits. As a result, substantially all the German and Japanese assets known to be in the United States as of December 7, 1941, were vested by the Custodian or by his successor, the Attorney General.

In January 1946 the United States and 17 allied nations other than the Soviet Union and Poland executed the Paris Reparation Agreement, whereby they agreed upon the division of the limited German assets in kind available to them as reparation from Germany, including German external assets located within the respective signatory countries. The 18 Allies agreed to hold or dispose of these external assets in such a way as to preclude their return to German ownership or control. This program was formulated in light of the allied experience after World War I when the attempt in effect to exact reparation from Germany's current production failed and led to Germany's default on its obligations. Moreover, it was clear after the end of World War II that the United States would have to provide major assistance to Germany to prevent disease and unrest. This country, therefore, favored measures which would limit Germany's World War II reparation to its external assets and other assets in kind, thus relieving Germany of reparation payments from current production and avoiding the indirect financing of reparation by the United States. The Paris Reparation Agreement met this objective.

In 1946 Congress enacted section 32 of the Trading With the Enemy Act authorizing returns of vested property to persons having merely technical enemy status and to enemy nationals who were persecuted by their own governments. In the same year, Congress added section 34 to the act, providing for the payment of prevested debt claims of Americans against enemy nationals whose property was vested.

By the War Claims Act of 1948 Congress added section 39 to the Trading With the Enemy Act, providing that German and Japanese assets not returnable under section 32 should, after the payment of debt claims therefrom, be retained by the United States without compensation to the former owners. In addition, the War Claims Act of 1948 gave priority to the use of the net proceeds of liquidation of this retained property for the payment of compensation to American civilian internees of the Japanese, to American servicement captured by the forces of Germany, Japan, and other governments which failed to provide adequate subsistence as required by the Geneva Convention and to certain Philippine religious organizations which had rendered aid to American personnel. This act did not provide for the payment of war claims of Americans arising out of war-caused property damage but authorized a study of the problem. The Attorney General has advanced a total of $225 million from the proceeds of vested assets for purposes of the War Claims Act of 1948. Thus that act constituted a congressional disposition of the German and Japanese assets vested under the Trading With the Enemy Act during World War II. Furthermore, that act, in effect, gave confirmation to the reparation program set forth in the Paris Reparation Agreement by devoting German external assets to the satisfaction of certain American war claims.

The Japanese Peace Treaty of 1952 also followed the policy incorporated in the Paris Reparation Agreement with respect to enemy external assets. It provided that the Allied Powers should have the right to retain and liquidate Japanese property within their respective jurisdictions. In addition, the peace treaty provided that Japan should compensate nationals of the Allied Powers in Japanese currency for war damage to property located in Japan. In consequence of these and other provisions the United States and the other Allied Powers waived any additional war claims against Japan.

The Bonn Convention of 1952 for the Settlement of Matters Arising Out of the War and the Occupation. Between the Federal Republic of Germany and the United States, Britain, and France also affirmed the policy of the Paris Reparation Agreement. In that convention the Federal Republic of Germany agreed to compensate its own nationals for their loss of external assets by the vesting and other action of the Allied Powers. For their part, these countries gave the Federal Republic a commitment that they would not

assert any claim for reparation against its current production. These provisions of the Bonn Convention were carried forward and approved in the Paris protocol of 1954 which was approved by the Senate April 1, 1955, and came into force on May 5, 1955.

On July 17, 1954, Chancellor Adenauer wrote to the President to enlist his support for legislation which had been introduced in Congress for the general return of vested German assets. The Chancellor referred to the hardships suffered by many of the German individuals whose property had been vested. He mentioned old people, pensioners, and beneficiaries of insurance policies and inheritances in particular, and urged that alleviation of these hardship cases would make a considerable contribution to furthering the friendship between the peoples of the United States and Germany. The President's reply of August 7, 1954, referred to the fact that the Allied Governments decided to look to German assets in their territories as a principal source for the payment of their claims against Germany. The President expressed sympathy with individuals in straitened circumstances in Germany for whom the operation of the vesting program in the United States had created particular hardship. He pointed out that American nationals who had suffered losses arising out of the war had received no compensation, also with resultant hardship in many cases. Finally, the President stated that although none of the bills then pending in Congress with regard to the return of vested assets had the approval of his administration, the problem was receiving earnest consideration and he hoped that a fair, equitable, and satisfactory solution could be achieved. The matter was also raised by Chancellor Adenauer with the President during the former's visit to Washington in October 1954 and conversations between representatives of the two Government were agreed upon.

The Japanese Government also expressed a hope that the return of vested Japanese assets would be considered. The subject was discussed by Prime Minister Yoshida with the President on November 9, 1954.

As a result, the executive branch formulated the plan represented by the enclosed draft bill. Thereafter, representatives of the United States and the Federal Republic of Germany discussed the matter of vested German assets and the related problem of American war claims against Germany. Subsequently, similar discussions were held between representatives of the United States and Japan. During these discussions representatives of the Federal Republic of Germany and Japan were informed that the executive branch would recommend a limited return of vested assets to natural persons up to a maximum of $10,000 as a matter of grace for the purpose of alleviating the cases of hardship caused by vesting. The United States representatives pointed out that this action would result in a full return to approximately 90 percent of the former owners whose property had been vested and would achieve the equitable solution sought by the President. The United States representatives expressed the hope that in addition to relieving hardships of an appreciable number of German and Japanese people, this action would serve to make even more secure the ties between the United States and those countries. The representatives of the German, Federal, and Japanese Governments expressed the hope that the proposed return would subsequently be followed by a wider program. They were informed, however, that the administration did not envisage a broader return than was contained in the present recommendation.

It will be noted that returns of vested assets would not be made to persons behind the Iron Curtain.

The second part of the proposed bill provides for the compensation of certain American World War II losses in the European theater. An examination of available records discloses that there are approximately 28,000 claims for such losses outstanding in which the amount claimed is approximately $215 million. In many cases, however, the amount claimed is not stated, pointing to a potential claimed amount of more than $215 million. It is not possible to estimate the number of prospective claims in excess of 28,000 that may be filed if the proposed bill becomes law. Past experience in such matters indicates, however, that total claims may well exceed the 28,000 figure.

The administration's proposal to the 84th Congress with regard to the financing of American war-claims payments was based on estimates made by the Office of Alien Property at the end of 1954 showing that it held assets of approximately $60 million over and above reserves for litigation, claims, and other obligations, and that returns to individuals up to $10,000 would require the expenditure of approximately $57,500,000. It was estimated thus that the return program would utilize all of the free assets available at that time. Since it was not possible to finance payment of American war damage claims against Germany from vested assets, provision was made for the use of the above-mentioned German repayments to this country.

It is now estimated that, as a result of the successful defense of suits and claims for the return of vested property, approximately $108 million of such property now remaining with the Office of Alien Property represents free assets. This amount is the balance of vested property remaining after setting aside reserves for unresolved claims, litigation and other obligations, including a 100 percent litigation reserve in the amount of approximately $120 million. It is anticipated that after all pending suits are disposed of a substantial amount of that reserve will become free and will be added to the present $108-million figure. Thus it is apparent that the total of vested assets available for the financing of American war claims payments will exceed the $100 million fund proposed by the administration in the 84th Congress.

The proposed bill expressly provides that the aggregate of the sums covered into the war claims fund for payment of American war claims shall at no time be less than the aggregate value of vested property, or proceeds thereof, to be returned to the former owners. All vested assets not required to effect the returns proposed by the first part of the bill would become available to the American war claimants.

The draft legislation was prepared by the Department of State, the Department of Justice, the Treasury Department, and the Foreign Claims Settlement Commission. It is based upon a full and careful consideration of the problems involved, and represents the considered position of the administration. The proposals should be considered as a whole. Prompt and favorable action would resolve a troublesome problem in the field of our foreign relations and would strengthen the ties of friendship with the Federal Republic of Germany and Japan.

I respectfully request that early consideration be given to the proposed legislation which transmitted herewith. A similar communication is being sent to the Vice President.

The Bureau of the Budget advises that the enactment of the proposed legislation would be in accord with the program of the President.

Respectfully yours,

WHITNEY GILLILLAND,
Chairman.

EXPLANATION MEMORANDUM ON DRAFT BILL TO AMEND THE TRADING WITH THE ENEMY ACT, AS AMENDED, AND THE WAR CLAIMS ACT OF 1948, AS AMENDED

The first part of the proposed bill is designed to effect: (1) The return in general as a matter of grace of vested assets other than patent interests to natural persons not behind the Iron Curtain up to a limit of $10,000, and (2) the return of trademark and copyright interests to business enterprises as well as to natural persons without regard to the $10,000 limitation on value and, insofar as copyright interests are concerned, without regard to the limitation on return to persons behind the Iron Curtain. Property owned by charitable, educational, and religious organizations would also be returned without regard to the $10,000 limitation. The proposed bill would treat several types of vested assets in a manner different from the treatment accorded the great bulk of such assets. The differences are deemed advisable by virtue of past policy, facility of administration of the contemplated return program, and the desirability of terminating the World War II alien property program as quickly as possible. There is set forth below a résumé of the manner in which the proposed bill would affect various categories of assets.

CATEGORY I: ASSETS OTHER THAN TRADEMARK, COPYRIGHT, AND PATENT PROPERTIES AND PRINTS OF MOTION PICTURES

The great bulk of the vested assets falls within this category. The proposed bill would effect returns of these assets in an amount not exceeding $10,000 to natural persons. Natural persons would not be deemed to have had any ownership interest in assets vested from a business enterprise in which they have stock or some other beneficial interest. Consequently, no part of such assets would be returned to them. Persons who have made settlements or compromises of claims or suits with respect to vested properted would be barred from obtaining any property in addition to that which they obtained in the settlement or compromise. Persons convicted of war claims would be excluded from return.

The following property would be excluded from the return program by reason of United States commitments to foreign governments:

1. Vested property located in the Philippine Islands and subject to transfer to the Republic of the Philippines under the Philippine Property Act of 1946 (22 U. S. C. 1381–86).

2. Certain securities of American issue looted in the Netherlands by Germany during its occupation of that country. Under an agreement with the Netherlands executed January 9, 1951, the United States undertook to return such securities to the Government of the Netherlands or its nationals.

3. Property which this Government is obligated to release or to receive or retain pursuant to existing agreements between the United States and certain World War II allies relating to the resolution of conflicts between the Alien Property Custodians of the signatories. These agreements, entered into by the United States pursuant to Public Law 857, 81st Congress, provide for transfers of various categories of vested property by and to the United States.

Returns of property in category I would be effected under a claims program. Claims would have to be filed with the Attorney General within 1 year of the enactment of the proposed legislation. In order to facilitate the administration of the contemplated program new claims would be required of persons who have previously filed claims under section 9 or section 32 of the Trading With the Enemy Act. This requirement would obviate the necessity of reopening thousands of closed claims and examining additional thousands of claims now pending under those sections to obtain the new data required by the proposed legislation.

The proposed bill provides that in general a return of vested property in this category will be subject to a deduction of the amount of conservatory expenses incurred with respect to such property, a deduction to cover

general administrative expenses, a reserve for any unpaid taxes with respect to the property and a reserve for any pending debt claims against the property under section 34 of the Trading With the Enemy Act. If the Attorney General should hold property vested from the prevesting owner in addition to the property returnable under the proposed bill, the amounts of expenses and reserves would be deducted, to the extent possible, from such additional property.

A person who has a pending claim under section 9 (a) or section 32 could claim return under the proposed bill only upon the filing of a written waiver renouncing his claim under section 9 (a) or section 32 to the amounts retained for expenses and reserves. As a practical matter this provision would reduce the amount of vested property returned under this bill to a section 9 (a) or section 32 claimant by the amount of the deduction for administrative expenses plus the amount of any debt claims. On the other hand, it would permit the claimant to receive a return under this bill without the necessity of establishing himself as a nonenemy under section 9 (a) or as a persecuted person or other eligible claimant under section 32. The provision for waiver has been included in the proposed legislation in an attempt to close out as expeditiously as possible the great majority of the pending title claims—that is, those which are filed against vested property worth less than $10,000. Elimination of these claims would be a major step toward the termination of the administration of World War II vested property.

CATEGORY II: TRADEMARK PROPERTIES

Since the use of a vested trademark would be deceptive except in connection with goods made by the prevesting owner of the mark, or the successor in interest of such owner, it is deemed advisable to make a general return of trademarks and unexpired interests in prewar contracts relating to trademarks. The proposed bill would authorize returns of trademarks or contract interets therein without regard to the $10,000 ceiling and thus would enable a natural person to receive such marks and contract interests in addition to $10,000 of other vested property. However, royalties or other income received from the marks or contract interests during the period of vesting would be charged against the $10,000.

The proposed bill would authorize the return of trademarks and contract interests therein to business enterprises as well as natural persons. However, any royalties or other income derived from such marks or contract interests during the period of vesting would not be returned to business enterprises. Also excluded from return, by reference to specific vesting orders, are certain possible reversionary or other similar rights relating to trademarks and good will which, since prior to World War II, have been assigned to and held by vested corporations which are still controlled by the Attorney General and which conduct manufacturing businesses. In general, the vesting orders excluded from the return provisions are catchall vesting orders issued as a precautionary measure for the purpose of cutting off any unknown or undiscovered rights which may have been retained by enemy nationals with respect to the goodwill, trademarks, and trade names of these vested corporations. Some of the excluded vesting orders vested contract rights which related to such trademarks and trade names. In many cases, these nebulous reversionary rights may be nonexistent or without any real value, although the catchall vesting orders still serve a precautionary purpose. To return the rights vested by these vesting orders might invite unnecessary harassment of vested corporations and their involvment in litigation with respect to those portions of their businesses in which the trademarks are used, notwithstanding the fact that the vested corporations for many years have operated these businesses independently of the former owners of any purported reversionary rights.

Inasmuch as the Attorney General has only about 315 vested trademarks and trademark contract interests, the return of such property would not involve the administrative problems described below with regard to copyrights. Consequently, the return would be effected by the claims program described under category I and would be subject to the restrictions mentioned there. The proposed bill provides that where a trademark or trademark interest was owned prior to vesting by a person in East Germany, it would be returned to a person in the Federal Republic of Germany if a competent agency of the Federal Republic certifies that an equivalent trademark has been registered by it for such person.

CATEGORY III: COPYRIGHT PROPERTIES

Vested copyright interests number more than 300,000. These cover vested copyrights and copyrights which are the subject of prewar contracts. A program for the return of copyrights and unexpired contract interests in copyrights of the nature described under category I might well become unmanageable because of the number of claims which might be filed and the complexity of claims of authors and composers in connection with vested prewar contract interests. Furthermore, since a substantial number of copyrights and contract interests would not be returned under the program proposed for category I by reason of the exclusion of East Germans, the Attorney General's Office would be forced to continue the administration of such copyrights and interests without any apparent practical means of terminating such administration within a reasonable time.

As a result of these considerations it has been deemed advisable in the proposed bill to effect the return of copyrights and unexpired contract interests therein by means of a statutory divestment which would require no action on the part of the Attorney General. Such divestment would be effective without regard to the value of the copyrights and contract interests and would serve to effect returns to business enterprises as well as to natural persons. The divestment would not extend to royalties or other income received during the period prior to divestment. Such funds would be returnable only to natural persons within the limits and pursuant to the claims program described under category I.

It should be noted that the divestment proposed in the draft bill would serve to return copyrights and unexpired contract interests therein to persons and firms in the East Zone of Germany. Thus, although such persons and firms would not receive the return of any money in the hands of the Attorney General they would become entitled to any income from their copyrights and contract interests which might accrue after divestment. Investigation in Germany has disclosed that practically all the former owners of valuable copyright properties who were located in the East Zone of Germany prior to World War II have now established themselves in the West Zone. As a result the amount of future income payable to former owners in the East Zone from the copyright divestment would be negligible.

The proposed bill specifically excludes from return the moneys collected in connection with the publication in the United States of Hitler's Mein Kampf, the diaries of Paul Joseph Goebbels, the memoirs of Alfred Rosenberg, and a work by a leading Nazi, Otto Skorzeny. The copyrights and contract interests connected with these works are also excluded from divestment. A photographic history of the Nazi Party formerly owned by Heinrich Hoffman, its official photographer, has been excluded from return. In addition, the copyright to a scientific motion picture entitled "Meiosis" has been excepted from divestment because of its wide use by American educational institutions. Since this copyright was owned by an East German firm prior to vesting, divestment might impede its future use in this country.

CATEGORY IV: PATENT PROPERTIES

Patents and interests in prevesting patent contracts are excluded from return by the proposed bill. It has been the policy of the United States since 1942 to make the patents and technology vested from World War II enemy nationals readily available to American industry by means of revocable nonexclusive royalty-free licenses for the life of the patents. This policy has been widely publicized and has been relied upon by licensees in making investments to develop and exploit the patents. The exclusion of patent interests from the return program is thus in keeping with the Government's long-time policy and will serve to safeguard the interests of American licensees.

With two exceptions, the income received by the Alien Property Custodian and the Attorney General from vested patents and contract interests in patents would be returned by the proposed bill to natural persons up to a limit of $10,000 in the same manner as other property in category I. One exception is the money collected from American licensees under prewar contracts with enemy nationals deemed violative of the antitrust laws. This money was collected because the Government did not suffer the disability of the enemy party. (See *Standard Oil Co.* v. *Markham* (57 F. Supp. 332), affirmed sub. nom. *Standard Oil Co.* v. *Clark* (163 F. (2d) 917 (C. C. A., N. Y., 1947), certiorari denied, 333 U. S. 873).) It would, of course, be inequitable to enrich a returnee with a gift of funds which he himself could not collect. The second exception arises from the fact that much of the income received from vested patents and patent contract interests was derived from their use in war production. In returning vested patents and patent contract interests to nationals of allied countries the Attorney General deducts royalties received from war production and turns them over to the Treasury. The returnee is compensated by his own government pursuant to reverse lend-lease arrangements. In the negotiation of the understanding between the United States and Italy which led to the return of vested Italian property it was agreed that patent royalties derived from war production should not be returned. In view of the fact that the segregation of such royalties would have been difficult, it was agreed that all royalties earned by vested Italian patent and patent contract interests prior to the end of 1945 would be deemed attributable to war production. The policy and date agreed upon in the Italian understanding have been used in the proposed bill.

CATEGORY V: PRINTS OF MOTION PICTURES

The Attorney General administers a considerable number of prints of motion pictures. Few, if any, of the individual prints are of more than nominal value. The aggregate value is not commensurate with the expense which would be involved in processing claims for their return. Furthermore, these prints can be duplicated elsewhere in almost every instance. Accordingly, the proposed bill excludes the prints from return except in cases where claims thereto have already been filed under existing law. The bill further provides that the Attorney General deliver the prints to the Library of Congress, which may retain or dispose of them in any manner it deems proper.

A section analysis of the first part of the proposed bill is set forth below:

Section 1 would make technical amendments to section 39 of the Trading With the Enemy Act necessitated by other provisions of the proposed bill. In addition, it would authorize and direct the Attorney General to transfer proceeds of vested assets to the war-claims fund for use in the program of compensating American war-damage claimants in the second part of the bill. The aggregate of such transfers would at no time be less than the aggregate value of property returned under the proposed section 40 of the Trading With the Enemy Act, thus insuring that the funds available for the benefit of the American war-damage claimants would not fall behind the value of property returned to German and Japanese nationals under the proposed section 40. Ultimately all proceeds of vested assets not required for effecting returns under that section would become available to the American war-damage claimants.

Section 2 of the proposed bill would add new sections 40 to 42 to the Trading With the Enemy Act to effect the proposed returns of vested property. Such returns will not be affected by transfers of the proceeds of liquidation of vested property to the war-claims fund.

The proposed section 40 (a) would effect the returns in general of vested property to natural persons up to a limit of $10,000. It specifically excludes from return the securities subject to the looted securities agreement with the Netherlands, copyrights and copyright contract interests, motion picture prints, patents and patent contract interests, property transferable to the Philippine Government, property subject to intercustodial agreements with foreign countries, and Bulgarian, Hungarian, and Rumanian property subject to disposition under section 202 (b) of the International Claims Settlement Act of 1949, as amended. It further provides that if the property of a prevesting owner exceeds $10,000 in value and cannot be divided into a portion having a value of $10,000, then return would consist of a lesser portion, if practicable, augmented by a supplemental return. Finally, section 40 (a) would make returns thereunder subject to deductions for expenses and reserves as set forth in section 40 (m).

The proposed section 40 (b) relates to trademarks and trademark contract interests. It would provide that they should be deemed to have no value in connection with the $10,000 limit on returns and in connection with valuation for the purpose of deducting general administrative expenses under section 40 (m). Section 40 (b) would make business enterprises eligible for the return of trademarks and contract interests therein. The reference to specific vesting orders would exclude from return certain possible reversionary or other similar rights relating to trademarks and goodwill connected with vested corporations still administered by the Attorney General. Trademark registration by the German Federal Government authorities would govern the return of trademarks in certain instances. All returns of trademarks would be subject to outstanding licenses issued with respect thereto.

The proposed section 40 (c) would authorize return of vested property to charitable, religious, and educational institutions without regard to its value.

The proposed section 40 (d) would limit to $10,000 the amount of property to be returned to the estate or the heirs of a prevesting owner who has died since the date of vesting. In addition, it would specifically prohibit any one person from receiving more than $10,000.

The proposed section 40 (e) would bar returns to persons claiming vested property who have previously settled or compromised suits or claims with respect to such property, to persons or firms behind the Iron Curtain as of January 1, 1955, or subsequently, and to persons convicted of war crimes. Section 40 (e) (2) uses the phrase "maintained his principal dwelling place" in connection with the disqualification of persons behind the Iron Curtain. This phrase is used in preference to language appearing in section 2 of the Trading With the Enemy Act which defines an enemy as including a person "resident within" enemy territory. The definition in section 2 has caused difficulty, in part because of uncertainty as to the weight to be given to a person's intent as to the future place of his abode. The phrase "principal dwelling place" would eliminate such intent from consideration.

The proposed section 40 (f) would exclude from return by reference to specific vesting orders any income received by this office from Mein Kampf and other works mentioned above and would exclude the Hoffman photographic collection both as to income and actual physical property.

The proposed section 40 (g) would exclude the return of moneys received from patent licensing contracts deemed to be violative of antitrust statutes and moneys received from the use of patents prior to the end of 1945.

The proposed section 40 (h) would bar return of property to a person claiming such property through his stock ownership or other beneficial interest in a business enterprise which owned the property prior to vesting.

The proposed section 40 (i) is practically identical with section 32 (d) of the Trading With the Enemy Act. It would restore persons to whom return is made to all rights, privileges and obligations in respect of the returned property which would have existed if the property had not been vested. This section would specifically exculpate the Government from any liability in connection with its administration or use of the property during vesting. It would also bind the returnee by any notice received by the Attorney General prior to return and impose on him any obligations which accrued with respect to the property during the time of its vesting. The period of vesting would not be included for the purpose of determining the application of any statute of limitations to the assertion of any rights by such person.

The proposed section 40 (j) is practically identical with section 32 (e) of the Trading With the Enemy Act. It would permit persons eligible for return under the proposed section 40 to sue subsequent to the return to establish as against the returnee any right, title, or interest they may have in the returned property. The period of vesting would not be included in determining the application of any statute of limitations to any such suit.

The proposed section 40 (k) would require that claims for return under section 40 be filed within 1 year from enactment in such form as the Attorney General shall prescribe. New claims would be required from persons who have filed previously under other sections of the Trading With the Enemy Act.

The proposed section 40 (l) would prevent anything in section 40 from affecting the rights of claimants to pursue remedies under sections 9 (a), 32, or 34 of the act. It would prohibit a person claiming property under section 9 (a) or section 32 from receiving a return under section 40 unless he waives his claim under section 9 (a) or section 32 to the amounts of expenses and reserves retained under section 40 (m). A return of property to any person under section 40 would be prohibited while a claim to the same property filed by some other person is pending under section 9 (a) or section 32.

The proposed section 40 (m) would provide for the retention by the Attorney General of the amount of conservatory expenses incurred with respect to the returnable property, a charge for administrative expenses and reserves for the payment of taxes and debt claims. It would provide that such expenses and reserves be retained from any additional property of the owner prior to vesting. Any unused portion of a reserve for the payment of taxes or debt claims would become returnable as though it had not been a part of a reserve. Returnees would be permitted to pay the amounts of expenses or reserves in lieu of the liquidation of returnable property to provide funds therefor.

The proposed section 40 (n) relates to the controls exercised by the Treasury Department pursuant to section 5 (b) of the Trading With the Enemy Act over assets owned by Communist Chinese and certain other blocked nationals. Returned property would be subject to these controls if owned by such persons.

The proposed section 40 (o) would make the determinations of the Attorney General in the administration of section 40 final.

The proposed section 40 (p) contains definitions.

The proposed section 41 (a) defines "copyrights."

The proposed section 41 (b) would provide for the divestment of vested copyrights effective 90 days from the enactment of the section. This 90-day period is proposed in order to afford time for adequate notice and instructions to American licensees and American parties to vested prewar copyright contracts regarding the effect of divestment on their future payments of royalties and taxexs thereon. Divestment would be made subject to outstanding licenses previously issued and assignments of interest in such licenses. The rights remaining in the Attorney General under licenses would be transferred effective the day of divestment to the owner of the divested copyrights. All royalties accrued up to that day would have to be paid to the Attorney General.

The proposed section 41 (c) would divest the vested interests in prewar contracts relating to copyrights effective 90 days from the enactment of the section. All sums payable under such contracts prior to the day of divestment would have to be paid to the Attorney General.

The proposed section 41 (d) would exclude from return the right to sue for infringement during the period of vesting.

The proposed section 42 would authorize the transfer of motion picture prints to the Library of Congress with the exception of prints subject to claims under present law. The Library would have full discretion to retain or dispose of the prints in any manner it deems appropriate.

Section 3 of the proposed bill would amend section 32 (h) of the Trading With the Enemy Act to exclude from returns to designated successor organizations thereunder any property returnable under the proposed section 40.

WAR CLAIMS ACT AMENDMENTS—GENERAL STATEMENT

The second part of the proposed bill provides for the receipt and settlement by the Foreign Claims Settlement Commission of five types of World War II claims for losses suffered by nationals of the United States. Claim payments are proposed to be made from the War Claims Fund into which proceeds from the liquidation of World War II vested enemy assets are to be transferred as provided in the first part of the proposed bill. The War Claims Fund was created upon enactment of section 13 of the War Claims Act of 1948, as amended (approved July 3, 1948), for the express purpose of making expenditures only as provided in such act or as may be provided hereafter by the Congress." The types of claims authorized by the proposed bill are, briefly, as follows:

1. Physical damage to or physical loss or destruction of property located within the prewar boundaries of Albania, Austria, Czechoslovakia, the Free Territory of Danzig, Estonia, Germany, Greece, Latvia,

Lithuania, Poland, and Yugoslavia in the period beginning September 1, 1939, and ending May 8, 1945, occurring as a direct consequence of military operations of war or of special measures directed against such property because of the enemy or alleged enemy character of the owner.

2. Damage to or the loss or destruction of ships or ship cargoes occurring as a direct consequence of military action by Germany in the period beginning September 1, 1939, and ending May 8, 1945.

3. Net losses by maritime insurance companies incurred in the settlement of claims for insured losses, including reinsured losses, of American-owned ships or ship cargoes which were lost, damaged or destroyed as a direct consequence of military action by Germany in the period beginning September 1, 1939 and ending May 8, 1945.

4. Loss or damage on account of the death or injury of any civilian national of the United States who was a passenger on any vessel engaged in commerce on the high seas if such death or injury was a result of military action by Germany during the period beginning September 1, 1939 and ending December 11, 1941 (the date upon which the United States declared war against Germany). In this general category the proposed bill would also include claims for the loss or damage to the property (chiefly personal effects) of any such passenger.

5. Losses resulting from the removal of industrial or other capital equipment in Germany which was owned by the claimant on May 8, 1945 and removed for the purpose of reparation including losses from any destruction of property in connection with such removal.

Within the limits of the categories of claims provided for in the proposed bill, except with respect to death or personal-injury claims, provision is made for the recognition of claims based upon assignments to the claimant of the rights or interests in lost or damaged property or property that was subject to reparation removal.

Recognition of claims of stockholders or the direct or indirect owners of any other proprietary interest in a corporation or other entity, under the proposed bill would be conditioned upon 25-percent ownership, direct or indirect, of such interest at all times between the date of loss and the date of filing claim, by United States citizens or nationals. Each award under this type of claim would be in an amount equal to the respective percentage interest of each claimant in the total corporate ownership. In other words, if one-half of the stock of a corporation were owned by 5 persons each having a one-tenth ownership of the total stock and the total loss was $1 million, such individuals collectively would be entitled to one-half the loss and each claimant to one-fifth of such one-half, or $100,000.

Payments of awards certified to the Secretary of the Treasury by the Foreign Claims Settlement Commission would be made in the following order of priority.

1. Death and disability claims would be paid in the full amount of each award certified, up to $7,500.

2. Payments up to $1,000 would then be made on awards certified for all other claims. Thus if the award is for $1,000 or less the full amount certified would be paid.

3. Thereafter, payments would be made on the unpaid principal of awards in equal amounts on each award or in the total amount of the remaining unpaid principal amount whichever is less. The total payments under priorities (2) and (3) on any single award would not exceed $10,000 under the bill.

4. Within the limits of any remaining funds available for payment of awards and after satisfying the requirements of priorities (1), (2), and (3) in that order, any remaining unpaid principal of an award would be paid on a prorated basis.

Eligible claimants or their predecessors in interest, in the case of natural persons are required to be nationals of the United States on the date of the loss for which a claim is filed and continuously thereafter until the date of filing such claim. In the case of a person who may have lost United States citizenship thrugh marriage to a citizen or subject of a foreign country, such person would be an eligible claimant if citizenship is reacquired prior to the date of enactment of the proposed bill, and if such person would have been a national of the United States at all times on or after the date of such loss if such marriage had not taken place. A national of the United States is defined as any person who is a citizen of the United States or who owes permanent allegiance to the United States. Aliens are expressly excluded from such definition.

Eligible claimants, or their predecessors in interest, in the case of corporations or other entities, under the proposed bill, are required to have been incorporated or otherwise organized under the laws of the United States or of any State or Territory thereof or the District of Columbia on the date of the loss, damage, destruction, or removal of its property. In addition the proposed bill requires as a condition of eligibility for such corporations or other entities that at least 50 percent of the outstanding capital stock or other proprietary interest in such entity was owned directly or indirectly by natural persons who could qualify as eligible claimants as described in the preceding paragraph.

These provisions of eligibility follow the traditional and generally accepted principle of international law relating to the nationality of claimants asserting claims against governments other than their own. It is believed a strict compliance with the eligibility requirements established by international law is essential since the claims are to be paid from the proceeds of assets vested and retained in lieu of the usual type of war reparation payments.

In addition to the foregoing major provisions of the proposed bill certain necessary collateral provisions are included relating to the claims filing period, limitation of attorneys fees, deduction for administrative expenses, and similar administrative matters.

SECTION-BY-SECTION ANALYSIS OF PROPOSED AMENDMENTS TO THE WAR CLAIMS ACT OF 1948, AS AMENDED

Section 4 of the bill designates as title I all present provisions of the War Claims Act of 1948, as amended, without redesignation of original section numbers.

Section 5 of the bill changes the word "act" to "title" wherever it appears in the present War Claims Act (which becomes title I) except in section 13 (a) of such act. This section creates the war claims fund and requires "the moneys in such fund shall be available for expenditure only as provided in this act." Since claims authorized in this proposed bill are also payable from this fund, the word "act" in this case must not be changed to "title."

Section 6 of the bill contains all necessary provisions relating to the receipt, settlement and payment of the claims therein authorized. These provisions would be designated as title II of the act and would add to the War Claims Act new sections 201 through 216. These new sections provide as follows:

DEFINITIONS

Section 201: Subsection (a) defines the territorial limits of the European countries named in this subsection and within which compensable war losses must have occurred. These limits are those generally accepted as existing on December 1, 1937. Alterations in the boundaries of these countries did not begin until 1938. The countries named in subsection (a) are Albania, Austria, Czechoslovakia, the Free Territory of Danzig, Estonia, Germany, Greece, Latvia, Lithuania, Poland, and Yugoslavia.

Section 201: Subsection (b) defines the word "Commission" to mean the Foreign Claims Settlement Commission of the United States, which in subsequent sections of the bill is the agency designated to receive and determine the validity and amounts of claims filed thereunder.

Section 201: Subsection (c) defines the term "national of the United States" to mean a citizen of the United States, in the case of a natural person, and in the case of a corporation, partnership, unincorporated body, or other entity, such as estates of decedents, trust estates, foundations, fraternal orders, or societies organized or created under the laws of the United States, or any State or Territory thereof, including the District of Columbia, in which not less than 50 percent of the outstanding capital stock or other proprietary or similar interest is owned, directly or indirectly, by nationals of the United States. Aliens are expressly excluded from the definition of the term "national of the United States."

Section 201: Subsection (d) defines the term "property" to mean not only real estate which, of course, includes land, buildings, permanent fixtures to land or buildings, but items of personal property of a tangible nature which can be presently identified, evaluated and which, in the judgment of the Commission, would normally be expected to have been owned by the claimant at the time of such loss, damage, or destruction. If, however, such items of personal property or movables were held or used by the claimant in carrying on a trade, business, or profession at the time of the loss, the strict requirements of identification and present evaluation would be waived, although the claimant would, nevertheless be required to establish the fact that such property was held as inventory or employed in a commercial or professional operation. Such operations would include, of course, the operation of a school, scientific or other research facilities, and similar related activities of a charitable or professional nature. Intangible property, such as rights or interests in real estate, loss of profits or income, goodwill, not susceptible of precise evaluation, or where the measure of damage would be purely speculative are expressly excluded from the definition of the term "property."

ADMINISTRATIVE EXPENSES

Section 202: This section authorizes the appropriation out of any money in the war claims fund for the purpose of defraying necessary expenses of the Commission and the Treasury Department required for the administration of the program authorized under the bill.

CLAIMS AUTHORIZED

Section 203: This section contains five subsections, (a) through (e), each of which contains provisions for specific types of claims which the Commission would be authorized and directed to administer.

Subsection (a) authorizes claims arising from the physical damage to, or physical loss or destruction of property (a defined term under the bill), which at the time of such damage, loss or destruction was located in Albania, Austria, Czechoslovakia, Free Territory of Danzig, Estonia, Germany, Greece, Latvia, Lithuania, Poland, or Yugoslavia. In determining whether the loss occurred in any of these countries reference will be made to the boundaries of such countries as they existed in continental Europe on December 1, 1937, in accordance with section 201 (a) of the bill. This subsection further requires that such loss shall have occurred in the period beginning September 1, 1939, when active military operations began with the invasion of Poland by Germany and ending May 8, 1945, the day following Germany's unconditional surrender and the cessation of

military operations in the European theater. The loss, damage, or destruction must have occurred either as a direct consequence of military operations of war or from special measures directed against property in the countries or territories named, and in the respective periods of time specified, because of the enemy or alleged enemy character of the owner.

It is further required that the property forming the subject matter of a claim under subsection (a) of section 203 must have been owned directly or indirectly at the time of its loss, damage or destruction by a national of the United States as such term is defined in subsection (c) of section 201. In other words, it must have been owned by a natural person who was a citizen of the United States or a corporation or other entity which could qualify as a national of the United States. In this connection a subsequent section of the bill prohibits any award unless the claimant and all predecessors in interest were nationals of the United States continuously from the date of loss to the date of filing the claim.

Section 203 (b): Authorizes claims by American ship or cargo owners for their losses resulting from military action by Germany in the period September 1, 1939, to May 8, 1945. Marine insurers or reinsurers or their assignees are not eligible claimants under this subsection. The latter claims are provided for in section 203 (c). Subsection (b) is designed to take care of possible claims by self-insurers, particularly in the period, early in 1942 when no such insurance, either Government or private, was available, and where essential defense or war materials was being shipped abroad.

Section 203 (c): The same types of marine loss claims are authorized in this subsection as in subsection (b) but only in the case of marine insurance or reinsurance underwriters who suffered net losses on policies underwritten for American hulls or cargoes during the same period, September 1, 1939, to May 8, 1945. Except for a short period, early in 1942, such insurance was otherwise available. The underwriters were particularly depended upon, during this period, for insurance coverage. Thus they prevented any substantial diminution in the flow of war materials and supplies abroad.

As indicated, the basis of claims hereunder would be the net losses suffered by the insurers or reinsurers on risks insured under policies covering American-owned hulls and cargoes lost or damaged by military action of Germany in the period specified. Under this subsection, the companies would file not as sugrogees but as direct claimants for net losses which they sustained, in other words, for the difference between their aggregate premium receipts on all such policies, hull and cargo combined, and the aggregate of indemnity payments on hull and cargo policies.

Section 203 (d): Death, injury, and property loss claims by American civilian passengers aboard commercial vessels resulting from German attack on the high seas are provided for in this subsection. Such death, injury, or loss must have occurred in the period beginning September 1, 1939, just prior to the sinking of the steamship *Athenia* on September 3, 1939, and ending December 11, 1941, the date upon which the United States declared war on Germany. It is believed no such vessels carrying America civilian passengers were sunk or destroyed by enemy action after that date and in any event there were ample deterrents to civilian travel in the period of open hostilities. American passengers on such vessels prior to the war, as in the case of Americans killed or injured on the *Athenia*, were the unwitting victims of enemy attack, a risk which they did not knowingly assume.

Death claims by eligible survivors are limited to maximum awards of $7,500 and would be payable only to the surviving widow, husband, children, or parents of the deceased as in the case of similar claims under other sections of the War Claims Act. Claims for personal injuries, however, following the general rule of law governing survival of actions, would not inure to the benefit of any particular survivors if the injured claimant dies while his claim was pending or prior to an award or if his death was not directly attributable to injuries sustained in the manner and in the period specified above.

Property loss claims by such American passengers would be confined to property as that term is defined in section 201 (d). It would be property normally expected to be in the claimant's possession at the time of loss. For the most part these claims will not be large dollarwise and will include luggage, personal belongings, and the like. Whatever the property may be, appropriate proofs of ownership, identification, and value will, of course, be required.

Section 203 (e): Provides for the very few but meritorious claims resulting from the removal from Western Germany of American-owned industrial and capital equipment for reparation purposes. These removals were authorized by the Potsdam and Paris reparations agreement. In a very real sense these removals were tantamount to the physical destruction of such property, and therefore properly regarded as war claims. Whether any particular items were removed for reparation purposes would obviously require appropriate documentation, including proof of the consent for its removal by the Allied Control Council, the Allied Control Authority, or the United States zone commander, and proof that such removal resulted in a measurable loss to the claimant.

TRANSFERS AND ASSIGNMENTS

Section 204: This section would permit the filing of a claim under subsections (a) or (b) of section 203 (property damage and direct ship or cargo loss claims) by the original owner of the property notwithstanding the sale or assignment for value of such property subsequent to its damage or loss. It would also permit claims to be filed by assignees to whom a claim had been assigned for value under subsections (a), (b), or (e) of section 203 at any time prior to the enactment of proposed title II of the act. The rules of eligibility and entitlement to an award, in the case of such assignees, would, of course, remain unchanged.

NATIONALITY OF CLAIMANT

Section 205: This section prohibits the allowance of any claim in favor of any claimant unless he and all of his predecessors in interest were nationals of the United States on the date of the loss, and continuously thereafter until the date the claim was filed with the Commission. The only exception provided for is in the case of a claimant who may have lost his United States citizenship between these two dates solely by reason of marriage to an alien but who reacquired such citizenship prior to the date of enactment of proposed title II. The term "national of the United States" is defined to mean, in general, a citizen of the United States or one owing permanent allegiance to the United States or a domestic corporation or other entity in which at least 50 percent of the capital stock or other proprietary or similar interest is owned, directly or indirectly, by nationals of the United States.

CLAIM OF STOCKHOLDERS

Section 206: This section prohibits claims based upon any interest, direct or indirect, in a corporation or other entity qualified to receive an award under proposed title II in its own right. If any corporation or other entity is not eligible as a claimant, as in the case of a foreign or alien-owned corporation, partnership, or entity, claims are authorized under this section by stockholders or other owners of a proprietary or similar interest in such entity to the extent of their interest and if at least 25 percent of such interest in such entities has been owned, directly or indirectly, and continuously from the date of the loss to the date of the claim by nationals of the United States who would be qualified to receive an award or any claim filed pursuant to proposed title II. The basic purpose of this section is to avoid the undue administrative burden of receiving and settling claims based upon a relatively minute interest in a foreign or alien-owned corporation whose property may have been damaged or destroyed or removed for reparation purposes.

DEDUCTIONS IN MAKING AWARDS

Section 207: This section specifically requires the Commission to take into account and to reduce any proposed award in the amount of any compensation or reimbursement received by the claimant from any source whatsoever for the same loss with respect to which a proposed award is made. In other words, the purpose of this section is to prevent any double benefits for the same loss.

CONSOLIDATED AWARDS

Section 208: This section permits the issuance of one award in favor of several individuals who may have a joint interest in any one claim. It is designed primarily to take care of those cases where the original owner of the property, forming the subject matter of a claim, may have died subsequent to the loss.

CERTAIN AWARDS PROHIBITED

Section 209: This section prohibits the issuance of an award in favor of any claimant who may have been convicted of treason or any other crime involving disloyalty to the United States. It would also prohibit awards in favor of any claimant whose claim under proposed title II is within the scope of title III of the International Claims Settlement Act. Title III of that act, which is presently administered by the Foreign Claims Settlement Commission, permits claims similar to those authorized under proposed title II of the War Claims Act, to be filed for certain war losses that may have occurred in countries named in section 201 (a) of this proposed bill. Certain claimants under title III of the International Claims Settlement Act could, conceivably, obtain full compensation for their war losses, occurring in Greece, for example, if permitted to file claims under that act as well as under the proposed amendments to the War Claims Act. This possible result would occur largely in connection with damages caused by Italy in any of the countries so named. This provision is necessary, therefore, to prevent duplication of claims and discrimination against claimants who could not qualify under these proposed amendments to the War Claims Act, as in the case of those claiming recoveries for war lossess occurring in Bulgaria, Hungary, or Rumania. By virtue of this provision, title III of the International Claims Settlement Act, of 1949, as amended, and proposed title II of the War Claims Act of 1948, as amended, are expressly made mutually exclusive.

CERTIFICATION OF AWARDS

Section 210: This section requires the Commission to certify all awards to the Secretary of the Treasury for payment in United States currency.

CLAIM FILING PERIOD

Section 211: This section requires the Commission to give public notice by publication in the Federal Register of the time when, and the limit of time within which such claims may be filed. Such limit is fixed at not more than 18 months after such publication. The date of publication may not be more than 60 days after enactment

of proposed title II or of legislation making appropriation to the Commission for administrative expenses.

CLAIMS SETTLEMENT PERIOD

Section 212: This section requires the Commission to complete its affairs, in other words, to terminate settlement of all claims under proposed title II, not later than 5 years after enactment of such title or after enactment of initial legislation appropriating funds for the Commission's expenses for carrying out its functions under such title. It is expressly provided that the life of the Commission itself will not be affected by this provision.

PAYMENT OF AWARDS; PRIORITIES; LIMITATIONS

Section 213: This section directs payment of all awards certified to the Secretary of the Treasury to be paid out of the war claims fund in accordance with a proposed schedule of priorities. Under such schedule, claims based upon deaths or injuries would be paid in full up to a permissible maximum, in each case, of $7,500. On other types of claims this section authorizes an initial payment of $1,000 or payment in full if the award is made for less than $1,000. Awards in excess of $1,000 but not more than $10,000 would then be paid in an amount which would be the same for each award or in the amount of the unpaid balance of such award whichever is less. In other words, a claimant receiving an award of $5,000 would receive an initial payment of $1,000. If funds were sufficient he could conceivably receive, as a second payment, $4,000. In this case, however, all other awards in excess of $1,000 would also receive second payments of $4,000, except those in total amounts of less than $5,000. These would be paid in full. No second payment could exceed $9,000.

In the case of awards in excess of $10,000, and depending upon the availability of funds, the holder of such an award would receive a first payment of $1,000 and a maximum second payment of $9,000. In these cases, however, the bill provides that the remaining unpaid balance of such an award would be prorated to provide an equal percentage distribution to all claimants similarly situated and to keep within any limit of funds available for the making of such payments.

The remainder of this section deals with more or less technical provisions in connection with the actual payment of awards except paragraph (f) which provides that the payment of any award which is not paid in full will permit the claimant, or award holder, to look for full payment at some time in the future. Subsection (f) expressly provides, in this connection, that such claimant will not be divested of his claim and that the United States in his behalf may proceed against any appropriate foreign government for the unpaid balance of his claim.

FEES OF ATTORNEYS AND AGENTS

Section 214: This section restricts the fees of attorneys, agents, or any other representative of a claimant for services rendered in his behalf in connection with any claim to an amount not to exceed 10 percent of the amount paid pursuant to any award that may be made. This provision follows the usual practice of the Government in limiting fees or compensation of representatives acting in behalf of claimants under similar circumstances. It will be noted that the limitation is based not upon the amount of the award, which could greatly exceed the amount of actual payments, but upon the total amount paid pursuant to an award. The demand or receipt of any greater percentage would constitute a misdemeanor under the express provisions of the bill, subject to the payment of a fine of not more than $5,000 or imprisonment of not more than 12 months, or both.

APPLICATION OF OTHER LAWS

Section 215: This section makes applicable to proposed title II certain administrative provisions of the International Claims Settlement Act of 1949, as amended, and the War Claims Act of 1948, as amended, as follows:

War Claims Act

Section 2 (b), first sentence, authorizes the Commission to prescribe necessary rules and regulations and to delegate functions to any Commission member, officer or employee.

Section 2 (c) authorizes, for the purpose of any hearing, examination, or investigation, the issuance of subpenas requiring the appearance of witnesses or production of documents with related provisions as to witness fees and mileage.

Section 11 requires appropriate notice to claimants of the approval or denial of their claims and the amount of awards, authorizes hearings with respect to claims and the subsequent affirmation or revision by the Commission of its original action. This section also provides that the action of the Commission in allowing or denying any claim should be final and conclusive in all questions of law and fact and not subject to review by any other official of the United States or by any court. It is deemed essential that this finality clause be applicable with respect to the claims program authorized in proposed title II. In the absence of such a provision the program could not be completed within the 5-year limitation period and the funds available for payment of claims could be seriously jeopardized. It should be borne in mind that no vested property rights are involved in the determinations of the Commission in any claim filed under proposed title II. Such rights as may be created would be purely stautory in nature. Payments on awards would be clearly gratuities. Claimants will have, under proposed title II and the incorporated provisions of title I, ample safeguards in the presentation of their claims and the fair and equitable determination of their entitlement to an award. This provision is not at all unusual in situations of this kind. It means, simply, that the Commission will not have jurisdiction of a permanent nature with respect to any particular claim.

International Claims Settlement Act

Subsections (c), (d), (e), and (f) of section 7 of the International Claims Settlement Act relate to payment of awards certified by the Commission where the payee is under a legal disability or is deceased or, if a corporation or partnership, is liquidated. This section also relates to payments to receivers or trustees and to assignees of an award. These provisions are necessary because of the possible change in circumstances that may occur between the issuance and certification of an award and the actual payment thereof. Although there is a relatively short timelag it frequently occurs that one in whose favor an award is made may have died before payment can be effected. It is conceivable, too, because of the schedule of deferred payments provided for in the bill, that the time lag between an award and payment may extend over several years. This makes all the more important provisions of the nature above described.

TRANSFER OF RECORDS

Section 216: This section simply makes it clear that any records, files, or documents in the possession of the Department of State which have a bearing on any claim filed under proposed title II will be available, upon request, to the Commission for the purpose of enabling the Commission to carry out its functions with respect to such claim or claims.

The final section of the bill itself, numbered section 7, is the usual severability clause by virtue of which the entire act will not be held invalid if only one provision thereof is found to be invalid.

Bargaining Style Changes in East

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. McCORMACK. Mr. Speaker, In my extension of remarks, I include an article written by Dorothy Thompson appearing in the Washington Star of April 11, 1957, showing our missed opportunity for bargaining position in the Middle East:

BARGAINING STYLE CHANGES IN EAST

(By Dorothy Thompson)

I don't know what our Government means by negotiation.

Negotiation is only what traders call bargaining. A customer wants certain goods and the seller wants to dispose of them. That is the first condition for a trade. The bargaining occurs over the price.

In the "Souks" and "Muskies" of most of the Arab world there is never a fixed price. A customer sees something he wants and asks what it costs. The merchant (praising his discerning taste) states a price. The customer expresses the most intense regret that it is beyond his means and names what he is prepared to pay. The merchant, shaking his head negatively and with sorrowful eyes, displays other inferior goods. The customer rejects them and starts to walk out of the shop. The merchant softly invites him to have a cup of sweet coffee. The customer complies and expresses his admiration for the beauty of the wares in general and the manners of the merchant's little boy.

PARTNER APPEARS

The merchant finds the customer so sympathetic and distinguished that for purely personal reasons he suggests a small shaving of the price. The customer still regrets. The merchant confesses that he himself might come down a little further (ruinous as that would be) but his partners would never agree. The customer again makes for the door. A partner miraculously appears. There is a whispered conversation and the merchant reports triumphantly that he has persuaded the partner to come nearer to the buyer's price.

This can go on for a long time. But, at a point, the buyer usually says. "It's still more than I ought to pay, but I do appreciate your concessions"—and brings out his purse.

The seller is all smiles. He serves another cup of coffee. The buyer takes his card and promises to inform friends about his beautiful wares. The merchant touches his hand to his brow and bows, invoking the blessings of peace. The bargaining has occurred in an atmosphere of exquisite courtesy.

In Cairo "negotiations" (bargaining) have been going on in a way that must utterly astonish the Arab President of Egypt.

When the United Nations (and the United States) halted the military operations involving the canal and forced the withdrawal of the British and French (the prime users), Egypt was also in a hole. For there wasn't any canal! The Egyptians, to impede the military operation, had sunk ships and cement-laden barges along its whole passage. To operate it again, on any terms, it had to

be cleared, and clearing it was a major engineering operation.

OPPORTUNITY MISSED

It would seem that then, when the canal was blocked, was the time to bargain about how, when restored, it would be operated.

Egypt could not clear the canal except at enormous expense, on top of the great losses she was daily suffering from the suspension of shipping. She did not possess the necessary machinery or adequate engineering skills, which she would have to hire. If she called on the Russians, she would pay through the nose and invite a new crisis.

But what did the would-be customers of canal service do?

They cleared the canal, at their own expense, before any price for its resumed use had been agreed upon. Gen. Raymond Wheeler (one of the greatest Army engineers in American history) mobilized men and machines for one of the quickest and most efficient jobs ever done. Now, after 5 months, it is just about ready to be handed back to Mr. Nasser clear and clean, still without those who cleared it and want to use it knowing what price they will have to pay for its use.

So, for the second time, all the bargaining advantages have been put into Egypt's hands.

If any Arab showed such a lamentable lack of trading skill, his head would be bowed in shame. Toward a customer showing such lack, he would feel nothing but amazed contempt.

And there hasn't been even exquisite courtesy and sweet coffee.

A Leading National Newspaper Decries the Outmoded Method for Rollcall

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. PORTER. Mr. Speaker, I heartily agree that we should have recourse to modern methods of taking the roll in the interests of saving time. I recognize that in many instances valuable work is done during a tedious rollcall, but there are enough parliamentary delays to allow for the last-minute conferences. A freshman Congressman, like myself, undoubtedly has a lot to learn about such procedures, but to date no senior colleague has given me reason for defending the present practice.

Under leave to extend my remarks in the RECORD I include an editorial which appeared in the Sunday Oregonian on April 7, 1957:

LOST DAY IN HOUSE

The United States House of Representatives spent the greater part of its day Thursday responding to the 400-plus names of those in the Chamber. The Members were acting on 17 separate amendments to the appropriation bill for the Departments of Labor and of Health, Education, and Welfare. In each case the Clerk was required, by the rules of the House, to read the roll, with each Member answering to his name.

The system has not changed in the nearly two centuries of the Republic. But surely it cannot be permitted to continue much longer. The Capitol in Washington is equipped with telephones, electric lights, even refrigerators for the refreshment of the lawmakers. All these things were unknown to the Founding Fathers, and all were originally considered more or less vulgar innovations when first introduced. Now, of course, they are recognized as necessities.

Congress thus has ample precedent for the installation of electric vote recorders such as are in operation in some State legislative chambers and in parliaments over the world. Tradition is a glorious thing, but its keeping in this specific instance seems scarcely worth the wasting of a legislative day.

Salute to Chemical Industry

EXTENSION OF REMARKS

OF

HON. DAVID S. DENNISON, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. DENNISON. Mr. Speaker, this week has been set aside to salute the chemical industry. All of us recognize the vital role chemistry is playing in America today. It is a basic part of all American industry and so is responsible for the creation of millions of jobs. It has added materially to our comfort and enjoyment of life. It plays a most decisive part in the defense and security of our country. Chemistry touches our daily lives on every hand and contributes mightily to an ever greater America.

The 11th District of Ohio, which I have the honor to represent, is probably the most intensified and fastest growing industrial area in the United States. Its mills, factories, and businesses of all kinds feed strength and life to our vigorous economy. With the advent of the St. Lawrence seaway northeastern Ohio will experience even greater industrial vigor and activity.

None the least of the important industries in this area are the huge chemical plants located there. Chemical Progress Week, therefore, is especially near to the hearts of the people of northeastern Ohio and we are proud to join in the salute to a great and basic industry.

The following editorial from the Telegraph, published at Painesville, Ohio, sets forth the thinking of many of the people of the 11th Ohio District regarding the chemical industry:

SALUTE TO CHEMICAL INDUSTRY

One week each year is set aside as Chemical Progress Week. The 1957 observance started Monday and will continue through Friday.

During this week the people who work in the chemical industry throughout the country use many means to acquaint the public with some of the contributions the industry makes toward a better America.

Most of us are aware of some of the direct benefits the chemical industry contributes to our constantly improving way of life in the ever-expanding field of pharmaceuticals and antibiotics, which go so far in making and keeping us healthy; in the tremendous advances in agriculture and food development; in the development and production of new and better clothing and houses.

These are only some of the easily identified ways in which chemistry contributes to our well-being.

Perhaps most of us are not aware, however, that chemistry plays an important and integral part in all our great American industries.

For instance, in two basic industries, steel and electronics, the amazing, new, and improved products which so greatly influence our lives would be impossible without the contribution of the chemist in research, engineering, and manufacturing processes.

As part of the current celebration, Lake County chemical firms have arranged special window displays and have provided speakers for various civic organizations. Some schools, which have worked on chemical projects, also will participate in the observance.

Lake County occupies a prominent place in northeastern Ohio's expanding chemical empire. It is fitting that tribute be paid to an industry which means so much to the prosperity and progress of our country.

Complicated Milk Hearings End After 102 Days

EXTENSION OF REMARKS

OF

HON. J. ERNEST WHARTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. WHARTON. Mr. Speaker, the Department of Agriculture has just completed a 102-day hearing on the subject of a Federal Milk Marketing Order for New York and Northern New Jersey. The hearing record is said to contain some 15,500 pages covering the testimony of more than 450 witnesses and weighs over 150 pounds.

In the meantime, the chaotic condition of the dairy industry is exemplified by the following article from the Hudson Star under date of April 1, 1957:

DAIRY GROUP IN REVOLT AGAINST BIG MILK TRUSTS, SAYS WALDORF

"We are in revolt against the domination of the big milk trusts," William Waldorf of Copake, president of the Dairy Farmers of America, Inc., said yesterday in discussing the forthcoming meeting in Chicago to form a national organization.

Mr. Waldorf will fly to Chicago tomorrow and meet with 25 dairy leaders throughout the Nation.

"We are organizing to take our share of the American standard of living," he said. "Among other things we must have shorter hours and higher pay.

"Let me cite three instances:

"Citizen A, covered by unemployment insurance, receives more remmeration for not working a 40-hour week than Citizen B, a dairy farm employee or dairy farm owner, receives for 40 hours of highly skilled labor. And the trend is toward futher segregation of agriculture by increased unemployment payment and a decreased work week.

"American children are no longer killed in American mines or heavy machine industries. Modern agriculture is the most dangerous of our heavy machine industries and the age group most commonly killed on American agriculture is 10 to 14 years of age.

"As dairy farmers we have an estimated $20 billion of capital invested in the milk production industry, which we risk for no profit and an average hourly wage of less than 50 cents an hour in a country with an average hourly wage rate of about $2 an hour and a minimum wage of $1 an hour. Dairy farm employees as well as owners labor 3,600 to 3,700 hours a year in a country with a 2,000-hour work year.

"We are in revolt against the domination of the big milk trusts. They must pay more for our milk.

AN ACTION GROUP

"We are an action group. Our national organization will be made up of similar action groups. We are producers of milk, not handlers of milk.

"Our aims will be clearly stated. To attain them we will use the Government and the democratic process. We will be orderly. We will avoid violence. When our forces are deployed they will represent the industry.

"We need and will use and rely on the understanding of the consuming public, which includes labor. Our task is national. The need is great. When we are understood we are encouraged."

Proposed Tax Reduction for the Depletion of Human Resources

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. ZELENKO. Mr. Speaker, today I have introduced a new measure which would cut taxes for older workers by providing a tax deduction for the depletion of human resources.

This bill is aimed at encouraging older people to continue productive activity in business and industry. It would allow taxpayers 45 years of age and older to claim a special deduction for the depletion of human resources on their Federal income tax. There is no reason why there should be a distinction between the present deductions for the depletion of natural resources, machinery and property, and that of the depletion of the most important resource of all—the human one.

The proposed deduction would be computed strictly on the basis of the taxpayer's age and would apply only to salaries, wages, and earned income and would offer an added economic incentive for the older workers to realize their full potential as useful and productive members of the Nation's business and industrial population. At present, from a monetary standpoint, retirement benefits in many cases far outbalance earning inducements for people of 45 and over to remain actively employed.

These conditions have produced a steady and detrimental effect upon the size of our country's senior working forces. Unless Congress takes constructive measures to combat the problem, we will ultimately find ourselves faced with a nationwide shortage of skilled and experienced older workers who form the strength and backbone of so many of our leading industries.

The reduction in income-tax revenue would be balanced with a decrease in social security to older workers who, with the inducement of tax deductions, would choose to remain actively engaged in business and industry. The deduction for the depletion of human resources would be computed by subtracting 44 from the age of the taxpayer and multiplying the resulting figure by 1 percent of his earned income. In other words, as the taxpayer grows older he would be allowed to deduct 1 additional percent each year. Thus, a 66-year-old working taxpayer would be entitled to a deduction of 22 percent from his earned income.

I hope this measure will act to ease the problems of our older people in industry, to the mutual benefit of our senior citizens and our national economic structure.

Colossi to the South

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. PORTER. Mr. Speaker, our Government neglects Latin America. This is a familiar charge, for which there is ample evidence. One outstanding neglect by the present administration is represented by its leaving the post of Assistant Secretary of State for Inter-American Affairs vacant for more than 8 months. An Acting Assistant Secretary, even one as able and experienced as Richard Roy Rubottom, cannot function as well as a man who has an unqualified hold on this important job.

Under leave to extend my remarks in the RECORD, I include the following editorial which comes from the New York Times for April 14, 1956. What it says applies as well this year as it did last:

PAN AMERICAN DAY

Today is Pan American Day, a day of annual commemoration and of dedication to one of the greatest and most successful regional associations in history.

The whole world is poised on the threshold of a new age. Eoverything that has happened since the second World War ended proves that to us. We feel a sense of growth and change, of a revolutionary dynamism that has rarely if ever been equaled. And we are beginning to realize that nowhere in the world is the great change more significant than in Latin America. It is a vast and complex movement, embracing as it does twenty different nations spreading over a huge continent, a great isthmus to the north and islands in the Caribbean Sea. One must approach this tremendous historic upheaval in all humility. Perhaps we in the United States, standing off at a distance but bound up closely as we are with Latin-American affairs, are in a better position to see the forest where our neighbors can only see the trees.

Latin America is ceasing to be a "frontier" in the historic and economic sense; it is approaching maturity; it is merging into the one-world where the destinies of our age are being decided. Western Europe has lost its dominance. The great sources of power today are on the periphery where the two giants—Russia and the United States—operate. Over the horizon one can see the light of another dawn as the Ibero-American world grows and grows.

Today the population of Latin America and the West Indies about equals that of the United States and Canada; at the present rate of growth by the end of this century it will be double. Industry is transforming agricultural economies. The exploitation of vital mineral wealth is raising national incomes and hence living standards. A middle class is growing fast and is assuming ever greater political power. Illiterary, disease, ignorance, poverty are declining rapidly.

Political consciousness is rising everywhere. And what do men ask who need no longer spend desperate lives scrounging for a bare subsistence? They ask for freedom, and freedom means the liberal democracy of the West. The dictator, the caudillo of Latin-American history, is doomed. Trujillo of the Dominican Republic, Somosa of Nicaragua, Perez Jiménez of Venezuela, Rojas Pinilla of Colombia—such men are anachronisms living on borrowed time.

Nothing has given surer proof of this and nothing in the year since we last celebrated Pan American Day has meant so much as the overthrow of Juan Perón and his wicked, blundering regime in Argentina. This revolution, which finally succeeded last September, was one of the most significant and heartening events in all Latin-American history. There have been disappointments and setbacks during this year, especially in Colombia, but what happened in Argentina outweighs all the years of all the dictators and it points inexorably to the eclipse of those backward men who still cling to power in a few countries.

Latin America has on the whole been outside the pattern of the cold war, but it cannot long remain so. Already the Russians are singing a siren song and always the Communists lie in ambush to strike when weakness is shown. It cannot be emphasized too often that the answer to the Communist threat in Latin America is democracy and not the military-fascist dictatorships of Venezuela, Colombia, Nicaragua and the Dominican Republic. The greatest weakness of United States policy toward the hemisphere has been its overt friendliness to the dictators.

Latin Americans feel that they have been and are being neglected. Secretary Dulles, for all his constant traveling, has been to Latin America only once, and that for the Tenth Inter-American Conference at Caracas, Venezuela, in March 1954. He has never made a trip around Latin America. The region is not just important to us; it is vital to our existence. It is emerging from adolescence into lusty manhood. On this day of commemoration North Americans should pause to thing what Latin America means, what is happening there and how in this changing world our relationships must be adjusted. We are still the colossus of the north, but the day is coming when there will be other colossi to the south.

St. Lawrence Seaway Studies

EXTENSION OF REMARKS
OF
HON. DAVID S. DENNISON, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. DENNISON. Mr. Speaker, Ohio, and particularly the 11th District which I have the honor to represent, is vitally concerned with the construction and development of the St. Lawrence seaway. As this great project progresses there will be many unforseen problems which will concern all of the areas affected by the seaway. It is just good commonsense that we do our best to anticipate as many of these problems as possible. To this end I join with my good friend

and colleague from the great State of Ohio, the Honorable A. D. BAUMHART, Jr., in urging investigations now of the impact the seaway is likely to have on the Great Lakes shipping and shipbuilding industries. In support of this plea I would like to include the following editorial from the Painesville Telegraph, published at Painesville, Ohio:

PLEA FOR SEAWAY IMPACT STUDIES

With completion of the St. Lawrence seaway scheduled in 2 years or less, Representative A. D. BAUMHART, JR., of the 13th Ohio District, is urging a congressional investigation of the impact the seaway is likely to have on the Great Lakes shipping and shipbuilding industries.

The plea is timely, and if such a study is to be made it should start soon. Two years is a short time in Government operations.

"The ramifications of seaway development are many, and for that reason I believe that we cannot begin too soon to prepare for the challenges we will surely encounter in 2 years or less," Representative BAUMHART wrote to Representative H. C. BONNER, chairman of the House Committee on Merchant Marine and Fisheries.

He suggested five subject areas for investigation: The increase in proportion of lake tonnage carried in foreign ships; the use of Great Lakes shipyards by Government agencies; the building of a prototype vessel (Clipper class) developed by Maritime, and the desirability of building such a vessel in a Great Lakes yard; use of the lakes for storage of laid-up fleets in the future; and the expected effects of foreign competition both for the intralake trade and the overseas trade.

Many cities along the Great Lakes are making big plans for getting substantial shares of the increased business expected when the seaway opens. Lake County, of course, is involved in that race.

But the subjects Representative BAUMHART suggests for investigation are broader in scope than the interests of any city or area along the lakes. Congress would do well to make the suggested studies.

Governments South of the Border, Free and Otherwise

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD in connection with Pan American Day, I am bringing the following list to the attention of my colleagues. It separates the practicing democracies and blatant dictatorships, with a third category consisting of countries striving to adopt democratic procedures but who for various reasons do not qualify as democracies at this time:

TYPES OF GOVERNMENTS IN LATIN AMERICA, MARCH 1957

I. DEMOCRACIES

1. Brazil.
2. Bolivia.
3. Chile.
4. Costa Rica.
5. Ecuador.
6. El Salvador.
7. Mexico.
8. Panama.
9. Peru.
10. Uruguay.

II. DICTATORSHIPS

1. Colombia (Rojas Pinilla).
2. Cuba (Batista).
3. Dominican Republic (Trujillo).
4. Nicaragua (Somoza).
5. Paraguay (Stroessner).
6. Venezuela (Perez Jimenez).

III. GOVERNMENTS FALLING BETWEEN THE EXTREMES OF POPULAR FREEDOM AND DICTATORIAL GOVERNMENT CONTROL

1. Argentina: Revolutionary government of General Aramburu has problem of recovery after 10 years of Perón dictatorship. Elections are promised for 1957.

2. Guatemala: Government of Castillo Armas which replaced Communist-infiltrated government [duly elected] of Arbenz has aroused criticism of even friends by repressive measures.

3. Haiti: President Magliore forced to resign in December after outburst of public discontent. Provisional government has scheduled elections tentatively for April.

4. Honduras: In October 1956 a liberal military junta seized power from an unpopular de facto government. The junta is committed to free elections and an eventual return to constitutional government. At present junta enjoys widespread popular support.

An Investment in Peace

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. LECOMPTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include a splendid editorial from the April 11 Free Press of Somersworth, N. H. The editorial is an expression of the views and conclusions of New Hampshire citizens who attended a hearing at Laconia on April 6 on the mutual-security program, conducted by the Foreign Affairs Subcommittee on International Organizations and Movements. The editorial follows:

AN INVESTMENT IN PEACE

Moving to the national scene, New Hampshire again became the center of attention over the weekend when a subcommittee of the House of Representatives' Foreign Affairs Committee, of which our own CHESTER E. MERROW is a ranking member, came to hold a hearing to sample grassroots sentiment.

Before the weekend was over, the seven Congressmen heard an impressive array of speakers, representing a good cross-section of New Hampshire opinion, give an overwhelming vote of confidence to the Federal Government's mutual-aid program. Under this program, economic and military assistance goes throughout the world to help bolster peace-seeking peoples.

One of the points which the testimony at Laconia brought out and this we believe is something that American people fail so often to recognize is that so-called foreign aid is not a one-way proposition. It's truly a mutual undertaking with this country as donor receiving a generous return on its investment. Of every single dollar that goes abroad, 70 cents of it is spent here in this country by the recipient.

We so often hear criticism leveled at these foreign aid expenditures yet the amount spent in aiding other countries is a small part of our overall budget—only $4.4 billion out of a $71 billion budget. Congressmen this weekend pointed out that it could be worse. They explained that it costs the American taxpayer approximately $700 to equip and prepare for the defense of his own country a soldier in another land such as Korea. Yet if an American soldier were to be put on Korean soil for defense purposes it would cost the American taxpayer $7,000 a year.

The Congressmen who visited New Hampshire this week and the citizens who testified before them failed to agree on all the ramifications of the foreign aid issue. Yet in the midst of this disagreement there was one encouraging ground of common feeling—Mr. and Mrs. New Hampshire taxpayer would be in an even more perilous world than they now find themselves if it were not for the comparatively nominal investments that have been made by this country in a foreign-aid program.

From the Sky

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a beautiful and expressive poetic contribution by my esteemed friend, a former Member of the House of Representatives, former Member of the United States Senate, and majority leader of that body, Hon Scott W. Lucas, entitled "From the Sky":

FROM THE SKY

Below, I see earth's curtains of lace,
Traveling through the beauty of space;
The rugged peaks near mountains of lawn
Will make you dream of the ages gone;
The shimmering snow in summer sun,
Telling the world what its robes have done.

Highways of gold, so lovely to see,
With pint-sized autos moving so free;
The small, fleecy cloud—lonesome and brave—
Winks at our plane with a friendly wave;
The smoke of a train, inching along,
The hum of motors, singing a song.

The farmer's home, an old stately place,
Cheerful in white, from its toes to face;
The light, brown fields of the rustling corn,
The autumn winds on the leaves forlorn;
Miles upon miles of our bounteous soil,
Plowed and terraced by the hands of toil.

Little creeks here and big rivers there
Look for their master to claim their share;
Cities of grandeur all over the place,
Lifting their fingers to heaven's face;
Chimneys of smoke from factory tower
Tell subtle tales of American power.

The blue horizon in yonder sky
Breaks bread with the earth, so near, so shy;
Sand dunes of old on the lake nearby
Cause you to ponder about the sky;
The lake itself is a strange old thing,
Its depth and its height, of thee I sing.

Ore boats bleak from the Mesabi Range,
Moving their all for process and change;
And now I see in the western nest,
The stately spires of Chicago's best;
The setting sun, tinged with wings of gold,
Calmly leaves the earth with tales untold.

Pray God protect such beauty and calm,
From the painful curse of atomic bomb.

—*Scott W. Lucas.*

Civil Rights Legislation

EXTENSION OF REMARKS
OF

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a series of three editorials which appeared in the Richmond News Leader on April 11, 12, and 13, 1957. The able editor, Mr. James Jackson Kilpatrick, in a forceful and intelligent manner, has presented an analysis of the so-called civil-rights legislation, which I commend to every Member of this body as worthwhile reading material. These editorials constitute the most concise and succinct discussion of the evils of the civil-rights proposals I have seen yet.

The unwarranted and ill-advised civil-rights proposals are fraught with extreme danger, not only to the Southern States but to every State in the Union.

The editorials are as follows:

[From the Richmond News Leader of April 11, 1957]

THE COMMISSION ON CIVIL RIGHTS

Within the next few weeks, when various delaying maneuvers have been exhausted, the House of Representatives will begin consideration (to employ a polite phrase) of the pending "civil rights" bill. Actually, we may be reasonably sure that Congressman EMANUEL CELLER's bill scarcely will be considered at all, in the sense that Members of Congress will give judicious study to the need for such legislation, or to the merits of particular provisions. Goaded on by minority blocs in key districts, the House will pass the bill with a whoop. Or so it appears now.

Yet this bill is so poorly drawn, so sinister in its implications, and so destructive of vital rights and powers, that some faint hope should be preserved of seeing it defeated. If Members of the House who are remote from immediate political pressure, and have been swayed only by the propaganda of liberal organizations, will take time to ponder the mischief inherent in the bill, perhaps we may yet see the matter abandoned.

The bill is divided into four parts. The text of part I appears on this page today; remaining portions will follow tomorrow and Saturday. May we invite readers to join in an examination of part I?

These opening provisions, it will be seen, establish a Commission on Civil Rights, and define its powers and duties.

The first question to be asked is, Why a commission at all? Sponsors of the bill cannot adequately answer even that basic question. They point to isolated instances in which it has been alleged—though seldom proved—that someone has been denied his right to vote—Evidence is utterly lacking to demonstrate the existence of any national problem that would justify a commission such as this one. We may also comment, in viewing the bill as a whole, on the paradox which sees a commission created in part I to investigate the very problems which are legislated upon in parts III and IV. Either the commission is necessary, and we should wait upon its report; or the substantive, permanent legislation of parts III and IV is necessary, and the commission's report is needless.

But assuming for the sake of argument that some need exists for an investigatory commission, we may inquire, Why a congressional commission? A President may by Executive order appoint any Commission he wishes to appoint; one such Presidential Commission already has reported on civil rights. The answer—and here we begin to get at the bones in the bill—is that only Congress can create a commission having powers of subpena.

How would this commission be permitted to use its subpena power? The registrar of some backwoods county in South Carolina could be summoned, under pain of prison sentence for refusal, to appear before the commission in Alexandria, Va., or Charleston, W. Va., these being within the fifth judicial circuit, to answer some "allegation in writing under oath" that he is depriving certain citizens of their right to vote. The rules do not permit him to confront his accuser; he is permitted no powers of cross-examination through his own counsel; if he wishes witnesses summoned in his own behalf he must bring them at his own expense—and then they would be permitted to testify only "in the discretion of the commission." The commission's own witnesses, it appears, would be abundantly cared for; the persons charged, it will be seen, may or may not be summoned at Government expense—they will be "afforded an opportunity voluntarily to appear."

Let us look a little deeper: This commission is to be composed of six members, but what is put down as their sole qualification? That "not more than three of the members shall at any one time be of the same political party." Who may schedule hearings? Any subcommittee may schedule hearings, provided it is composed of "2 or more members, at least 1 of whom shall be of each major political party." Could anything more clearly expose the political nature of this body? Not a word is said of geographical considerations; nothing is said of qualifications in law, history, education, or Government. Three Democrats. Three Republicans.

This political sextet, once appointed and confirmed, would then employ "a full-time staff director and such other personnel as it deems advisable," but this unlimited corps of salaried employees would be only the beginning. The commission also may "accept and utilize services of voluntary and uncompensated personnel" (for which we may read the attorneys and staff of the National Association for the Advancement of Colored People), who are to be paid travel and subsistence expenses.

And what are the vaguely defined duties of this traveling band of inquisitors? They are set forth in section 104 of part I. Broadly, the commission is to investigate, to study, to collect, to appraise, and finally to report on anything under sun or moon which may relate to "equal protection of the laws." It is the blankest check ever written; and it would be handed over to the commission members with a broad grant to utilize their powers as they please.

To be sure, section 104 offers what might seem to be a saving grace—a terminal date on the commission's existence. On that point the minority report of the House Judiciary Committee said this: "Anyone who believes that this Commission will cease to exist in 2 years can rightfully be accused of believing in fairies. The 2-year limitation on the duration of the Commission will mark its first milestone to perpetuity. There will be as many leftwing pressure groups howling for its permanency as now demand its creation. Considerations of political expediency which spawned it will not let it expire."

This then is part I of the bill. It creates an unwarranted investigatory commission, qualified on a basis of partisan politics and armed with incredibly broad powers of subpena. This commission will function, in practical effect, as a congressional arm of the NAACP, the American Civil Liberties Union, and other leftwing bodies. It would be financed—at what heavy cost the sponsors cannot or will not predict—from the United States Treasury.

And this is the "moderate" beginning the South is asked to accept on a civil rights bill.

[From the Richmond News Leader of April 12, 1957]

A CIVIL-RIGHTS BUREAUCRACY

The civil-rights bill now pending in the House of Representatives opens with a long section, discussed in these columns yesterday, which creates a Congressional Commission on Civil Rights. Part II of the bill is quite brief. It simply provides for an additional Assistant Attorney General, to be named by the President and confirmed by the Senate:

"PART II OF THE CIVIL-RIGHTS BILL—TO PROVIDE FOR AN ADDITIONAL ASSISTANT ATTORNEY GENERAL

"SEC. 111. There shall be in the Department of Justice one additional Assistant Attorney General, who shall be appointed by the President, by and with the advice and consent of the Senate, who shall assist the Attorney General in the performance of his duties, and who shall receive compensation at the rate prescribed by law for other Assistant Attorney General."

The majority report of the House Judiciary Committee says this:

"While the bill does not specify that the additional Assistant Attorney General * * * shall be head of the Civil Rights Division in the Department of Justice, it is the understanding of the committee, predicated upon testimony of the Attorney General, that the individual authorized to be employed by this section will be so designated and given such responsibility. The reason for not specifically stating the title and duties of the newly authorized Assistant is purely one of internal management on the part of the Attorney General as head of the Department of Justice."

The majority report acknowledges that there already exists within the Department of Justice a Civil Rights Section within the Criminal Division; but in the majority's view, "it is no longer logical that this section should remain as a subdivision of the Criminal Division, since recently the Justice Department has been obliged to engage in activities of a civil nature in the civil-rights field." As examples, the majority cities the Department's intervention in Hoxie, Ark., and Clinton, Tenn. Moreover, the majority adds, congressional approval of parts III and IV of the pending bill * * * "would increase the volume of litigation in which the Department of Justice would be involved."

The majority report continues with this significant comment:

"Probably the most important factor providing for such a division is the fact that the problems which arise in the area of civil rights are extremely complex and very delicate in nature. The problem touches the very essence of Federal-State relationship and, therefore, requires a centralized responsibility in the person of an eminently qualified attorney with the prestige of a Presidential appointment behind him."

On the surface, part II of the bill may not appear to warrant strenuous opposition by critics of the proposal as a whole. Yet even a scanty knowledge of the operations of Federal bureaucracy will suggest an unerring picture of the course this new Civil Rights Division would pursue. In order to justify its creation, the division swiftly would plunge into widespread litigation. Where causes of action could not be found, the division would create them.

But we do not have to fear that this eminently qualified attorney would find the "In" basket on his desk empty of suggestions. The National Association for the Advancement of Colored People, which assiduously cultivates all the litigation its busy attorneys can handle, could be relied upon to pepper the division with daily memorandums. The

practical effect of part II would be to provide the NAACP with an entire new legal staff, their salaries paid from the bottomless United States Treasury, with which to carry on the organization's harassment in the name of the United States Government.

The Department of Justice has done very well, these many years, without such a division. No compelling reason can be advanced for establishing it now. The brief provisions of part II would do nothing to improve domestic tranquility in the complex and very delicate field of civil rights, but on the contrary would surely lead to discord, strife, and a deeper bitterness. This is what the moderates would buy with part II of their bill.

[From the Richmond News Leader of April 13, 1957]

A WEAPON FOR TYRANNY

The civil rights bill now pending in the House of Representatives is divided into four parts. The first of these, reviewed, editorially on Thursday, creates a congressional Commission on Civil Rights; the second, discussed yesterday, provides for a new Assistant Attorney General who would head a Civil Rights Division within the Department of Justice.

If the bill contained nothing more than parts I and II, it would still be a thoroughly bad bill, but the harassments thus authorized might somehow be tolerated. The worst evils of the pending measure lie concealed in parts III and IV. These provisions would equip the new Assistant Attorney General with weapons by which the entire State and Federal relationship could be effectively destroyed. Age-old guaranties of personal rights would be stripped away.

Part III undertakes to add a fourth and fifth paragraphs to the old Ku Klux Act of 1871. It is important to understand that the first three paragraphs of the existing law already provide that any person injured by denial of certain civil rights (including the right to vote) "may have an action for the recovery of damages * * * against any one or more of the conspirators." If Smith and Jones conspire "by force, intimidation, or threat" to keep Brown from the polls, Brown already has full power to sue them. What, then, would be added by the pending bill?

The two new paragraphs would authorize the Attorney General, upon an allegation that someone had conspired against Brown or was "about to" conspire against Brown, to bring on Brown's behalf "a civil action or other proper proceeding for preventive relief, including an application for a permanent or temporary injunction, restraining order, or other order."

But such a proceeding would not be instituted for or by Brown alone, as an individual plaintiff. It would be institued "for the United States, or in the name of the United States."

Furthermore, Federal courts would be authorized to hear such proceedings "without regard to whether the party * * * remedies that may be provided by law."

The quoted provisions were phrased with deliberate care. As events in Clinton, Tenn., recently have made clear to the public, a jury trial is prohibited in any contempt proceeding arising out of an action instituted "for the United States, or in the name of the United States." The effect of this section of the pending bill would be to place the powers of a tyrant in the hands of every Federal judge. Under the catch-all term of "equal protection of the laws," almost anyone may contend that he is being deprived of anything. Upon the flimsiest allegations of an "about-to" conspiracy—without even the consent of prospective plaintiffs—the Attorney General may demand an injunction. He is not required to give notice. Not even a hearing is guaranteed.

Let us be specific. Under this bill, the new Assistant Attorney General provided in part II could pick at random any handful of Negro schoolchildren in any locality in the South. Without asking or obtaining their consent, he could seek an injunction against local school officials on the contention that they were about to deprive the children of equal protection of the laws. Such an injunction could be obtained ex parte—that is, without a formal hearing of any sort. It could be obtained without regard to whether the party aggrieved shall have exhausted any administrative or other remedies, thus overturning the ruling of the United States Supreme Court on March 25, in a North Carolina case, that Negro plaintiffs in school segregation cases must first exhaust State remedies before seeking Federal relief. Resistance on the part of anyone to such an injunction, because the suit had been brought for the United States, or in the name of the United States, would be punishable by a summary trial for contempt, without benefit of jury.

That is part III of the bill. Part IV, which applies to voting rights only, closely parallels the language of part III. Together, they form the most vicious legislative weapon ever devised for the support of judicial tyranny. In place of government by law, in which State powers are preserved and individual rights are jealously protected, these provisions would substitute government by injunction—government by the uncheckable whim of Federal judges.

Those of us in the South, having suffered most grievously from the Supreme Court's rape of the Constitution, are perhaps better situated than other Americans to comprehend the evils here afoot. We can measure the bill's effects in terms of the incalculable bitterness and hostility which its sweeping provisions could bring to our public education.

It is the blindness of other sections of the country that is most mystifying. Every State in the Union, it may be surmised, has some domestic institution vital to the interests of its people. These interests may relate not merely to schools or to voting, but also to conservation practices, to the control of State resources, to the management of hotels, theaters, restaurants, even to State laws governing inheritance and marriage. In each of these fields, it may be contended that someone is denied "the equal protection of the laws." And under part III of the pending bill, the Attorney General may seek to translate such contentions into blinding injunctions, obtained without regard to State remedies and State courts.

Members of Congress from the North, Midwest and West seem not to comprehend what vast powers they are here transferring to the courts. State Governors and other State officials, outside the South, seem indifferent to their own extinction. In fighting this sinister bill, southerners are not speaking for their own region alone; they are struggling to defend the whole fabric of Union from forces that would destroy it. Let us pray the efforts will not be in vain.

A Reminder

EXTENSION OF REMARKS
OF
HON. DAVID S. DENNISON, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. DENNISON. Mr. Speaker, under leave to extend my remarks, I would like to call attention to the following editorial which appeared in the Ashtabula Star-Beacon, Ashtabula, Ohio, under date of March 29, 1957:

IN OUR OPINION: CONGRESSMEN HAVE SHORT MEMORIES

Some northeastern Ohio observers are declaring these days that President Eisenhower's leadership over the Members of Congress is faltering and they are going their own way.

They say he isn't assertive enough in promoting his program, that he doesn't crack the whip on Capitol Hill, that his steep budget has cost him popular support and that, in any event, he is a "lame duck" who can't run for reelection in 1960.

Consequently, they add, the lawmakers are following their traditional course under such circumstances. They are falling into factions and allowing themselves to be pressed heavily by local and regional rather than national concerns.

It is said, too, that when they climb a platform anywhere in the land they seldom nowadays bother to mention Mr. Eisenhower's name, having concluded there is no further political magic in it for them.

This could be a risky route to travel. To begin with, the newest public opinion polls show the President's popularity only slightly below recent record high levels.

Secondly, the lawmakers might remember that neither the Republican nor the Democratic rank-and-file candidates won much of an endorsement at the polls in 1956 or earlier elections.

Mr. Eisenhower was the only one for whom there was great and widespread enthusiasm. The President, in the view of most, won reelection as a man people trust. But it isn't easy to separate a man and his program. Just possibly, voters may expect Congress to support him on this whether or not he exercises a strong initiative. Surely the wiser heads in both parties will move cautiously before consigning him to political limbo.

What About Saturday Love Letters?

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by H. I. Phillips entitled "What About Saturday Love Letters?":

WHAT ABOUT SATURDAY LOVE LETTERS?—AND WHERE'LL PEOPLE SWIPE PENS IF POST OFFICE CLOSES FOR A DAY?

(By H. I. Phillips)

It was nice of the Postmaster General to extend the life of correspondence in America for another week. Mr. Summerfield spent most of his life in the automobile business, which may partly explain his threat to take the spotlight off autos and put it on letter carriers.

He gave the country the three-tone mailbox and better mail-wagon upholstery, but last week he forgot to put shock absorbers on Congress and the public.

With Uncle Sam dishing out billions right and left, it is hard to see why the postal service, deep in the red, should be singled out for cuts, but the Postmaster General may not be doing his cause much good by acting more like an auto dealer trying to recover a hardtop from a nonpaying customer than like a Government official trying to win fair

play from Congress. He seems to keep his finger on the horn while talking.

Some members of the appropriations committee are saying things about him that wouldn't be allowed through the mails.

WHAT OF LOVE LETTERS?

At a time when the world's greatest need is affection and comfort, Mr. Summerfield would hold up love letters from the Friday coffee-break to Monday of next week. He would treat romance, courtship, marriage, and a letter to mother strictly under the head of business enterprises.

He could go down into history as the postman who rang only once, and not at all on Saturday.

With his automobile selling background, he talks as an extra not included in the basic price.

Think of the blow to the love life of a nation if millions of tender epistles got stacked up in our post offices from Friday to Monday. And how can an administration boasting of its support for business and prosperity tolerate also a slowdown in business correspondence?

Fancy not being able to enter a post office on Saturday even to swipe a pen or see who's wanted by the police for forgery and safecracking.

The biggest laugh is found in Mr. Summerfield's statement that the cut in service won't apply to special delivery letters. Gosh, a special delivery stamp can delay a letter until an entire congressional session is ended.

Chicago's Negro Population Second Largest in Nation

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. O'HARA of Illinois. Mr. Speaker, Chicago has the second largest Negro population in the country, now over 600,000, compared with half that figure in 1940. I am extending my remarks to include the following article from the widely read and highly rated Chicago Defender, issue of April 13, 1957:

NEW BOOK PROBES STATUS OF CHICAGO'S NEGRO LIFE

The Chicago Negro, who he is, where he comes from, where he lives, and how he has affected the distribution of races in Chicago, is the subject of a new book to be published March 26. The book, the Negro Population of Chicago, was written by Otis D. and Beverly Duncan and published by the University of Chicago Press.

The first complete study of its kind, the Negro Population of Chicago attempts to shed cold statistical light on one of the Nation's hottest subjects.

Chicago is not the only city with a Negro population problem. Thirty northern and western cities, in the period from 1940 to 1950, more than doubled their nonwhite population. The Duncans, a husband and wife research team from the University of Chicago's population-research center, point to New York's Negro population, which has increased from 669,000 to 1,046,000.

Thus New York has the Nation's largest Negro community. Chicago has the second largest with a population of over 600,000—nearly twice the 1940 Negro population.

Since "The Negro Population of Chicago" is a statistical study, little attempt is made in the book to study the consequences of the facts brought to light. The authors' statement on the book is "that one of the major sources of social disorganization in the contemporary American city (is) its inability to accommodate and assimilate the southern Negro."

"The patterns described in this book," they note, "and the social problems arising out of them, are not unique to Chicago." They are observed, with local variations, in each of the northern metropolises where Negroes have increased in numbers at rates of 50 to 100 percent per decade.

"Today the focus of attention, renewal slum clearance programs and the provisions of public housing. But it remains a real question whether such measures can eradicate substandard housing and its attendant problems as rapidly as they are created.

"While the Nation debates the issue of segregation in southern schools, the North is neglecting the so-called race problem at the heart of the problem of the survival of the city itself."

The growth of the Negro population in Chicago resembles, according to the Duncans, the growth of previous foreign-born migratory groups. In other generations it was the influx of Europeans that caused Chicago to grow. Today, most of Chicago's population growth is due to increasing numbers of migrating and multiplying nonwhites.

The most important difference and the Negro migrant is the fact that the Negro faces more barriers to his assimilation in the "melting pot" process and to reaching new economic levels.

For this reason, economic status is the chief factor for determining where new Americans may live, while the movement of the Negro is highly restricted. Hence the improvements in living conditions which we have come to expect of all migrants is to a great extent prevented among Negroes.

Organized and unorganized attempts to restrict the Negro geographically, in addition to social ties and economic differences, have led to the creation of Negro ghettos throughout the country. This is most evident in Chicago.

The tremendous Negro migrations from the South to Chicago during World War II and in the postwar years, stimulated by an acute labor shortage, have filled the city's Negro ghettos to the point where satisfactory adjustment to new life in the North by the newcomers is impossible. In areas surrounding the Negro ghetto, the competition for living space with white residents has been keen and even the cause of violence.

The penetration of Negroes into hitherto white areas of Chicago is a major factor in changing the proportion of whites to Negroes. In the last 20 years, the Negro has increased in number while the white population has decreased. Today 1 of every 6 Chicagoans is nonwhite.

Inheriting the effects of poor educational standards in the South, Chicago's welfare agencies have had to deal with thousands of young adults having practically no education or skills. However, the Duncans show that the number of Chicago-educated Negroes is increasing and changing the character of the nonwhite population.

Further, an increase is seen in the migration of whole family units which should tend to stabilize the behavior of Negro youth.

The last 10 years has seen tremendous improvements in the economic status of the Negro. In 1940 two-thirds of the nonwhite population of Chicago were engaged in unskilled and semiskilled personal services.

In 1950 only one-third of the Negro population was engaged in personal services. A tremendous shift to industrial work, the trades, and to some extent even the professions has taken place.

Baseball: The Game for All America

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. PRICE. Mr. Speaker, today is the opening day for major-league baseball. The President of the United States will throw out the first ball. Thirty thousand people will be crammed in Griffith Stadium. Millions of Americans will await the final score of the first game of the season.

Baseball is the game for all America. It is most aptly described in a tribute by Mr. Ernie Harwell, which first appeared as a guest editorial in the season-opening issue of the Sporting News 2 years ago. It has since become a classic. It has frequently been reprinted, quoted by speakers, and represented by a framed copy in Baseball's Hall of Fame at Cooperstown, N. Y. It has become a classic.

With the approval of the House, I herewith offer it for printing in the CONGRESSIONAL RECORD.

THE GAME FOR ALL AMERICA

(By Ernie Harwell)

Baseball is President Eisenhower tossing out the first ball of the season; and a pudgy schoolboy playing catch with his dad on a Mississippi farm.

It's the big-league pitcher who sings in nightclubs. And the Hollywood singer who pitches to the Giants in spring training.

A tall, thin old man waving a scorecard from his dugout—that's baseball. So is the big, fat guy with a bulbous nose running out one of his 714 home runs with mincing steps.

It's America, this baseball. A reissued newsreel of boyhood dreams. Dreams lost somewhere between boy and man. It's the Bronx cheer and the Baltimore farewell. The left-field screen in Boston, the right-field dump at Nashville's Sulphur Dell, the open stands in San Francisco, the dusty, windswept diamond at Albuquerque. And a rock home plate and a chicken-wire backstop—anywhere.

There's a man in Mobile who remembers a triple he saw Honus Wagner hit in Pittsburgh 46 years ago. That's baseball. So is the scout reporting that a 16-year-old sandlot pitcher in Cheyenne is the new "Walter Johnson."

It's a wizened little man shouting insults from the safety of his bleacher seat. And a big, smiling first baseman playfully tousling the hair of a youngster outside the players' gate.

Baseball is a spirited race of man against man, reflex against reflex. A game of inches. Every skill is measured. Every heroic, every failing is seen and cheered—or booed. And then becomes a statistic.

In baseball, democracy shines its clearest. Here the only race that matters is the race to the bag. The creed is the rule book. Color is something to distinguish one team's uniform from another.

Baseball is Sir Alexander Fleming, discoverer of penicillin, asking his Brooklyn hosts to explain Dodger signals. It's Player Moe Berg speaking seven languages and working crossword puzzles in Sanskrit. It's a scramble in the boxseats for a foul—and a $125 suit ruined. A man barking into a hot microphone about a cool beer, that's baseball. So is the sports writer telling a .383 hitter how to stride, and a 20-victory pitcher trying

to write his impressions of the World's Series.

Baseball is a ballet without music. Drama without words. A carnival without kewpie dolls.

A housewife in California couldn't tell you the color of her husband's eyes, but she knows that Yogi Berra is hitting .337, has brown eyes and used to love to eat bananas with mustard. That's baseball. So is the bright sanctity of Cooperstown's Hall of Fame. And the former big leaguer, who is playing out the string in a class B loop.

Baseball is continuity. Pitch to pitch. Inning to inning. Game to game. Series to series. Season to season.

It's rain, rain, rain splattering on a puddled tarpaulin as thousands sit in damp disappointment. And the click of typewriters and telegraph keys in the press box—like so many awakened crickets. Baseball is a cocky batboy. The old-timer whose batting average increases every time he tells it. A lady celebrating a home-team rally by mauling her husband with a rolled-up scorecard.

Baseball is the cool, clear eyes of Rogers Hornsby, the flashing spikes of Ty Cobb, an overaged pixie named Rabbit Maranville, and Jackie Robinson testifying before a congressional hearing.

Baseball? It's just a game—as simple as a ball and a bat. Yet, as complex as the American spirit it symbolizes. It's a sport, business—and sometimes even religion.

Baseball is tradition in flannel knickerbockers. And chagrin in being picked off base. It is dignity in the blue serge of an umpire running the game by rule of thumb. It is humor, holding its sides when an errant puppy eludes 2 groundskeepers and the fastest outfielder. And pathos, dragging itself off the field after being knocked from the box.

Nicknames are baseball. Names like Zeke and Pie and Kiki and Home Run and Cracker and Dizzy and Dazzy.

Baseball is a sweaty, steaming dressing room where hopes and feelings are as naked as the men themselves. It's a dugout with spike-scarred flooring. And shadows across an empty ball park. It's the endless list of names in box scores, abbreviated almost beyond recognition.

The holdout is baseball, too. He wants 55 grand or he won't turn a muscle. But, it's also the youngster who hitch hikes from South Dakota to Florida just for a tryout.

Arguments, Casey at the Bat, old cigarette cards, photographs, Take Me Out to the Ball Game—all of them are baseball.

Baseball is a rookie—his experience no bigger than the lump in his throat—trying to begin fulfillment of a dream. It's a veteran too—a tired old man of 35, hoping his aching muscles can drag him through another sweltering August and September.

For 9 innings, baseball is the story of David and Goliath, of Samson, Cinderella, Paul Bunyan, Homer's Iliad and the Count of Monte Cristo.

Willie Mays making a brilliant World Series catch. And then going home to Harlem to play stick-ball in the street with his teen-age pals—that's baseball.

And so is the husky voice of a doomed Lou Gehrig saying, "I consider myself the luckiest man on the face of this earth."

Baseball is cigar smoke, hot-roasted peanuts, the Sporting News, winter trades, "down in front," and the "seventh-inning stretch." Sore arms, broken bats, a no-hitter, and the strains of the Star Spangled Banner.

Baseball is a highly paid Brooklyn catcher telling the Nation's business leaders: "You have to be a man to be a big leaguer, but you have to have a lot of little boy in you too."

This is a game for America, this baseball.

Two Towns Show How To Improve by Improving

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD I include herewith an editorial entitled "Two Towns Show How To Improve by Improving" which appeared in the April 11, 1957, issue of the Courier Journal of Louiville, Ky.

The editorial is as follows:

TWO TOWNS SHOW HOW TO IMPROVE BY IMPROVING

The people of Franklin and Cave City have reason to be proud today—proud of their home towns and proud of themselves. For their two cities have just been selected by the Kentucky Chamber of Commerce as the State's outstanding communities in civic progress and local improvement.

There is an object lesson in Franklin and Cave City that might be noted by the leaders of other towns who fear that progress and industrial development are passing them by. For neither of these towns has anything in the way of physical facilities that dozens of other Kentucky towns do not have. Neither of them, a few years ago, had any special lure to offer new business or to attract new industry. Yet in both communities, new industry and expanded business are evident today, part of the overall progress for which the cities have been cited.

New business was not the only reason for their selection, however. In both towns, the merchants are building new store fronts, improving the interiors of their stores, expanding their lines of merchandise. They boast new school buildings, new street-lighting projects, new hospitals, a program of improved pay for teachers, better street projects.

THE RIGHT KIND OF SPIRIT

The point is that both Franklin and Cave City attracted new business because they started these improvement projects first. The people of Franklin started their improvement program not to attract industry but to make the town a place where its educated young people would like to stay. They decided to remake their town, and to change the attitude of the people in it.

When the time came to look for new sources of income and employment, they had a labor survey ready, and $250,000 for industrial site buying, as incentives for potential industrial investors. That's the kind of spirit industry likes to find, and in time new plants began finding their way to Franklin. Now the payrolls from these new plants will help spark further improvement that will make for further expansion. It's a cycle of prosperity that builds on its own momentum.

In too many towns, officials sit and wait and wish for the chicken to come before the egg, unwilling to face the tough fact that civic progress must produce industry before industry can produce prosperity and more progress. Fraklin and Cave City are to be congratulated for having the courage and energy to hatch the egg rather than to sit wishing for a chicken.

The State Chamber of Commerce is to be commended, too, for having a program that recognizes and rewards progress and local initiative. Too often, we fear, chambers of commerce tend to become little more than lobbies for employer groups, given to denunciation of union labor, income taxes, cooperatives and government in general, and to public yearning for the good old days of Harding-type free enterprise. It is an attitude, a state of mind, that can frustrate and stagnate a chamber of commerce as well as a city. For as Franklin and Cave City have shown, it is not enough to stand pat or long for the past.

Great Lakes Water Important to Several States

EXTENSION OF REMARKS
OF
HON. DAVID S. DENNISON, JR.
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. DENNISON. Mr. Speaker, the 11th District of Ohio which I have the honor to represent, is one of the most dynamic and fastest growing in the United States. We have three great ports on the Great Lakes and the welfare and livelihood of hundreds of thousands of people in northeastern Ohio and throughout the State are closely knit with the waters of the Great Lakes. We, in Ohio, cannot permit diversion of any water from the lakes without protest unless there is an overall study to determine the rights of all the States bordering the lakes. The problem we face is set forth clearly in the following editorial from the News-Herald, published in Conneaut, Ohio, one of the major harbor cities on the Great Lakes. I commend careful study of this editorial to the other Members of the House:

STOP NEW WATER STEAL

Conneaut Harbor, with its top-ranking ore port, has a vital interest in hearings now underway in Washington on the proposed diversion of Great Lakes water into the Illinois Waterway.

With the coming of the St. Lawrence seaway, Conneaut and other lake ports will need even deeper harbor channels. Lowering of the lake level from the water diversion would have the opposite effect.

Immediate result of any drop in the lake level would be a reduction in the size of ore cargoes and a resultant increase in transportation costs.

A natural lowering of the lake levels in the last 3 years of at least 21 inches has reduced the cargo capacity of the Great Lakes fleet by 5,040,000 tons, according to Lyndon Spencer, president of the Lake Carriers Association.

"At present the natural trend of lake levels is downward and this trend may well continue for several years," Spencer testified at the Washington hearing. "Under these circumstances increased diversion would only add to the lower levels from natural causes. But whether the lowering is natural or manmade, the effect on vessel capacity and on Great Lakes commerce, is equally grave."

It is estimated the annual potential cargo loss to the United States and Canadian fleets from increased diversion would total almost 1,500,000 tons a year with a resulting economic loss of about $2,500,000.

Present diversion is 1,500 cubic feet a second, plus domestic pumpage, the total of

which already lowers Great Lakes levels by nearly 2 inches.

Bills introduced by Illinois Congressmen would authorize an increase of 1,000 cubic feet a second in the diversion of water from Lake Michigan into the Illinois Waterway.

Congress should turn down this new water steal.

A Day for Schoolma'ams—Why Not?

EXTENSION OF REMARKS
OF
HON. MICHAEL J. KIRWAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. KIRWAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by H. I. Phillips, entitled "A Day for Schoolma'ams—Why Not?":

A DAY FOR SCHOOLMA'AMS—WHY NOT?—ONLY JOB THAT'S TOUGHER IS EXTRACTING TEETH IN A MENAGERIE

(By H. I. Phillips)

America is to have a Schoolteacher's Day. It's about time. Who rates it more? A schoolma'am is close to No. 1 in the building of a civilized society. She is a bulwark of progress. She, as much as anybody else, makes America what it is. And she has tough going all along her journey. Consider the public schoolteacher:

Hers is one of the few professions where opposition, contrariness, and stubbornness are nonstop. Her calling takes not only patience, intelligence, skill, and tact, but intestinal fortitude, self-sacrifice, a sense of dedication, and a talent for enduring anguish.

She gets little credit if Junior seems fairly smart, and all the blame if he fails to be Phi Beta Kappa material.

She dedicates the best years of her life to a great purpose and is supposed to be satisfied with a red apple, and maybe one polite sentence in a 2-page note denouncing her for not letting little Willie run the classroom unrebuked.

MUST SUFFER GLADLY

A schoolteacher is entitled to more nervous breakdowns in a single school week than most folks are asked to endure in a lifetime.

She must smile when her heart is broken, her stamina weakened, her patience exhausted and her headaches made king sized.

It is her job to suffer indignities gladly, take it on the chin calmly and register no complaint except by request.

Her job is one of the toughest on earth, barring bear training, teeth extraction in a zoo, and the mental training of army mules.

A schoolma'am must be a glutton for harassment.

She must combine the qualities of Mollie Pitcher, Clara Barton, the Old Woman Who Lived in a Shoe, and the grandmother in Little Red Riding Hood.

If Junior grows up to become a millionaire owner of the steelworks she doesn't get honorable mention, but if he winds up in the hoosegow the consensus is that she must shoulder the blame.

She gives much, asks little, and expects less.

All her life she must endure the cries of, "Teacher slapped me for nuthin'," "No matter what you say, he's a good boy," and "I've a good mind to complain to the board of education."

Her career is a sacrifice wrapped in a dedication.

She must love children beyond the call of affection and be kind to moppets even when they pick her as a target when they want to play Indian.

We salute her. And while we are at it we give a cheer for the male teacher, the principal, and the dean.

Hawaiian Statehood Benefits United States

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. BURNS of Hawaii. Mr. Speaker, statehood for Hawaii is to the benefit of the United States of America in more ways than one. One of the benefits is that it gives full recognition to the great Americans that compose the population of the Territory of Hawaii. Statehood removes the citizens of Hawaii from the apron strings of the mother—the United States of America.

The record of Hawaii's citizens in war—whether as civilians or as fighting men on the worldwide battlegrounds—has been outstanding. Equally outstanding is the performance of the Americans of Hawaii—and they are all Americans—in the normal everyday pursuits of the United States.

An outstanding exemplification of this Americanism was the recognition given Frank W. C. Loo as one of the Ten Outstanding Young Men of the Nation in 1956.

Nominations for the Ten Outstanding Young Men of America are solicited annually from the general public and are limited to men between the ages of 21 through 35. Two questions are considered by the judges:

First. What outstanding contribution did the nominee make to his work or profession?

Second. What outstanding dedication of service did the nominee make to the general welfare of the people?

Judges on this year's panel were: Adm. William A. Radford, chairman, Joint Chiefs of Staff, Department of the Navy; Walter L. Hayes, Orlando, Fla., president, American Fire and Casualty Co.; W. Howard Chase, New York, N. Y., Communications Counselors, Inc.; Carl T. Rowan, Minneapolis, Minn., Star-Tribune.

William E. Robinson, New York, N. Y., president, the Coca-Cola Co.; John S. Coleman, Detroit, Mich., president, Chamber of Commerce of the United States; Ben H. Wooten, Dallas, Tex., First National Bank in Dallas; Dean Robert G. Storey, Dallas, Tex., SMU law school.

Richard D. Weigle, Annapolis, Md., president, St. John's College; H. Roe Bartle, mayor of Kansas City, Mo.; Bishop G. Bromley Oxnam, Washington, D. C., bishop of the Methodist Church; Walter B. Martin, M. D., Chicago, Ill., past president, American Medical Association; and Frank Leahy, Michigan City, Ind., Merritt-Chapman & Scott.

It will be noted in the following citation that Frank W. C. Loo was cited as originator and general chairman of National Citizenship Day observance in Hawaii. It is particularly noteworthy that Mr. Loo was educated in the local schools of Hawaii. He is an example of the kind of citizens Hawaii is producing. The United States will add to its resources by the admission of Americans of Hawaii to full-fledged membership in the Union as citizens of the State of Hawaii.

The citation follows:

TEN OUTSTANDING YOUNG MEN OF THE NATION FOR 1956

FRANK W. C. LOO

Born November 20, 1922, Honolulu, Hawaii, attorney at law.

Schools attended: University of Hawaii, United States Merchant Marine Academy, Ohio University, Yale University.

Degrees: Bachelor of arts, bachelor of science, and bachelor of laws.

Affiliations: Kamehameha Lions Club; past president, Chinese Catholic Club; director, Pearl Harbor Apprentice Alumni Association; vice president, Chinese Literary Improvement Association; St. Stephens Church; member, Chinese Chamber of Commerce; La Kalihi-Kai Elementary School PTA.

Activities: Past vice commander, Kau-Tom Post, No. 11, American Legion; advisory board member, St. Anthony's Home for Dependent Children; board member, World Brotherhood, Hawaii chapter; operates own law firm in general practice; active in community affairs, including Americanism and citizenship, religious activities, education, and community betterment.

The legal profession is normally expected to provide more than its share of volunteer leadership for the betterment of the community. Frank Loo, of Honolulu, Hawaii, is to be considered the least of exceptions.

Named the Outstanding Young Man of 1956, Loo has more than demonstrated to the public that members of his profession believe in community service without thought of personal gain or monetary remuneration. Utilizing his professional training for community service, Loo has extended his interests to include active participation in Americanism and citizenship, education, community betterment, and religious development programs.

Engaged in the private practice of law in his own firm since 1952, Loo has served on the important Committee on Unauthorized Practices and Legal Ethics, whose duty it is to investigate and prevent the unlawful practice of law by unlicensed persons, as well as the respectability of maintaining high standards of ethical conduct among attorneys and judges.

Loo has offered his voluntary legal services to several community organizations, including the St. Anthony's Home, a Community Chest institution caring for dependent children; American Legion, Kau-Tom Post, No. 11; Department of Hawaii; the Chinese Catholic Club; and the Oahu Council Diocesan Union of Holy Name Societies.

As originator and general chairman of National Citizenship Day observance in Hawaii, Loo, in cooperation with the junior chamber and the United States district court, arranged 2 ceremonies in 1953 during which some 400 aliens were naturalized before a large Hawaiian audience. For this project, the Honolulu Jaycees earned the highest United States Junior Chamber of Commerce national award for Americanism.

Through his unselfish efforts to help his fellow man and to contribute toward the betterment of his community, Loo has en-

gendered abounding good will in his community toward the legal profession because he stands out as an excellent example of individual leadership for community service without personal gain or monetary remuneration.

Labor Stand on Civil Rights

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. SMITH of Mississippi. Mr. Speaker, today, as a quarter of a century ago, a great fight is developing in the Congress to assure guaranteed right of jury trials in contempt of court cases.

Twenty-five years ago the issue was whether or not persons charged with contempt of court in connection with labor disputes would be guaranteed jury trial. With the help of the virtually solid vote of southern Members of Congress, American labor won one of its greatest legislative safeguards through the passage of the Norris-LaGuardia Act.

Today, southern Members of Congress are fighting to assure trial by jury to anyone who may be charged with contempt of court in connection with the proposed civil-rights legislation now pending. I hope that when the showdown comes on this issue, they will not be fighting without support.

Morris Cunningham, Washington correspondent for the Memphis Commercial Appeal, has just published an excellent series of articles reviewing the fight made in 1932 in behalf of the Norris-LaGuardia Act. Mr. Cunningham's painstaking research makes it clear that the issue in 1932 was the same as today, involving the basic American right of jury trial. Under unanimous consent, I include Mr. Cunningham's articles as an extension of my remarks.

The articles follow:

DIXIE, UNIONS, AND JURY TRIAL—SOUTHERNERS STANDING ALONE IN CIVIL RIGHTS JUDICIAL FIGHT—DESERTED BY UNION LEADERS, NORTHERN LIBERALS IN BATTLE FOR GUARANTEED JURY TRIALS—SIMILAR SCRAP OF 25 YEARS AGO RECALLED

(By Morris Cunningham)

WASHINGTON, April 6.—For the second time in this century a great cry is being raised for the guaranteed right of jury trials in contempt of court cases.

This time southerners are demanding that such a guarantee be included in President Eisenhower's civil rights bill.

Twenty-five years ago the battle was fought over the inclusion of a similar guaranty in labor laws, so that persons charged with contempt of court in connection with labor disputes would be guaranteed jury trials.

With the help of Southern congressmen, labor union leaders and Northern liberals won their battle with the passage of the Norris-LaGuardia Act in 1932.

But today, in the new battle, southerners stand virtually alone—deserted by their allies in that bygone battle.

Indeed, modern-day union leaders have switched to the other camp and are actually advocating the injunctive procedures and denial of jury trials in contempt cases they once fought so bitterly.

WELL ENTRENCHED

But today labor unions are well entrenched, their existence no longer threatened by "government by injunction" as it seem to them in bygone years.

This series of articles will attempt to review the history of court injunctions in labor disputes, of their use with the support of troops and police to enforce the hated "yellow dog" labor contract, of the countless persons jailed without jury trials for contempt of court, and of the years of strife and bloodshed before labor achieved—with Southern support—the beginnings of its powerful present-day status.

The articles will endeavor to relate that bloody and bitter period in American history to the present campaign to invoke the same judicial procedures to enforce racial integration in the South.

And in the course of the articles it will be shown how northern liberals and labor leaders have switched their position in relation to court injunctions and the principle of trial by jury.

CONTRACT EXPLAINED

First, it should be explained that a yellow-dog contract was an agreement between employer and employee in which the employees, as a condition to getting a job, agreed to refrain from joining a labor union or participating in union activities.

Through a United States Supreme Court decision prior to 1932, such contracts were enforced through court injunctions, frequently backed by troops and police.

A person who violated an injunction was tried for contempt of court, without a jury, by the judge who issued it. And frequently he was summarily jailed.

A parallel easily can be seen here between the United States Supreme Court's school-desegregation decision and the situation that has arisen from it, including the contempt charges that have been filed at Clinton, Tenn., and the provisions of the administration's civil-rights bill.

The first State court injunction in a labor case was issued in 1888, the first by a Federal court in 1891. Thereafter, injunctions in labor disputes, with contempt charges tried without a jury, became common.

Labor-union leaders, it should be noted, did not recognize the Court decision in respect to the yellow-dog contract as the law of the land.

BITTER WARFARE

Instead, they waged bitter and relentless political warfare against that as well as other adverse court decisions, seeking in every conceivable way to nullify them.

Labor's friends in Congress, including an overwhelming majority of Southerners, took up the battle and fought to override the decisions with Federal legislation.

Bills were introduced in Congress for 14 consecutive years before the Norris-LaGuardia Act finally was passed in 1932, labor's most important victory to that time.

In the bitter years preceding that action, the courts themselves came under attack, frequently on the floors of Congress.

Representative Leonidas C. Dyer, Republican of Missouri, declared on the floor of the House in 1932 that "some of the judges that have been appointed are absolutely without question unfit judicially and otherwise to pass upon matters affecting human rights, as they have demonstrated by the issuance of very arbitrary and unjust injunctions."

HIT BY BANKHEAD

Representative William B. Bankhead, Democrat of Alabama, one of the many Southerners fighting with labor on the issue, declared on the same day:

"It has become apparent that some of the Federal judges, clothed with a little brief authority, seem to have forgotten absolutely the fundamental essence of our judicial system in some of the injunctions they have imposed against organized labor."

As early as 1930, the brilliant Harvard University law professor, Felix Frankfurter, now an associate justice of the United States Supreme Court, wrote:

"Organized labor views all law with resentment because of the injunction, and the hostility which it has engendered has created a political problem of proportions."

Roscoe Pound, dean of the Harvard University Law School, likewise commented upon the growing distrust of the courts, wrote:

"The attitude of many of our courts on the subject of liberty of contract is so certain to be misapprehended, is so out of the range of ordinary understanding, the decisions themselves are so academic and so artificial in their reasoning, that they cannot fail to engender such feelings."

URGED RESTORATION

Donald R. Richberg, a labor attorney then representing the Railway Shop Trade Union, wrote: "It is * * * worthwhile to point out the misdirection of persistent efforts to combat natural laws of human conduct with artificial laws."

Former Senator George Wharton Pepper suggested that Congress restrict the courts as a mean of restoring and maintaining public confidence in the juriciary.

"To maintain such confidence," he asked, "must we not confine the courts to the sphere in which the creators of our constitutional system intended them to live and move and have their being?"

DIXIE, UNIONS AND JURY TRIALS—LABOR STAND ON CIVIL RIGHTS IGNORES OWN BATTLE OF THIRTIES

(By Morris Cunningham)

WASHINGTON, April 7.—With jury trial of contempt charges long since guaranteed in labor cases, today's labor union leaders show no concern over a threatened denial of this right in civil-rights proceedings.

On the contrary, today's union leaders are actually advocating that in civil-rights cases the Nation return to the judicial procedure they once denounced as a "Gatling gun on paper."

It was this procedure, before the passage of the Norris-LaGuardia Act in 1932, that was used to enforce the "yellow dog" contracts which banned union membership and which employees had to sign to get jobs.

Felix Frankfurther, now an Associate Justice of the Supreme Court, wrote in 1930 that this situation posed "a threat to the very existence of labor unions."

PERILOUS PAST FORGOTTEN

Yet today union leaders appear to have forgotten this perilous past in their zeal to enforce so-called civil rights.

Andrew J. Biemiller, chief lobbyist for the AFL–CIO, is one of the several present-day union leaders who has testified in behalf of the administration's civil-rights bill, which would provide for injunctions to enforce civil rights and which would contain no guaranty for jury trial of contempt charges.

"The AFL–CIO strongly advocates this proposal," Mr. Biemiller told a House Judiciary subcommittee last month.

He said his now powerful labor organization favors the administration bill, and its injunctive procedures, because present laws on civil rights require that charges arising from them must be tried "before a jury drawn from the locality in which the crime was committed."

"Experience shows," he continued, "that in certain types of cases, not limited to civil

rights, the local juries simply will not convict regardless of the evidence."

With that, the modern-day labor lobbyist disposed of an argument that his predecessors in the labor movement vigorously advanced for many bitter years, until they finally won their point with the passage of the Norris-LaGuardia Act.

And by a curious coincidence, Mr. Biemiller's contention that the right of trial by jury must be bypassed because juries will not convict in some cases was precisely the same as that advanced against giving labor that right in 1932.

It was raised, among other critics of labor, by Representative Thomas L. Blanton, Democrat of Texas, the only southerner in 1932 who voted against passage of the Norris-LaGuardia Act in either the House or Senate.

FEARED SYMPATHIZERS

Mr. Blanton charged that juries hearing contempt cases arising from labor disputes would be composed of labor sympathizers. And pointing to prolabor representatives in the House debate that preceded passage of the Norris-LaGuardia Act, he demanded:

"What kind of juror would our friend from New York, Representative John P. O'Connor, make in a case like this, a man who says he hates the Federal courts? What kind of a juror would Mr. L. C. Dyer make in an injunction case? What kind of a juror would Mr. Fiorello LaGuardia make? They would have the case decided before it was ever called. I do not want that kind of a juror in my case."

That was the type of argument that was being made against labor only 25 years ago. Yet today union leaders join with the NAACP and other pressure groups in echoing the same arguments in respect to southern juries in civil rights cases.

And Mr. Biemiller is not alone in his latter-day contentions. Walter Reuther, a vice president of the AFL–CIO and head of the United Auto Workers Union, and other modern union leaders also are advocating passage of the administration's civil rights bill.

NO MENTION OF TRIAL RIGHT

At its February 4 meeting in Miami Beach, the AFL–CIO executive committee adopted a resolution stating:

"We urge that the present civil-rights laws be strengthened by authorizing the attorney general to bring civil actions to prevent or redress certain acts or practices which violate existing civil-rights acts."

This 1957 labor resolution made no mention of preserving the right of trial by jury in contempt cases arising from court injunctions. Since the introduction of the Administration's civil-rights bill last year labor union leaders have maintained a notable silence on this issue. But it was not always so.

In 1932, labor witnesses before the House Judiciary Committee, then considering the proposed Norris-LaGuardia Act, made vigorous arguments in behalf of trial by jury in contempt cases arising from labor injunctions.

The hearing transcript shows that James S. Easby-Smith, counsel for the American Federation of Labor, thumbed the lawbooks all the way back to 1200 A. D. to try to prove the validity of jury trials in contempt cases.

CITED ENGLISH LAW

Mr. Easby-Smith argued that English law, from which American jurisprudence was derived, clearly provided for jury trials in such cases.

He said the Magna Carta, the English Bill of Rights, decreed that "no man shall be destroyed nor punished save upon the judgment of his peers and the law of the land." And, he said, "that meant a jury trial."

Donald R. Richberg, representing railroad unions, picked up the argument where Mr. Easby-Smith left off.

"The prevailing English practice up to the adoption of the Constitution of the United States," Mr. Richberg told the committee, "was to punish contempt of court through trial by jury, usually upon indictment or information.

"And yet the argument was made and had been made in the Supreme Court of the United States for 100 years that it was the inherent power of a court of equity to try contempt cases by the court, and that when the court was created by the Federal Government that power was poured into the court. It was absolutely untrue historically, and it was untrue as a fact, and of the intention of the framers of the Constitution who passed the first judicial act.

"I have made this point here because one of the questions here involved (in the proposed Norris-LaGuardia Act) is the right of trial by jury."

The Norris-LaGuardia Act became law March 23, 1932. In addition to banning "yellow dog" contracts, it assured for labor two rights which southerners now seek to incorporate into the administration's civil-rights bill—a hearing before the issuance of injunctions, and jury trial of contempt charges resulting from any alleged violation of the injunction.

DIXIE UNIONS, AND JURY TRIALS—SOUTH'S STAND CONSISTENT

(By Morris Cunningham)

WASHINGTON, April 8.—Southern Congressmen have been consistent in fighting for the right of jury trials in contempt court cases.

Twenty-five years ago they fought side-by-side with prolabor Congressmen to pass the Norris-LaGuardia Act and to assure jury trials in contempt cases arising from labor disputes.

Today Dixie Congressmen are making approximately the same arguments their predecessors made a quarter century ago to obtain this same guaranty in the administration's civil rights bill.

There is a ring of familiarity in the Dixie arguments of today and 25 years ago. For instance, here is what Representative Gordon Browning (Democrat of Tennessee), later two-time Governor of Tennessee, said on the House floor in behalf of the Norris-LaGuardia bill, March 8, 1932:

"Another principle we undertake to enunciate here is not new, and that is the right of trial by jury. The insistence is made against this measure that it is robbing the people of the right to prevent a wrong, which would be better than undertaking to remunerate them for the wrong done.

"In my humble opinion that is not the principal reason for those people undertaking to hold on to this practice of the Federal courts.

"The principal reason is that they would rather undertake to convince one man, who is schooled in the thought of their economic beliefs, than to convince 12 men of their rights in a trial by jury.

"The right of trial by jury is a constitutional right. It goes back to the first declaration of English rights.

"We have a situation now by which a man may be enjoined by a Federal court without notice, and either through ignorance or intention he violates that injunction. He is arraigned before the court, which is not only the legislature but the grand jury, the trial judge and the prosecuting attorney; the man is sent to jail without a trial by jury, which is guaranteed to him under the Constitution; and then another court on appeal, 2 or 3 years later, may decide that the injunction was wrongfully issued.

"However, that man has been punished, not only wrongfully, but punished contrary to the fundamentals of the Constitution. I say it is not right for such a practice to be perpetuated in this free country of ours, and that is one of the things which is being objected to in the passage of this bill."

The CONGRESSIONAL RECORD shows that at the conclusion of his remarks, Mr. Browning was applauded, presumably by and Northern liberal and prolabor Congressmen.

Yet today, when Dixie Congressmen make approximately the same arguments in behalf of jury trial of contempt charges in civil-rights cases, they are greeted by rebuttals from labor union leaders, and by cries of derision from the Northern liberals.

Mr. Browning was not the only southerner to support passage of the Norris-LaGuardia Act. In fact, the RECORD shows that only one southerner voted against it in the House, and none in the Senate.

The single Southern opposition vote was cast by Representative Thomas L. Blanton, Democrat, of Texas.

Congress had thought hat it had successfully assured jury trials in contempt cases involving labor with the passage of the Clayton Act in 1914. But a series of court decisions greatly restricted its applicaiton. Representative Fiorello H. LaGuardia, Republican, of New York, coauthor of the Norris-LaGuardia Act, charged that the courts manned by politically-appointed judges had emasculated the Clayton Act.

Representative E. H. Crump, Democrat, of Tennessee, later to become Tennessee's topmost Democratic leader, was a Member of the House in 1932 and joined in supporting and voting for the Norris-LaGuardia Act.

So did Representative JERE COOPER, Democrat, of Tennessee, who is still a Member of the House; Senators Kenneth D. McKellar and Cordell Hull of Tennessee, and all of the other Tennessee Congressmen of that year.

Also voting for the bill were the Mississippi delegation, which included Representative John E. Rankin and Senators Pat Harrison and Hubert D. Stephens, among others.

Senators Joseph T. Robinson and Hattie W. Caraway and the Representatives from Arkansas also joined with the other southerners, with the single exception of Mr. Blanton, of Texas, in supporting the labor bill.

Southern support was so great, in fact, that the RECORD shows that a good-natured dispute broke out on the House floor as to whether the South could take credit for the passage of the bill.

Representative Charles L. Gifford, Republican, of Massachusetts, took exception to a remarks by Representative William B. Bankhead, Democrat, of Alabama.

"Why, down there," the Massachusetts Republican exclaimed, "they resist efforts to organize; they say to the American Federation of Labor that they are entirely unwelcome to come into those States to help organize labor there."

"And yet," Mr. Gifford continued, "we hear the Democratic Party of the South claiming credit for this bill favoring organized labor."

Mr. Gifford couldn't understand it. But there was more to the Norris-LaGuardia Act than prolabor legislation. It involved the constitutional right of trial by jury—a right for which Dixie Congressmen are still fighting.

MR. CELLER REFUTES HIMSELF

(By Morris Cunningham)

WASHINGTON, April 9.—Twenty-five years ago Representative EMANUEL CELLER, Democrat, of New York, protested the widespread use of court injunctions in labor disputes.

Today Mr. CELLER, now chairman of the House Judiciary Committee, takes a different view in respect to injunctions in civil-rights cases.

And while he supported the Norris-LaGuardia Act in 1932, which assured jury trial of contempt charges in labor cases, he

is today demonstrating no interest in the southern fight to guarantee jury trial of contempt charges in civil-rights cases.

In fact, he is reported to have voted with the majority in a recent executive session of his committee during which a southern amendment to the administration's civil-rights bill was rejected 17 to 15.

On March 8, 1932, Mr. CELLER delivered a speech on the House floor in behalf of the Norris-LaGuardia Act and dwelled at length upon abuses of the injunctive power in labor disputes the same power the civil-rights bill would invoke to enforce racial integration.

"I have read injunctions so fantastic, so arbitrary, that they were practically but one step from a threat of jail to a striker if he coughed, spat, or chewed. Some injunctions read very much like orders of an army of occupation bent upon vicious revenge. Many injunctions are not used to protect property from irreparable loss, but issued to disorganize unions and to terrorize and intimidate those on strike."

He told the House the Norris-LaGuardia Act would "follow the English practice and relegate the disputants to the criminal side of the law and to actions for damages."

"Only in rare instances," he said, "do we allow injunctions in this bill."

Mr. CELLER also lashed out against the Supreme Court decision validating the "yellow dog" labor contract and struck at abuses of the injunctive power by Federal judges.

"Because of the laxity of Federal judges," he said, reviewing the judicial history of injunctions in labor disputes, "all manner of abuses crept in the issuing of injunctions. One of the most obnoxious of these was the granting of an injunction at simply an ex parte hearing.

"The bill before you this afternoon precludes the issuing of an injunction without a hearing and the taking of testimony. It destroys forever the issuance of an injunction after an ex parte hearing. Both sides must be heard."

Mr. Celler was speaking then, of course, of injunctions against labor unions. The administration's 1957-model civil-rights bill, which he is supporting, contains no guaranty of both sides being heard before an injunction is issued.

Southerners have charged that the bill is so broad that an injunction could be obtained against people who had no knowledge it had even been issued.

And the debates show that this was one of the arguments in behalf of the Norris-LaGuardia Act.

Senator Huey P. Long, Democrat, of Louisiana, cited this instance in support of the act:

"In Monroe, La., when the Vicksburg, Shreveport & Pacific Railroad strike occurred there was a man named Lynch who was running a grocery store. He had received the trade of the employees of the railroad for from 20 to 25 years. They all went out on strike. He inserted a little notice in the newspapers that he did not care for the trade of any man who was brought into Monroe, La., and used as a strikebreaker.

"Lynch was immediately brought before the United States court in Shreveport, La., one-hundred-and-some-odd miles away, on the charge that he was guilty of contempt because there had been an injunction against certain specified employees of the railroad.

"There the court entertained jurisdiction against Lynch and several other persons because of nothing on earth except they had inserted in the newspapers a notice that they were loyal to the citizens of the town and did not care for the trade of people who came in there in order to break up the strike."

He added that the merchant was "lodged in jail and served 30 days' imprisonment."

Senator Long opposed an amendment to the Norris-LaGuardia Act that would have given Federal judges power to issue injunctions against labor unions to restrain threatened offenses.

"If the word 'threatened' is inserted in the bill, then the gate has been thrown open," Senator Long said. "That is all a Federal judge needs for a ground upon which to issue the injunction. The threat of one man is as good as the threat of a thousand men, because under the power of a Federal court the injunction generally is not restricted to the man who is directly enjoined."

Mr. CELLER likewise opposed an amendment that would have authorized injunctions to prevent intimidation.

"An examination of the precedents in this country and in the State and Federal courts," he said, "will show that the word 'intimidation' forms the basis of greatest abuse in labor injunctions. The cases seem to indicate that the word 'intimidation' is not capable of exact definition, and that hence the courts become laws unto themselves. There is no limit to what the judges embrace within the word 'intimidation.' If this amendment were adopted, it would cover all sorts of peaceful and lawful actions."

These arguments are interesting in respect to the administration's civil-rights bill, since it would authorize the Attorney General to seek injunctions in civil-rights cases on the basis of threats or intimidation.

DIXIE, UNIONS AND JURY TRIALS—FRANKFURTER ASKED FOR JURY

(By Morris Cunningham)

WASHINGTON, April 10.—A brilliant Harvard University law professor who now sits on the United States Supreme Court once coauthored a book that was replete with arguments in behalf of jury trials in criminal contempt of court cases.

Prof. Felix Frankfurter, now Justice Frankfurter, also is credited with drafting the Norris-LaGuardia Act of 1932 that guaranteed jury trials in contempt cases arising from labor disputes.

In his book, entitled "The Labor Injunction," published in 1930 and coauthored by Nathan Greene, Justice Frankfurter traces the history of the labor movement in the United States and points again and again to abuses of the injunction and subsequent contempt charges tried without juries.

Southerners in Congress today are fighting for this same right, the right of trial by jury in contempt cases, to be incorporated in the administration's civil-rights bill.

Justice Frankfurther is not the only Supreme Court Justice to let his views be known in this matter prior to becoming a member of the Supreme Court.

Three former Supreme Court Justices, all from the South, supported the Norris-LaGuardia Act in 1932 while they were Members of Congress. They were Senator Hugo Black, Democrat, of Alabama, Senator James F. Byrnes, Democrat, of South Carolina, and Representative Fred M. Vinson, Democrat, of Kentucky.

Justice Frankfurter perhaps summed up his view on the right of trial by jury in contempt cases when he wrote:

"The grievances aroused by summary prosecutions for contempt and their legislative appeasement long antedate labor injunctions. But the incidence of hardship has, in our day, fallen heaviest upon labor, because of the widespread threat of summary punishment conveyed by every labor injunction.

"The heart of the problem is the power, for all practical purposes, of a single judge to issue orders, to interpret them, to declare disobedience and then to sentence."

He said the injunction "employs the most powerful resources of the law on one side of a bitter social struggle."

Pointing to the misuse of contempt proceedings by Federal courts in previous labor disputes, Justice Frankfurter cautioned that in some instances, "a stranger to an injunction suit may still be punished for contempt of the injunction."

Many proponents of the right of trial by jury in contempt proceedings argue that this is the point at issue now in the Clinton, Tenn., case, where 17 persons have been charged with contempt in connection with the integration of Clinton High School. In that case Federal Judge Robert L. Taylor hasn't decided whether he will grant jury trials.

Justice Frankfurter opined that "trial by jury in contempt proceedings is an innovation in modern practice, but is a return to what is old in the history of English law."

And he said that "since a charge of criminal contempt is essentially an accusation of crime, all the constitutional safeguards available to the accused in a criminal trial should be extended to prosecutions for such contempt."

Justice Frankfurter's theory was not an unpopular one. Both the Democratic and Republican national platforms of 1928 had scored abuses in the use of injunctions and had called for reforms.

The Norris-LaGuardia Act, passed in 1932, breezed through the House by a vote of 362 to 14 and the Senate by a vote of 75 to 5.

Many prominent Congressmen, some of whom are still in the House or Senate, supported the Norris-LaGuardia Act, the RECORD shows.

They included, to name a few: House Speaker Sam Rayburn (Democrat, Texas), Representative Clarence Cannon (Democrat, Missouri), Representative Howard W. Smith (Democrat, Virginia), Representative Wright Patman (Democrat, Texas), Representative Martin Dies (Democrat, Texas), Senator Matthew M. Neely (Democrat, West Virginia), House Majority Leader John M. McCormack (Democrat, Massachusetts), House Minority Leader Joseph W. Martin, Jr. (Republican, Massachusetts), Senator Dennis Chavez (Democrat, New Mexico), Senator Huey P. Long (Democrat, Lousiana), Representative John Rankin (Democrat, Mississippi), Representative Fred A. Hartley, Jr., (Republican, New Jersey) (coauthor of the later Taft-Hartley Act), and various others.

This combination of southerners, northern liberals, and westerners indeed gave truth to the statement of former Justice Story of the United States Supreme Court who said "the trial by jury is justly dear to the American people."

Viewing the past, southerners today find it difficult to understand the present opposition of labor and northern liberals to the right of trial by jury in contempt cases arising from civil right's cases.

The Julio Centeno Case

EXTENSION OF REMARKS

OF

HON. GEORGE S. LONG

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. LONG. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following letter from the Administrator of Veterans' Affairs regarding the case of Julio Centeno:

VETERANS' ADMINISTRATION,
Washington, D. C., April 12, 1957.

The Honorable GEORGE S. LONG,
House of Representatives,
Washington, D. C.

DEAR MR. LONG: On April 1, 1957, you inserted in the CONGRESSIONAL RECORD an As-

sociated Press dispatch that appeared in the Washington (D. C.) Evening Star for March 29, 1957, concerning a veteran who plunged to his death from atop the Veterans' Administration Building at 252 Seventh Avenue, New York City, N. Y. Because of your interest in the matter, I am furnishing you some additional data about this veteran.

Mr. Julio Centeno's records in the Veterans' Administration reveal that this World War I veteran filed an application for pension on March 29, 1956. Although he served from July 10, 1918 to December 23, 1918, the Service Department records show as a result of lost time due to a. w. o. l. and confinement, Mr. Centeno had less than the 90 days required service for entitlement to monetary benefits and his claim was accordingly disallowed. In October 1956, the possibility of affording him domiciliary care at the Veterans' Administration Center, Bath, N. J., was under consideration. This the veteran declined, giving as his reasons that he had found a satisfactory place to live and was in receipt of aid from the department of welfare. There is no record of any subsequent contact that he had with our New York office. Even on the day of his appearance on the roof of the building and his subsequent death, he had not contacted any of our people at the regional office nor asked them for any assistance.

I have furnished you this report with the thought in mind that you may wish to enter it in the RECORD also, so that those who may possibly have gained an unfavorable impression from the press dispatch about the Veterans' Administration relations with this veteran may be more fully acquainted with the pertinent details.

Sincerely yours,

H. V. HIGLEY, *Administrator.*

Public Assistance for Needy Indians

EXTENSION OF REMARKS

OF

HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. LAIRD. Mr. Speaker, I ask unanimous consent to include in the Appendix of the RECORD today a joint resolution adopted by the Wisconsin State Legislature, relating to a memorial to Congress concerning public assistance granted to needy Indians.

The resolution follows:

A JOINT RESOLUTION RELATING TO A MEMORIAL TO CONGRESS CONCERNING PUBLIC ASSISTANCE GRANTED TO NEEDY INDIANS

Whereas the proportion of needy Indians receiving public assistance from the categorical aid programs administered by the State department of public welfare is much higher than that for the population as a whole; and

Whereas under special legislation (sec. 639, title 25 of the United States Code), the Federal Government provides 80 percent of the State and local government share of public assistance to New Mexico and Arizona, thus recognizing the need for equalizing disproportionate burdens placed upon the State and local governments by reason of the location of Indian reservations and concentrations of Indian populations therein: Now, therefore, be it

Resolved by the senate (the assembly concurring), That the Congress of the United States be respectfully memorialized to provide equitable financial treatment to State governments with respect to aid provided under social-security programs to Indians living in this State; and that copies of this resolution shall be delivered to the Secretary of the Interior, the members of the congressional delegation of Wisconsin, and the President of the United States.

ROBERT G. MAROTZ,
Speaker of the Assembly.
ARTHUR L. MAY,
Chief Clerk of the Assembly.
W. P. KNOWLES,
President of the Senate.
LAWRENCE R. LARSEN,
Chief Clerk of the Senate.

The Tuttle Creek Dam

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a copy of House Resolution No. 41 forwarded to me by the Honorable Jess Taylor, speaker of the house of representatives, Topeka, Kans. This is a resolution memorializing the Congress of the United States and the appropriate committee thereof, to direct special attention to the land-procurement practices of the Corps of Army Engineers in the Tuttle Creek Dam area of northeastern Kansas, and was adopted on April 3, 1957, by the House of Representatives of the State of Kansas.

The resolution follows:

Whereas the Tuttle Creek Dam on the Big Blue River in northeastern Kansas is in the process of construction by the Corps of Army Engineers; and

Whereas this $90 million project encompasses 53,000 acres of land in a highly developed and productive agricultural area, resulting in the removal of 2 third-class cities and 4 towns and the dislocation of nearly 600 farm homes, 19 cemeteries, scores of schools and churches, and involves relocation of parts of 2 railroads, 1 Federal highway, 6 State highways, and hundreds of miles of county and township roads; and

Whereas congressional appropriations for this project, as a part of the Kansas River Basin flood-control plan were finally made afer 15 years of serious questioning as to the advisability and economic feasibility of this project by Presidential and State commissions and engineering studies, organizations, and legislative bodies of the State of Kansas; and

Whereas violent objection to this project by the several thousand residents of the Tuttle Creek area drew congressional and nationwide attention to this project; and

Whereas the people of said Tuttle Creek area repeatedly through the years voiced their objections to this project in personal and delegation appearances before the congressional Appropriations Committees of both the House and Senate; and

Whereas assurances were repeatedly given to the people to be displaced by said Tuttle Creek Dam, both by these congressional committees and the personnel of the Corps of Army Engineers that, in event of construction of this project, very effort would be made to see that the people in the affected area would not have inflicted on them undue economic hardship and loss as a result of such project and so far as possible they would be left in as favorable economic position following displacement as they were before being forced to move; and

Whereas appraisals and purchase of land and residential properties in said Tuttle Creek area are in the process of being made by the land procurement office of the Corps of Army Engineers; and

Whereas appraisement of property in the cities and towns in the Tuttle Creek area are being made on the basis of value in present location with no consideration given to replacement cost in kind in another location; and

Whereas the high percent of refusals to accept the offered price by those whose properties are appraised and the ever-increasing number of condemnation actions being filed against residents of the Tuttle Creek area indicates dissatisfaction with the procedures and treatment being accorded the people of this area in matters of appraisals: Now therefore

Be it resolved by the House of Representatives of the State of Kansas, That we respectively urge, request, and petition the Congress of the United States to make such inquiry into the land procurement procedures of the Corps of Engineers, issue such directives, and take such action as may be necessary to insure the fulfillment of the intent of congressional appropriations committees as expressed to the people of the Tuttle Creek area and as assured these people by the Corps of Army Engineers; and be it further

Resolved, That the chief clerk of the house of representatives be directed to send a copy of this resolution to the President of the United States, the Vice President of the United States, each Member of the Congress of the United States, the Director of the Bureau of the Budget of the United States, and to the Chief of the United States Corps of Army Engineers.

I hereby certify that the above resolution originated in the house, and was adopted by that body April 3, 1957.

JESS TAYLOR,
Speaker of the House.
A. E. ANDERSON,
Chief Clerk of the House.

Aid to Poland

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of April 10, 1957, on the subject of American economic aid to Poland:

Once again, the Eisenhower administration is getting an important assist from Democratic Senators in a ticklish policy move.

The administration is thinking in terms of a $75 million deal with Poland, under which the Poles would receive loans for the purchase of surplus farm commodities and machinery. Conspicuous among the opponents are Minority Leader KNOWLAND and Senator STYLES BRIDGES, chairman of the Senate G. O. P. Policy Committee. They say that such a deal would indirectly aid Russia by easing demands for help which the Poles otherwise would make on the Kremlin.

This probably is true. But the risks of indirectly helping the Russians have to be

balanced against the advantages of direct help to the Poles, assuming they want to go through with the deal. On this score, it seems to us that the best interests of the United States will be served by a reasonable attempt to lessen rather than to increase Polish dependence on Moscow, and it is gratifying to see such prominent Democrats as Senators RUSSELL, MANSFIELD, and SPARKMAN coming to the support of the administration.

Gallup Poll on National Prohibition

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. SILER. Mr. Speaker, under leave to extend my remarks, I now wish to insert in the RECORD the following extraneous material that has been delivered to me by Mr. Clayton M. Wallace, executive director, National Temperance League, Inc., 131 Independence Avenue SE., Washington, D. C. The article is as follows:

GALLUP POLL ON NATIONAL PROHIBITION DOESN'T REFLECT TRUE PICTURE OF LIQUOR SITUATION, TEMPERANCE LEADER CHARGES IN STATEMENT

"The Gallup Poll on National Prohibition (published locally in Washington Post-Times Herald, April 9) fails to reflect many significant trends in America against alcoholic beverages," Clayton M. Wallace, executive director, National Temperance League, Inc., said today.

"While national prohibition was the method of dealing with the liquor question under the 18th amendment," said Mr. Wallace in a statement, "today we live under the 21st amendment, which gives to each State the right to deal with the liquor question in its own way.

"Under the 21st amendment, a State may have a liquor monopoly system, a license system, local option, or statewide prohibition. Under the 21st amendment, there is a persistent effort to dry up 'wet' territory through local option, with small steady gains toward the 'dry' side.

"Texas has 144 dry counties with 80 more partly dry and only 30 still wet. Oak Cliff, Tex., a Dallas surburb with 225,000 population, voted dry last fall. Polk County, largest dry county in Florida, faced the possibility of a wet-dry election this month. No election was held because the liquor interests could not get enough signatures on their petitions to call up the election. Regardless of public sentiment on national prohibition, there is a real growth in dry sentiment at the local and State levels.

"The recent Gallup Poll shows the strongest dry sentiment in the South. It is in that area that much territory has gone dry under local option. Recent studies made by the research department of the National Temperance League show that the rate of alcoholism in the South is less than half of that in the Northeastern States.

"In a study of the estimated alcoholics per 100,000 adult population for 1953 the national average was 4,390, while the average for 9 Southern States was 2,490. The average for the States of Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, Maryland, Delaware and District of Columbia was 5,650.

"On the west coast, California's estimated number of alcoholics per 100,000 adult population was 7,060. We believe these figures show that where the sale of alcoholic beverages is reduced by local option, the harmful results of drinking are also reduced. Where the sale of beer, wine, and liquor is wide open, alcoholism and other harmful effects of drinking are much more widespread.

"Furthermore, there is no doubt of a rising tide of temperance sentiment in the churches of America, who are alarmed over the effects of alcohol on the character of the American people."

Ike Hasn't Changed—He's for Economy Where It Can Be Made

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am including an editorial appearing in the Ashland Times Gazette of March 30, 1957, one of the outstanding newspapers of our district. I recommend it to the Members of Congress.

IKE HASN'T CHANGED—HE'S FOR ECONOMY WHERE IT CAN BE MADE

People who are worried about "What's Happened to Ike?" can rest a bit more easy these days.

In his Thursday press conference, President Eisenhower quipped:

"It is a great satisfaction to me to find out there are so many economy-minded people in Washington. They didn't used to be here."

And he also said:

"If we could get these things (i. e., service provided at a loss by the postal service) on a business basis and tackle the problems where the money is going out, we would save a whole lot."

He also was quoted as remarking:

"You can save some money here and there, and I'm all for it to the last dollar."

This sounds more like the President who sought office in 1952 on an economy platform and who ripped some $10 million from his predecessor's proposed budget in 1953.

But Eisenhower also made some comments Thursday that the American people should seriously weigh and evaluate.

"No one," he said, "has urged cutting the Armed Forces by 20 or 10 percent or any other thing that will give us a significant saving in the budget."

National security, including foreign aid, totals more than $45 billions of the $71.8 billion budget proposed by the President and his staff.

Not until these measures can be measurably sliced, as Ike points out, can the people of the country expect any truly large reductions in expenditures.

Certainly it is true that some money can be saved here and there. But it is actually a drop in the bucket compared to the big items in the budget.

Someone has pointed out that everyone in Washington could be laid off and the saving would be something less than 10 percent of the total budget this year.

Whether or not that figure is accurate is open to question, but it illustrates well the basic fact that the United States cannot retain its vital position of world leadership unless it remains strong and assists those who keep it strong and influential in the world today.

The price of staying strong is steep, but it is far more economical than allowing ourselves to slip and become the victims of a more costly war.

We agree that economies can be effected in certain areas. But we are not so naive as to believe that piddling savings will materially reduce the budget or will result in any tax reductions at this juncture.

The temper of the people may be high over the budget.

But as yet we have seen no concrete proposals to reduce it measurably without sacrificing in the very areas in which we cannot afford to weaken ourselves.

We believe Ike is sincere and is trying to save where savings are possible and logical. We do not believe he has changed in attitude from 1952.

He is merely more familiar now with the needs than he was during some of the more extreme campaign expressions in 1952.

And we can't criticize a man for changing his position to aline himself with the real situation.

USIA Movie Subsidy Revealed

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post and Times Herald of April 11, 1957:

USIA MOVIE SUBSIDY REVEALED

(By Frank Eleazer)

The United States Information Agency (USIA) secretly spent $100,000 in 1953 to subsidizes the production of a commercial anti-Communist movie for showing in American movie houses, it was disclosed yesterday.

A House Government Operations subcommittee made public recent closed-door testimony in which a top official of the propaganda agency conceded that the movie turned out to be a box-office failure.

He said this unfortunately is the history of motion-picture documentaries.

Agency officials refused even to tell the subcommittee the name of the movie or to say where it is being shown now. But it indicated that a foreign-language version, financed by non-Government interests, is now in production.

The subcommittee held hearings on the USIA's request for $140 million to finance its operations in the new fiscal year beginning July 1. The request was $27 million above the Agency's current budget.

The Agency also wants an extra $4 million to build a powerful new radio transmitter for its overseas Voice of America broadcasts.

INITIAL DENIAL CHARGED

Subcommittee Chairman JOHN J. ROONEY, Democrat, New York, charged that the Agency's motion-picture director, Turner B. Sheldon, first denied to him that USIA had any connection with the anti-Communist picture which ROONEY said he saw at a Washington movie house.

But he said Shelton and Clive L. Duval II, the Agency's General Counsel, came to his office the following day and told him the story.

The heavily censored 741-page testimony did not make clear to what extent USIA has participated in such ventures, although Shelton said this was the only case he knew

of involving a film produced for distribution in this country.

Elsewhere, the hearings showed that the Agency has budgeted $755,924 in the new fiscal year for a secret motion-picture project known as Kingfish.

Shelton told the subcommittee USIA is making movies locally in 44 countries. These generally are documentaries, he said, which "advance the cultural interests" of this country, explain American positions, or expose how Communists infiltrate local governments.

OTHER HIGHLIGHTS

Other highlights of the testimony:

Former film producer Eugene W. Castle said Congress should take the USIA out of the news business and leave the field to the regular private news agencies. USIA wants spend $11,474,000 on its press service in fiscal 1958—a $1,594,000 increase. Castle also said the Nation would be better served if the Agency were abolished altogether and its necessary functions handled by the State Department.

Subcommittee members questioned whether the USIA wire service, operated last year at a cost of $1,280,000, duplicates commercial news services like the United Press. Officials said it does not. The service goes to about 10,000 publications, organizations, and officials.

USIA is boosting its TV output. It said a check last fall showed its canned shows were being used on 138 of the 185 TV stations in the free world outside the United States and Canada.

The agency is stepping up its radio broadcasts, known as the Voice of America. Instead of the $16,849,479 it got this year it wants $27,387,767. A new land-based transmitter would be built in the Greek area to replace the shipborne transmitter, *Courier*, which has been tied up off the island of Rhodes for 4 years.

The agency wants to spend $2,930,000 under its new budget distributing books. In addition to purchases of regular editions it will print 7,455,000 low-cost paperback volumes in 19 languages to sell at 10 to 40 cents a copy.

Negro Band Leader Dizzy Gillespie for several months last year received for an overseas culture tour a Government-guaranteed salary higher than President Eisenhower's. Gillespie was paid $2,150 a week—about $150 a week more than the President.

The Great Giveaway

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES

Monday, April 15, 1957

Mr. TALMADGE. Mr. President, there is a new book just released which ought to be "must" reading for every American taxpayer. It is the Great Giveaway, by Eugene W. Castle, author, world traveler, and authority on motion pictures and propaganda. I ask unanimous consent to have printed in the Appendix of the RECORD the following articles about it: An editorial from the March 18, 1957, issue of the Manchester (N. H.) Union Leader entitled "the Great Giveaway," the featured book review in the May 1957 issue of American Mercury magazine; and the review from the Christian Herald edited by the Reverend Daniel A. Poling.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the Manchester Union Leader, March 16, 1957]

THE GREAT GIVEAWAY

Unless you're able to keep your emotions fully under control, we advise you not to read Eugene W. Castle's latest book, The Great Giveaway. We'll guarantee that Mr. Castle's expose of the foreign aid scandal, which has so far cost American taxpayers nearly $60 billion, is going to thoroughly excite even the most complacent. To whet the appetite, here's a sampling from this great book, recently published by Henry Regnery Company, Chicago:

"We have sent our dollars marching sixty billion strong over the world's far lands in quest of mutual security. The prize, like a will o' the wisp, has eluded us. The world is still in turmoil and danger. There is no security, mutual or otherwise.

"What have these dollars brought us?

"They have dammed great rivers far away. They have built fine highways for others to travel. They have reared hundreds of industrial plants under flags which many of us cannot even recognize. They have dispatched thousands of American technicians to remote India and elsewhere. They have poured out our resources to distant peoples everywhere.

"Our billions of dollars have delivered jet planes across the seas and some of these planes have been diverted to misuse. Our dollars have given vast armaments to friendly nations to strengthen them against aggression, and some of those armaments have been misdirected to the invasion of other countries. Our budgets have helped sustain the domestic budgets of Europe, while our own debt remains higher per capita than in any other country in the world.

"What measure of security for America has been attained from all this?

"At home, mutual security is in a large way responsible for the denial of tax-relief to millions of Americans whose earnings have been nibbled away by the Federal Government to pay for foreign spending ventures.

"The facts given in this book are only those that have pierced the mantle of secrecy veiling the mutual security program. They are but part of the story, the part that Washington's bureaucrats could not conceal. The full story will perhaps never be known to the American people."

Be sure to read Eugene Castle's The Great Giveaway! Available at all booksellers on April 15, 1957.

[From the American Mercury Magazine of May 1957]

THE GREAT GIVEAWAY

(By Eugene W. Castle)

(Henry Regnery & Co., Chicago)

Unless all signs deceive, Eugene W. Castle has written the book which will confound the foreign aid zealots in Washington this year.

It is a book which gives the American people the other side of the foreign aid debate—a side which has long been awaiting an advocate.

So far, the foreign aid bloc, sparked by the White House itself, has had things pretty much its own way in Congress. With the appearance of the Great Giveaway, the Washington billion dollar spenders will be driven upon an uncomfortable defensive. This man Castle has the rare gift of asking unwelcome questions. The little men in the Washington agencies who supply the speeches and the charts for the foreign aid big brass will have a rough time during the next few months scurrying around to find the answers to Castle's verbal blockbusters.

The most telling argument in the Great Giveaway is the revelation that we are beginning to depend upon foreign aid as a substitute for a foreign policy. The bewildered men in Washington have reached the stage of vertigo in the cold war. They are running out of expedients. Foreign aid has come to them in this dilemma as a safe and painless way to give the appearance of having a foreign policy, without actually doing anything to provoke the Russians. In the Eisenhower administration, foreign aid has become a sort of glorified numbers game. Only the hapless taxpayer is unhappy under the program, and hitherto he has been kept in blissful ignorance of the total sting of the giveaways.

Along comes Gene Castle to blurt out the hidden truths. Some of the things which he tells us are nightmarish in their impact. For instance: Since 1947 we have poured out over $60 billion in foreign aid, and we are more unfriended today than we were when we began. In our desperate desire to purchase friends, we have lavished billions upon neutral nations such as India, Yugoslavia, Indonesia, and so forth, which will not even fight on our side in the next world war. In our technical aid and development programs we have opened the door to a lush future of giveaways which some doubledomes are now seriously estimating in the trillions. The whole program reeks with the imprint of waste, inefficecny, and irresponsible planlessness.

One of the best parts of the book is Castle's description of the sordid pressures in Washington which result in the annual aid appropriation. These pressures include (1) the bureaucratic drive to get more money to maintain empty and bankrupt projects which are supplying prestige and power to incompetent men, and (2) the pressure of what the author describes as big business, big banking, and big labor, which financially profits from the spendings. The hollow farce of so-called Washington investigations of foreign aid is sketched pitilessly by the author. One of the disconcerting things about the book is Castle's uncomfortable habit of naming names and giving instances.

The book is not an exercise in negativism. Castle concedes the good which has been accomplished by foreign aid in wartime, or in the reconstruction difficulties which follow war. Where he takes issue with the Washington spenders is in his refusal to accept aid as a permanent peacetime program. He shudders at the spectacle of a free world which is kept viable only through the constant economic blood transfusions of American dollars. He describes, with searing words, the basic insecurity of a world which rests upon such shaky political foundations.

If, as now seems apparent, the Eisenhower administration is resolved to take its whole Middle East and Asiatic policy upon the bulkheads of foreign aid, then The Great Giveway is the book which its propagandists must answer during the coming months. It is a book which should easily become a best seller. Crisply written in language which crackles and stings, it is a book which is a controversialist's must. Few books of the 1957 season will come with such apt timeliness. Few will raise more hackles on the backs of the political truth dodgers.

[From the Christian Herald]

THE GREAT GIVEAWAY, BY EUGENE W. CASTLE (HENRY REGNERY CO., CHICAGO, ILL.)

Whether or not we support the Government's vast program of foreign aid, this volume is imperative reading. The title is a true description of what you will find between the backs. Certainly, there will be no disagreement with the statement "We have made progress and we have made mistakes," but here is a question that this author faces and in answering carries conviction. "Are we profiting from the mistakes of yesterday or are we continuing to make

the same mistakes at even greater costs?" Reading here one thing becomes ominously clear. In investigating foreign aid the taxpaying American citizen learns grimly that he can never win. And did you know that credits to foreign governments must be redeemed in gold if demanded?

Shall It Be Feast or Famine for the Increasing Millions?

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, April 15, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting article by Dr. Karl D. Butler, entitled "Shall It Be Feast or Famine for the Increasing Millions?"

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHALL IT BE FEAST OR FAMINE FOR THE INCREASING MILLIONS?

(By Karl D. Butler)

It can be feast and not famine for the peoples of earth during the next century * * * if scientists, producers and distributors work objectively toward this goal. I am led to this conclusion by reflection on some extremely subjective evidence recently published by scientists of the California Institute of Technology after appraising the resources of the world in high-level private conferences still in progress across the United States. This group of scientists[1] speculates as to the mineral, energy, agricultural and manpower resources 100 years from now.

The scientists speculate on a number of specific questions, including: "To what levels might per capita consumption of various minerals grow in industrialized society?" "How rapidly might we expect industrialized civilization to spread throughout the world?" "How large might human populations grow and how rapidly?" "What are the available raw materials which man might use?" "Can agricultural productivity be brought abreast of the world requirements?" "Are our technical manpower resources adequate for the evolution?"

In these imaginative speculations, certain assumptions are made. It is assumed that technically it is possible for man to exist at a modest standard of living on the leanest of substances—air, sea water and ordinary rock—and that eventually we will be forced by sheer pressure of increased population to move in that direction. The rate and manner of approach to what they assume to be this ultimate condition are explored in the conferences.

Special significance is given to the question in which we are all interested—the agricultural potentials of the world. It is assumed that three-fourths of the people in the world do not presently have an adequate diet. Even in recent years, it is stated, population growth in the world as a whole has exceeded growth in food production. For example, Asia, which contains over half of the world's population, has the gravest food shortage of any area, and its agricultural problems appear to be the most difficult of all.

It is said that we might look forward, among other things, to an eventual complete replacement of animal protein by plant protein and partial chemical synthesis of food material. It is assumed this might be necessary in order to support 5 to 10 times the present world population. It is assumed that the earth's population during the next 100 years may increase from 2.6 billion people to 6.7 billion or more. All these predictions are said to apply only if world catastrophe is avoided.

THE EXPERTS PREDICT MORE CEREALS, LESS PROTEINS

In a nutshell, the predictors say that food presents on insoluble problem because their studies indicate that "improvements of conventional agriculture can greatly increase the world food supply," and that eventually nonconventional food-production techniques will feed any expected increase in world population "if we look beyond the limits of our present agricultural system."

We are blandly told that what may be in prospect for each of us is one-third less steak, hamburgers, milk, and eggs, and more cereal products. "This is a dietary prescription for Americans if the population of the Nation increases, as expected, to 200 million in 1970."

According to the New York Times of May 22, 1956, the team reports that "animal foods are 10 times more expensive to produce, in terms of the acres necessary to make a calorie of food, than are plants used directly as food."

CONSUMPTION CAPACITY VERSUS PRODUCTION CAPACITY

In essence, the challenge presented to farmers in these pronouncements is: "When will our ability to consume seriously challenge our demonstrated capacity to produce?"; or "Can agricultural productivity be brought abreast of the world requirements?"

As a partial answer to these questions, I should like to pose another question: "When and how can we learn to consume intelligently what we are now capable of producing?"

In order to attempt to answer these questions or to seriously challenge the assumptions made by the touring scientists, I think it is first necessary for us to take a look at where we now are, both in our capacity to produce in relation to our apparent ability to consume and in our nutritional status. Also, we should appraise our markets.

PRESENT DEFICIENCIES IN AMERICAN DIET

There is no question but that a great many people in the world are not as well fed nutritionally as are Americans. However, nutritionists tell us that there are a number of nations which rank far ahead of the United States in this respect. Perhaps the best way to measure the human nutrition standards of a country is on a basis of its per capita animal protein consumption.

On this basis, a number of countries, including New Zealand, Australia and Uruguay (a total of 7 or 8) surpass the United States. Even though it is often said we are the best fed nation in the world, this statement can be seriously challenged. Further, it is well established that many in the United States today are not properly fed. In fact, one authority says that 25 percent of our population does not consume enough animal protein; and officially at least 11 percent of our population is underfed. This malnutrition cuts straight across all types of family income groups from low to high.

Recently a prominent nutrition authority, Miss Edith Shapcott, said: "From statistics one sees it would seem 45 percent to 50 percent of the people in the United States have diets poor in at least some respects." Miss Shapcott is a nutrition consultant at the Visiting Nurse Association of Brooklyn. On being honored by the Public Health Association of New York recently for her contributions to improving the nutrition of New York residents, Miss Shapcott said: "We often find anemia, especially in pregnant women and new mothers. Borderline deficiency of vitamin A is fairly common, and older people are apt to neglect vitamin C. All this applies as much to those in the higher income brackets as to the lower." Miss Shapcott further said that what women lack is a knowledge of what makes a good balanced diet.

In studies recently released at Cornell University from surveys made among housewives, it was found that only one-quarter of the homemakers interviewed showed a fair layman's understanding of nutritional principles.

Dr. B. S. Schweigert, assistant director of research of the American Meat Institute Foundation, has estimated that one-sixth of our population (the low-income group) does not attain optimum nutrition because of economic factors. He pointed out that surveys have shown that teenagers, overweight men and women, pregnant women, industrial workers, and those 65 years of age and older require improved dietary patterns where income level is not the limiting factor in the selection of the amount and kind of foods consumed.

Dr. Schweigert says: "The major protein needs are for the teen-age and the overweight adult groups. While there is a slight overlapping between groups, the total estimated need for additional protein for these groups alone would require a 5 to 15 percent increase per year in the need for carcass meat (or the equivalent amount of protein from other sources) based on the current level of meat production in this country."

Thus we can say that we as a people are not as well fed as nutritionists would like to have us. Now, what is our ability to produce?

OVERPRODUCTION IS ONLY FORESEEABLE PROBLEM

Certainly if our ability to produce and produce superabundantly had not been clearly demonstrated, we would not have a farm problem at the present time. There is no question but what farmers are producing great quantities of commodities, such as wheat, corn, cotton, and often dairy products for which there are not profitable markets.

To accomplish this great productivity, we had to have the technical knowledge, and there had to be incentives. There also had to be a market for things we did not need. For the most part, the market for excess productivity has been the Government. In attempting to argue this point, the fact is that we are now producing, and have been for some time, commodities for which there are not effective markets.

So I would say that our first problem for the foreseeable future is to find markets for things we are producing. On this point, the most knowledgable people in the country are fairly well agreed. They feel there is little hope that production and consumption of farm commodities can be brought into effective balance during the next quarter of a century, and the time required to do so may be much longer.

In spite of (1) the projected continued increase in human population and intelligently directed educational efforts to increase our capacity to consume nutritional and concerted foods, such as meat, milk, and eggs; (2) our ability to apply teachnology in the form of new improved plant varieties and animal breeds; (3) an enlightened use of fertilizers and chemicals; 4 greater application of mechanization; and (5) the whole rampart of technology in our agricultural productivity, what farm experts are saying, based on exhaustive studies, is that our ability to produce, assuming no national catastrophe, will continue to outrun our capacity to consume.

ABUNDANCE OF FOOD IS NOT WORLDWIDE

Of course, this does not apply to the world as a whole. However, I think we do know this: In spite of our continued pouring of billions of dollars into projects abroad, many of which are highly worthy from an educa-

[1] Dr. James F. Bonner, professor of biology; Dr. Harrison S. Brown, professor of geochemistry; Dr. John R. Weir, professor of psychology; Prof. Robert V. Barts, director of the Industrial Associates Program of the California Institute.

tional standpoint and otherwise, before these underfed nations can eat as high on the hog as we have become accustomed to do in the United States, even without deficiencies, they must develop ways and means of raising their productive capacity enough to be able to afford a higher standard of living than they now have. We can help and we are helping; but they, themselves, in the end will have to accomplish this, both by individual effort and by adopting national policies which may help them achieve the desired end.

All of us have stomachs of more or less comparable capacities. It is true that each of us chooses different things with which to fill that stomach, and we should be very grateful for that free choice. But it is a fact that, the world over, it takes in the neighborhood of 1,500 pounds of food per year to fill a human adult stomach. This more or less limited poundage can be in the form of cereals and other starchy foods such as bread, potatoes, and rice, or as milk, meat, cheese, butter, eggs, fruits and vegetables, and other forms of nutritionally packed products.

THE MARKETS OF AMERICAN AGRICULTURE

Speaking specifically of the United States, I think we should bear certain fundamentals in mind. So far as agriculture is concerned, what we eat makes the market, and we only have three basic markets—exports, industrial uses, and human food.

Our export markets move up and down from year to year. During the past year, which was a fairly good export year, the export market handled about 10 percent of our harvested crop acreage, both food and nonfood. Although a great deal of work should be and is being done to expand our export markets, it is not likely that our total percentage of exported crops will be greatly expanded in the immediate years ahead.

Our second market, the industrial use of agricultural products, amounted to about 7 percent of our total production last year. This included tobacco, cotton, flax, and other such crops. Although 7 percent is not a tremendous segment of our productivity, again this area is very important and undoubtedly can be expanded.

The third market, and the greatest, is what we consume ourselves. About 12 percent of our cropland acreage is used to produce crops for direct domestic food consumption, such as fruits, vegetables, and cereals. The remaining 71 percent of all cropland is used to produce livestock and poultry feed crops, the products of which find their way into human consumption in the United States.

Great effort is needed to expand all of these important markets. I might say another related need is that a great deal more research is needed in the expansion of the types and quality of crops we grow. For example, of the more than 200 plant varieties which are used for commercial production in the world, only 12 crops supply more than 80 percent of man's needs—only 12 crops of the more than 300,000 known plant species. As a matter of fact, only 1 of the 12 has been brought into use since the advent of agricultural science—rubber. This makes one wonder just how effectively our demonstrated scientific ability has been applied to the needs of agriculture.

THERE IS ALSO A TREMENDOUS PRODUCTION POTENTIAL

Many of these best authorities believe that our productive capacity for the things we now produce on farms in the United States could be doubled just with the proper application of the knowledge we now have. In my opinion, this is a conservative statement. If there were markets which would make it profitable for farmers to apply all the technology now known plus that which scientists estimate could be applied, we could greatly increase our productive capacity. This, in addition to the fact that we are producing more than we can effectively utilize at this time, makes me seriously question some of the assumptions made by the Cal Tech scientists. However, as I mentioned before, it is their privilege to predict just as much as it is my opportunity to challenge them.

Some are predicting that labor will be working only 30-hour weeks in a few years. Who is going to operate successfully a modern dairy or other farm enterprise on a 30-hour week? Who is going to get the hay in the barn in a 6-, 8-, or 10-hour day? Some farm days during a rush season cannot be run by the clock—as least, as yet.

There is another question which might be asked. If our greatest problem is the application of brainpower, as outlined by the scientists, why not use our technology and our scientific knowledge, both present and hoped for, to improve the human diet? Why not aim for a maximum type of diet for the masses rather than a minimum, as projected by the scientists? In other words will it be feast or famine for the increasing millions?

In this country, we have been applying technology at a tremendous rate; and that, along with questionable Government policies, is perhaps the biggest cause of our buildup of commodities for which there are no markets at the present time.

NEW PLANT VARIETIES SHOULD INCREASE CROP PRODUCTION

As an example of our ability to apply technology, plant scientists in State and Federal Governments, and especially in the seed industry, have changed the whole character of our crop plants. Even though the number of plants has not changed as mentioned before, the character of the crop plant itself has. In 1956, more than two-thirds of all the United States cropland was planted to new and improved varieties which did not exist 20 years ago. Of the 337 million acres of cropland (1954), about 70 percent was planted to new and improved varieties of field crops and other crops that did not exist in 1935. Of all crops now grown, 96 percent are from seeds of types not known 20 years ago. With soybeans, 98 percent of the varieties grown were not known 20 years ago; cotton, 95 percent; oats, 92 percent; corn, 86 percent; and wheat, 80 percent.

Who knows what the pattern will be 10, 20, 50, or 100 years from now? Right now, plant-grown nitrogen is being replaced by industrially produced nitrogen.

The predictors say that we may have to learn to use plant proteins direct for human consumption instead of animal proteins because the latter are less efficient to produce. This may be true. On the other hand, why would it not be just as logical to speculate that, when we learn how to produce plant proteins more profitably than now or to produce them synthetically, what is going to keep us from using both synthetic products and plant proteins from algae, etc., to greatly expand the production of animal products? Man has demonstrated that he likes animal products, and man is not easy to change. Even aborigines in Africa are known to boil rats in their rice to give it added flavor.

Those of us who have had a little experience in attempting to get people to eat more of nutrition-packed products, such as meat, milk, and eggs, know how difficult it is to get man to change his habits. Would it not be far more difficult to get people to revert to a poor diet than to get them to use a better diet? In other words, man certainly will not easily revert to a cereal diet after he has tasted steak unless there are some pretty compelling forces. As long as there is incentive to eat more steak or hamburger or consume more milk and other tasty products, I believe man would be more inclined to move in that direction if at all possible.

I have confidence in the ingenuity of man, with God's help, to accomplish what he would like to accomplish rather than to give in to the idea of taking the road of least resistance and reverting to a cereal diet which is so prevalent in the more backward parts of the world today.

There is another point that needs to be clarified. It was said that animal foods are 10 times more expensive to produce than are plant products. This may be true in general, but man does not live by generalities. He lives by specifics.

No poultryman can stay in business today who does not produce one pound of meat from approximately 2½ pounds of feed. The great industry of poultry is more or less based on this formula. Furthermore, there is research in progress which clearly indicates that it is within our means today to produce great quantities of palatable poultry meat at the rate of a pound from 1½ pounds of feed. This certainly is not a 10-to-1 ratio. In general, with pork and other meat, the ratio is roughly 7 to 1. With cattle, especially when fed stilbestrol, the ratio is less.

SEVEN POUNDS OF MUSH OR ONE POUND OF BACON AND EGGS?

Then, too, who among us wants to eat grass? Roughly 55 percent of all the animal products in the United States are produced from our great forage crops, both in the grazing areas and from forage in the form of hay, silage, and meals made from them. What would we do with the great forage crops and all the land that is used to produce them, and with the expansive grazing areas of the West which would be of little agricultural value if we did not husband animals to use them?

An ordinary breakfast of bacon and eggs, and other commodities, might weigh a pound. If this were converted to a cereal equivalent, it would equal up to 7 pounds. Who wants to eat seven pounds of mush or algae for breakfast when we can have tasty bacon and eggs with buttered toast and plenty of other delicious dairy products?

It is difficult in these days of surplus to visualize a time when people might starve because of farmers' inability to produce enough food supplies. In 1955, the experts figured that farmers produced about 4 percent more than we used, and the present so-called farm problem revolves around our buildup of surplus stocks which has resulted because farmers have been able to produce more than we have eaten.

Our first challenge as American farmers is to learn to use profitably what we are now able to produce. This alone will take at least a quarter of a century, possibly much longer. It is the belief of many experts that advances in technology and efficiency will enable farmers to keep up with the increasing demand for food by our ever-growing population. Then, too, world population may not increase anywhere near as fast as the scientists assume it might. The population experts have been wrong before. According to their predictions of only 20 years ago, our population should be declining right now.

The desire of the human race has been to improve its lot, and one of the principal ways of doing this has been through better food. In this connection, most people consider better foods those which improve the human diet.

AGRICULTURE CAN MEET INCREASED FOOD DEMANDS

There is no question that in the years to come we need higher per-acre yields of food and feed. We will need more animal growth per pound of feed. We will need a large increase in livestock numbers. We will need considerably larger output of food per unit of livestock. All this must depend on great advances in research knowledge and technology, particularly as they apply on our farms. There is no question but what we can do it. Other nations can do it, too, if they

have the will and capacity to apply modern technology.

American agriculture has the potential for enormously greater production than we are achieving. It is my firm belief that the growth in population will be met by farmers' capacities to produce more of the high-protein, healthful food needed for proper diets. With a greater demand for food, farmers will respond with increased use of fertilizer, improved crop-producing practices, improved livestock, added capital investment, and whatever else it takes.

A century ahead is a long time, but I am counting on more and better food for the peoples of the world—not less.

Swords Into Plowshares

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, April 15, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Swords Into Plowshares," written by Kelvin Wallace Coventry, and published in the Front Rank, the National Church School Weekly of the Christian Church.

This article was sent to me by the Reverend James I. Spainhower, of the First Christian Church of Fayetteville, Ark., and, in his words, "shows the high regard in which the international student exchange program is held by Christian people the world over."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A NEW INTERNATIONAL PEACE VENTURE IS SUCCESSFULLY TURNING SWORDS INTO PLOWSHARES

(By Kelvin Wallace Coventry)

"The American has no need for a blueprint of democracy—he lives it." This statement neatly sums up the testimony of more than 12,000 foreign students, teachers, lecturers, and research scholars who have observed American life firsthand under the 10-year-old "swords into plowshares" program.

Just what is the swords into plowshares plan? Briefly, it is the largest international educational program in our history, launched on August 1, 1946, when Congress passed the Fulbright Act. This act described a plan for turning the implements of war into instruments of peace and understanding.

At the end of World War II many millions of dollars' worth of American military equipment was left idle in warehouses all over the world. This included bulldozers, machine tools, locomotives, and food and clothing stocks which could be of great help in rebuilding foreign countries. Yet, these countries did not have the dollars to purchase this vital equipment.

Then the unique Fulbright plan was proposed. We would sell our surpluses for foreign currencies and credits, with part of these funds being set aside for educational exchange purposes. The debt would be paid, but it would be paid in terms of things money cannot buy—goodwill and better international understanding.

It was apparent that we might not see the benefits of the Fulbright Act for many years when it was signed in 1946. But now we are reaping a harvest of dramatic results.

In Finland, a young doctor who studied with the first "blue baby" heart specialist at Johns Hopkins University Hospital has since performed many successful operations on children with heart disease.

In Italy, a professor of medicine at the University of Genoa has set up an isotope laboratory after having done research and visited medical and biological projects of the Atomic Energy Commission in the United States.

What personal meaning does the exchange experience have for foreign students?

"Do you like the United States?" was the inquiry of friends when a foreign student returned to his home. Proudly introducing his bride to his countrymen, he said, "I married an American."

Another foreign-born student spent 9 months in the United States sharing the ordinary life of its citizens. This was his impression: "No one could, I hope, live for any length of time with so generally openhearted and kindly a people as the Americans and remain unaffected. It is difficult to express my deep feelings, but I will never forget."

While exchange students are marveling at the wonders of New York City and mass-production techniques, over 9,000 American students have sampled the mysteries of the Far East and the exquisite beauty of Paris. Through their studies they are adding continually to our store of knowledge about these distant friends.

In Germany, one American scholar is working with a Nobel prize-winning biochemist on the conversion of light into chemical energy. An American forestry expert is studying Scandinavian methods of utilizing waste wood products. These are only two of the ways American scholars are advancing the frontiers of knowledge through joint research with their foreign colleagues.

How does the American view his experience in terms of better understanding with other nations? One student expressed his views in this way: "I have made friends of people who have never had American friends before. I believe I have made America more real and more reasonable to them than ever before."

In India, an American lecturer and his wife lived in a rural university area, entirely surrounded by rice paddies. "The humblest of peasants and farmers were our neighbors," wrote these Fulbright grantees. "To our surprise, toward the end of our stay we were actually invited to dinner in Hindu homes. We have a feeling that with our friendships and talks we built new attitudes toward Americans and America."

Aren't we afraid that one rotten apple will get in the barrel of international understanding? It is unlikely. Besides being carefully screened by the selective board, only those students who display interest in a broad range of activities, are active in community life, and show leadership, have a chance of representing their respective countries.

What is it about the swords-into-plowshares program that makes it so important in this atomic age? As an American student who recently returned from the Middle East remarked, "The proposition of getting on to common ground is no longer a matter of philanthropy. It is a matter of survival. It is not something we should do merely because it is a good thing, but because we need it to survive and grow."

The Fulbright Act has torn down misconceptions and enmities, and new understandings and friendships are rising in their place. All of this represents a new American achievement—achievement in international human relations as significant in our history as the spanning of the continent by the first railroad or the invention of the automobile.

"Human history becomes more and more a race between education and catastrophe," H. G. Wells once said. The exchange program is helping to win that race. Through personal persuasion this new venture is developing a kind of people-to-people understanding that may prove a mightier weapon for peace than the pen or the sword.

Tito—Loyal Communist and Slavemaster of Yugoslavia

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including a timely article by a great American, Mr. William H. Smyth, of New York City. Mr. Smyth knows Yugoslavia. At one time he was in business in Belgrade and represented such American firms as Chrysler, Packard, Caterpillar, Goodyear, and other large industrial organizations. For 20 years or until July of 1941 when Yugoslavia was overrun by the Germans, Mr. Smyth through the operation of his business and his varied social, technical, trade, and general contacts learned to know Yugoslavia and its people as do few, if any other Americans.

Mr. Speaker, the article which I am inserting first appeared in Defenders of the American Constitution, Inc., in March of 1957. The article follows:

TITO—LOYAL COMMUNIST AND SLAVEMASTER OF YUGOSLAVIA, A DANGEROUS THREAT TO AMERICA AND THE WESTERN WORLD

(By William H. Smith)

Just over 90 years ago, led by our original Republican administration, our fathers fought a great war to preserve our Nation and as one result abolished slavery in our land. Just recently, our new Republican administration considered inviting to be our guest, the Yugoslavian Communist Dictator, Tito, a man dedicated, like all leading Communists, to the destruction of our Nation, and who, through our Government's support, has held our friends and World War II allies, the Yugoslav people, in slavery.

However, following the reports of the administration's intentions, protests pouring in from all over the country, from religious, ethnic, labor, and other patriotic groups, from Members of Congress, and in newspaper editorials, and the statement from the mayor of New York that he would hold no official reception for such a person as Tito, caused worry, apparently great worry to our foreign policy leaders and to Tito.

As a result, the Yugoslav Communist Government announced that Tito would not accept an invitation to visit Washington at this time, and thus got all concerned off the hook * * * our own foreign-policy leaders who would have faced sure moral condemnation for inviting and entertaining in our Capital, Tito the mass murderer, thief, and enemy of the United States, whom they helped to build into a person of greatly overrated international importance, while Tito saved himself from having his inflated pride hurt through coming here and not receiving the full honors usually accorded to a chief of state, and from arousing suspicion among his Kremlin pals over the possibility that he was getting too close to the West.

That's fine for now, and the protests made might seem to indicate how far the American people must be ahead of their foreign-policy

leaders in their appreciation of the basic moral principles upon which our Republic was founded and became great, and in their unwillingness to have our national shrines desecrated through visits from unworthy guests.

But in view of the administration's constant and determined efforts over the past 4 years to give aid, economic and military, to this thug, Tito, and his associated gangsters, in view of its failure to realize that Tito and his mob do not represent the people of Yugoslavia • • • possibly no more than Al Capone represented the people of Chicago • • • and in view of its "diplomacy of personal contact," doesn't it behoove us to be on guard to ensure that Tito be not invited to visit us in the future?

Therefore, might it not be worthwhile to review who Tito is, how he came to power and maintained himself in Yugoslavia against the will of the people, his record of loyal service to Moscow and of enmity to the West, his actions in the Polish, Suez, and Hungarian situations, and what may be expected of him in the future, which together should show whether he measures up to the kind of person we would like to have visit us?

Whether Tito was born in Croatia, Yugoslavia, or as some say, in Galicia or the Ukraine, which might explain his foreign accent and poor Croatian shown in his early speeches after Stalin placed him in power in Yugoslavia in October 1944, he did serve in the Austro-Hungarian army in World War I, he was captured by the Russians and held as a prisoner of war. He joined the Bolshevists in the Russian Revolution, studied in Communist schools in Russia, and later was sent to Yugoslavia to work with the Communist Party. He rose in the party, was jailed by the police, escaped, and was sent to serve world communism in other countries. In the spring of 1937, together with other Yugoslav Communist Party leaders he was called to Moscow for consultations.

Iskra (the Spark), the excellent Yugoslav bimonthly paper published by refugees in Munich, Germany, in its April 25, 1956 issue, under the heading, "Tito—Model Executioner," portrayed a bit of Tito's character through the following quotations connected with that 1937 trip to Moscow:

(a) From Die Weltwoche, the well-known Swiss weekly, and its articles on the Riddle of Tito, by Serge Caplan, in April 1953, who said: "Early in the morning, April 23, 1937, Milan Gorkic, secretary-general of the Yugoslav Communist Party, and his wife were led into the courtyard of the Ljubljanka, the central prison in Moscow. Both were in chains and heavily guarded. The previous night Vishinski and Manuilske had sentenced them in a special court. Gorkic bore himself calmly, bravely. His wife cried, screamed, called for help. She directed glances full of curses at Friend Walter, the name by which Tito was known to his Communist friends, who had come there to witness the carrying out of the death sentence. Gorkic and his wife were placed against the wall and shot. When they fell, Tito left. The same day, before noon, Malinkov, then Stalin's secretary, received Tito with a smile, and said: 'I have good news for you, Friend Walter. The executive committee of the Comintern has named you to be the general secretary of the Yugoslav Communist Party, as successor to the traitor Gorkic.'"

(b) Hans Borkenau, a former member of the German Communist Party, now a publicist and author of many articles and studies on communism, states in his recent book, European Communism—Its History From 1917 Until Now, in the chapter on Tito's rise: "Tito contributed to the destruction of his superiors and after their demise received a free hand for the reorganization of the Communist Party of Yugoslavia. Stalin regarded Tito as one of the most able representatives of young generation of Communists; he was the dynamic type who works much and questions but little. In other words, he was a model executioner for Stalin, the great executioner, whom today, in chorus with Khrushchev and company, Tito renounces and charges with criminal actions."

Tito returned to Yugoslavia to reorganize the Yugoslav Communists who remained quiet when Stalin's ally, Hitler, attacked Yugoslavia, April 6, 1941. But after Hitler's attack on Stalin, June 22, 1941, Tito, under the mask of nationalism and of resistance to the Germans, began his drive to eliminate anti-Communist Yugoslav leaders, and to prepare to take over the country for world communism.

General Mihajlovitch, Royal Yugoslav Minister of War, who later, in 1942, contributed greatly to the British victory at El Alamein by cutting the German supply line through eastern Serbia down to Greece, late in 1941 drove Tito out of Serbia into mountainous western Bosnia. From there Tito carried on his campaign for the communization of Yugoslavia, calling his bands deceptively, "The People's Army of Liberation," which meant to the peasants liberation from the Germans, and thus initially helped to get support from some of them.

In spite of getting the supplies we sent him instead of to General Mihajlovitch, and in spite of getting the equipment surrendered to him on our instructions by the Italians in Yugoslavia, after their capitulation, Tito's forces were so ineffective that German paratroopers captured his headquarters in Drvar in May 1944. Tito saved himself by deserting his men and being flown to Italy in an Allied plane. Then our leaders, appeasing Stalin, and in their incredible ignorance of what Tito, a Communist, was, consulted with this runaway, placed him on the Yugoslav island of Vis with Allied troops to protect him, and treated him as a man of parts.

True to his vicious Communist training, Tito, after being saved by the Western Allies, skipped from Vis in a Soviet plane, and reported to Stalin in Moscow. As a result, Stalin, against Allied arguments, sent a Soviet army into Yugoslavia, and in October 1944, placed in power in Belgrade, as "liberator of Yugoslavia," Tito, who had deserted his own men at Drvar, and never had been able to reach Belgrade with his partisans. An orgy of arrests and killings of anti-Communist Serbs followed. The Serb youth, without equipment or training, was conscripted and driven as a protective screen before Tito's Communists as they followed the Germans retreating through Zagreb to Germany. In Zagreb, as in all other Yugoslav cities, arrests and murdering ensued. People, many in absentia, were put before special courts on all kinds of fictitious charges, merely to have some quasi-judicial justification for Tito's confiscation of their property.

Tito and his mob organized Communist Yugoslavia on the basis of Soviet advice and police terror. They created a slave state in which the people and their churches, practically speaking, had no rights other than to act as directed by the Communist Party • • • which had all power.

Their much propagandized "break" with the Soviets, June 28, 1948, actually their expulsion from the Communist International—Comintern—was a personal matter of Stalin's who probably felt his protege, Tito, was getting too big for his boots. Our foreign-policy leaders, excited, it seems, by their silly hopes that through Tito they would be able to win the Chinese and Satellite Communists away from the Soviets, overlooked facts such as Tito's flight from Vis to Moscow in 1941, his shooting down of unarmed American airmen in 1946, and his proven record as a Communist, and began to support Tito. Incredible as it must have been for the enslaved peoples, our United States, supposedly the bastion of liberty, enabled Tito and his gangsters, through American support, to maintain themselves in power and to hold the Yugoslav peoples in slavery • • • even until now.

Including the $550 million given in UNRRA aid, a third of which, according to competent observers, was shipped on by Tito to Soviet Russia, and to the Albanian Communists, we've given Tito probably $2 billion in aid, economic, financial, and military. As an example of how our Government extends aid, even military, to an avowed enemy, note that our Department of Agriculture announced January 19, 1956 (last year) "details of an agreement between the United States and Yugoslavia providing for the sale of $49 million worth of United States agricultural commodities (including certain ocean transportation costs) for dinars (Yugoslav currency)." Tiflis covered approximately 75,000 metric tons of wheat, 49,000 bales of cotton, and 40,000 metric tons of lard plus ocean transport.

Four months later, a New York Times dispatch, dated May 21, 1956, read: "The United States and Yugoslav Governments announce an agreement today to release $46,700,000 in American Aid Counterpart funds to be used to purchase equipment and supplies for the Yugoslav armed forces."

Presumably, upon receiving the shipping documents for the commodities concerned, the Yugoslav National Bank credited the United States for the dinar amount covering the dollar value of the commodities. Then following the May 21 agreement, they probably debited our account for the dinar value of the $46,700,000 mentioned, and through these simple bookkeeping entries, the wheat, cotton, and lard, supposedly "sold" to the Yugoslav Communist Government, was given them free for the purchase of military equipment and supplies, to be used, if so dictated by world communism at some future date, to kill our own American boys.

But, as possession of the commodities must have passed with the documents, what was to stop Tito from shipping all or part of them, should he so wish, say to Czechoslovakia as payment for arms for Yugoslavia, or even for Egypt in some Communist deal, Tito's men having played an important role in negotiating the Czech-Egypt arms business.

That's just one glimpse of how Tito and his mob have maintained themselves in power in Yugoslavia. Our enormous aid to Tito enabled him to travel to India, Burma, Ethiopia, Egypt, and other countries, going in his own private yacht, accompanied by warships and hundreds of guards, all intended to impress the people visited, and has enabled him to build an operate a spy and propaganda apparatus in our and other countries, and all for the benefit of world communism and the overturn of the democracies.

His trips, judging by the results, were made as a front-man for Moscow. Obviously, Tito, posing as a "different" or "nationalist" Communist, openly supported by the United States Government, has been an ideal ground-breaker for Khrushchev, Bulganin, Zukov, Shepilov, and other Moscow men who followed him. And traveling on his own yacht, he most probably carried Soviet gold for delivery to Nasser for the financing of the Soviet-inspired revolutionary propaganda in Africa, which was noted incidentally in my May 7, 1954, talk before the Commonwealth Club of California, and which is very interestingly and fully described in Frank Kelly's article in the New York Herald-Tribune of February 12, 1957. Don't forget that Nasser nationalized the Suez Canal, July 26, 1956, just a week after returning from his visit to Yugoslavia, where on July 18, he was in conference the whole day with Nehru and Tito. Also note that Tito, only a few weeks earlier had returned

to Yugoslavia from his trip to the Soviet Union, and in all probability could have brought back some suggestions for Nasser.

Tito's statements during the Suez, Polish, and Hungarian crises, have been reserved, but his delegate to the United Nations has voted fairly consistently with the Soviets, or abstained to their advantage.

I may be wrong, but believe that Tito, during that period was trying not to offend the United States, whose foreign-policy leaders had until October 16 to decide what to do about extending further aid to Tito. The decision announced that day, extending economic aid and leaving the door open for possible military aid was so important for Tito in giving him a chance to bolster his sagging economy, that even the Hungarian revolt on October 23 brought no statement from him, waiting as he was for help from us. Our administration worked fast to help the Communist dictator, for on November 3, 1956, the Department of Agriculture announced: "Secretary of Agriculture Ezra Taft Benson announced that the United States has entered into a commodity agreement with the Government of Yugoslavia for the sale to that country of $98.3 million worth (including certain ocean transportation costs) of United States agricultural surplus commodities," covering approximately 925,000 metric tons of wheat, 85,000 bales of cotton, 32,000 metric tons of lard, 7,000 metric tons of cottonseed or soybean oil, 9,000 metric tons of inedible tallow, and ocean transport. This is the third foreign currency transaction entered into with the Government of Yugoslavia, and brings the total value of such agreements with that country to $221.5 million.

Most interestingly, a New York Times dispatch from Belgrade, dated November 4, the day after Mr. Benson's announcement, and published on the 5th, included the following:

"Yugoslavia supported the new government in Hungary tonight. * * * The Belgrade regime finally took a public stand on the Hungarian situation after 9 days of official silence by circulating a commentary from Tanjug, official news agency. The document was understood to state the views of President Tito. It regretted that the government of Janos Kadar had to rely on Soviet troops to come to power. But it explained this intervention with the assertion that reactionary elements were about to bring down the whole Socialist structure in Hungary.

"The use of foreign troops for settlement of internal matters is contrary to the principle attitude on which Yugoslavia is building socialism and which should exist in international relations. However we cannot overlook the fact that the use of these troops is the product of negative developments."

Thus Tito, who had kept his mouth shut while the, to him, life-saving commodities agreement was being worked out with us, was able on November 4 (with $98,300,000 of commodities assured to him from America the previous day, with 100,000 tons of the wheat to be supplied immediately without the usual 7-day waiting period), to talk, and talk he did.

He spoke again, and at length, at Pula, Yugoslavia, on November 16. There he discussed the Polish and Hungarian situations, and although he made certain criticism of Soviet handling of the situations and of its intervention, yet he stated definitely, and this seems the kernel of it all to me, as reported in the New York Times on November 17: "Many people are asking why the Soviet intervention took place. It is clear, we have said and we will always say, that we are against the intervention and use of foreign military force. * * * It is understood that if intervention saves socialism in Hungary, then comrades, we will be able to say, although we are against the intervention, that Soviet intervention was necessary."

Noting that Tito uses the terms Socialist and socialism as we use Communist and communism, it is seen that irrespective of the desires of the Polish, Hungarian or any other peoples to have their freedom, Tito approves the use of foreign, Communist, intervention to suppress those God-given desires, and to maintain the respective Communist government in power over those people.

When Tito speaks of freedom, it appears obvious that he means freedom for the Communist Party concerned, to control the government concerned, and thus to enslave and dominate the people under them. Unfortunately our foreign policy leaders do not appear able to understand this difference between Tito's standard Communist idea of freedom, and freedom as we understand it * * * freedom for the people as masters of their governments.

Tito is now assured of $98,300,000 more at least in good American commodities, to be paid for apparently in his Yugoslav Communist dinars. Are those dinars to be released back also as counterpart funds to be used by him for the purchase of more military equipment and supplies, to be used possibly some day against our American boys? Or will he ship them to Czechoslovakia or some other Communist country to pay for equipment for his Yugoslav Communists or for Egypt or some other country where communism is trying to foment trouble for the West? If so, why?

Tito, the deserter we saved in May 1944, and saved again through our support after Stalin turned against him in 1948 (though Tito never has turned against communism), must carry on as a Communist. Otherwise he will be finished. In a free election the Yugoslav people would rid themselves of him fast; he knows that, hence will hold no such election.

He has to stick with world communism, with the Soviets, and it seems to me, the sooner our foreign-policy leaders realize that, the better it will be for us and for the world. How can the rest of the world, particularly the hundreds of millions of enslaved peoples, have any faith in our declarations of our anti-communism when we support Tito, whom we have built into a world figure in communism?

A visit by Tito to Washington would be a tremendous buildup for him personally, it would be a victory for world communism, and would be the last straw in wrecking faith in our country in the minds of those immense numbers of human beings, living miserably in Communist slavery, but who have held to their hope in getting back their freedom one day through our help. Our handling of the Hungarian situation must have dismayed those people who have carried hope for freedom in their hearts. Let us start to rebuild that hope through letting Tito know, once and for all, that he will never be invited to Washington.

Post Office Closing Unfortunate

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. FLOOD. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader of April 13, 1957:

POST OFFICE CLOSING UNFORTUNATE

Postmaster General Summerfield carried out his strike threat against the American people today by discontinuing mail service for the weekend.

With characteristic inconsistency, Summerfield made exceptions. He saw to it that the White House, and certain other departments of Government, the heads of which he knows personally, got service. John Doe, the average American taxpayer, who foots the bills, received no mail. Summerfield was economizing on him. Since the Post Office Department's explanation was that it was important to deliver mail to favored Government recipients, we must assume other Americans are unimportant in its book.

Quite obviously Summerfield was throwing his weight around. He wanted to make his point—that Congress must knuckle down to him and grant him what he requested or else. His colossal arrogance in treating the American people like dirt is without precedent in history.

Since the problem is likely to be solved during the course of the next week, the issue itself now is secondary. But Summerfield's action in stabbing the American people in the back is a challenge that must not be allowed to go by default.

Summerfield's disservice to his country is not merely a blot on his personal record; it is a blackeye to the Eisenhower administration. Unless the President disavows him, as the labor movement repudiated Dave Beck, then Mr. Eisenhower must share the responsibility.

It is a serious matter for a man in high place like the Postmaster General of the United States to penalize the American people. He should not have that authority. Why should he be allowed to go on strike at the expense of his countrymen? Dictatorship in any form is just as reprehensible at home as it is abroad.

Today's suspension of service was uncalled for; it was a deliberate and inexcusable abuse of authority. Money was available to operate the Post Office Department today and next week when the difficulty is likely to be resolved. So this was a crisis Summerfield precipitated without any justification. There are other interesting angles which need not be explored now.

Steps must be taken under responsible leadership to straighten out the mess in the Post Office Department. Rates should be reviewed and efficient methods installed to give the public the break to which it is entitled and which it has not been receiving. For a country that is supposed to be so advanced and wealthy, the United States has a postal service that is pathetic, to state it in generous terms.

Subcommittee of the Foreign Affairs Committee on International Organizations and Movements

EXTENSION OF REMARKS
OF
HON. A. S. J. CARNAHAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 11, 1957

Mr. CARNAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include resolutions adopted by the New Hampshire House of Representatives in connection with a public hearing of the subcommittee of the Foreign Affairs Committee on International Orgnizations and Movements which was held in Laconia on the 5th of April. This meeting was in the First District of New Hampshire, represented by my colleague, Congressman CHESTER E. MERROW, who is the ranking minority member of this subcommittee. Other mem-

bers in attendance included: KARL M. LECOMPTE, Iowa; FRANK M. COFFIN, Maine; L. H. FOUNTAIN, North Carolina; DANTE B. FASCELL, Florida; and ALBERT P. MORANO, Connecticut.

I am delighted that the House of Representatives of the New Hampshire Legislature has passed these resolutions in reference to the Subcommittee on International Organizations and Movements. I greatly appreciate their thoughtfulness and I am glad that there is such a tremendous interest in foreign affairs in the State of New Hampshire. The hearings which were held were a marked success and we derived a great deal of good from our meeting in Laconia. The testimony we received will certainly be helpful when mutual security legislation is before the House.

I know that I express the sentiment of every member of the subcommittee in saying that we are exceedingly grateful for and deeply appreciate the action taken by the New Hampshire House of Representatives.

The resolutions follow:

RESOLUTIONS TO SUBCOMMITTEE ON INTERNATIONAL ORGANIZATIONS

Whereas the State of New Hampshire is highly honored to have a subcommittee on international organizations and movements, Committee on Foreign Affairs, of the United States House of Representatives, meet in the city of Laconia, on Friday, April 5, 1957, at the Garden Theatre; and

Whereas the committee has invited the people of New Hampshire to visit Laconia on that date and express their views on national and international affairs; and

Whereas Hon. CHESTER E. MERROW, Congressman from the State of New Hampshire, is a member of that subcommittee and will appear at that time: Therefore be it

Resolved, That we, the members of the house of representatives, do hereby offer our gratitude to said subcommittee for extending to this State the distinction of being its choice for its first meeting outside of Washington, D. C.; and be it further

Resolved, That a copy of these resolutions be forwarded to the chairman of the Subcommittee on International Organizations and Movements, Hon. A. S. J. CARNAHAN, and to Congressman MERROW.

[SEAL] W. DOUGLAS SCAMMON,
Speaker, House of Representatives.
PETER S. KARAGIANIS,
Representative from Laconia.
GEORGE T. RAY,
Clerk, House of Representatives.

Words of Wisdom from Joseph A. Salerno, Labor Leader

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. LANE. Mr. Speaker, the transgressions of a few labor leaders should not blind us to the unimpeachable integrity of the overwhelming majority. Nor should this be used as a pretext for attacks designed to weaken the organized labor movement and its established role in the functioning of our economy.

Modern labor leaders are well aware of their responsibilities. The trust reposed in them by millions of union members is well justified.

Joseph A. Salerno, of Boston, is an exemplary leader, who has devoted a lifetime to the cause of organized labor. His intelligence, sincerity, and courage are a tribute to his personal character, and inspire confidence in the leadership of labor.

As New England director, Amalgamated Clothing Workers of America, AFL–CIO, he speaks words of wisdom, that deserve your attention.

Under unanimous consent I am reprinting in the CONGRESSIONAL RECORD the editorial of April 12, 1957, from La Gazzetta Del Massachusetts, and its well-deserved commendation of Joseph A. Salerno:

MR. SALERNO IN TIMELY ADVICE

Joseph A. Salerno has long been recognized as an articulate spokesman for the particular branch of organized labor with which he is associated. He always knows whereof he speaks and he speaks fluently and in language that is clearly understood by persons without advantages of higher education. His views are conservative except when he feels circumstances warrant abandonment of such a policy.

He chose Waterville, Maine, to offer very timely advice to members of labor unions, but his remarks to workers in that area should carry weight throughout the Nation. His conviction is that union members should, if necessary, regain control of their unions and not permit development of a few bosses who order members what to do instead of doing what the unions instruct.

Mr. Salerno is competent to analyze the cause of the recent national exposures of wrongdoing by some labor bosses. He knows that the blame rests with union members who are too lazy to attend meetings and assert their authority to determine policies, make certain that funds are honestly used, and that the welfare of their organization is the major consideration at all times.

No one can question the value of this advice. It comes from one, admittedly capable of offering advice. It is devoid of personal considerations. If all unions would decide to do what Mr. Salerno has suggested the future of organized labor would be definitely assured. No reason would develop for any interference by National or State governments.

Good Neighbors Are His Specialty Wherever He Is

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. POAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Waco Times-Herald of March 18, 1957:

GOOD NEIGHBORS ARE HIS SPECIALTY WHEREVER HE IS

The tanned, gray-haired general, wearing the dark blue dress uniform of the United States Army, looked around the dinner table at the men from Waco, Temple, Belton, Killeen, Copperas Cove, Lampasas, McGregor, and Oglesby.

Their names and faces took him back to the years when he commanded Fort Hood, reactivated the 1st Armored Division from scratch with raw recruits, became an authority on ground warfare in the atomic age and still had time to help the communities that surrounded the huge armored center solve their problems. Roy Smith, the Killeen banker and chairman of the group, had stirred the memories with his recital of how General Clarke personally helped this community with its water troubles, pacified that rancher after a tiff with the troops, devised a school solution for another community, assisted the Boy Scout program in central Texas, and otherwise made himself a supremely useful citizen.

Now Gen. Bruce Clarke heads the United States Seventh Army in Europe at 162 posts and stations, comprising 250,000 Americans counting the dependents with the troops, strung out along 700 miles of the Iron Curtain. He looked around at his old Central Texas Military Affairs Committee and said, "The only difference in helping the Army to solve problems with communities in central Texas and with communities in Germany is the difference in the language." Then he passed on to reassert his faith in central Texas' future.

But those who have been with General Clarke in Germany can enlarge on his success at winning the Germans over to a new attitude toward the Americans who are protecting them day and night from the Soviet Army.

When General Clarke took over the United States Seventh Army in Europe 11 months ago, there was ugly and spreading tension between the Germans and the United States troops. There had been crimes of violence on both sides but the German newspapers in a particular area, aiming at discrediting all military in their drive against a rearmed Germany, had magnified the crimes and the tension beyond their meanings.

One of General Clarke's first acts on arriving at this troubled spot was to make an address to the leading citizens of that part of Germany. He speaks no German. But his adopted daughter, whom he rescued as a war waif in the ruins of Munich in 1945, stood by his side. This beautiful girl, now 17, put into German the general's invitation to sit down and look at the problems and work them out. It created a sensation in that part of Germany.

One particular United States regiment was the source of most of the violent trouble that had preceded General Clarke's arrival. The Germans considered its men ogres. A few months later, when this regiment prepared to return to the United States, the Clarke good-neighbor policy had worked its magic to the extent that German neighbors of the regiment bought an expensive silver service, engraved it with the regimental crest, held a big feast of presentation and invited the ogres to come back any time.

General Clarke didn't refer to these incidents, nor to the way his men have used their own money and muscle to help German orphans, German poor, Hungarian refugees, German flood victims. But he did admit that relations between the United States Seventh Army and the German people are the best they've ever been. "We are their guests," said the general.

The guests are not sitting around with their feet propped up, either.

In 2 hours, the 170,000 men of the United States Seventh Army can roll ready for battle, whether it's a Sunday or a snowy midnight or a fine, sunny day in 2 hours, with all guns loaded, gas tanks filled, planes and tanks in motion and all men at their as-

signed spots. If General Clarke has worked a miracle in friendship, he has achieved a double miracle in hour-to-hour unceasing military preparedness. "We hope we will never have to do our stuff," he said. "But if it comes, we are ready."

General Clarke gives the credit to his men, urges the homefolks to write them and help keep up their morale. We think General Clarke is entitled to some credit and mail, himself.

Postal Fund Dispute

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks I should like to include an editorial from the Saturday, April 13, 1957, issue of the Miami Daily News, of Miami, Fla., entitled "A Good Fight, Best Man Won."

As the editorial indicates, the post office must grow to meet the steadily rising demands of our population, and in order to accomplish this it must have the necessary funds. Our country is enjoying dynamic growth. Unlike some agencies and services, the post office has to serve each new home, each new family, and each new community. It cannot stand still.

A million and a half young people get married each year. The post office must serve a million new homes a year. This means, Mr. Speaker, that every working day the post office has to accommodate the equivalent of a completely new city of approximately 10,000 population. I believe both the Congress and postal officials are determined that our postal service keep pace with the demands of our citizens in 20th century America.

The editorial follows:

A GOOD FIGHT, BEST MAN WON

The Nation today is receiving a lesson of what happens when irresponsible Congressmen deny a department of the Government the funds it must have if it is to give the service the public demands.

Closing of the Post Office Department for today by Postmaster General Arthur Summerfield is no sudden action. The Postmaster General warned Congress several days ago that he would have to curtail service unless the money needed to operate was forthcoming.

There is a dispute between Mr. Summerfield and some members of the House Appropriations Committee over who is to blame for the Post Office Department's predicament. Some blame the Postmaster General, as head of the Department, because fourth-quarter money was spent in advance to cover sharply increased expenses. Others blame the Bureau of the Budget for having authorized the advanced spending.

It doesn't matter who is to blame. The committee has belatedly approved $41 million of the $47 million which was requested. The action came too late to avoid economies which went into effect today.

Mr. Summerfield is no stranger to politics, although he is essentially a businessman. He has sought to run his Department like a business against the opposition of the politicians in Congress who have blocked necessary postal-rate increases and consolidation of post offices.

The Postmaster General deserves commendation for standing up to Congress and forcing the issue. Essential services of Government cost more as the country gets bigger. This controversy has been a demonstration to the Nation that if the budget is to be reduced, the savings can be made only in nonessentiial spending.

Plans Completed for 1957 Congressional Tour of New York City, May 10, 11, and 12

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. VAN ZANDT. Mr. Speaker, plans have been completed for the annual congressional tour of New York City and Kings Point Maritime Academy, May 10, 11, and 12.

This annual congressional tour for Members of both Houses of Congress and their families provides for 3 glorious days in New York at a cost of $37.50 for adults and $32.50 each for children between the ages of 5 and 12 years.

As in previous years, Members of the Senate and House of Representatives have received a most cordial invitation from Mayor Robert F. Wagner of the city of New York, who has instructed his city department of commerce and public events to make every effort to assure an interesting and well-balanced program for the reception and entertainment of the group making the 3-day tour of New York.

For the information of those who intend to make the tour, the following itinerary will be of interest.

SCHEDULE OF EVENTS

Friday, May 10: 9:45 a. m. daylight time, we leave Washington via Pennsylvania Railroad. Luncheon will be served in dining car. We arrive New York Penn Station at 1:45 p. m. daylight time, and immediately board motor coach for tour of lower New York, including a stop at City Hall for reception by the Mayor, Hon. Robert F. Wagner. We also stop at the United Nations for a 2-hour tour. We arrive at the Paramount Hotel about 6 p. m daylight time. The evening will be open for Members to attend the theater or enjoy the bright lights of Broadway.

Saturday, May 11: 9 a. m. motor coaches will leave for Pier 83, Hudson River, to board excursion steamer for luncheon and harbor inspection until 2 p. m. From 4 to 6 p. m. the party will go aboard the Italian Line steamship *Cristoforo Colombo* at pier 84, Hudson River, for a reception and inspection of the ship. The party will then proceed to the Hotel Savoy-Plaza for a reception and buffet dinner after which the evening is open for theaters and other forms of entertainment.

Sunday, May 12: 8:30 a. m. motor coaches will transport the party to the foot of the Battery for a 9 a. m. departure via steamer up the East River through Hell Gate Rapids and out to Long Island Sound for a noon arrival at the United States Maritime Academy pier at Kings Point, Long Island. After lunch and a review of the cadets, the party will return by bus to the Pennsylvania Station, New York City, and depart for Washington at 5:30 p. m. daylight time.

I should like to emphasize that this tour is for Members of the Senate and House of Representatives and their families, and reservations should be made immediately by calling Miss Patricia Bryan, extension 366 or 1830.

Bankers Interest

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CENTRAL MISSOURI TRUST CO.,
Jefferson City, Mo., April 8, 1957.

The Honorable W. STUART SYMINGTON,
United States Senate Office Building,
Washington, D. C.

DEAR SENATOR SYMINGTON: Attached is a letter from Robert Van Cleave, the author of After the Federal Reserve System—What? regarding Dr. Welsh's memorandum to you which you sent to me for comment on March 6.

I am pleased to note that Mr. Van Cleave and Dr. Welsh appear to be in fundamental agreement on the basic point " 'that the mere fact that interest rates have risen is not sufficient justification for pumping more money into the system,' and again, 'The idea that a ready solution to economic difficulties is simply one of arbitrarily increasing the monetary supply is a dangerous philosophy.' " Also both of their statements either directly support or definitely imply that the management of monetary policies should be in the hands of an independent, non-politically motivated agency, such as the Federal Reserve Board.

In my judgment, if there is anything wrong with the present monetary policy mechanism, it is due to restrictions on the authority of the Federal Reserve, rather than to any abuse of its present powers. For example, not many months ago when inflationary pressures were the strongest and when almost all economists agreed that credit should be temporarily restrained, the administration relaxed terms on FHA loans, et cetera, with much publicity, while at the same time the FED was attempting to follow a restrictive policy by refusing to supply all the reserves that were demanded for further credit expansion. The former policy was in the interest of immediate popularity; the latter was the unpopular policy, but in the best interest of the welfare of the country.

Sometime in the future, I believe, we very much need to give sufficient authority to some indepetndent agency to coordinate all Federal monetary policy, in accordance with overall objectives as laid down by Congress.

Some of the most vital objectives should be to foster such monetary policies as will continue to encourage maximum economic prosperity and expansion up to the very limits of available resources and technical know-how. The key is to keep private and public affairs in balance so that we can have an equilibrium between spending and saving and between borrowing and paying of debts. I know of no agency better suited for this great responsibility than this Federal Reserve Board, if it could be given adequate authority to do the job.

Attempts have been and are now being made to find somebody to blame for the present tight-money situation. Some are blaming the administration; some are blaming the Federal Reserve Board. As you well know, I have no love or even respect for the policies of the present administration, but I do have great respect for Mr. MARTIN and the policies the FED is attempting to follow. And I believe the time is long overdue for the responsible leadership in the Democratic Party to disavow many of the irresponsible statements on monetary policy that come principally from some of the elected representatives of our party.

The cause of tight money is that we are not saving as much as we want to spend, and not that the FED or even the administration is attempting to raise interest rates for the benefit of big bankers. Even with restrictions on further expansion of credit, we have witnessed a serious continuation of greater and greater inflation. In the past, inflation has always brought deflation and recession—the greater the inflation the more difficult the inevitable readjustment. Where is this to end if some agency is not supported by the responsible leaders of both parties in their efforts to restrict the continued expansion of credit when all available resources are fully employed or, in some cases, overemployed?

Granted monetary policy alone cannot hold the economy in balance. Wage increases, for example, in excess of productivity increases are largely beyond its control. But the absence of any effective monetary policy would certainly create the probability of much more serious and violent economic fluctuations (i. e., how much greater would the inflationary spiral have been since 1951 if the FED had not been active?).

The current controversy over the VA-loan rate seems to me to be another example of the potential dangers of involving politics in monetary policy. The proper course in my judgment is to permit the rate on VA loans to adjust itself to the market price of money necessary to attract long-term savings. And unfortunately, the further inflation progresses, the higher the price that must be paid to attract long-term savings. There have been several suggestions that the Government should expand its program of direct loans to veterans at the 4½-percent rate, which is substantially below the present free-market rate necessary to attract long-term investment funds. But as Mr. MARTIN says on page 4 of the attached statement (which I thought you might not have seen), "none of these proposals operate to encourage more savings, i. e., to increase the total flow of funds from which all demands for long-term investment must be made." Such a program would, of course, require additional borrowings by the Treasury and "would not only be inflationary but would tend to raise the market rate of interest still further and then increase the barrier that is already impeding the flow of private investment funds in VA markets."

My dislike of the political overtones involved in the tight-money argument are based not only on the best interests of our economy, but also upon its future implications for the Democratic Party. I believe if our party continues to make monetary policy a political issue, in the final analysis this matter can only be resolved in the same manner as William Jennings Bryan's proposal for the free coinage of silver—as an appealing emotional issue that will eventually be discredited by the facts.

I am not arguing that monetary policy, any more than any other policy, should be exempt from political debate or criticism. My point is simply that direction of all Federal monetary policy should be coordinated by an independent, non-partisan agency, with final authority to take such actions as are in the overall best interests of the country. As conditions now exist, many monetary policy decisions must be made by the administration and Congress. Such decisions have often become involved with partisan considerations and have, therefore, been based primarily upon the immediate popular reactions. Unfortunately the results have frequently been contrary to the overall best interests of the people whose approval is sought.

True, I bear the political epitaph, "banker," but I am one banker who is also a dedicated liberal Democrat. In my very humble opinion, it is not in the best interests of the country or of the Democratic Party (whether liberal or conservative) to give support to an issue which, if determined politically, will in the final analysis bring great discredit to our party and serious dangers for the future of our free-price, free-competitive, and free-enterprise economy.

Please excuse the length of this letter, but I feel so intensely on this subject that it is hard to stop.

Thank you and Dr. Welsh for taking the time to consider this matter.

Respectfully yours,

SAM B. COOK.

Plain Talk for Those Concerned Over United States Prestige Abroad

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. HOSMER. Mr. Speaker, I commend the following editorial from the Sacramento Union of April 10, 1957, to the attention of those of my colleagues who periodically are impelled to regale us with expert assessments as to an alleged low state of United States prestige in foreign countries:

IS THAT BAD?—EUROPEAN NATIONS NO LONGER LIKE US

A San Francisco merchant who became an international expert after touring Europe for 6 weeks, is alleged to have reported that in England, France, Italy, and Spain, Americans are "looked upon as well meaning but without all our buttons. The talk of Eisenhower and Dulles now is about 'two sick men running the United States Government.'"

England has lost her colonies throughout the world and is struggling to remain a second-rate power in the family of nations; France hasn't had a stable government since the Second World War and is a hotbed of socialism, communism, and Poujadists; Italy is Communist dominated, and Spain is an absolute dictatorship, where freedom is found only in the dictionary.

Yet we are to concern ourselves about the low level of esteem to which the United States has sunk in those nations. Why? We've been spoon feeding all of them for years, literally pouring billions into ratholes in each of their countries.

If Mr. Eisenhower and Mr. Dulles have finally succeeded in displeasing those nations, this country ought to give them a standing vote of thanks. Certainly the San Francisco merchant, who became an international expert in 6 weeks, ought to be reminded that Mr. Eisenhower is President and Mr. Dulles is Secretary of State of the United States, and not of Europe.

As Hawaii Sees Employ the Physically Handicapped

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. BURNS of Hawaii. Mr. Speaker, having a great deal of interest in the physically handicapped and in promoting a better understanding of the capabilities of the Nation's physically handicapped, it is a privilege for me to draw to the attention of the Members of the House the prize winning first place essay of the 1957 National Employ the Physically Handicapped essay contest, Hawaii division. This national essay contest is sponsored by the Disabled American Veterans. The teacher of the young man who wrote the essay which I insert in the RECORD is Mrs. Elaine Kono, of Hilo, T. H. The essay follows:

EMPLOYMENT FOR THE HANDICAPPED A COMMUNITY RESPONSIBILITY

(By Jackson Kohagura, Hilo High School, Hilo, T. H.)

Imagine yourself a young man 25 years of age, happily married for 3 years, with a 2-year-old son. Life has been good to you. Although you are not rich, you have a car and a home that will be paid for in another 10 years or so. You enjoy your work as an auto mechanic in a local garage. It isn't the best paying job in the world, but it supports you and your family quite adequately.

One afternoon you are driving home from work, when suddenly you feel as though you were struck by lightning. You recover consciousness and find out that you were hit by another car coming out from a side street. You find yourself in a hospital bed with a ball of fire on your right leg. You look up into the disturbed face of your wife, who says nothing; but you can tell immediately that something is wrong—very wrong. A nurse gives you an injection and tells you that soon you will feel no pain. You put your hand to your right leg where the pain is. Then it slowly sinks into your brain that you have no right leg.

The next few weeks are filled with pain and despair. Your only comfort is your wife's daily visits. As time passes, your thoughts turn away from yourself. You wonder whether your insurance policy is large enough to cover the hospital bill. You wonder how you will get an income, since without a leg you can no longer work as a mechanic. There are many other questions to be answered: How will the monthly payments on the house be met? And your son? Yes, your son. Will you be able to get for him all the things that you had hoped for—an education? Security? A happy home? How would he feel about having a father who has no right leg, a father who cannot run and play ball with him?

About a month after you go home from the hospital things are looking black for you and your family. You cannot meet the monthly payment on the house; the car is beyond repair; your savings are wiped out by additional therapeutic treatments for your leg; after your insurance policy is used to its maximum amount. But you have one hope left—the Government. You know the Government helps disabled people through many agencies.

One morning you call on a cheerful and sympathetic man who is a counselor for the Vocational Rehabilitation Agency. The first thing he does is to get a medical report on your physical condition. He gives you some vocational aptitude and interest tests. After looking over the results, he says that your abilities could be directed to being a bookkeeper. You laugh bitterly, because you don't know a single thing about bookkeeping. He convinces you that if you are willing to try his suggestion, you have nothing to lose.

You are sent to a business school by the agency; they also give you a pair of crutches. You do very well, just as your counselor has predicted. Your family is supported by the Welfare Department for the duration of your schooling; payments on your house are made through loans from friends who have noticed your progress.

Finally the big day comes when you are ready to go out and look for a job. You hobble on your crutches into a large building, move toward the personnel manager's office and wait your turn to see him. He is very nice, but he explains to you that you have no chance of passing a physical examination. You protest the idea of a physical exam for a bookkeeper's job. You show him your reference and a certificate of the validity of your training. He excuses himself with "I have nothing to do with company policy. A rule is a rule." After many similar futile attempts you find yourself returning dejectedly to the Vocational Rehabilitation Office. Your counselor, who has been waiting for you, says, "Same old excuses, I presume."

"Same old excuses." These words run through your mind. How did he know?

"You mean this happens all the time?" you ask. Sadly you find out that there is definitely a prejudice against people who do not have full use of their physical faculties. You are more frustrated than ever when you hear your counselor repeat the very same poor reasons that employers give for not hiring handicapped people: More absenteeism, higher injury rates, lower production. These falsehoods in a country which is proud of itself for the equal opportunity offered to everyone. Is this equal opportunity?

You know that Government surveys prove that handicapped workers produce at an equal to or higher rate than full-bodied persons on the same job. The surveys also prove that handicapped persons are equal to or better than normal workers in absenteeism and injury rates. Handicapped workers also have the same wide range of skills, abilities, and interests as the nonhandicapped.

You feel hopelessly frustrated, for you are not even given a fair chance to prove yourself or your abilities. Although you know that the man in the Vocational Rehabilitation Agency is trying his best to find a position for you, you cannot help thinking that his efforts are in vain.

People who talk to you sympathize with you, but they do not seem to realize that you can do a good job in an occupation where your disability is not an occupational handicap. There is a stigma attached to employment of disabled persons. This prejudice is difficult to understand. If an individual takes the time to find out what a disabled person can do, there certainly would be no hesitancy about hiring a disabled worker.

One day a call comes from the rehabilitation agency to inform you that a position has been found for you. You realize that you are among the more fortunate of the disabled who will be employed. You are suddenly transformed into a person who pays an income tax instead of one who depends upon money derived from the taxes of other people. You also realize that in paying in income tax you will be "squaring away" the amount that the Government has spent on you since your accident. Things look bright again and there is a future for you.

What you have just read has a happy ending. However, for every disabled person that is rehabilitated and has been helped by the Vocational Rehabilitation Agency and other related agencies, there are many, many more disabled that lead a futile, aimless life. Many disabled people do not get the help they need because there are not enough trained personnel to handle all the cases. There is also a need for rehabilitation centers and other facilities where each individual case can be handled.

The public needs to educate itself on what a disabled person can do. The centuries-old stigma that is attached to disabled persons must be destroyed. The prejudices must be corrected.

"What can I do?" you ask. Alone it is always difficult to accomplish much; but as a community of individuals something can be done. A community must realize that its reward for ridding itself of groundless prejudice is a body of taxpayers, productive though physically handicapped. Remember, although you are a normal person today, you have no assurance that tomorrow you will be the same. Tomorrow you might need the community's help.

"Open the door for the disabled."

A Fitting Choice

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I want to include an editorial from the Mount Vernon News, entitled "A Fitting Choice."

This refers to the choice of Gen. Nathan Twining as head of the Joint Chiefs of Staff. It has been my privilege to know General Twining for a number of years. He has great ability, his loyalty can certainly never be questioned, and he is one who has the intestinal fortitude to speak his views. He is certainly no yes-man.

I think the appointment of General Twining will be heartily endorsed by all.

The editorial follows:

A FITTING CHOICE

Gen. Nathan Twining, now Chief of the Air Force, seems a wise choice to succeed Adm. Arthur Radford as head of the Joint Chiefs of Staff.

Certainly no one is better qualified by position and experience than Twining.

He has held his present post 3½ years. In this job he has again and again showed a talent for getting along with his fellow service chiefs. General Pate, of the Marine Corps, calls him the fairest minded man I know.

In World War II he served in the South Pacific where he once spent 6 days on a life raft after his plane was ditched, and in Italy.

He has all the qualifications that fit him for an office which has been held by so many great military men.

Massachusetts Department of Natural Resources Review of Legislation Relating to Lobsters

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting letter pertaining to the lobster industry that merits the attention and consideration of each and every Member of the Congress.

The letter follows:

THE COMMONWEALTH
OF MASSACHUSETTS,
DEPARTMENT OF NATURAL RESOURCES,
Boston, April 11, 1957.

Congressman THOMAS J. LANE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN LANE: The Massachusetts Department of Natural Resources has reviewed the several bills relating to lobsters (the Payne bill (Senate 237) and companion bills (H. R. 2425, 2464, and 3028) by Congressmen HALE, MCINTYRE, and COFFIN, all of Maine).

On the basis of our present information we find no need for the legislation at least in its present form with one exception.

Title 1, in substance, is an attempt to establish a minimum legal length of lobsters (Homarus americanus) at 3 1/16 inches (carapace measure) as a national policy, while at the same time reserving to the individual lobster-producing States the right to deal internally with their own lobster industry as they may see fit.

Massachusetts may well agree that a uniform legal length for all lobsters, wherever caught or taken, might be universally desirable. However, we do not agree that such minimum length be set at 3 1/16 inches. Without commitment Massachusetts might take a somewhat different view if the minimum length was to be 3 3/16 inches. Another objection which might be considered is the possibility of difficulty in enforcement arising from the conflicting, concurrent, or overlapping of authority or jurisdiction of two sovereigns.

For the foregoing reasons, together with the fact that this State is not presently aware of any particular problem concerning the interstate shipment of lobsters which have been illegally caught or taken, and for other reasons title 1 is objectionable to the interests of the Commonwealth and would not receive our support.

The exception to which I referred above deals with title 2. Title 2 defines lobster as that species of decapod crustacea commonly known as Homarus americanus. We agree with all other lobster-producing States that this part of the legislation will be beneficial to all such States, including Massachusetts.

It is the consensus of the States producing Homarus americanus that the North Atlantic lobster will never be equaled by any of the competing substitutes.

We are aware of the increasing importation and use of crawfish in its many varieties and voice no objection to the sale of those products as crawfish. However, to permit the word "lobster" to be used in connection with the advertising and marketing of what is generally considered by lobster lovers as an inferior substitute would subject the true lobster, Homarus americanus, to unfair, if not deliberately fraudulent, competition. For these reasons we would support title 2 of the legislation.

I trust that this information will prove useful when these matters come up for consideration.

Sincerely yours,

FRANCIS W. SARGENT,
Commissioner.

Post Office Department Appropriation

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. McGREGOR. Mr. Speaker, it is to be regretted that the chairman of the Appropriations Committee and possibly one or two more are playing politics with the Post Office Department's recommendations. I am sure the public will know of his actions and his refusal to give consideration to the request of the Postmaster General that an emergency exists.

I am reliably advised that the Postmaster General notified the proper department many months ago of the situation in which we now find ourselves. It is ridiculous, in my opinion, for the Congress to pass laws reclassifying and increasing expenditures of the Post Office Department and then to refuse to give the money to pay for those increases.

I sat in on a meeting a few days ago, Mr. Speaker, and our Postmaster General Summerfield had questions fired at him for over an hour. I might add that many of the questions did not come from so-called friends. The Postmaster General clearly demonstrated that he is a victim of politics, that just a few members of the New Deal and Democratic Party were trying to embarrass not only him but the Eisenhower administration as well.

Being granted permission to extend my remarks, I am including the following information given by the Postmaster General that I believe will be of interest:

How much does the Post Office Department spend in a year?

About $3,250,000,000.

Seventy-eight and four-tenths percent for postal employees' salaries and fringe benefits set by Congress.

Fifteen and one-half percent for transportatoon of mail set by Government agencies.

One and eight-tenths percent for rents, utilities, and communication set by FCC.

Only 4.3 percent left for controllable items over which the Department really exercises any control.

Use money to print stamps, buy trucks, pens for 38,000 post offices, and hundreds of other items needed to operate post offices.

Why does the Post Office Department need $47 million now?

To give accustomed service for the next 90 days.

None of this money to pay past bills.

Three reasons why it is costing more to give the American people the mail service they deserve, expect, and pay for:

1. More mail than estimated by about a billion pieces. And this increased volume of mail doesn't provide funds to operate the Post Office Department, since all revenues go directly to the Treasury Department.

2. Increased mail service to 1.3 million new homes.

3. Higher wages to employees by law.

All three of these reasons beyond control of the Department.

If the Post Office Department doesn't get the $47 million, what can it do?

Required by law to live within the money Congress appropriates.

If Congress doesn't vote more money, must curtail mail service starting next Saturday, April 13.

Orders to do so already in hands of postmasters.

1. No Saturday mail deliveries.
2. Close post offices on Saturdays.
3. Less delivery service in business areas.
4. Close post offices earlier on weekdays.
5. Embargo third-class mail on April 29.
6. Stop the sale of money orders on April 29.

Obviously these drastic actions seriously hurt the economy of the Nation.

Has the Post Office Department ever asked for more money before?

Yes; but only once in past 4 years.

In 1956 needed and got $166 million more, of which $150 million was for pay increases under Public Law 68, effective March 1, 1955; the remaining $16 million is the only supplemental appropriation the Department has received in 4 years for additional operating expenses.

However, in 2 other years spent less:

In 1954 turned back $105 million.

In 1955 turned back almost $50 million.

Are you cutting costs in the Post Office Department?

Yes. Now carrying 20 percent more mail with fewer employees than 6 years ago.

How many postal employees are there?

1952	523,757
1955	511,613
1956	508,587

How is mail volume increasing?

	Pieces *Billion*
1952	49.9
1956	56.4
1957 (estimated)	58.8
1958 (estimated)	59.7

Is the Post Office Department satisfied with mail service today?

Of course not.

Better than it was but still not good enough.

What is the Post Office Department doing to improve service?

Spending over $4 million this year alone or research.

Set up first Office of Research and Engineering in history.

Working with nine engineering firms and Bureau of Standards.

Developing mechanical and electronic devices to speed mail through post offices.

Over 1,500 obsolete post offices replaced in past 4 years with new ones built by private capital.

Objective: Next day delivery of mail anywhere in the United States.

Our Heritage

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. SCHWENGEL. Mr. Speaker, on April 4, it was my honor to attend the centennial birthday party of the National Education Association at the Sheraton-Park Hotel in Washington. On that occasion, I heard a wonderful address by Dr. William G. Carr, executive secretary of the association. Dr. Carr spoke on "Our Heritage," and although he was speaking about the heritage of the National Education Association, his words hold an important message for all of us. I ask permission to have his remarks printed here and I urge all Members of Congress to read them. The address follows:

OUR HERITAGE

Every birthday invites us to look in two directions, forward and back. But in this instance looking back shows us how difficult it is to look forward.

If the 43 founders of the National Education Association could be here tonight, they would confess that their most sanguine dreams in 1857 did not foresee in any manner whatsoever the remarkable present status and strength of the organization they established. If they, with their buoyant and daring spirits, could not foretell a fraction of today's achievements what warrant have we now to try to forecast the long reaches of the future?

Of two things, however, we may be reasonable sure. First, we can see that the association is still growing. It is growing in numbers. More important, it is gaining in clarity of purpose and, therefore, in influence and usefulness. It is increasing in its ability to enlist the energy and enthusiasm of its members and friends. Growth is a sure evidence of vitality. The fact that our association is still unfinished is a good general augury for its future, however indistinct may be the shape of things to come.

Second, we may be sure that none of us will be on hand for NEA's 200th birthday. Of course, the ladies among us age so slightly, so imperceptably, that one is tempted to think they might make it. But even that is a happy illusion.

Everyone is curious about the causes of longevity. When some respected member of the community attains his 100th birthday, the newspaper reporters knock early at his door. While the flash bulbs explode their lightning around his white hairs, the reporters always ask the same question, the one to which the reading public wants an answer: "How do you account for your long life?" The old gentleman may prefer to recall the story of his life at full length. He may want to recite the exploits of his youth with lurid details of fact and fancy. But you and I and the reporters want to know how he has survived.

So it is with the NEA. There is a double temptation on such an occasion as this either to try to recount the full history of the past or to try to forecast what will happen in the next hundred years. These are inviting prospects but I shall resist them both. I shall neither "dip into the future" nor "chronicle the past." Instead let us consider why the NEA has kept so spry and in

such good health. Let me suggest three of the important elements in our heritage that have enabled our associatino to endure for a hundred years.

I

The first element in our heritage is the habit and the tradition of voluntary cooperation.

No ordinance or statute requires anyone to support the National Education Association. An act of Congress confers the charter which merely permits the association to transact business in the District of Columbia. But every activity under this charter is performed only because individual members join forces to make it possible.

This principle of voluntary partnership for a common purpose brought the 43 founders together at the Athenaeum in Philadelphia 100 years ago. The printed message calling this meeting has been preserved for us with all its old-fashioned sturdy phrases. It invited the participation of all teachers "who are willing to unite in a general effort to promote the educational welfare of our country." It speaks of "concentrating the wisdom and power of numerous minds," of "distributing among all the accumulated experience of all." It summoned a national meeting of all who "are ready to devote their energies and contribute of their means to advance the dignity, respectability, and usefulness of their calling."

Today this same desire "to concentrate the power and wisdom of numerous minds" on the achievement of common ends enlists 700,000 NEA members and makes the association by far the largest professional organization in the world.

This part of our heritage manifests itself in many ways, but never in a more dramatic fashion than in these birthday dinners. Tonight, as the edge of darkness moved westward across the continent from Maine to California, in sumptuous hotel ballrooms, in severely functional school cafeterias, in cities and towns and villages, overseas in Hawaii and Alaska and Puerto Rico, members of the association and their friends gather to celebrate its birthday. We know of a least 2,500 such occasions—and there musts be hundreds more that have not been reported to us.

Some of these dinners, for various practical reasons, have already been held. I would like to tell you about one of these. There is a town named Ulysses in the sparsely populated area of the Kansas Dust Bowl. This is a rather unusual name for a town; it did not, however, derive from some far-wandering classical scholar. The explanation is simple—Ulysses is located in Grant County and the NEA dinner there was sponsored by the Grant County Teachers Association. The president of the association wrote that the dust was blowing so that one could not see the highway—"a total blackout" in her words. Number of teachers in Grant County—75. Number present at the dinner—75; plus the school board, plus the PTA officers, plus 35 other citizens. They ate their centennial dinner in the school gymnasium. They lit their candles and cut their cake beneath the basketball goal. The tables were nicely decorated. The president wore an orchid. When the photographer took their group picture, to give NEA a record of its proud occasion, they all smiled that unconquerable American grin—proud, friendly, and relaxed. As their president wrote me, "We did what we could to help make 1957 very important."

"We did what we could." Upon that first person plural depends the very existence of the National Education Association. Whether the enterprise is a centennial dinner or any of hundreds of other varied daily acts of service and good will, our association represents an unwritten but powerful treaty of mutual assistance among its members. With our colleagues across the Nation and around the world, we here and now are the heirs and present custodians of the great tradition of voluntary cooperation. Without that element in its heritage the association would be only a name and a legal entity. With it, as has often been proved in the past, no worthwhile task is too big to tackle or too difficult to accomplish.

II

A second aspect of our heritage is dedication to the ideal of equal opportunity for all. This is undoubtedly the central motif of American education, the compelling theme to which other principles are merely accompaniments and elaborations.

Because of this principle, every child born in America is born rich. He may not have the proverbial silver spoon but he does possess a golden key—the key of education to unlock the door of opportunity. The American people have expected their system of universal education to produce miracles. For the past century it has not failed them. The schools of the Nation have moved freedom forward. They have helped to make the Nation united, strong, and prosperous, as well as free.

"To promote the caure of popular education in the United States"—this great purpose of the association was proclaimed at its first meeting in 1857. That purpose in those same words remains in our congressional charter today.

Much else has changed in our country and in the world. To glimpse what has happened, it is only necessary to recall some of the circumstances prevailing in 1857. At that time, there were only 31 States in the Union. Alaska was Russian, Puerto Rico was Spanish, the Canal Zone was part of New Granada, and Hawaii was an independent kingdom.

In 1857 there were no land-grant colleges, no school health services, no public kindergartens. Even the legal status of free secondary education was undetermined. Few men and even fewer women had opportunity for higher education.

In 1857 the transatlantic cable was completed to link the two great land masses of the earth. It is a striking measure of the changing times that in 1957 we are preparing an earth satellite to link our planet to others. In 100 years the secrets of the land, the sea, and the air have been seized and harnessed. And eternally questing man now turns to assail the remote fortresses of outer space.

In 1857 also some genius invented what must be regarded as the greatest aid to instruction of all time—the first pencil with an eraser on the end.

In 1857 Thomas Edison was a 10-year-old boy conducting improbable and hair-raising experiments in the basement of his home. Alexander Graham Bell was at school in Scotland. Wilbur Wright would not be born in Dayton for another 10 years.

Most of the founders of the NEA could remember when James Monroe was President of the United States. They were nearer in point of time to the Declaration of Independence than we are to them.

Through the intervening century good times and bad have alternated. The unity of the Nation has been tested and affirmed in the fiery crucible of civil conflict.

New inventions have revolutionized communication and travel. New materials, new sources of power, and new medical discoveries have profoundly changed our personal habits, our economic patterns, and our social structures. Wars of massive destruction and appalling ferocity have cast down some nations and created others. Our country has, with many a lingering longing glance behind, become a world power. A great struggle for the loyalties and minds of men has shaken the world and continues to do so.

But through all these changes, the National Education Association has never faltered in its zeal to provide a fair chance for all through good educational opportunity for all. Changing conditions have led the association to expand the scope of its efforts. Local support for universal education has been supplemented by growing State support. State support, in turn, will be supplemented by national support. Some barriers have to be removed before this goal can be attained. But nothing can alter the goal itself. Nothing can weaken the determination of the association to press on toward it. We inherit, in this respect, not only the achievements of our predecessors but also their unfinished business. The striving, too, is part of our heritage.

III

The third part of our inheritance is the ideal of professional service. In 1857 the NEA founders declared that one major purpose of the new association should be "to elevate the character of the profession of teaching." Today, we find these identical words still in our charter. Directly or indirectly, they guide the activities of the association. In cooperation with its 6,000 State and local affiliates, the Association is steadily lifting the requirements for admission to the profession. It has been remarkably successful in winning approval for a 4-year college preparation as a minimum for beginning teachers in any school. It works for smaller classes—not that teachers may lead an easy life—but rather that teachers may be fully occupied in giving children the individual attention which is essential to their effective instruction. It promotes levels of compensation and conditions of service which will make teaching an attractive career for the best of America's youth. For competent teachers, and for competent teachers only, it insists on professional treatment. Through its research, publications, and conferences it increases the knowledge, wisdom, and skill of its members.

It helps teachers in the classroom to make practical applications of scientific findings in child growth and psychology, to evaluate and improve their methods of teaching, to use wisely the new audiovisual aids to learning, to adapt the curriculum to meet new needs and to include new information, to provide education suited to the interests and abilities of exceptional children, to produce and use better textbooks and children's reading material, and to remove artificial barriers between the school and its surrounding community.

Through its code of ethics, it has placed service above self and it has identified those standards of conduct which befit the members of a responsible profession. In these and many other ways, the association is making the practice of education in any of its branches respected because it is respectable.

Great men and women, a few of them famous but most of them completely unknown, have held our association to this unselfish purpose over the past 10 decades. Occasionally some member of the association is called upon for extraordinary devotion. Such was the case, for instance, a few months ago when a teacher led her pupils from a flaming fire-trap school in North Carolina risking and losing her own life as she did so. Few are called upon thus to give their lives for their pupils in one swift and irreversible decision. But many there are who give their lives for their students hour-by-hour and day-by-day over many years of skilled and devoted service. The professional ideals which motivate such lives are also part of the proud 100-year heritage of the National Education Association.

Time is a seamless fabric. Clocks and calendars are human inventions. They measure the fabric of time but they do not cut it. The clock ticks and the leaves of the calendar turn aside to provide convenient reference points in an unbroken pattern that we perceive only dimly, if at

all. Minutes, days, years, and centuries are artificial and relative terms.

In the life of a man a century is a very long time indeed. In the life of an institution a century may be only a brief interlude. At his 100th birthday, if he survives that long, a man is at the beginning of the end. An institution on the same occasion may be only at the end of its beginning.

P. G. & E. Co. Statement on Central Valley Project Power Operations Ridiculous in the Light of Project Financial Report

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. ENGLE. Mr. Speaker, a few weeks ago Mr. Robert H. Gerdes, vice president of the P. G. & E. Co., attempting to justify his company's proposal to build the Trinity project power facilities, stated, with reference to potential preference customers of Trinity power, that "all the taxpayers in the State and throughout the Nation would be paying more taxes so that these favored few can get tax-subsidized cut-rate Federal power." The 1956 financial report on the Central Valley project indicates just how incorrect and ridiculous this statement is.

On numerous occasions I have pointed out to this body that there is no Federal subsidy involved in power operations of Federal reclamation projects—that power pays its own costs, including interest, and assists repayment of irrigation costs. The 1956 financial report of the Central Valley project shows that CVP power not only is paying its way with interest but is returning a nice profit to Uncle Sam. The gross project revenues for 1956 totaled $15,861,116 while net revenues amounted to $7,845,761, most of which is attributable to project power revenues. This net amount is after payment of all operation and maintenance expenses, after setting aside funds for expected future major item replacements and after paying interest on the power and municipal and industrial water investments. Addition of the Trinity facilities will improve this financial picture. In other words, the Central Valley project not only is producing low-cost power for the people in the area but it is doing so at a profit.

I include for the information of my colleagues an article appearing in the April 3 issue of the Fresno Bee, which covers the 1956 report on the Central Valley project.

The article follows:

CVP's NET REVENUE RISES 64.7 PERCENT

The Federal Bureau of Reclamation has reported the operation of the Central Valley's project during 1956 produced a net revenue of $7,845,761, an increase of 64.7 percent over the 1955 figure.

In its annual report on the CVP operation the Bureau notes the gross revenue totaled $15,861,116, an increase of 33.5 percent over the amount reported for 1955.

The Bureau said the increases were due largely to a good water year and the first full year's operation of the Folsom and Nimbus powerplants.

BREAKDOWN IS GIVEN

A breakdown of the earnings follows:

Power sales, $11,352,011 from the delivery of 1,395,139,014 kilowatt-hours of electricity; irrigation-water deliveries, $4,121,939 from the sale of 1,701,040 acre-feet; municipal and industrial water, $375,054 from the sale of 37,190 acre-feet; and miscellaneous, $12,112.

In 12 years of operation the project's net earnings total $66,067,035, or 12.7 percent of the cost of the revenue-producing plant in service. The construction costs to December 31 totaled $520,856,000.

COSTS ARE REPORTED

Last year's costs were:

Power, $2,596,739; irrigation, $2,348,656; municipal and industrial, $263,735; provision for replacement, $701,850, and interest on investment, $2,104,376.

The bureau said project pumping took 163,448,195 kilowatt hours and the Pacific Gas and Electric Company received 1,447,808,707 kilowatt hours.

Water storage approached maximum in Millerton and Shasta Lakes and reached capacity in Folsom Lake. The total storage amounted to 5,200,000 acre feet as compared to 2,800,000 acre feet the previous year.

HOW DELIVERIES WERE MADE

The water deliveries by service areas were:

Class I—Friant-Kern, 489,470 acre feet; Madera, 72,150; Mendota Pool, 19,022; Delta-Mendota, 185,848; Contra Costa, 5,058, and Sly Park, 5,731, and Class I, Friant-Kern, 130,640; Madera, 182,301, and Mendota Pool, 41,321.

An additional 1,015,513 acre feet were delivered on the exchange contract and for water rights for which no revenue was received.

Clyde H. Spencer, the bureau's regional director in Sacramento, said "the feasibility of the project has been demonstrated not only by its financial stability but in making vast amounts of water available to agricultural lands of the valley and by producing low cost power for public agencies and others throughout the area."

Submarines Everlasting Honor and Glory

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. VAN ZANDT. Mr. Speaker, it was Adm. Chester Nimitz who once said that the Japanese missed their golden opportunity at Pearl Harbor when they restricted their attack to capital ships. If they had knocked out our submarines, our task would have been infinitely greater. For as soon as the war started, our submarines began unsupported operations in Japanese waters and substantially damaged Japan's vitally important shipping.

"It was to the submarine force that I looked to carry the load until our great industrial activity could produce the weapons we so sorely needed to carry the war to the enemy," Admiral Nimitz has said. He added, "It is to the everlasting honor and glory of our submarine personnel that they never failed us in ouf days of peril."

Now this valiant—and relatively unpublicized—branch of our Armed Forces is getting the kind of recognition long due it. Throughout the Nation, a television program called the Silent Service is being shown to increasing millions of Americans. This series, based on authentic war reports, dramatically presenting the heroism and adventures of submarines at war, effectively delivers to the citizenry a weekly account of the vital role our submarine service performs in the Nation's defense.

The series was conceived in love and devotion by Adm. Thomas M. Dykers, United States Navy, retired, an old submariner himself who as commanding officer of the submarine *Jack* in World War II downed 4 Japanese tankers in 1 day—a feat unequaled by any other United States sub in the war.

Mr. Speaker, it is a privilege to pay tribute to the glory of the men of the submarine service. I commend NBC Television Films for bringing this story to the American public and to WTOP–TV in Washington, D. C., where it begins on the air April 30, so that everyone, especially those in Goverment here, in the Nation's Capital, may know more about the Silent Service."

Tribute to an Outstanding Citizen—Ian Ross MacFarlane

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. GARMATZ. Mr. Speaker, with the closing of the Emergency Hungarian Refugee Operation, it seems a fitting time to review what has been done in resettling the thousands of gallant freedom fighters and their families in various American communities.

The contribution of the citizenry of Baltimore in this cause is one, Mr. Speaker, which I feel privileged to acknowledge with pardonable pride. Over 125 Hungarians have been brought or sent to Baltimore by various sponsors. This project has required the interest and patience of Baltimore industry in offering employment; the charity of religious organizations in donating clothing; the generosity and understanding of the Baltimore homeowner in making available living quarters where these Hungarian newcomers could live, not only in self-respect, but in an environment of genuine American family life. The YMCA, the Rotary Clubs, the Kiwanis, and other civic organizations, the police department, storekeepers, taxicab companies have all joined in a cooperative effort to assist these otherwise bewildered patriots from overseas.

However magnificent as has been the work, Mr. Speaker, of those already mentioned and the scores of others who have toiled so generously but without recognition, there stands out one Marylander who has been the originator, the spark, the driving force, the coordinator

of all this trendous achievement. He is Ian Ross MacFarlane, who this year marks his 20th anniversary as a radio commentator.

Mr. Speaker, this is not the first time Mr. MacFarlane has figuratively left his job as one of our State's most respected political reporters and news commentators to assist those who needed aid. During World War II and following his return from an overseas tour of duty that took him to the frontlines, Citizen MacFarlane sponsored the idea over his radio hookup that eventually resulted in the Congress enacting into law a measure that provided for increased allowances and allotments for the dependents of servicemen. Immediately after the cessation of hostilities, he led the fight that secured for 158 honorably discharged veterans the right to own and operate taxicabs in Baltimore. This group is still functioning and doing a standout job under the name of the G. I. Veterans Taxicab Association of Baltimore. In organizing this company, Mr. MacFarlane insisted that it be based on equality for all. In other words, Mr. Speaker, integration of its membership from its very inception. In between gathering and editing news, Mr. MacFarlane served as president of this group for 5 years, leaving them with earned assets of over $100,000.

Every veterans' organization in Maryland has honored Mr. MacFarlane by citations, medals, and plaques for his work in behalf of all veterans. In 1947, he was named the Baltimorean who has done most for the Negro people.

Being a humanitarian and a champion of the rights of all has been the keystone of Ian Ross MacFarlane's life. He is the first non-Jew ever to have lived and worked as a member of the Jewish agricultural colonies in Palestine. Since this period in 1933, he has constantly worked voluntarily for the cause of autonomy for Palestine, which he has seen come to pass with the establishment of the Republic of Israel. Today he is one of the outstanding champions for justice and understanding of this tiny outpost of democracy in the Middle East.

So, Mr. Speaker, it is no wonder that when another voice of an underprivileged or persecuted person calls, Ian Ross MacFarlane is among the first to respond.

Therefore, it is a privilege and real pleasure to be able to pay tribute to Ian Ross MacFarlane in connection with his outstanding and untiring efforts in connection with the Hungarian relief program, and his many other civic activities.

Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. THOMAS S. GORDON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. GORDON. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following resolution adopted by the city council of the city of Chicago on March 28, 1957, memorializing the United States Congress to enact the Juvenile Delinquency Control Act (S. 1455). This resolution which was presented by Alderman Alfred J. Cilella, memorializes the Congress in support of bill S. 1455, providing for the strengthening and improvement of State and local programs to combat and control juvenile delinquency. The resolution points out that juvenile delinquency has increased 70 percent since 1948 and that estimates show that by 1960, unless corrective steps are taken, 2 million children may be in trouble with the police annually. The resolution succinctly states the case for favorable action on bill S. 1455 and I commend to the Members of the House this resolution for their most serious and careful reading.

Prompt attention to the serious problem of juvenile delinquency is most urgent and essential and I feel that the city council of the city of Chicago is to be praised for its forthright and progressive stand on this vital question.

The resolution follows:

RESOLUTION MEMORIALIZING THE UNITED STATES CONGRESS TO ENACT JUVENILE DELINQUENCY CONTROL ACT—ADOPTED BY CITY COUNCIL OF CITY OF CHICAGO AT MEETING HELD ON MARCH 28, 1957 (PRESENTED BY ALDERMAN ALFRED J. CILELLA, 36TH WARD)

Whereas the social problem of juvenile delinquency, according to the finding of the Congress of the United States, as set forth in the statement of finds and policies of Senate bill 1455, deflects children in their growth to responsible citizenship, and diminishes the strength and vitality of the people of our Nation; and

Whereas since 1948 delinquency has increased by 70 percent according to court dockets across the Nation; and

Whereas during the period from 1948 until the present the number of children has increased by only 16 percent; and

Whereas it is estimated that we may have, by 1960, 2 million children annually in trouble with the police; and

Whereas the growing seriousness of this problem, with its terrifying potentialities, demands the attention of all branches of Government—Federal, State, and local; and

Whereas while the city of Chicago, through its various agencies, public and private, is attempting to deal effectively with this problem, additional support from all available sources obviously should be sought; and

Whereas there is pending on the calendar of the Senate of the United States Senate, Senate bill 1455, otherwise known as Juvenile Delinquency Control Act, which provides for the strengthening and improvement of State and local programs to combat and control juvenile delinquency, with authorization for the appropriation for the fiscal year ending June 30, 1958, the sum of $2 million, and for each of the following 4 fiscal years sums not to exceed $5 million annually, as the Congress may determine; and

Whereas these sums under the provisions of Senate bill 1455 are to be apportioned among the States in the same ratio to such sums as the child population of each State bears to the child population of all the States; and

Whereas said bill calls for a determination of the needs in the State for strengthening and improving State and local programs for the control of juvenile delinquency, and development of plans to meet these needs, and for coordination on a continuing basis of juvenile delinquency control programs and of plans for strengthening and improving the same; and for the training of personnel in juvenile delinquency programs to furnish improved services to delinquent youth; and for demonstrations of improved services for the location, treatment and after-care of delinquent youth; and for research and investigation for assessing the causes and extent of juvenile delinquency and the effectiveness of existing control programs; and

Whereas although it has been concluded by the citizens and their representatives in local government in Chicago that the problems of youth may best be dealt with at the local level, it is obviously advantageous, both to our State and to our community, to have at the disposal of our authorities substantially augmented resources for the solution of our most pressing difficulty, the necessities of our young people: Now, therefore, be it

Resolved, That the Members of the United States Senate and House of Representatives are hereby memorialized by the city council of the city of Chicago to enact into law Senate bill 1455, or any other legislation embodying the same provisions and purposes, with all possible expedition; and be it further

Resolved, That this resolution be spread upon the journal of the proceedings of the city council and that copies be transmitted to the President of the United States and to all Senators and Representatives in the Congress of the United States.

JOHN C. MARCIN, *City Clerk.*

"All Members of the Board Shall Be Persons Who Profess a Belief in the Feasibility and Wisdom of This Act" (From the TVA Act)—New Board Member Should Be Man of Ability, Vision, and Executive Capacity

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. EVINS. Mr. Speaker, the conference committee, in its report on the TVA Act some 24 years ago, when the TVA Act was originally passed, commented as follows:

We are fully persuaded that the full success of the Tennessee Valley development project will depend more upon the ability, vision, and executive capacity of the Board than upon legislative provisions.

TVA's success over the years has been attributable in a large measure to the fact that distinguished men of ability, vision, and executive capacity have served on the Board.

As a vacancy is soon to exist on the TVA Board, a well-considered editorial appealing for the selection of such a man as Director appeared in the April issue of the Public Power magazine. Under unanimous consent, I include this timely editorial in the Appendix of the RECORD.

The editorial follows:

MAN FOR A JOB

Some 24 years ago, when the House of Representatives was debating final passage of the Tennessee Valley Authority Act, the House group on the conference committee commented: "We are fully persuaded that the full success of the Tennessee Valley development project will depend more upon the ability, vision and executive capacity of the Board than upon legislative provisions."

Thus at the birth of TVA it was recognized that the success or failure of the agency would depend as much on the caliber of those serving on its three-member Board of Directors as upon any other factor.

TVA's undeniable success is a tribute to a number of distinguished men of ability, vision, and executive capacity who have served on its Board during the past 2 dozen years. Next month one of these men steps down, and President Eisenhower faces the difficult task of selecting a worthy successor.

The vacancy on the TVA Board will come May 18, when Dr. Harry A. Curtis retires. At 73, Dr. Curtis looks back upon a long and distinguished career of public service, capped by a 9-year term as TVA Director.

To understand the significance of the appointment which the President is to make, it is desirable to take note of the agency which the TVA directors are responsible for administrating. TVA is the world's largest public corporation, a wholly owned Federal corporation with total assets approaching $2 billion. It operates the Nation's largest integrated power system, with a total installed capacity nearing 10 million kilowatts. And it is perhaps the world's outstanding example of comprehensive river development, with unified development and conservation of the resources of a region that includes parts of 7 States and a population of more than 5 million.

More than this, TVA has become a worldwide symbol of democratic achievement. TVA has provided inspiration and guidance to water project planners in many nations and is considered abroad to be one of the greatest proofs that our form of government does work.

In providing that TVA be operated under a three-member Board of Directors, Congress specified a unique qualification for these Board members. The TVA Act states: "All members of the Board shall be persons who profess a belief in the feasibility and wisdom of this act." Another section of the act specifically bans political considerations in the appointment and promotion of TVA employees.

But the best description of the qualification for a TVA director remains that of the House committee when the act was being given final consideration. He must be a man of "ability, vision, and executive capacity." We hope that these qualifications are uppermost in the mind of the President when he nominates a successor to Dr. Curtis.

Old Earth on the Operating Table

EXTENSION OF REMARKS
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, April 1, 1957

Mr. SIEMINSKI. Mr. Speaker, in 1492 man crossed water and found wealth.

Before that, he crossed land.

Since then, he has flown through space and plunged through water.

It is said that man is where he was in 1492 in relation to earth, space, and water; he has dug about 6 miles deep into the earth's crust and soared not much higher than 6 miles above his home on the ground. The ocean veils the land beneath it in mystery. Glaciers mask 10 percent of the earth's lands.

Man can hold the skull of a man in his hand and point out its parts and the organs that fit into it and how they are nourished. Man knows man. He can trace the circulation of his blood. He knows his life span and does what he can to lengthen it and free it from pain. He tries to be better informed so he can live more creatively and less wastefully.

Man can spin the globe in his hands, but he cannot point out its component parts and how they are nourished—too much ocean, too much earth, too much space. Perhaps man in relation to these is where Dr. Harvey was in relation to man and his circulatory system.

Perhaps man in the international geophysical year which is just ahead of us stands on the threshold of unlocking a geographical bill of rights for man. Nature does not set the same table before man on each of the continents. It is said that one of the hopes of the IGY is that it will enable man to lessen the inequalities of nature and its burdensome pressures on man.

It is said that the Scriptures and the Bill of Rights provide man with a light to get along with man and his Creator, and that the IGY will better enable man to do so all over the world. At least that is a conclusion one can draw from the article listed below. It is from the April 14 issue of the Washington Post and Times Herald entitled, "Old Earth on the Operating Table":

OLD EARTH ON THE OPERATING TABLE

(By Alton L. Blakeslee)

NEW YORK.—Mother Earth is getting a vast and unique physical checkup. The results could profoundly affect your life for the better.

To do this checkup, 5,000 scientists from 56 nations will go digging, crawling, climbing, sailing, freezing, baking, testing, comparing, flying, and even crashing the gravity barrier into limitless space.

They will probe into earth's temperatures and pressures, the complicated actions deep inside the earth and high above it and the powerful influences acting from the outside. For science is making a great assault against ignorance about the world, seeking to solve secrets of the earth and some of the mysterious forces which control and shape our lives.

From it all may come better control over climate and weather, improved or even new ways of communication, even perhaps gifts and powers as yet undreamed of by mankind.

The assault is the International Geophysical Year—better pronounced simply as IGY—starting officially July 1 and lasting 18 months. Geophysics is the science of the earth. Vanguards of this geophysical task force already are at work at the South Pole and other stations over the face of our globe.

Man has lived on earth about half a million years. He has charted much of its lands, roamed wide over its seas, explored some mysteries of its ocean of oxygen and air, figured out some secrets of the sun, learned a bit about magnetism, gravity, cosmic rays. But in all this time men have dug only about 6 miles deep into the earth's crust. Others have soared not much higher above their homes on the ground.

Compared with the 4-billion-year age of the earth, it is as though mankind had lived for only a few seconds upon the skin of an apple—and knows only about its skin.

In a whole lifetime from only a few vantage points, scientists can learn only a few things about the earth and its life. It demands worldwide, standardized efforts to understand global forces such as weather, radio blackouts, cosmic rays, gravity, the advance or retreat of glaciers, magnetism, and the causes of earthquakes which jar the globe.

That is the purpose of IGY. Scientists and engineers of all major nations, including Russia, and many smaller countries are sharing the checkup job, and will share equally all their findings about the earth.

Twice before, in 1893 and in 1932, scientists cooperated in this fashion, but only to study phenomena of the little-known north polar regions. This time, the physical study is truly global.

Our blazing sun is one main target of interest, for the sun is a massive, controlled H-bomb reaction, giving us life; bathing us with warmth, light, suntan rays, X-rays.

But the sun does not live unruffled, unchanged from moment to moment. Vast explosions and flares and electromagnetic storms sweep across it, causing sunspots, making the sun a vast atom-smashing machine bombarding us with atomic bullets and radiations. The sun's life and emanations affect our weather and magnetic currents, the creep of ice masses.

Sunspots occur in cycles, and the coming 18 months are a time for expected maximum sunspot activity. That is a main reason for undertaking the IGY studies now, correlating many types of observations and measurements with the solar activities.

So in one of a dozen IGY activities, scientists will expand present programs which keep a constant solar patrol or watch upon the face of the sun, to record what is happening there.

In a new and audacious step, other scientists from the United States and Russia will rocket tiny artificial moons or messengers out into space. These objects will go whirling about the earth at speeds of 18,000 miles per hour, in orbits ranging from 200 to 300 to 1,500 miles high.

Measuring devices inside these little round balls can take a never-before-seen look at the sun. They can sense and record radiations from the sun as they actually are out in space, before they are absorbed or altered by our thick, protective blanket of air. What is pure sunlight actually like? Tiny radios inside the little moons will broadcast back the answers.

The artificial moons can tell us new facts about cosmic rays hurtling at us from our sun and across billions of miles of space from distant universes of stars.

They can tell how empty space actually is—how many molecules of hydrogen gas race about in the not-quite-perfect vacuum of space. How high does our atmosphere rise? How many meteors and of what sizes speed through space? What hazard would they be to passenger ships questing to Mars or the moon?

IGY marks man's first hesitant step to conquer the new frontier of space.

On earth itself, many hundreds of scientific stations will be at work, strung along three main belts or meridian lines between the North and the South Poles with others crisscrossing west to east. Each will do one to several simultaneous tasks in search of new knowledge.

Many will be concerned with weather. Our atmosphere is the fluid of a vast heat engine driven by the sun, scientists point out. Its flow, its winds, all the forces acting upon it, create our weather, the balmy spring days, blizzards, hurricanes.

To understand weather better, and also to sample cosmic rays and study other events, hundreds of rockets and rackoons—rockets launched from high balloons—will roar 20 to 200 miles high. They will read temperatures, wind speeds, pressures, humidity. What they learn will be melded with similar readings from hundreds of stations on land and at sea.

Great surges of cold air spill down from both poles, setting in motion events affecting weather thousands of miles away. For the first time, the great unknown Antarctic Continent will be manned by nearly 60 sta-

tions, permitting drawing of daily weather maps. What they learn can be correlated with north polar observations, and data from everywhere else.

Glaciers still mask 10 percent of the earth's lands. Are they melting or advancing, where and why? Glaciologists want to know. If the ice masses thaw entirely, mankind wins new lands to populate and draw resources from—but at a cost of losing great cities such as New York and London when ocean levels rise 75 feet or higher.

And IGY ships will sail the great seas, charting the bottoms with echo-sounding devices. What lies underneath? How fast move the deep ocean currents—never yet well traced. How rapidly does cold water travel from polar regions to the Equator and back? On this depends to a great extent the fertility of the seas and the abundance of marine life. These currents affect long-range weather forecasting, too.

How rapidly does deep cold bottom water rise to the surface? In 100 years, or 10,000? If the reversal is slow, then deep holes in the oceans could be safe garbage dumps in which to drop concrete coffins containing dangerous radioactive wastes from atomic power plants.

On scattered island stations, specialists will record and measure the changes in sea level which come with the seasons, and add to knowledge of ocean tides.

Similar but smaller tides pulse through the solid interior of the earth, and will draw special attention. Gravity keps us earthbound, and gravity measurements give clues to these tides; help to determine the rigidity of the earth and its internal structure.

Manmade explosions will send shock waves plumbing into the earth, to learn more about the shallow crust which supports us, and its deeper layers, too. And around the world, seismology stations will record deep and shallow earthquakes, using these quivers and violences to chart the earth's interior down to its fiery, molten core. Knowledge and understanding could lead to means of predicting earthquakes in advance.

High above us sweep violent electromagnetic storms whose cause and meanings scientists want to learn. The earth's magnetism is not a steady thing; it is subject to daily and long-term fluctuations. Ground stations will help spell out part of this story. Much can be learned from studies of magnetic and electrical events 50 to 250 miles up.

Up there lies the ionosphere, an electrified layer of air which bounces back radio waves from earth and makes radio communication possible. Flares from the sun alter it, make radio useless. But scientists already have learned new modes of radio transmission which grow even stronger when the ionosphere is disturbed.

From the ground, from rockets into the air, from data learned by the artificial moons, scientists also will explore puzzles of the aurora or northern lights and the dim air glow which always shines about the earth. They will attempt to make far more accurate measurements of the size and shape of earth, to correct errors in present longitude and latitude measurements which permit inaccuracies of 200 to 300 feet in distances between continents.

IGY will bring a special kind of calendar. There will be regular world days each month for simultaneous measurements and observations, and there will be special world days or rocket launchings signaled by an international warning system to coincide with such unusual events as sunspots, solar eclipses and meteor showers.

You will be supporting IGY with tax funds. Congress already has appropriated $39 million for United States participation. The American program was prepared by a National committee established by the National Academy of Sciences-National Research Council, representing us in the International Council of Scientific Unions for IGY.

All findings on a dozen fronts will be fed into 3 world data centers, 1 of them in the United States. All information will be shared equally with all nations.

Where will it lead; what benefits may it bring? Perhaps control over cosmic forces which now go untamed or unused. No one can predict. IGY can enrich our fund of basic, fundamental knowledge. Science and the world have never been the poorer for that.

For Foreign Loans Why Not the World Bank?

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. EVINS. Mr. Speaker, under unanimous consent I am including in the Appendix of the RECORD an editorial which appeared in the Nashville Banner, April 10, 1957, suggesting that future foreign loans, as envisioned by the Secretary of State, should be programed through the World Bank. The editorial is thoughtful and timely.

The editorial follows:

FOR FOREIGN LOANS WHY NOT THE WORLD BANK?

Rather than embark on a long-range program of enlarged loans to friendly nations, as visualized by Secretary Dulles for a new approach to foreign aid, why not refer these to the World Bank, of which 44 nations already are members and stockholders?

The purpose of that institution is stated in its articles of agreement, and very title. It is an International Bank for Reconstruction and Development. Its subscribed capital stock now amounts to $9,263,200,000; and disbursement on loans as of last October was a little in excess of $2 billion.

America is heavily encumbered with loans and grants-in-aid already made, some going back to World War I (still in arrears) and scores of billions lent during and since World War II. Even if this were not true, it would be a matter of questionable prudence to undertake such a commitment of up to $750 million annually, for an indefinite period.

There stands the World Bank, its purpose: "To assist in the reconstruction and development of its member countries by facilitating the investment of capital for productive purposes, and thereby promote the long-range growth of international trade and the improvement of standards of living; to promote participation in loans and investments made by private investors, and to make loans for productive purposes when private capital is not available on reasonable terms."

The United States has subscribed to a larger portion of its stock than any other nation, a shade more than one-third, or $3,175,000,000.

Such an institution, as a matter of business principle and solvency, necessarily keeps its books balanced and its accounts current, a concept of responsibility these debtor nations could use in the whole area of international finance.

Much of the economic aid mentioned by Secretary Dulles in his outline of the proposed loan program falls within the scope of the bank's purposes. It exists, it could be capitalized at a higher figure if necessary (all of the members participating); why not use it?

Bridge Across the Ohio River Near Lawrenceburg, Ind.

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. WILSON of Indiana. Mr. Speaker, a week or so ago I introduced a measure which would give Government approval to the creation of an Indiana-Kentucky bridge commission for the purpose of constructing a toll bridge across the Ohio River near Lawrenceburg, Ind. Since this is in the congested Cincinnati area, a bridge at this point would be very helpful.

A few days after introduction of my bill—on Monday, April 8, to be exact—this Chamber passed a measure calling for an appropriation of some $10,500,000 for the construction of another bridge across the Potomac River between Virginia and Washington. There are already five Potomac bridges in this area.

It seems grossly unfair to me, Mr. Speaker, for the general American public to be asked to foot the cost of this project, with the State of Virginia paying no more, proportionately, than will Nevada, for example.

Also, the people in Indiana and Kentucky—and elsewhere, I am sure—are going to wonder why they have to finance all their bridges across the Ohio, while the entire Nation pays for bridges connecting the District of Columbia with Virginia and Maryland.

There are now four bridges spanning the Ohio River between Evansville and Cincinnati, a distance of some 350-river miles. Not a one of these was financed by public moneys. All were constructed as toll bridges, paid for by the people who use them. The people out there have not complained about it, either. They were glad to get the bridges, glad to pay for them. I am certain they will be equally as glad for the opportunity to pay, by the toll arrangement, for the proposed new bridge at Lawrenceburg.

I am familiar with all the arguments in favor of another Potomac bridge—the congestion, the fact that Washington is the Nation's Capital, and so forth—but I still cannot see the fairness of calling upon all American taxpayers to meet the cost.

I might point out that there is very much heavy traffic in the region of the Ohio. People now drive 30 or 40 miles to get to a bridge to cross that river. There are many important industrial centers, and there is much defense work going on. In event of armed attack against our country, the north-south traffic arteries and bridges would be of immense importance.

In seeking passage of my own Lawrenceburg Bridge commission bill, I am not suggesting that one red cent come from Federal funds. All that my people want is the approval of the Government so that they can proceed, in an orderly manner, to set up a commission which

will plan all the details incident to financing and constructing of the bridge.

I wonder why other bridges, such as the Potomac projects, cannot be financed in a similar manner?

A Passover Message to Americans

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following message by Lord Mayor Robert Briscoe:

A PASSOVER MESSAGE TO AMERICANS
(By Lord Mayor Robert Briscoe)

(Robert Briscoe, the Jewish lord mayor of Dublin, came to New York last month on the eve of St. Patrick's Day and the Jewish festival of Purim and since then has been visiting American cities in behalf of Jewish and Irish organizations.

(Tomorrow night, the lord mayor and his family will observe Passover at a traditional seder in the New York area on the occasion of the holiday, which commemorates the deliverance of Jews from Egyptian bondage. Mr. Briscoe has written this message especially for the Hearst newspapers.)

Passover finds me visiting in the United States where so many of my coreligionists share in the benefits of freedom with all other Americans.

Therefore my best wishes for a happy Passover go out to all my friends, to all the people who made me welcome in the communities which I visited, and to all who join in commemorating mankind's oldest Festival of Freedom. You can be joyous as you follow the Passover ceremony in which every generation repeats the wonderful story of our deliverance from bondage, the exodus from ancient Egypt.

But, unfortunately, not all of our people dwell in America, Ireland, Israel, and other free countries. Millions are held in bondage by the modern Pharaohs. They truly eat the "bread of affliction" and can only pray for deliverance.

In recent months a great human torrent has managed to break out of these areas of bondage, creating the gravest Jewish refugee problem since the end of World War II.

The main purpose that brought me to this country was to help rescue these uprooted people and open up a new life for them through the United Jewish Appeal's emergency rescue fund to save at least 100,000 of these new refugees. And at this Passover season—the celebration of freedom—I feel impelled to urge a special effort for this lifesaving work. The most effective way to help is by making an extra Passover gift to the emergency fund.

As both Irishman and Jew I want to salute the people of Israel at this Passover time, just a few weeks before they celebrate the ninth anniversary of their independence. Israel, like Ireland, has shown that a small nation, against great odds, can achieve freedom through the indomitable spirit of its people.

Israel's gallant people rate another salute. Despite all their difficulties, they are continuing to give haven to the great majority of Jewish refugees from modern tyrannies. Therefore we must do all we can to sustain the newcomers.

All who help in this humanitarian duty can then repeat in good conscience the words of the Passover ceremony, "Let all who are hungry enter and eat."

Essay on Patriotism in Modern America

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. HAYS of Ohio. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following prize-winning essay from Jefferson County, Ohio, in a contest sponsored by the American Legion of Ohio on the subject of Patriotism in Modern America. This essay was written by Winfield Glenn, Jr., of Mingo Junction, Jefferson County, Ohio, and I am happy to present this fine prize-winning essay to readers of the CONGRESSIONAL RECORD:

PATRIOTISM IN MODERN AMERICA

To me, patriotism means the very spark of life which ignites the mixture of brawn and brains and commences the function of our modern, powerful engine of democracy.

The study of mechanics reveals that the first stroke of the four phases of a gasoline combustible engine is intake. That is so in our engine of democracy, the present-day American Government. In with the downward movement of the piston of freedom, comes a mixture of truth, honesty, ambition, brotherhood, and sportsmanship through the values of mankind. But there also enter impurities such as communistic infiltration, prejudices, idleness, and dishonesty.

Now is it not God's intended and divine plan for qualities of such different tastes to thrive together in harmony? Since these qualities will not mix or intermingle, honesty soon begins to remove dishonestry, ambition overcomes idleness, and truth, along with brotherhood and sportsmanship, foils infiltration and prejudices. But with all the essential corrections, human nature is still present on a scene of undecided nature. Human nature, man's downfall, tends to be selfish and find the easy way out. It is only natural that a person would think of his advancement first. Consequently people are torn between doing what is right and what is wrong. Although the right has an edge over the wrong, many people take the easy way out. Therefore, with some people on one side and other people on the opposite side, an unbearable amount of public and private tension and unrest is formed. The piston of freedom of speech and press, like that of a combustible engine, soon compresses the mixture of which we talked to its paramount of density. Although this is the most trying time of despair, God, the divine distributor of mankind, still offers a chance. Yes, there is a chance, and this chance is like that of the third stroke of an engine—power. God sends a spark, the very spark of patriotism, which explodes the mixture and thus turns the crankshaft of a smooth-running government. Best of all it has removed the impurities from the mixture, and the two different paths of wrong or right are plainly shown. Then, without doubt, people have to pick one way or the other, usually the right. Therefore the piston of freedom, inspired by the inertia of the explosion from the spark of patriotism, rebounds in an upward movement to force out the impurities of the wrong in form of correction, forgetting, and forgiving. Patriotism is the key to worldly and national harmony and happiness. So let it be your guide in eradicating these evils of today. Be confident when you reutter the words of the immortal and noble Abraham Lincoln: "That this Nation of the people, for the people, shall not perish from this earth."

Trial by Jury

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I present a resolution adopted by the Louisiana Society of the Sons of the American Revolution on the 4th day of April 1957, at New Orleans, La. The resolution is as follows:

Whereas our Founding Fathers realized the inequalities inherent in depending solely on judicial temperament for justice, and in the Declaration of Independence declared, in part:

"The history of the present King of Great Britain is a history of repeated injuries and usurpations * * *. He has obstructed the administration of justice * * *. He has made judges dependent on his will alone * * *. He has combined with others to subject us to jurisdiction foreign to our Constitution * * *. For depriving us, in many cases, of the benefits of trial by jury."

Whereas the Congress of the United States is now considering legislation which would permit the Federal Government to intervene in litigation and, by so doing, obtain an injunction against the alleged offender, and in such cases a single Federal judge would be able to issue an injunction, make its initial interpretation, determine who has violated it, and inflict punishment for contempt; and

Whereas the Constitution of the United States makes no exception to jury trial on criminal charges except impeachment; article III, section 2 of the Constitution provides:

"The trial of all crimes, except in cases of impeachment, shall be by jury; and such trial shall be held in the State where the said crimes shall have been committed."

The Bill of Rights goes on to say (amendment 6 of the Constitution):

"In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed": Now, therefore, be it

Resolved by the Louisiana Society of the Sons of the American Revolution, That we respectfully petition the Congress of the United States to adequately safeguard our vested rights guaranteed to us under the Constitution and the Bill of Rights, and that it endorse no legislation, no matter under what guise it may be offered, that would have the effect of abrogating the trial by jury of persons accused of crime; and

Resolved, further, That a copy of this resolution be sent to the President of the United States, the Attorney General of the United States, and Senators and Representatives from Louisiana; and

Resolved, further, That a copy of said resolution be sent to the members of the New Orleans press, radio, television, and other media.

A true copy of a resolution passed by the Louisiana Society of the Sons of the American Revolution on the 4th day of April 1957, at New Orleans, La.

STEWART O. LANDRY, *Secretary.*

The Ideas That Made America

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 15, 1957

Mr. BOYLE. Mr. Speaker, recently, the Rev. Gerard Grant, S. J., delivered an address The Ideas That Made America to the Serra Club of Chicago, which carries a very pointed theme and a powerful message.

Resultingly, under unanimous consent to extend my remarks and to include a speech, I am happy to include the talk in the CONGRESSIONAL RECORD.

The address follows:

THE IDEAS THAT MADE AMERICA—A TALK BY REV. GERARD GRAY GRANT, S. J., TO THE SERRA CLUB OF CHICAGO

The story I am going to tell you concerns a very little known aspect of American history, but one which is very important to us. I have often started this talk by reminding people that ideas have consequences. If you teach a young boy that lying is smart, he will grow up to be a liar. If you teach him to regard his parents as old fogies, he will. If you teach him that his country is worth dying for, then you may have a Nathan Hale. This country of ours is founded upon a whole system of ideas and there is some danger that in losing sight of those ideas we might completely divorce ourselves from the tradition upon which we rest and hence lose complete contact with the things that give vitality to this country.

I imagine most of you have heard of Mr. Walter Lippmann, the commentator and political analyst. I believe Mr. Lippmann is one of the sound thinkers of our time. In his last book, called The Public Philosophy, Mr. Lippmann pointed out that a people must keep alive the philosophical tradition upon which their heritage rests or they lose the heritage. It may take time. There is such a thing as social inertia, and just as you can set a ball rolling and it will roll on a smooth surface for quite a while without another push, so human beings can go along drawing heavily upon their past but contributing nothing to it. Daily and yearly they lose more and more contact with the things that made them. That is by way of introduction and when I have come to the end I think you will see what Mr. Lippmann meant.

Now to the story. Historians, social scientists, political scientists, and others were always fascinated by this unusual fact, that in our Declaration of Independence and in our Constitution there is found embedded a whole system of what we call scholastic philosophy. I think most of you know what is meant by scholastic philosophy. The name is a poor one. "Scholastic" refers to the school men, who were the instructors and professors in the universities of the Middle Ages. Scholastic philosophy was not one philosophy, but a whole group of philosophies, alike in their basic position, but vastly different in their development.

The most famous of the scholastic philosophers was Thomas Aquinas, but there were others, men like Bonaventure and Duns Scotus. Essentially the matter goes back to the ancient Greeks—Zeno, Plato, and principally to Aristotle. From Plato came St. Augustine's thinking which remained a vital force in the intellectual life right to the end of the Middle Ages and is still kept alive in some of our universities, such as Villanova. But Thomas had partaken heavily of Aristotle, and most of the Middle Aged schools of philosophy traced their heritage back to that great mind.

In the Middle Ages philosophy and theology were the heart of the university system. When the Reformation came, theology, of course, was banished from the universities in Protestant countries. Oddly enough, in some places they kept the scholastic philosophy alive, notably at Edinburgh and Glasgow, in Scotland. There they were in the unusual position of defending predestination in theology at one moment and free will in philosophy at another. The two are not compatible, as you know, because predestination presumes a lack of freedom. However that might be, they kept the scholastic tradition alive.

When the American colonists came to this country they were for the most part representatives of those sects in England called Dissenters and that is precisely why they came to this country, because they suffered many of the disabilities that Catholics did in England. They were unhappy with the church state and the state church and they wanted independence in religious matters. They came here and one of the first things they did, of course, was to found little seminaries for the training of their ministers. The professors in those institutions had all come from Glasgow and Edinburgh. When they sent men abroad for further study to come back and teach, it was to the universities in the mother country that they sent them. There were seven of those colonial colleges. Today they have all grown into great universities: Harvard, Brown, and Yale, Kings College which is now called Columbia, the College of New Jersey which is now Princeton, Penn's College which is the University of Pennsylvania, and William and Mary down in Virginia. Those seven furnished the intellectual stimulus for this growing Nation.

Now we return to the puzzle that confronted the Catholic thinkers. For a great while they thought that they had discovered the origin of Jefferson's thought in a volume which he had in his library at that magnificent home called Monticello he built on top of a mountain overlooking the Shenandoah Valley. The volume was a copy of Filmer's debates. Filmer was an Englishman and an apologist for James I of England, the King who first put forth most cogently the purely pagan notion of the divine rights of kings. He had been challenged by a young Jesuit priest teaching in Europe who wrote in reply to reject his position. The young priest's name was Farther Robert Bellarmine, later to be canonized as a doctor of the church. Filmer had the courtesy, while he was defending James I, of quoting Bellarmine at great length and it was the passages from Bellarmine in Filmer's debates that were heavily annotated in Jefferson's own hand.

Thus for a while historians thought this must be the connection, this must have been where Jefferson found the germ of the ideas that he put into the Declaration of Independence. But it remained for Dr. James J. Walsh, former seminary student who had to leave because of ill health, later a physician of note and a historian of no small stature, to uncover the whole story. He went to those seven colleges and probed into their libraries and came up with some fascinating data. He found that all through the colonial times those seven colleges were teaching scholastic philosophy much as we teach it today at Loyola, DePaul, Notre Dame, Georgetown, or where have you. Moreover, they even taught it in Latin. The disputations which constituted their graduation ceremonies were all conducted in Latin. The student had to be fluent in that language to succeed at all.

Now we know that of the men who signed the Declaration and the Constitution, perhaps 50 percent had gone to those colleges and the other 50 percent with one exception had all been tutored locally by the Protestant minister who was himself a graduate of those schools. The one exception, of course, was Charles Carroll who went to St. Omar's where he was taught that same system of philosophy. Thus, gentlemen, you see, the story is this: the reason we have a Constitution written the way it is, is simply that the men who wrote it could not have written it any other way. They wrote out of their convictions. They wrote out of their own deep knowledge of the realm of ideas and how those ideas applied to human life. That is why they could start out the Declaration with these immortal words: "We hold these truths to be self-evident, that all men are created equal, endowed with unalienable rights, that to protect these rights governments are instituted among people deriving their just power from the consent of the governed."

What has that to do with us? From it we can draw some very consoling and inspiring conclusions. First of all, the germ ideas that made this country have their origin in the classrooms of medieval universities. They were developed by the great doctors of the church of those days, Bonaventure, Albertus Magnus, Thomas Aquinas. Another great thing—we alone in this vast land of ours have been carrying on this intellectual tradition, because, after the War of Independence, England was no longer popular in this country, and when the young men went back to Europe for further studies so they could return and become instructors, those young men no longer went to England or to Scotland, but to Germany where they sat at the feet of Kant, Hegel, and other doctors of the new school. When they returned they gradually displaced the oldtimers and, as the old men died out, took over completely. The result is that in American universities for the past 100 years or more, except in those under Catholic auspices, there has not been taught one vestige of scholastic philosophy.

Now we have rather the contrary; we have had a potpourri or melange, a mess of every impossible and insane system of thought that has ever been proposed. Hegel's work was designed for one purpose only, to destroy God, because Hegel's whole philosophy was intended to divinize man. Kant pulled the rug from under all intellectual thought, all sound development of reality, because he took as his cardinal premise that we are unable ever to reach the reality that lies beneath appearance. Out of these groups came such wild systems as idealism, which in its most extreme form holds that nothing exists except ideas, and what you see about you is merely the project of your mind. From that we have pragmatism, which relies upon the oversimplified notion that that which works, works, and in the area of law we got positivism, which holds that the only law which exists is the law of the state. Such a thing as the law of nature implanted in our very being by the God who created us is something which, for these thinkers, is altogether false.

I will venture to make this statement and I am confident that I can make it without serious contradiction; I will venture to say that with the exception of perhaps one-half dozen men you cannot find in the philosophy departments in the universities of this country men who could write anything approaching the Declaration of Independence today and still remain loyal to their own convictions. They can't do it. What materialist among them could write: "We hold this to be self-evident that all men are created"? Not one of them. What materialist could add the word "equal"? Be-

cause there is only one thing in which we are all equal. We are equal in nothing, in appearance, in height and weight, or intellectual attainment, or social background, or wealth. In this alone are we equal, that each one of us is endowed with an immortal spirit within us. That is what Jefferson knew, and that is what no materialist could ever hold. "We hold it self-evident that men are endowed with inalienable rights." No positivist teaching in our secular law schools could subscribe in good conscience to that statement, for the simple reason that his very philosophy of positivism holds there are no such things as inalienable rights, since all rights come from the state and the state if it wishes can take those rights away. And so for the other details you will find in the Constitution, in the first 10 amendments especially because those amendments deal largely with those inalienable rights, give fuller expression and enumeration to them.

Fortunately, there has been some little revival of interest in scholastic philosophy. Some years ago Robert Maynard Hutchins, who may be lamentable for other things, did this job well. He introduced scholastic philosophy almost single-handed at the University of Chicago and created something of a sensation at the campus. The ideas he proposed to his students from Thomas Aquinas and Bellarmine and the other writers caught on like wildfire. The Daily Maroon had nothing in it at all for weeks and months but quotations from the Summa Theologica and from other great scholastic works. He was joined there by Mr. Mortimer Adler. A man named John Wild attended Chicago in those days and he went back to Harvard to teach something that approaches scholasticism. A man named Vetch down at Indiana has been doing something in a limited way.

The lawyers have had second thoughts. When they put the Nazi criminals on trial at Nuremberg, Germany, right after the war, they were faced with this problem: On what basis could they try them? Should they go upon the principle of ex post facto legislation, a principle repudiated in our own Constitution and recognized to be unsound by every good lawyer? If they did not, they had no way to rest their case. It was only then that they came to realize that while there was no international code that Hitler and the others had violated and while the laws of their own country had not prohibited their actions there still remained one law that did forbid their acts and under which those men could be punished, the natural law. This idea was developed first by Zeno and then by Aristotle and brought to the fullness of its perfection by the modern scholastic writers. There is some hope now. The law journals have carried articles about the natural law. We can expect, however, that it will be some time before the positivists die out and scholasticism once more gets a hearing in our State and secular institutions.

Now to return to Walter Lippmann. His great point was this: That unless America is reintroduced through its universities to the public philosophy, the very heritage by which we live will be lost. Because once a people gets away from the essential philosophy that lies behind its fundamental documents, then though those documents may remain in force, and the words may still be there on the paper, but the spirit will no longer be in the hearts of the people. Then it is only a question of time until the very vital lesson, the very living idea would be lost completely. Why hasn't it been lost before? We can attribute it to two great factors, one the inherent good sense of Americans and the fact that these basic documents have been taught as compulsory in our grammar and our high schools for so long. Every youngster has read the Declaration, every youngster has read the Bill of Rights, and they speak so forcefully, so nobly of the things that men believe in that boys and girls in our schools could not help but be impressed. The second factor that has saved us, and here is the point of pride for us, is our Catholic high schools and universities. Year after year, in their quiet way they turn out men and women imbued with the philosophy that inspired the Declaration and the Constitution, men and women, who still keep alive the public philosophy in their minds and hearts. Some of them may not understand it too well perhaps, we know that; some of them flunked their exams in it once in a while. Nevertheless they were exposed to it and are convinced of it.

What is the hope for the future? Very briefly, this country is waking up to Catholic scholarship. This country is waking up in the philosophy departments, at least in some areas, to the possibility of introducing and teaching a scholastic philosophy. Yale had Father Courtney Murray teaching there a year or two ago. Pennsylvania has invited Father Paul Henri, who is teaching now at Iowa. Perhaps in time we will see that kind of thing everywhere, though there is still great prejudice. Philosophers have their prejudices just as well as religious people, and no positivist wants to see a scholastic philosopher teaching in the same institution with him, because he knows well that within a year or two he is going to have to look for another job. You can't fool the kids. Just as two men down at the University of Chicago set the whole institution on its ear because they brought to the place the "public philosophy" for the first time, so these people know very well that as this philosophy is introduced into their colleges they are either going to have to learn it themselves and teach it or they are going to have to get out. There is where the prejudice chiefly lies. It is another cause to pray for.

Help Keep Alive the Spirit of Freedom in Eastern and Central Europe

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1957

Mr. REUSS. Mr. Speaker, an excellent way for the United States to help keep alive the spirit of freedom in the enslaved countries of Eastern and Central Europe would be to assist the democratic patriots of these lands to publish their writings in their own national languages.

At present the exiles from the satellite nations have little opportunity to publish their works in their native tongues. And there is almost no possibility for the underground opponents of Soviet oppression and Communist dictatorship to have their manuscripts printed after they have been smuggled through the Iron Curtain.

Yet the importance of an active cultural output by writers and poets dedicated to national independence and democracy cannot be underestimated. From the author's pen can come—as at the time when our own land became a free nation—the words which will keep alive devotion to liberty, confidence in a common cause, and consciousness of a national destiny. Both those who are refugees and those still enslaved, whom these words will certainly sooner or later reach, will receive new inspiration and feel new pride in their country.

The Soviet Union knows well the significance of a nation's cultural life in keeping alive the spirit of resistance. A massive campaign has long been underway in the satellite countries to destroy independent culture and thus to produce a new generation unacquainted with its own cultural heritage and out of touch with any of the current writing and thinking of its democratic leaders in exile.

The case for a United States publications assistance program has been well presented by one of Czechoslovakia's most distinguished patriots, Dr. Peter Zenkl. Dr. Zenkl—three times lord mayor of Prague, and one of the stanchest anti-Nazi and anti-Communist democrats in Czechoslovakia before and after World War II—now honors the United States by his residence here. As Edward R. Murrow recently said: "Technically, I presume Dr. Zenkl is now classified as a refugee. But he will be at home wherever freedom flourishes and men are prepared to fight for it."

I am glad to present below a memorandum in which Dr. Zenkl expands on these ideas and on other proposals for preserving and strengthening the cultural vitality of the Eastern and Central European nations. Some of these proposals might appropriately be carried out by Government, others by our great foundations or other private organizations. Certainly Dr. Zenkl's thesis deserves careful attention by all of those who are concerned about the ultimate liberation of these captive peoples.

Dr. Zenkl's article follows:

Modern historiography stresses more and more the study of individual cultures and civilizations in contrast to the old historiography which primarily described the political, economic, and social situation (of different countries). According to the opinion of modern historians, the vital force of nations is not their momentary political power or economic prosperity, but their spiritual reaction to the challenge of the cultural world around.

The correctness of this modern conception can be convincingly demonstrated on the history of the central European nations. In their case—more than in the case of any other nation—the cultural and moral collapse always preceded the political downfall and the loss of freedom and, conversely, the cultural boom was always foreshadowing the coming of political freedom. The cultural workers and genii of these nations—such as Mickiewicz, Smetana, or Petofi—were political heroes and forebears of national freedom in the noblest sense of the word. Even the latest events in the countries behind the Iron Curtain demonstrated that the first flames of the political liberation—or of the fight for the liberation—originate frequently just among the cultural workers, among the writers, and the students.

It is one of the seeming paradoxes of Marxism, which has been perfected by the technique of Soviet imperialism and colonialism, that it attacks most violently and bitterly the intellectuals and the culture in general, in spite of the theoretical claim that the cultural activities are only a reflection and consequence of the economic situation or the status of productivity. I repeat that it is only a seeming paradox, because in the Lenin-Stalinist Marxism every detail is weighed very thoroughly: Marxism has to

declare in theory that the whole culture is a matter of secondary importance in order to lead away the interest of the nations from the cultural activities, in order to break the ties of cultural cooperation among the members of the cultural and political community so that they would become an easier prey and victim of the imperialistic intentions of the Soviet dictators.

It is a well known fact that the highly cultivated (cultural) nations of Central and Eastern Europe—the nations between the great nations of Russia and Germany—are exposed after the inhuman and devastating 5 years of Nazi occupation to another 9 to 15 years of the most brutal and cruel oppression of their 1,000-year culture which gave so many noble products at all times to Europe and to mankind. Communism, by using a sheer physical force, forbids all kinds of free cultural expression in order to cram into this forcefully created vacuum its own cultural monstrosities. In Central Europe, the Communists burned the books of scientific nature and belles lettres; they plundered the public and private libraries; they stopped the cultural influx from the West; they destroyed the excellent literary and scientific publications, the societies and the museums; they corrupted the cultural upbringing of the children, youth and adults from the nursery schools up to the world-famous universities; they occupied and monopolized the theater, the film production, the broadcasting and television; they even transcribed and changed the whole history of these nations in such a way that they disrupted the centuries old hierarchy of national values and brought in to this once so promising cultural world only lies and chaos. We wish to mention as a little example that one single state-operated publishing house in Czechoslovakia (there is no private publishing enterprise in Czechoslovakia), Artia, published during the last 5 years about 5 million Communist books in different languages which were used to flood other countries with Communist propaganda. During the first 9 months of the year of 1955, Soviet Union imported in tiny Albania 100,000 books and countless numbers of newspapers and magazines.

The purpose of this Communist large-scale effort of the worst kind is not only the interruption of all cultural ties of the satellite nations with the West, but also destruction of their own national tradition. A nation without the roots can be easily subjugated by the Communist doctrine of the so-called historical materialism.

HOW DOES THE FREE WORLD REACT ON THIS CULTURAL OFFENSIVE OF THE SOVIETS?

The free world fights in many ways the political and economic advances of communism. The free world also does a great work on the human side of this problem by giving the possibilities of a new life to many refugees from these countries. But we have to state with regrets that nothing, or almost nothing, is being done in order to preserve the individual cultures of these countries. The Soviet offensive meets with an easy success, because there is no defense. Its rich arsenals as well as new sources had been destroyed by the barbarian Communists. And so the totalitarian occupation of these countries—first the Nazi occupation and now the Communist occupation—aimed primarily at the destruction of all the cultural treasures of the occupied nations in order to have free elbow room for its own activities and in order to be able to conquer the souls of the captive peoples and to deepen the abyss between them and the West by the mass production of totalitarian culture. In the Communist-occupied countries the Muses are sadly silent. It is certain that many an invincible member of this Nation creates in secrecy, but his products are locked in the bottom of a drawer. They must not be known to the public, because the authors would be thrown in jail. On the other hand, there are many cultural workers from the occupied nations living in exile, and they may indeed enrich by their work in their own language the cultural riches of their own nations, but they are also forced to hide their writings in the bottom of the drawers, because these works cannot be published abroad. It is quite impossible for them to cultivate on a limited basis the free creative forces of their nations which should serve as a bridge between the rich, free past, and the promising creative activities in the future. And so it happens that these rich cultural sources rest unused to the loss of all.

This tragic interruption of the free cultural development of the satellite European nations, this complete interruption of the thousand-year western tradition in the countries situated between the Black Sea, the Adriatic Sea and the Baltic Sea, this interruption will be a shameful spot on the history of the Free World which is losing in this way not a small and unimportant element of its own strength.

It would be a great merit of the United States of it would grasp this problem in its full meaning and if it would help to save the desperate efforts of a considerable number of the Central and East European cultural workers now living in exile. It is rather obvious to me that this kind of help would bring the most beautiful harvest to America and at the same time it would win for the United States a deeper and more permanent gratitude than can be expected in the field of economic or political help. For in this field, that is, in the field of economics, the temporary products only are of concern, but in the field of culture the products are almost of eternal value. Only a tiny fragment of the economic or political subsidy would be needed to save the cultural life itself of these nations. After all, even many Americans derive benefits from the creations of these cultures. It would certainly be an outstanding merit of the young United States of America would render help to the old cultures of the occupied nations in these difficult times.

This proposal is not concerned with any kind of propaganda, not even in the best sense of the word. It does not follow any political goals, either, even if the realization of this proposal would be of highly political nature. The meaning of this proposal is as follows:

1. To make possible the publishing of belles lettres and of the scientific literature of numerous writers from behind the Iron Curtain living in exile, and to publish these writings in the mother tongue of individual nations. These authors, who had great possibilities to publish their works in their homelands, were deprived of this privilege by their anti-Communist demonstration. They have a certain possibility to publish in the language of the country where they live as exiles, but they have no opportunity to publish in their national language. Many people in the free world are able to read the literature in the languages of the satellite countries, and if no worthwhile literature will be published in exile, these people will turn to the books published behind the Iron Curtain, and it certainly would not serve the interest of the free world. After all, the books published in exile will get, sooner or later, legally or illegally, into the countries behind the Iron Curtain, where they are awaited with great anticipation, as we have learned in the most authoritative way.

2. There is also a need to publish belles lettres and scientific books smuggled out from the satellite countries by the authors—anonymously, of course—so that all valuable writings from these countries would not be doomed to decay in the drawers, but that they would become a new source of strength for a new and better thinking.

3. Another problem is the translating of the prominent books of the western literatures into the languages of the occupied nations, so that they would be ready when the cultural Iron Curtain will be torn down. These translations would be readily available for publishing in these countries in order to speed up the desirable cultural contact of these nations with the contemporary western civilization.

4. And it is also desirable that the prominent essays, scientific treatises and belles lettres of these countries were translated into the great western languages, so that the free world would get acquainted with the thinking and the desires of the peoples behind the Iron Curtain and thus to gain knowledge about them. As of now, this knowledge is rather limited in the West.

5. There is also a need for the publishing of the new literary and scientific publications in the national tongues of the exiles, and for the support of the existing publications. They have to struggle with financial and other problems, which cannot be overcome without the outside help that would enable them to compete in quality, print, and general appearance with the richly decorated Communist publications.

6. This kind of aid should not be limited only to the literary arts, but it should be analogously extended to the other branches of cultural activities such as music, painting, sculpture, architecture, film industry, theater, ballet, etc.

President Nasser's Resentment

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 9, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Herald Tribune of April 1, 1957:

PRESIDENT NASSER'S RESENTMENT

President Nasser's point of view, as expressed to a group of American newspapermen in Cairo, is discouraging. This is not because of his negative position on current issues. That is well known. But his patent resentment at the United States, and the reasons he gives for it, offer very little hope of working out a reasonable modus vivendi in the Middle East.

The Egyptian leader harks back to the brusque withdrawal of proferred American aid to the Aswan Dam project—which is understandable. He also charges that the United States is now taking Israel's side without one word about the rights of the refugees. But he completely overlooks the fact that the United States did offer to help build the Aswan Dam and that there would now be no question about Israel's rights in the Gulf of Aqaba and the Suez Canal if Israel, Great Britain, and France had not, under strong urging from Washington, pulled their troops out of Port Said and Sharm el Sheikh. In other words, President Nasser's question to the United States is (as the old joke has it): "What have you done for me lately?"

The United States has made errors in its dealings with Egypt. It has been dilatory when speed was called for (notably at the time of the Egyptian arms deal with the Communist bloc) and too hasty when suavity would have been in order—as in the Aswan Dam decision. But it has never been moti-

vated by any antagonism toward Egypt; if anything its recent course has been too conciliatory, too anxious not to antagonize the Cairo Government. Moreover, the United States would be very pleased to see a general settlement of the whole Arab-Israeli problem, such as President Nasser says is necessary—a settlement that would take in the refugees, the water question and boundaries.

However, the immediate, urgent need is to liquidate the state of belligerency that exists in Palestine and that threatens the renewal of a shooting war. The first stage of such liquidation was the withdrawal of Israeli, French, and British troops from the territory seized in November. That has been accomplished. The next is to end the belligerent acts on the Egyptian side that provoked the crisis. One of these is a ban on fedayeen raids—which can be done by the United Nations emergency force, given proper status and such border defenses as are necessary. The other is the interference with Israeli shipping in the Gulf of Aqaba and the Suez. These are necessary prerequisites to a settlement; they must be supplied by Nasser. The only purpose of American policy is to obtain a fair, workable arrangement that will encourage the stability that the Middle East needs. This implies no hostility to Egypt—but neither does it imply that anything Nasser thinks will serve his own ends will be satisfactory to the United States.

Middle East Development Authority

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. McGOVERN. Mr. Speaker, one of the clearest and best-informed voices in the field of American foreign policy today is that of Minnesota's great Senator, HUBERT H. HUMPHREY. Always a forceful and articulate spokesman, Senator HUMPHREY is also a keen student of foreign relations. As a member of the Senate Foreign Relations Committee, he has frequently offered incisive criticism and constructive suggestions in such a manner as to place all those who believe in peace in his debt. Knowing of his special interest in the crucial area of the Middle East, I have asked unanimous consent that an address which he delivered in New York City on April 10 be included in the RECORD.

The address follows:

ADDRESS BY SENATOR HUBERT H. HUMPHREY ON THE MIDDLE EAST DEVELOPMENT AUTHORITY (MEDA)

Tonight I want to explore with you some further thoughts on a subject I first broached here in New York on December 20 in a speech I made at the Overseas Press Club. At that time I said:

"It might be useful * * * to consider establishing, under United Nations auspices, a Middle East Development Authority. Most of the economic, as well as the other, problems of the area are international in their scope. Most of them also require outside assistance, either in the form of capital, of technical aid, or of good offices. Why not, then, have an international agency to deal with them? The kind of Middle East Development Authority that I have in mind would have on its board of directors representatives of all the states of the area, as well as representatives of the states furnishing capital and technical assistance. Ample provision could be made to protect national sovereignties."

In the past few months since I made that suggestion, I have been spending a good deal of time thinking about the proposal in more detail. Among the various proposals which others have made and which are entirely consistent with my own suggestion, is one in particular which I should like to bring to your attention. It originated in the London Economist last August 4, at the start of the Suez crisis. The Economist called for "a permanent international zone to consist of the Gaza strip, plus a narrow strip of Egyptian Sinai running all down the frontier to the Gulf of Aqaba south of Israel's Red Sea outlet at Eilat, plus the Island of Tiran at the mouth of the gulf." The Economist proposed that "this area should be available for the passage of oil pipelines, air, and land traffic—in fact, all international communications agreeable to the United Nations."

I believe that this proposal should be given more consideration. Even on its own merits, such a strip would form a buffer zone making it possible for both Egypt and Israel to reduce their military expenditures. Unlike most international transfers of land, it would displace no settled nationals of any country. Operating in conjunction with a Middle East Development Authority, the project could indeed provide new employment to many of the 200,000 Arab refugees in the Gaza strip.

Of course, there is the possibility—perhaps the probability—that intense negotiations would have to take place before both Egypt and Israel would accept this proposal. We need to be bold. But there are advantages in it for both. As one bargaining point in negotiations, I would even be willing to consider the possibility which has up to now been unacceptable to the Israelis: namely, the possibility of an internationally administered and guaranteed corridor across the Negev which would provide land communications between Egypt and Jordan. Such a corridor could in turn be used as a quid pro quo both for an additional international corridor across the Sinai Peninsula and for Arab guaranties of free Israeli passage through the Straits of Tiran and the Suez Canal.

Whether or not some modification of this plan for the internationalization of territory can be worked out, the parallel proposal of a Middle East Development Authority still seems to me to be a significant and hopeful one. We should give it the highest priority in a dramatic effort to break the accumulated logjam of frustration and bitterness in the Middle East.

No where on earth can a better case be made than in the Middle East for a regional approach to the basic necessity for economic development. Most if not all of the vexing, complicated tensions of the area are involved with, and partly dependent upon, present economic conditions and future economic prospects in the area.

A Middle East Development Authority (MEDA), representing all the states in the region as well as of other states furnishing capital and technical assistance, could be a decisive new element in the whole situation. It seems to me that such an authority could be the catalytic agent which is now so desperately needed to precipitate solutions for a host of other Middle East problems.

As I now see it, MEDA itself would be a kind of hybrid between the World Bank and the TVA. It could undertake projects itself. It could lend money to either private or public agencies. It could participate in equity financing, in the manner of the International Finance Corporation. It could actively manage projects. It could carry on scientific research (in such matters as soil fertility, geological surveys, etc.). It could make basic engineering surveys and contribute to the drawing up of overall regional development plans. Furthermore, it could carry on long-term technical assistance—directed and staffed by the people of the area—for the people of the area.

The advantages of such an authority are really exciting. Just to consider a few of the possibilities:

1. MEDA could divert the attention of Arab leaders from military adventures to internal economic development. Turning Arab energies into constructive channels would eventually lead to institutional and social changes, such as the growth of a middle class, which would have a beneficial energizing and yet stabilizing influence.

2. MEDA could provide a means of channeling Arab oil revenue into productive uses which would benefit the entire area, thus utilizing part of the presently existing hard-money resources of the Middle East for the financing of regional development.

3. MEDA could be an international entity with which the states of the area could carry on bilateral negotiations and bilateral economic agreements. At present, it would be fanciful to expect Israel and Egypt to agree with each other. But it would perhaps not be so fanciful to expect them to agree separately with someone else.

4. MEDA could ultimately provide a solution to the whole Palestine-Arab refugee problem. This problem is supposed to be dealt with by the U. N. Relief and Works Agency, but UNRWA's activities have been limited almost solely to relief. The only long-term solution for the refugees is basic economic development for the area as a whole—the kind of development which will make it possible for the area to support more people at a higher standard of living.

5. MEDA might provide the political and economic formula for the acceptance of the Jordan River plan. MEDA itself could manage the project. This would also have advantages because an international agency would be less suspect of giving one side or the other more or less than its fair share of irrigation water or of power.

6. MEDA could give technical assistance and supervised farm credit to farmers settling on new lands coming into production from the development of the Jordan, the Litani, the Euphrates, or the Nile.

I appreciate the fact that there would be very serious practical problems as to how MEDA could be established and financed. In the present circumstances in the area, these problems may prove insuperable. For this reason, it is probably wise not to attempt to outline MEDA's charter and functions in precise detail, but to leave plenty of room for negotiation and compromise as developments indicate. Great care must be taken not to give MEDA the appearance of a supranational authority which would impinge upon the sovereignties of the states of the area. All chances of Egyptian participation, especially, would be lost if MEDA were put forward as an international agency to operate the Suez Canal.

To meet these objections, ample provisions for the protection of national sovereignties would have to be written into MEDA's charter. Further protection would be offered by the fact that all participating states would be represented on MEDA's Board of Directors.

Care would also have to be taken that MEDA did not become an instrument for furthering the Arab economic boycott of Israel. At the same time, the project would probably fail if the Arabs viewed it as an instrument designed especially for breaking their boycott. The avoidance of both of these pitfalls will require a fine degree of diplomatic tightrope walking, and determination to come to grips with the problems.

It is important to recognize that progress toward political stability and economic development in the Middle East can only be

made slowly, one step at a time. It is impractical to try to work out an overall political settlement and economic development plan in a single package. It is imperative, however, that some kind of a start be made. Once this is done, the economic and social consequences will themselves generate a kind of momentum that will lead to further progress. For example, one cannot realistically expect the establishment of full trade relations between Israel and the Arab States in one step. But one can, perhaps, expect some kind of an arrangement, with MEDA or a similar agency acting as an intermediary, whereby joint water-use rights, for example, can be established. And one can also expect one thing to lead to another. Economic contact has a way of stimulating further activity.

In all of this, it is of the greatest importance that economics and politics be sharply separated. Economic development and political stability are, of course, closely related, and it is a close question as to which comes first. But one of the difficulties with the American foreign economic assistance program has been that it has been too much concerned with political conditions and too little concerned with economic conditions. The result, in many cases, is that the program has been counterproductive politically and a failure economically.

If there is a new international agency for economic development in the Middle East, or if the United States continues its own bilateral programs, the problem should be approached on an economic basis. The charter of the international agency should forbid the use of political considerations, and the United States should renounce such use. On the other hand, the most rigid economic criteria should be established and adhered to.

What we have got to get across to everybody concerned in the Middle East is that it is in their own interests to turn their attention from intraregional feuding to intraregional development. This is true of both Israel and the Arab States. Israel has a per capita gross national product approximately twice that of Lebanon, the richest Arab state, and approximately 4 or 5 times that of most of the other Arab states. Just as it is unhealthy, and indeed dangerous, for the United States to live as an island of wealth in a sea of poverty, so is it unhealthy and even more dangerous for Israel to do so.

This is not to suggest an Israeli aid program for the Arab States. But it is to suggest that Israel has responsibilities toward the Arabs, particularly in terms of compensating the Arab refugees and providing for at least token resettlement in Israel.

The Arab States likewise have responsibilities toward Israel, the most important of which is to recognize Israel's right to independent existence and peace.

The Arabs frequently complain about the disparity in American aid to Israel as compared to the Arab States. What is frequently overlooked is that American aid has been better used and has been more effective in Israel than in almost any other country of the Afro-Asian region. The economic transformation which Israel underwent between 1952 and 1955 is as dramatic as that which occurred in Western Europe under the stimulus of the Marshall plan—yes; even more so.

The plain economic truth is that comparable amounts of aid poured into the Arab States would have produced by no means comparable results. In Israel, the aid program was dealing with a skilled, literate population with workable social and political institutions which are a prerequisite to economic development. These same conditions do not exist in the Arab States. This is not a reason for withholding aid to Arab States; but it is an additional reason for undertaking, multilaterally, and on a regional basis, fundamental development projects in the Arab States. The need is great—the possibilities challenging.

Total United States aid to Israel and the Arab States has amounted to more than $600 million. Except in Israel, it has not been particularly effective. The total that can be usefully expended over the next 10 years will almost certainly be no more than $600 million—let's say $1 billion at the most. If a regional development agency like MEDA could be created and given a capital of approximately this amount, the United States would be called upon to contribute only a portion of the total. In addition, the chances of successful economic development would be considerably improved.

UNITED STATES-ISRAEL ECONOMIC RELATIONS

What I have just said about the importance of Israel as a symbol for economic development in the whole Middle East area only further serves to emphasize the importance of close, continued United States-Israel economic relations. Your own Chamber is dedicated to the promotion of these relations, through the publication of your News Bulletin and Monthly Journal; your regular and special meetings of businessmen; your market research; the finding of agents here for Israeli products and in Israel for American products; your advice to investors; your assistance in licensing arrangements, and the many other valuable services you are performing.

I know that your 10-year program aims at sustaining and increasing United States-Israel economic relations and calls for economic activity totalling $1,500,000,000 over the 10 year period since your founding in 1953. I rejoice with you that economic activity between the two countries is increasing, in spite of diminishing official United States economic aid to Israel.

On that subject, let me say a bit more. United States economic aid to Israel reached its peak in fiscal year 1953 ($70 million), and has been decreasing since then. Last year it was $25 million, but was augmented by some $25 million in surplus foodstuffs.

This form of aid promotes United States exports to Israel, usually to an extent larger than the aid amount itself. This help, of great value to Israel, has also helped establish United States leadership in Israel's markets.

I know that you have heard talk of renewing such aid now that Israel's troop withdrawals have occurred. I know that the hundreds of United States business firms trading with Israel, are anxious to know: (a) When will the aid be renewed, and (b) What amount of aid is being considered.

I am glad to say that I have reason to believe that the Israeli aid program will be resumed in the near future. As you know, mutual security aid for fiscal 1957 was planned at about the level of $25 million for Israel. I believe that when the program is resumed, it will be reinstated at about that same level.

You will also remember that a United States Export-Import Bank loan to Israel of $75 million was under negotiation last year, to assist Israel's agricultural development. The grant of the loan would have meant much export business for the United States, no doubt over and above the $75 million loaned.

The Export-Import Bank announced last October 11 that a delegation from the bank would leave for Israel to examine the development program and clear the way for granting the loan. The outbreak of fighting negated this mission.

Since Israel's withdrawal there have been rumors that the negotiations for the loan are being resumed and I can assure you that some of us have been urging, and will continue to urge with all the force at our command, the renewal of these negotiations.

OIL PIPELINES

Many of us have been following closely the developments in the two Israeli pipeline projects now in process, as well as the third which is still in the planning stage.

I appreciate the fact that our Government has not been requested to assist in the financing of any of these projects, but I am afraid the reason is what the Israelis consider to be a predictable disinterest on our part. I should like to see us take an active interest, and offer to help. The oil pipeline situation in Israel at the moment is itself another story of imagination and initiative on the part of those pioneering people.

The first pipeline, a purely domestic project, calls for the construction of an 8-inch pipeline from Eilat—on the Gulf of Aqaba—to the railhead of Beersheba. This line will be capable of carrying about two-thirds of the country's oil needs, or roughly 800,000 metric tons a year. Construction of this pipeline was undertaken from domestic resources, with pipe already in the country and the preliminary technical survey was done by Tahal, the Israel water planning company. To put the line in operation by the target date of April 15, Israel must bring to rapid completion 2 pumping stations with double pumps—one located at Eilat and the other about 100 kilometers north of that port. Israeli press reports indicate one of these stations was completed by the middle of March. The oil will be transported by rail from Beersheba to the Haifa refinery which has an annual capacity of 4 million tons. This pipeline of 240 kilometers will cost about $6.7 million.

In the meantime, another project which is about to commence is for a 16-inch pipeline from Beersheba to the Mediterranean coast—in the neighborhood of Wadi Sukheir (about 30 kilometers south of Tel Aviv) with the oil transported by sea tanker to Haifa. The 16-inch line from Beersheba to Wadi Sukheir will be 60 kilometers in length.

Israel is also seeking financing for a 32-inch pipeline to carry 25 million tons of oil a year from Eilat to a location somewhere along the Mediterranean coast. The pipeline will be 180 or 270 miles long, depending upon the location of its Mediterranean terminal, and may require something in the order of $60 million. According to Israeli reports, surveys of this line have begun, with the help of French engineers. This project would be an international pipeline and is intended as Israel's answer to the Suez problem. Israelis say that they prefer private enterprise financing of this project. At one point, the French Government announced it would finance its construction but this appears to have fallen through. Whether this project can be realized remains to be seen. It, too, may depend on what we do.

Here, as on other issues, it is important to remind ourselves in conclusion that what happens to Israel happens to freedom. America and the entire free world are inextricably involved in the fate of Israel. We must frankly come to recognize that whatever happens to this struggling country happens to the forces of freedom everywhere.

If this outpost of democracy suffers, the free world suffers with her. As a result, far more than the fate of one nation, as vital as that is, is involved in the future of the Middle East.

Israel ought to and does represent and exemplify America's foreign policy objectives. Our goals for a free and peaceful world include development of responsible governments, the correction of ancient social and economic inequalities, the determined use of modern skills and technical skills for economic progress, and the opening of new horizons for the human personality. When we look at the Middle East today, where but in Israel do we find these goals being realized

in daily performance? Israel is an exemplification of liberal democracy, in an area needing a beacon of democracy.

We have a vital stake in keeping that beacon glowing.

Congress To Probe Tax-Avoidance Plan Used by Four International Oil Firms

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 15, 1957

Mr. VANIK. Mr. Speaker, on February 19, 1957, I took the floor of this House to call attention to the fact that the Arabian-American Oil Co., in operating the Saudi Arabian oilfield, has been treating its royalty payments to King Saud as a tax rather than a royalty. At that time I pointed out that under Aramco's purported agreement with King Saud the net profits of $500 million to $600 million were divided equally between King Saud and the Arabian-American Oil Co., and that by arranging to have the payments to King Saud treated as a tax rather than a royalty, the Arabian-American Oil Co. could deduct the payments made to King Saud from income taxes due the United States. I further pointed out that by arranging this simple gimmick with King Saud, Aramco was permitted to skip income taxes due our Government on a profit of over $300 million a year.

The arrangement under which the Aramco Oil Co. produces oil in the Middle East is not American enterprise in a foreign land in the usual sense. The blood and the dollars of the American people are pledged to the protection of the status quo in the Middle East as well as the integrity of Aramco's oil contracts with King Saud which would otherwise be a meaningless scrap of paper. What does our Government collect from the Aramco Oil Co. in return for its very costly guarantee of contract integrity? A conspired avoidance of an income tax obligation on $254 million of income each year.

It seems to me that the time has come for the American people to rise up in protest against the injustice of income tax diversion by those who should rightly pay. The American people have a complete right to know what goes on and how some people or corporations are specially privileged to accumulate tremendous incomes outside of the reach of the tax collector. It is morally unjust for so many people to assume tremendous tax burdens when a few are failing to do their proper share toward contributing to the operation of our costly Government.

The Senate Combined Antitrust and Public Lands Subcommittees have done a tremendous service in calling the attention of the public to the tax abuses of American groups engaged in the production of oil abroad. It is my earnest hope that this Congress will look further into these matters and thoroughly examine the tax returns of the Aramco Oil Co. to determine what further special considerations have been possible within the scope of our current income tax laws.

Following is an article by Bernard D. Nossiter, Staff Reporter of the Washington Post and Times Herald, which appeared on April 13, 1957, and which details the tax avoidance plan worked out by Aramco:

FOUR OIL FIRMS FACE PROBE ON TAX-AVOIDANCE PLAN

(By Bernard D. Nossiter)

Senator JOSEPH C. O'MAHONEY, Democrat of Wyoming, yesterday asked the Senate Finance Committee to investigate a multimillion dollar tax-avoidance device by four international oil companies. Chairman HARRY F. BYRD, Democrat, of Virginia, of the Finance Committee indicated that the O'MAHONEY request would be promptly honored.

BYRD said, "I will have the staff of the Joint Committee on Internal Revenue Taxation make a study on this matter. It will then be considered by the Finance Committee."

The study will focus on a Treasury-approved device for the Arabian-American Oil Co. (Aramco). Under it, Aramco makes about 70 percent of its payments to Arab King Saud in income taxes instead of royalties. This saves Aramco's four American parent companies a conservatively estimated $80 million a year that would otherwise go to the United States Treasury.

PLAN BOOSTS SAUD'S TAKE

In effect, the scheme, begun in 1950, enabled Aramco to sharply boost Saud's take at the expense of United States taxpayers.

Aramco is a Delaware corporation owned 30 percent each by Standard Oil of New Jersey. The Texas Co. and Standard Oil of California, Socony Mobil Oil gets the remaining 10 percent.

Formed in 1933, Aramco has a 60-year concession on all the oil in Saud's kingdom. Aramco estimates this is 15 to 20 percent of the free world's reserves.

The story of how Saud adopted an income tax for Aramco in 1950 was told to O'MAHONEY's combined Antitrust and Public Lands Subcommittees at little-noticed hearings last month.

But the request for a Tax Committee investigation was sparked by the belated discovery of a new fact: that the 1933 agreement provides that Saudi Arabia shall collect a royalty of 4 gold shillings a ton (21 cents a barrel) on Aramco oil but shall not impose any kind of tax until the pact ends in 1993.

Some tax experts reason that the 1950 income tax, therefore, could not be imposed without Aramco's consent. Thus, they conclude that the income tax is simply a mask for a royalty payment. This mask saves Aramco about $100 million a year and its parents $80 million in United States taxes.

The New York office of the Internal Revenue Service, it was learned, questioned the validity of the Saudi tax in 1954. But in 1955, the Internal Revenue Service in Washington headquarters ruled that it was a proper tax.

Asked to explain why, a spokesman for Internal Revenue Commissioner Russell C. Harrington, said that the ruling was made before Harrington took office.

Fred A. Davies, Aramco's board chairman, told the O'Mahoney committee last month, "we certainly never thought of it (the Saudi tax) as a disguised royalty in any sense."

He said that, "they (Saud's Government) asked us as early as 1948: 'Isn't there some way in which we can get a greater take?' and a little later they said: 'Isn't there some way in which the income tax you pay to the United States can be diverted to us in whole or part?' In the meantime, they had been visited by a representative of the (United States) Treasury Department and they knew of that situation (tax savings for Aramco by paying Saudi taxes instead of royalties) which existed."

Davies explained that by 1949, Saud's royalty of 4 gold shillings royalty only yielded the potentate about 20 percent of Aramco's net profit on each barrel of oil.

FIFTY-FIFTY VENEZUELAN SPLIT

But Saud knew the international oil companies had agreed to give Venezuela a 50-50 split on the oil there.

In 1949, said Davies, Aramco's taxpayments to the United States were greater than Saud's royalties "and they weren't a darn bit happy about that."

Arabia, said Davies, had a desire for "this approximately 50-50 take which they knew Venezuela was getting.

"So, the royalty was left unchanged but Saud 'imposed' an income tax to make up the difference."

"Why didn't Aramco simply increase its royalty," asked O'MAHONEY's counsel, Donald P. McHugh?

Answered Davies: "The Saudi Arabian Government was insisting on an income tax which would result in no additional burden on the company."

Although Aramco's profits have steadily climbed since 1950 to reach $543,400,000 by 1955, the company now pays no United States taxes on its Arabian operations. On the $272,200,000 Aramco melon cut up in 1955, the 4 parent firms paid only the small intercorporate dividend tax. This amounted to $21,200,000.

But now the Congress will study this language authoritatively said to be in the 1933 concession agreement with Arabia:

"The company (Aramco) shall be exempt from all direct and indirect taxes, imposts, charges, fees and duties."

HERE'S WHAT IT WOULD DO

If Congress decides the Treasury was wrong and that Saud's tax should really be treated as a royalty, then, according to tax experts, Aramco's 1955 books will look like this: Net income (after an equal payment to Saud) of $272 million; subtract $108 million for depletion allowance (Aramco doesn't use this permissible device now because the tax and royalty it pays Saud reduces its taxable income to nothing even before calculation of the generous depletion allowance); this would leave a taxable income of $164 million and the United States Treasury would pick up $85 million. If Aramco's 4 parents collect as dividends what is left in the kitty—$186 million—then they would have an additional tax bill of over $14 million.

In brief, instead of the United States Treasury receiving $21,200,000, as it did in 1955, it would get $100,000,000, a gain of $78,800,000.

Senator BYRD noted that all tax legislation must originate with the House Ways and Means Committee. But the Senate's chief economizer remarked that his Finance Committee is interested "in anything that indicates avoidance of taxes or evasion of taxes."

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Address by Hon. William F. Knowland, of California, Before Daughters of the American Revolution

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address I delivered last night before the 66th Continental Congress of the Daughters of the American Revolution.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY UNITED STATES SENATOR WILLIAM F. KNOWLAND, 66TH CONTINENTAL CONGRESS OF THE DAUGHTERS OF THE AMERICAN REVOLUTION, CONSTITUTION HALL, WASHINGTON, D. C., APRIL 15, 1957

The Daughters of the American Revolution have notably contributed to the preservation of our spirit of patriotism without which our Nation would not have arisen from the flames of the revolutionary war nor survived the intervening years.

In this year 1957 we need to rededicate ourselves to the American Constitution and our free way of life.

America is still the authentic revolution. The flame of freedom which was struck at Concord and Lexington still is an inspiration to the enslaved behind the Iron Curtain.

But it is also an ageless lesson that no outsiders can win independence for a people though they may give material assistance. The subjugated must be willing to pay the price in blood and resources to gain their own freedom.

We do recognize, however, that when freedom is destroyed anywhere in the world a bit of freedom is destroyed everywhere.

Other nations have been or now are larger in land area, in population, and in natural resources. Yet they have not been able to give to their people the freedom and the standard of living Americans have enjoyed.

As important as is the productive capacity of our Nation and its military strength, these are not the factors which alone could preserve our freedom or enable us to maintain a free world of free men. The inner strength of America has not been its great cities, its huge industrial plants, its extended transportation systems, or its variety of natural resources.

The factor which made America an inspiration to the rest of the world grew out of our Declaration of Independence, the Constitution of the United States, and the spiritual values which the founders of our Republic recognized and by which they were guided.

We have recognized that there was a higher moral law to which governments were also accountable. We have humbly acknowledged the divine inspiration which made and preserved us as a nation.

We have read of and been inspired by the action of George Washington kneeling in prayer during the dark days of Valley Forge and of Lincoln doing the same during his lonely vigil in the White House during the darkest days of the Civil War.

This Nation of ours has grown from a weak colony of 3 million on the Atlantic coast to a great power of 170 million people, the most productive nation the world has ever known.

The priceless ingredient for our people has been our constitutional form of government, which guarantees our religious, personal, and economic freedom.

The incentives furnished have constantly opened new horizons.

In this atmosphere Americans of each generation have sought to leave to their children a better land than they themselves found, not just better in a material way but in the educational and cultural developments that make for better family and community life.

New inventions in various industrial fields and the tremendous potentials of the peacetime developments of atomic power are bound to challenge us for many years into the future.

Instinctively we know that human freedom is a greater force than tyranny.

We also instinctively know, though at times our allies and our own Government may for expediency forget, that there are some things in life which cannot be compromised.

Nations can die while delegates talk. Last year the General Assembly of the United Nations passed 10 resolutions in 76 days of debate. All that while freedom was being strangled to death in Hungary. With callous indifference the Soviet Union placed itself above the higher moral law of God as well as above its obligations under the United Nations Charter.

No international organization can long endure with a double standard of international morality.

Are the obligations and the mandates of the United Nations to be applicable to the democratic nations but not to the totalitarian powers? To the law abiding but not to the outlaw nations? To the small and weak countries but not to the big and strong? What kind of justice is this? Are we building on quicksand? What kind of a foundation is this for constructing a system of international law and order based on justice?

We serve no useful purpose if we hide the facts. To the contrary by ignoring them and failing to seek remedies, we may endanger the safety of this Republic and free men everywhere.

For many decades the men in the Kremlin have preached the doctrine that the free world contains the seeds of its own destruction.

It is far more likely, I believe, that the Communist world contains the seeds of its own destruction.

Hungary was but the latest in the indications that, even under totalitarian police rule and the brainwashing of a whole generation, the spark of freedom still lived and was capable of lighting a fire that endangered the whole monolithic structure of Communist tyranny.

After the Hungarian experience how much reliance can the Soviet Union place in the armed forces of the other captive nations if freedom is ever within their reach? How can they have faith in Communist indoctrination when young students were the leaders of the Hungarian rebellion?

Within the past 10 days, the rulers in the Kremlin have sought to intmidate Norway, Denmark, Greece, and Iceland.

The Soviet Union has not changed its long-term strategic objective: the destruction of human freedom everywhere.

They will be relentless in seeking to destroy our institutions. Fortified by our faith in God, we must be determined that our way of life will be preserved.

Hungary has also taught the world that unless an independent government or revolutionary movement can function for several weeks or months it is difficult for outside friends to assist.

Had the British Red Coats crushed the first American rebellion in a week and captured the leaders (as happened in Budapest) there would have been no time for France and our other friends abroad to come to our aid.

Sooner or later there will be another Hungary. Will the free world be better prepared to strike a blow for freedom? Will the United Nations be prepared to do more than talk and pass 10 resolutions?

It may come this year or next in Bulgaria, Rumania, Czechoslovakia, Eastern Germany, Albania, North Korea, China, Poland, or in Hungary again.

Indeed it may even come in the Soviet Union where the people of Russia were the first victims of the godless Communist tyranny.

During the week Nagy was the legal head of the Hungarian Government what a difference it might have made if the United Nations had sent in observers; if based on the first United Nations resolution the friends of freedom abroad had sent the freedom fighters bazookas and grenades rather than more resolutions of sympathy.

Or is the policy of the United Nations and the free world now to be that we will throw water on the embers of freedom and revolt against tyranny and that we will finance Communist economic and political systems so that the slaves will be more content with their masters?

For several years the United Nations has discussed the freedom of colonial people in Asia and in Africa. These are and will continue to be important questions until equitable solutions have been reached. The Asian-African bloc of neutrals show great solicitude.

Why, however, has there been a strange silence in the United Nations relative to the destruction of freedom in Latvia, Lithuania, and Estonia? Here is a clear-cut prima facie case of the violation of its international treaties of friendship and nonaggression by the Soviet Union. Here is a clear case of the unilateral incorporation of three independent nations as provinces within the U. S. S. R. Here we find three nations that were once free which are now in Communist captivity. Yet here the silence is almost deafening.

Will the General Assembly take further action in the Hungarian case to back up its 10 resolutions or will an effort be made to create a zone of silence so that relations with the Soviet Union will not be embarrassed? Is justice for Hungary to be blinded and gagged as well? Is the conscience of the world that was so thoroughly aroused in October and November to be complacent and satisfied in April and May? If the Security

Council meets on the Mideast question this month or next will the Hungarian issue be raised or be forgotten?

These are questions which freemen will be asking and enslaved people who want to be free will be waiting for the answers.

It was Lincoln who said: "Fellow citizens, we cannot escape history. The fiery trial through which we pass will light us down in honor or dishonor to the latest generation. * * * We, even we here, have the power and bear the responsibility. In giving freedom to the slave we assure freedom to the free. * * * We shall nobly save or meanly lost the last, best hope of earth."

The Landmarks We Defend

EXTENSION OF REMARKS
OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 16, 1957

Mr. TALMADGE. Mr. President, it is a privilege for me to ask unanimous consent that the masterful address delivered by my honored and distinguished colleague [Mr. RUSSELL], before the 66th Continental Congress of the National Society of the Daughters of the American Revolution in Washington last night, April 15, be printed in the Appendix of the RECORD. Entitled "The Landmarks We Defend," this address is a forceful summation of our cherished American heritage which should be read by every citizen of our country.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LANDMARKS WE DEFEND

(Address of Senator RICHARD B. RUSSELL, 66th Continental Congress, the National Society of the Daughters of the American Revolution, April 15, 1957)

Madam president general, delegates to the 66th Continental Congress of the National Society of the Daughters of the American Revolution, ladies and gentlemen:

It is indeed a high privilege to be permitted to address this distinguished gathering. The Daughters of the American Revolution stand in the very forefront of this Nation's great patriotic organizations. Their contributions to the preservation of our ideals and institutions are valuable beyond computation.

You have recognized the fact that a people without sentiment are poor indeed. In periods when some have considered it fashionable to scoff at pride as a venal sin, you have courageously sought to create and instill pride of our heritage in our youth, indeed in all of our people. You have realized that our country would be safe so long as our increasing population revere and respect the works of those men whose vision, efforts, and sacrifices enable us to enjoy the richest legacy of freedom the world has ever known.

Those who have insisted that our Constitution is outmoded or that this sacred document is a sort of political accordion to be expanded or contracted with the changing moods of men who temporarily hold power have met with unrelenting opposition from your great organization.

The numerous resolves that you have approved over the span of many years demonstrate that you are confirmed in the faith that our national charter, the Constitution of the United States, means exactly what it says and that no man nor set of men can ever twist or distort it for their purposes without endangering all that we hold dear. As the years have come and gone you have consistently rallied to protect the landmarks our fathers have set, whether they were under direct attack or threatened with undermining by a cunning process of nibbling and erosion. In short, you have worked at citizenship.

The system we have evolved under a Constitution which guarantees the rights and liberties of every American citizen has brought us greater blessings than any people have ever enjoyed. We call it the American way of life. It has enabled us to progress and go forward—to develop—to invent—and to accumulate—to such a degree that the civilization we enjoy has become the envy of the world.

This priceless heritage was not easily won. It cannot be cheaply defended. It will not be easily preserved.

These are dangerous days that demand that those who love liberty recognize and prepare against any force that is likely to destroy that heritage.

The most obvious threat to the security of the United States is the armed might of the Communist conspiracy with its nerve-center located in the Kremlin. Cracks may appear in the Iron Curtain. Rulers may come and go, deified today and denounced tomorrow, but the ultimate objective of the Communist conspiracy remains unchanged. They still seek to dominate and rule the entire world. We know enough about this ugly system to realize that this would mean the destruction of every element of human dignity. No amount of wishful thinking can alter this brutal fact.

We know that without regard to the needs or wishes of the masses of their people, that a despotic power is largely devoting the great resources of the Soviet controlled world to the building of military might. They maintain vast armies. They have built the second largest navy of the world with incomparably the largest fleet of submarines afloat. Only the foolish would blind themselves to the fact that the Soviet has made disconcerting progress in fashioning the new and effective vehicles designed to deliver terrible nuclear weapons. Shamefully we must admit that the Soviet developments in the atomic field were greatly expedited by the treason of those who either partook of our hospitality or enjoyed our citizenship. The unprecedented peacetime efforts by the Soviet Union have done much to close the gap of our leadership in these engines of vast destruction. For many years we have relied on our preeminence in this field for the maintenance of world peace.

We must constantly recognize that we are confronted by a foe who knows little and cares less about the principles of honor and decency we have been taught to respect. The only language that he understands is the language of strength. The only way to prevent a war so destructive as to stagger the human imagination is to maintain American military might. Come what may, cost what it must, the United States must maintain superiority in atomic weapons and in the ability to deliver them. If our people are informed as to the magnitude of the stakes, I do not for a moment doubt that they are willing to make any sacrifice necessary to maintain superior strength in this field. There is no other way to salvation.

Another constant threat to our institutions of freedom is the Communist-directed effort to undermine those institutions by infiltration and internal subversion. Some of the committees of the Congress have exposed many of the ramifications of this phase of the Communist conspiracy. Your great organization has consistently supported every effort to reveal and stamp out this Communist threat. The Federal Bureau of Investigation works ceaselessly to ferret out agents and traitors who seek to sell this country to our enemies. The prosecutions following these exposures have brought about an awareness of the insidious nature of this danger.

We recognize that the diabolical forces in the Kremlin constantly conspire to find ways and means to plant its agents upon us. The Congress, through legislative enactments, has demanded a careful screening of all aliens who seek admittance to our land. We have sought to make sure that our generosity in making our country a sanctuary for the oppressed shall not be abused.

The heart of America goes out to every victim of tyranny and oppression in foreign lands. However, we will never be able to overthrow the Communist conspiracy by the process of admitting to our country all of those who seek to escape Red tyranny. Common prudence also dictates that we take every precaution to make sure that our national compassion for those in distress is not developed into a gateway for a Communist Trojan horse.

Most of our fellow citizens are fully awake to the danger posed from without by armed Soviet might and from within by Communist subversion. At great cost we seek to maintain the means to protect our way of life and our institutions of free government. We seek to keep loyal Americans on guard to defend us against both of these dangers.

Let me speak to you about a third threat to our constitutional system and to the rights and liberties it seeks to assure. There is another danger confronting us which is far more insidious than even the Communist conspiracy of subversion. This danger is ever present but always difficult to recognize. It often comes in appealing guise, confusing and deceiving many whose love of country is unquestioned. It is a creeping disease which, if not arrested, will surely result in the death of the system which has enabled us to achieve our greatness.

I refer to the grave threat which is posed by big government, undue concentration of power. We must arrest the prevailing trend towards shifting all of the functions and powers of the States into the control of a completely centralized, all-powerful Federal Government. The rights filched from the several States must be restored.

The Founding Fathers well knew the corrupting and tyrannous effects of highly centralized government. They were not only students of history. They had endured tyranny. They knew that the shores of history were littered with the wrecks of great civilizations that had risen to greatness but had deteriorated and crumbled to dust when all of the power of government over the people became concentrated in one pair of hands. They were familiar with the axiom which history had proved before Lord Acton, that all power corrupts, and absolute power corrupts absolutely. Knowing that individual liberty could not be maintained in a government of men, they sought with a wisdom almost beyond human understanding to assure that the liberties of their descendants would be forever protected by a government of law. Thomas Jefferson expressed this determination when he declared, "In questions of power let no more be said of confidence in man, but bind him down from mischief by the chains of the Constitution."

The very genius of our system of government is found in the careful division of power to rule our people. The Founders believed that the exercise of the functions of government should be kept as close as possible to those who were governed. They therefore fashioned a Federal Government of limited powers, with the rights of the several States and of the people fully reserved and protected by the National Charter.

The exercise of the powers over the people allotted to the Federal Government were further divided. They were distributed between

the executive, the legislative, and the judicial branches of the Federal Government. To assure the perpetuity of American liberty, they established the most marvelous system of checks and balances ever brought forth from the minds of men.

Those wise patriots realized that the problems of government confronting each of the States would not be exactly the same. They knew that as the several States in their own way approached their own solution for any problem, each State would serve as a laboratory of government. In the processes of trial and error or trial and cure, the experiences of one State would serve as a guide to the others without the danger of injury that simultaneous application to all might bring.

So great was the faith of the founders in the system of divided powers that each of the Original Thirteen States likewise embraced this system. The State functions were divided between the executive, legislative, and judicial branches. To keep the Government close to the governed, counties and other subdivisions were vested with those functions which most directly affected the people in their everyday life. All placed their faith in a government of law and sought to eliminate any possibility of a government of men.

It has been a long time since those who live on American soil have felt the chafe of the chains of tyranny. So many generations have enjoyed the blessings of unchallenged liberty that we have become prone to take them as much for granted as the air we breathe or the water that we drink.

Millions of loyal American citizens have been so engaged in the everyday business of making a living for their families that they do not realize how far down the road to centralization we have already traveled. The approach to one big government has not been made by spectacular leaps. The process has been insidious, but it has gone a long ways. The whittling process has gone so far that it threatens to reduce the several States to mere geographical boundaries or administrative areas of Federal departments. The transferral of the proper functions of the States or their subdivisions to the administrative control of Federal bureaucrats in Washington has been done in many ways. A series of decisions by Federal courts have wiped out a number of rights and privileges which the States have exercised since the birth of our Republic. They do much to extend the process of centralization.

Cooperation between the Federal Government and the States and their subdivisions has long been a part of our system. In recent years, however, some of the legislative proposals that are called Federal aid are almost a sort of bribery to tempt local government to surrender their control over local functions in return for money from the National Treasury.

A small but active group of self-styled intellectuals have dedicated themselves to the task of centralization. Most of them honestly believe that national State socialism is better for us than the system devised by our fathers. They abhor a free enterprise economy and would have the Government of the United States possess the power to control the activities and the lives of all of our people. Unmindful of the lessons of history, they would place America's future in a supposedly benign and all-powerful Federal Government.

This group is too small to be effective were it not for the carelessness and indifference of unthinking millions. Mankind has ever been plagued by the chimerical illusion that it is possible to get something for nothing. We have our millions who seek and accept alleged free benefits for their States and communities from a Generous White Father in Washington in return for the surrender of the priceless right of local self-government. It is understandable that the people of foreign countries who have seen how prodigal we are with our expeditures on the foreign-aid program would believe that dollars grow on trees in the District of Columbia. However, the most obtruse American taxpayer on this day which is the last day for the payment of Federal income taxes must be painfully aware that this is a foreign illusion.

Any money that the Federal Government spends on functions which properly belong to the States and their communities must come in the first instance from the people of these States and communities. Federal bureaucracy takes a toll from every tax dollar it touches. Those who are enticed with the idea of free money from Washington will eventually find to their sorrow that they are paying yearly increasing costs in dollars and cents for the privilege of giving away the right to govern themselves.

The 9th and 10th amendments to the Constitution, designed to limit the powers of the Federal Government and protect the rights of the States and the people, were once considered the keystone of our system. Due to a series of recent decisions by the Federal judiciary, they have now been rendered almost ineffective.

It would have been impossible to have convinced the authors of the Constitution or of the Bill of Rights that a Federal court would ever hold that a sovereign State was powerless to enact and enforce laws against Communist subversion which occurred within its borders. Those men would have been shocked by the mere contention that any local subdivision of government was without power to rid themselves of a teacher, chosen locally to instruct and guide their children, paid with local tax funds, because he sought the refuge of the fifth amendment.

These decisions, as well as others that could be enumerated, are destructive of local self-government. Such crippling attacks upon the rights of the States make meaningless our once proud boasts of an indissoluble Union of indestructible States. State power cannot survive many more such disastrous and degrading blows. If our dual system is once destroyed, how long will the individual rights and liberties of the American people survive?

There is considerable national agitation today over measures pending in the Congress that are euphoniously labeled civil-rights bills. The title of these bills appeal to the American people. Every American is in favor of more and bigger and better civil rights. An examination of what these measures really do immediately raises the question as to whose civil rights and what constitutional rights are involved. They raise the issue of how far you may go in infringing upon the civil rights of all of our people in the attempt to establish doubtful civil rights for the benefit of one group by force bills. High-handed and drastic legislative action in this field must be weighed well in the light of its effect upon the rights of the States and upon the sum total of the liberties of all of the American people.

Some of these bills are destructive of the integrity and rights of the several States as entities of government. They could be used to deny the elemental rights of individual American citizens guaranteed by the Constitution. By a cunning plan to make the Federal Government a party to civil causes growing out of acts now punishable as crimes against either State or Federal law, these bills would deliberately bypass and annul sacred and inherent individual rights specifically spelled out in the Constitution. American citizens could be punished and jailed without due process by resorting to civil proceedings and contempt citations tried in star chamber sessions.

The right of trial by jury before being sentenced and punished is the proudest boast of Anglo-Saxon justice. It is considered the shield and buckler of the liberties of free men wherever the English language is spoken. Even before Magna Charta was wrung from an unwilling King John at Runnymeade, men of our race had spilled their blood for the right of a public jury trial by their peers. For many centuries Lord Jeffreys and his Star Chamber have been held in odium for perverting judicial power into an instrument of oppression and tyranny. If free born American citizens can be thrown in jail for indefinite or unlimited terms by this perversion of process at the caprice of a Federal judge enjoying life tenure by appointment, we will no longer have a government of law. Our most sacred rights will be the plaything of a government of men.

Let no lover of liberty anywhere be deceived by the specious argument that the unprecedented powers of this bill will be applied only in one section of the country. If enacted, they will be a threat to the most sacred constitutional rights of every American citizen. Such proposals are repugnant to the system which has brought us to greatness. They would employ the methods of the despised police state of totalitarian regimes.

There is no condition in this land of ours that can conceivably justify the wholesale sweeping aside of constitutional rights. Our Constitution wisely provides that the United States shall guarantee to every State of this Union a republican form of government. If there be a single State where a republican form of government is denied, the Federal power may be legally applied. There is no valid reason for general Federal legislation that will further degrade all the States and State institutions. There is no cause whatever to impeach the laws, the procedures, and the officials of all of the States and in the process so twist our system as to eliminate the guarantee of due process of law which has heretofore protected every one of our citizens. If this be done in the name of civil rights, it will be a crime more heinous than any ever committed in the name of liberty.

The President of the United States is duly chosen by the people to serve in the most exalted office of the earth. No President of the United States, even in time of dangerous crisis, has ever possessed any such powers over the lives and liberties of the American people as these bills propose to vest in an appointed Attorney General.

The American system rejects the idea that any one man, however wise or impartial, should be permitted to govern by intimidation and injunction and jailing his fellow citizens for contempt. What self-respecting patriot will willingly agree that any official under any circumstances could designate him to be the first to be stripped of his constitutional rights to a fair trial before being jailed? Our forebears did not endure Valley Forge or face death on a hundred battlefields in the war for independence for any such tortured concept of freedom.

The heart of our country is still sound, and the spirit of patriotism still lives. American youth have again and again shown the heroism of old in their country's service. We still have the genius and capacity to meet and overcome any threat to our freedom and to our institutions.

All of us must work harder in the discharge of every duty of citizenship. Our age is complex and requires greater vigilance as the price of liberty. We must constantly guard against the evil consequences of carelessness and indifference. We can seek no greater reward than to have another generation study and consider the period in which we live and say, "Our American heritage and the landmarks of our Fathers were safe in their hands."

Annual Dinner of the Amen Corner of Pittsburgh, Pa.

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Tuesday, April 16, 1957

Mr. MARTIN of Pennsylvania. Mr. President, the Amen Corner of Pittsburgh, Pa., includes in its membership many of the leading business and professional men in the tri-State area of which Pittsburgh is the center. Each year it holds a dinner with a program devoted to the discussion of matters affecting the national welfare. Saturday night, April 6, 1957, the 31st of such meetings was held.

This annual dinner also honors the retiring president of the organization. This year the president, Mr. Walter Schulten, an outstanding industrialist and civic leader of Pittsburgh, was so honored.
